Congressional Record

SEVENTY-THIRD CONGRESS, SECOND SESSION

SENATE

THURSDAY, MARCH 1, 1934

(Legislative day of Wednesday, Feb. 28, 1934)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

THE JOURNAL

On motion of Mr. ROBINSON of Arkansas, and by unanimous consent, the reading of the Journal for the calendar day of Wednesday, February 28, was dispensed with, and the Journal was approved.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7295) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1935, and for other purposes; that the House receded from its disagreement to the amendment of the Senate no. 3 to the said bill and concurred therein; and that the House insisted upon its disagreement to the amendments of the Senate nos. 31, 32, 33, and 34 to the said bill.

CALL OF THE ROLL

Mr. ROBINSON of Arkansas. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Costigan	Keyes	Robinson, Ark.
Ashurst	Cutting	King	Robinson, Ind.
Austin	Dickinson	La Follette	Russell
Bachman	Dieterich	Lewis	Schall
Bailey	Dill	Logan	Sheppard
Bankhead	Duffy	Lonergan	Shipstead
Barbour	Erickson	Long	Steiwer
Barkley	Fess	McAdoo	Stephens
Black	Fletcher	McCarran	Thomas, Okla.
Bone	Frazier	McGill	Thomas, Utah
Borah	George	McKellar	Thompson
Brown	Gibson	McNary	Townsend
Bulkley	Glass	Metcalf	Trammell
Bulow	Goldsborough	Murphy	Tydings
Byrd	Gore	Neely	Vandenberg
Byrnes	Hale	Norris	Van Nuys
Capper	Harrison	Nye	Wagner
Caraway	Hatch	O'Mahoney	Walcott
Carey	Hatfield	Overton	Walsh
Clark	Hayden	Patterson	Wheeler
Connally	Hebert	Pittman	White
Coolidge	Johnson	Pope	
Copeland	Kean	Reynolds	

Mr. ROBINSON of Arkansas. I desire to announce that the Senator from South Carolina [Mr. SMITH] is detained from the Senate because of a death in his family.

Mr. VANDENBERG. I should like to announce the necessary absence of my colleague, the senior Senator from Michigan [Mr. COUZENS] on account of illness. I ask that this announcement stand for the day.

Mr. TOWNSEND. I wish to announce the unavoidable absence of my colleague, the senior Senator from Delaware [Mr. HASTINGS], occasioned by a death in his family.

Mr. HEBERT. I desire to announce that the senior Senator from Pennsylvania [Mr. REED] is absent on account of illness, and that the junior Senator from Pennsylvania [Mr. DAVIS] and the Senator from South Dakota [Mr. NORBECK] are necessarily absent.

The VICE PRESIDENT. Ninety Senators have answered to their names. A quorum is present.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate resolutions adopted by New Deal Local No. 272, International Brotherhood of Paper Makers, of Bastrop, La., endorsing Hon. HUEY P. LONG, senior Senator from the State of Louisiana, and opposing attempts to deprive him of his seat in the Senate, which were referred to the Committee on Privileges and Elections.

Mr. KING presented memorials of sundry citizens of Blanding and Monticello, in the State of Utah, remonstrating against the passage of legislation tending to nullify the homestead laws, specifically the so-called "Taylor grazing bill", which were referred to the Committee on Public Lands and Surveys.

Mr. CAPPER presented memorials, numerously signed, of sundry citizens of Abilene, Caldwell, Chanute, Colby, Emporia, Eskridge, Fredonia, Hiawatha, Hutchinson, Independence, Jennings, Kinsley, McPherson, Manhattan, Medicine Lodge, Newton, Oberline, Ottawa, Plainville, Pittsburg, Pratt, Salina, Sharon Springs, Stafford, Wamego, Wichita, Winfield, and Topeka, all in the State of Kansas, remonstrating against the passage of the so-called "Tugwell bill", to prevent the manufacture, shipment, or sale of adulterated or misbranded foods and drugs and to prevent the false advertisement of such commodities, which were referred to the Committee on Commerce.

Mr. WALSH presented a memorial of sundry citizens of Malden, Natick, and Quincy, all in the State of Massachusetts, remonstrating against the passage of Senate bills 885 and 2258, to regulate commerce in firearms, which was referred to the Committee on Commerce.

He also presented a petition of sundry citizens of New Bedford, Mass., praying for the adoption of measures for the restoration of silver to be used as money along with gold, and also the issuance of adequate new currency to be used to cancel interest-bearing war bonds, which was referred to the Committee on Banking and Currency.

FEDERAL EMERGENCY AID FOR EDUCATION

Mr. WALSH. Mr. President, I present petitions from the principals and teachers of the Horace Mann School and the Liberty Junior High School, urging favorable consideration of Senate bill 2402, providing aid by the Federal Government to the States and Territories for the relief of education, which I ask to have printed in the RECORD, without the signatures, and appropriately referred.

There being no objection, the petitions were referred to the Committee on Education and Labor and ordered to be printed in the RECORD, without the signatures, as follows:

PITTSBURGH, PA., *February 15, 1934.*

HON. DAVID I. WALSH,
United States Senator, Washington, D.C.

DEAR SIR: We, the undersigned, members of the faculty of the Liberty Junior High School, Pittsburgh, Pa., and voters in our respective districts, are keenly interested in the success of Senate bill 2402, providing that the Federal Government aid the States in the present education emergency.

We are writing to Senators REED and DAVIS of our State asking that they support this measure.

Because of the influence that you wield as Chairman of the Committee on Education and knowing that you have the best interests of education at heart, we are asking that you likewise give your whole-hearted support and influence to the end that this humane measure may be enacted by the Congress.

Respectfully yours,

We, the undersigned, principal and teachers of Horace Mann School in the city of Pittsburgh, Pa., recognizing the fact that

education is the very life of democracy and that no moratorium can be declared in the matter of public education without jeopardizing the safety of our Government, urge you to support legislation which provides for Federal emergency aid for public education so that no school will need be closed and that existing standards for education will not need to be lowered.

THE WORLD COURT

Mr. WALSH. Mr. President, I present and ask that there be printed in the RECORD and appropriately referred a resolution adopted by the Woman's Union of Prospect Hill Congregational Church, Somerville, Mass., urging the ratification of the World Court protocols.

There being no objection, the resolution was referred to the Committee on Foreign Relations and ordered to be printed in the RECORD, as follows:

Whereas the Permanent Court of International Justice has for more than 100 years been an ideal supported by the best American sentiment; and

Whereas adherence to the Court now actually established has been advocated by leaders and platforms of both political parties; and

Whereas ratification by the Senate has been long delayed, causing world-wide uncertainty regarding America's real intentions; and

Whereas such an agency is logically required by the Paris Treaty to "settle all disputes by pacific means", which the United States led the world in adopting: Therefore be it

Resolved, That the Woman's Union of Prospect Hill Congregational Church, Somerville, Mass., at its regular monthly meeting, February 21, 1934, earnestly petition our Senators, Hon. DAVID I. WALSH and Hon. MARCUS COOLIDGE, to give their hearty support to prompt ratification of the pending treaties for adherence to the World Court.

REGULATION OF MOTION PICTURES

Mr. WALSH. Mr. President, I present and ask that there be printed in the RECORD and appropriately referred a letter, together with a resolution adopted by the Women's Home Missionary Society of St. Luke's Church of East Lynn, Mass., urging favorable consideration of the Patman motion-picture bill, and also endorsing the so-called "Copeland food and drug bill."

There being no objection, the letter and resolution were referred to the Committee on Interstate Commerce and ordered to be printed in the RECORD, as follows:

FEBRUARY 25, 1934.

Senator D. I. WALSH,
Senate Office Building, Washington, D.C.

DEAR SIR: I am enclosing a copy of the resolution in regard to the Patman motion-picture bill, which has been considered and signed by our society.

We sincerely hope that you will give this your serious consideration and act favorably upon it.

We also wish to ask your favorable action on the new food and drug bill called the "Copeland bill." We believe this bill is a very important one and worth your special notice.

Very truly yours,

Mrs. D. E. SHEARER.

Whereas it has been shown by recent scientific tests that the motion picture is probably the strongest educational force we have; and

Whereas the makers of commercial films have broken repeated promises to improve the moral tone and atmosphere of their productions; and

Whereas it seems possible to do away with the pernicious practices of blind- and block-booking only by Federal regulation: Therefore be it

Resolved, That we urge our Senators and Representatives in Congress to do all in their power to obtain early and favorable hearings on the Patman motion-picture bill (H.R. 6097) providing means for higher moral standards for films entering interstate and international commerce.

Mrs. W. F. KOONSEN,
President.
DOROTHY E. SHEARER,
Secretary.

Name of organization, Women's Home Missionary Society of St. Luke's Church.

Address of secretary, 15 Bulfinch Terrace, East Lynn, Mass.

CARRIAGE OF AIR MAIL BY ARMY OR NAVY PILOTS

Mr. GIBSON presented a memorial of sundry citizens of Chester and Springfield, Vt., remonstrating against the use of Army or Navy pilots and airplanes for the carriage of the mail, which was referred to the Committee on Post Offices and Post Roads and ordered to be printed in the RECORD, without the signatures, as follows:

PETITION OF PROTEST

We, the undersigned, citizens of the United States of America, urgently protest against the continuance of the use of Army and/or Navy pilots and planes for the carriage of United States mail and ask that this practice be immediately discontinued. We feel that this practice has already proven itself impractical and is an unnecessary and unwarranted hazard to the lives of our men in the service, to Government equipment, and to the mail matter for which we pay for transportation.

LONG- AND SHORT-HAUL CLAUSE

Mr. HAYDEN. Mr. President, I have received from constituents of mine a large number of letters for and against the repeal of the fourth section of the act to regulate commerce, commonly known as the "long- and short-haul clause." With my limited office force it is impossible to personally answer each one of these communications. I therefore ask unanimous consent to have printed in the RECORD a letter I have written to Mr. Leroy Magers, of Tucson, Ariz., and further request that the letter be referred to the Committee on Interstate Commerce.

The statute now provides that it shall be unlawful for any rail carrier to charge a higher freight or passenger rate for a shorter than for a longer distance over the same route in the same direction. However, the Interstate Commerce Commission may, upon application, relieve the railroads from the strict enforcement of this rule where it is shown that, to meet actual water competition, it is necessary to make a lower rate for the longer haul. But the rate to the more distant point must be reasonably compensatory. My letter relates to the proposal to entirely repeal this provision of existing law.

There being no objection, the letter was ordered to be printed in the RECORD, and referred to the Committee on Interstate Commerce, as follows:

UNITED STATES SENATE,
Washington, D.C., February 28, 1934.

Mr. LEROY MAGERS,
Secretary Arizona State Committee, Western Conference Committee of Standard Railroad Labor Organizations,
Tucson, Ariz.

MY DEAR MR. MAGERS: Your letter of January 29 was duly received and I want you to know that I have not and do not question the sincerity upon which the resolution adopted by your committee is predicated. My contacts with the Standard Railroad Labor organizations have long ago convinced me that they do their own thinking without instruction from any source. I hope you will credit me with equal integrity when I state why I am not convinced that the repeal of the long- and short-haul section of the act to regulate commerce will be of benefit either to railroad employees or to the States of the intermountain region.

Since my letter to you of January 20, I have made a rather extensive examination into the major issue raised in your resolution, namely:

"* * * Under restrictions of the fourth section of the Interstate Commerce Act, as amended, February 28, 1920, railroads have lost to the steamship lines comparatively all of the transcontinental nonperishable traffic they formerly handled, with the result that thousands of members of our brotherhood have been forced out of employment, and * * * that we do hereby urge repeal or modification of the fourth section of the Interstate Commerce Act to permit of fair competition and the reestablishment of thousands of railroad employees to their former employment * * *."

In that connection permit me to direct your attention to the following excerpt from a brief submitted to the Interstate Commerce Commission by J. R. Bell, attorney for the Southern Pacific Co. and allied lines on September 22, 1930, in support of fourth-section applications 13638 and 13639 for relief from the long- and short-haul provision of section 4 with respect to rates from eastern territory to the Pacific coast ports via Southern Pacific Steamship Lines, Galveston, Tex., and Southern Pacific Rail Lines beyond:

"Protestant contends that the only out-of-pocket cost study respecting rail operations which should be given consideration in disposing of the applications is that computed on a basis of added train mileage. This likewise finds no support in what is contrary to undisputed facts of record. Locomotives hauling westbound trains have a potential hauling capacity of 2,300 tons, whereas the actual load was only 1,757 tons. Eastbound the potential hauling capacity was 2,300 and the actual load 2,087 tons, showing that a share, at least, of the eastbound traffic might also be used to fill out existing trains to their ratings * * *" (pp. 56, 57.)

It will be observed that the attorney for the Southern Pacific Co. contends that an increase of approximately one third in westbound tonnage could be handled without any increase in train mileage; that is, without adding any additional trains, and that the eastbound tonnage could be increased approximately 15 percent without requiring increased train mileage. Obviously if

there is no gain in train mileage and additional trains are not operated, there can be no increased employment for train crews.

Mr. Bell's brief was undoubtedly based on the testimony of Mr. W. A. Worthington, vice president of the Southern Pacific Co., at a hearing held in the same proceedings in Phoenix, Ariz., on May 10, 1929, from which the following extract is taken:

"In the present case, applications have been made for rates upon both east- and west-bound business, thus preserving the balance of traffic and minimizing empty haul. * * *

"If the traffic gained should be greater west-bound than east-bound, as is probable, as like commodities moving through the Canal preponderate largely west-bound, a very large part of it can be accommodated in trains now operated to fill them up from 1,757 tons to 2,087 tons or more, causing no increase in train mileage, and such traffic can be moved at the very low cost estimated for added traffic where increased train mileage is not involved. After filling up the west-bound trains to the tonnage of the east-bound trains, further increases in west-bound traffic would require the higher cost stated where pro rate increase in train mileage is necessary.

"For the 2 years 1926 and 1927, for every hundred gross tons moved west-bound there was a movement of 125 gross tons east-bound. Therefore, particularly as to west-bound traffic, there is great opportunity to fill out trains at very little additional expense for movement. In fact, I would estimate that we can accommodate in such trains, without increased train mileage, a large share of the volume of traffic now moving west from the Atlantic coast to California. Locomotives hauling west-bound trains had in 1927 a potential hauling capacity of 2,300 tons, whereas the actual load was only 1,757 tons.

"There is also some unused capacity with respect to east-bound trains, which addition to traffic volume in that direction would permit of utilizing, through the well-known rule, that as traffic volume is increased opportunities for maximum train loading are more frequent and there is less necessity for sending out under-loaded trains to complete movement of traffic offered. In the east-bound direction potential capacity of locomotives was 2,300 tons and actual load 2,087 tons, in both cases gross tons, showing that a share, at least, of the east-bound traffic also might be used to fill out existing trains to their locomotive ratings" (transcript, pp. 293–301).

It is clearly evident from these expressions by representatives of the Southern Pacific Co. that they do not believe that it would be necessary to increase train mileage, or certainly not to any considerable extent, to enable the railroad to handle such transcontinental traffic as might be obtained in competition with the Panama Canal steamship lines, even though they could publish rates to and from the Pacific coast without restriction and without regard to a long and short haul such as is now precluded by section 4.

You state that transcontinental freight through the Panama Canal has grown to 10,120,000 tons, much of which would have moved by rail had there been no canal. In the last annual report of the Governor of the Panama Canal are certain statistics published under the heading:

United States intercoastal traffic for calendar year 1933

	Tons of cargo
Atlantic to Pacific	1,595,087
Pacific to Atlantic	4,831,521
	6,426,608

Out of the total cargo of 1,595,087 tons moving west-bound through the Canal, 482,622 tons of iron and steel manufactures were included therein. Out of the total cargo of 4,831,521 tons moving east-bound through the Canal, 2,539,593 tons of oil and 1,289,908 tons of lumber were shipped in tankers and lumber ships.

It is my understanding that there is no possibility of the railroads competing with the steamship lines on lumber and oil because of the low water rate and the fact that oil and lumber producers to a large extent use their own ships. I am also informed that iron and steel represent a major portion of the tonnage which moves west-bound in intercoastal traffic at such exceptionally low rates that this business could not be taken away from the water carriers by the railroads.

After deducting the tonnage of the three noncompetitive commodities—oil, lumber, and iron and steel—the total remaining annual cargo from the Atlantic to the Pacific is 1,112,465 and from the Pacific to the Atlantic, 1,002,020, which might be classified as potentially competitive with the railroads. Since we are told that the railroads do not intend to compete with the water carriers by making equal rates and are seeking to secure, at higher than water rates, only about 25 percent of the obtainable intercoastal traffic (which they feel is sufficient justification for the repeal of the fourth section), it would appear that the total amount of tonnage involved, after eliminating the four noncompetitive commodities, would be 278,117 tons from the Atlantic to the Pacific and 250,500 tons from the Pacific to the Atlantic.

The evidence is that the excess potential hauling capacity of Southern Pacific locomotives west-bound is 543 tons, which, based on one train per day for a year, would be approximately 200,000 tons. Vice President Worthington and Attorney Bell must have been correct when they said that their company could take care of its anticipated share of the traffic to be diverted from the Panama Canal without increased train mileage.

But it must not be overlooked that this total potentially competitive Canal tonnage, both east- and west-bound, would necessarily have to be divided among the seven transcontinental carriers. It is not to be expected that the Southern Pacific Co. would be able to absorb the entire 25 percent of the potentially available Canal tonnage, even if it could be diverted to the railroads. While it probably would not be divided that way, if all of the seven transcontinental lines shared equally in this new tonnage, the proportion of each carrier would be less than 4 percent of the total desired new business.

At a hearing before a subcommittee of the Senate Committee on Interstate Commerce on S. 563, a bill to amend section 4 of the Interstate Commerce Act, held in May and June of 1930, the following colloquy took place:

"Senator PITTMAN. How do you account for the fact that the men who have been working for the Southern Pacific 12 years have suffered as you say, when the traffic of the railroads has increased 60 percent in that time? Ought not the employment to increase proportionately?

"Mr. MORGAN. Well, for instance, we used to have an orange rush in the orange season, in the wintertime. We have lost that.

"Senator PITTMAN. However, the traffic of the railroads has increased 60 percent in 12 years.

"Mr. MORGAN. Decreased?

"Senator PITTMAN. Increased. The Southern Pacific increased 60 percent in 12 years. Even if the number of employees did not increase proportionately, you would think that the oldtimers would not suffer any in that kind of an increase."

If a 60-percent increase in railroad business failed to provide a proportionate increase in employment, how could less than 4 percent of the potentially competitive Panama Canal traffic, or (if the Southern Pacific Co. obtained all of the anticipated increase of business) even 25 percent of the available Canal traffic, give work to thousands of railroad employees?

I ask that this question be considered in the light of the fact that the attorney for the Southern Pacific Co., in support of its application for fourth-section relief in 1930, stated that an increase of approximately 33⅓ percent in west-bound tonnage and approximately 15 percent of the east-bound tonnage could be handled without any increase in train mileage and without requiring any additional trains. This contention was substantiated by testimony under oath by Mr. W. A. Worthington, vice president of the Southern Pacific Co., at the hearing held in Phoenix on May 10, 1929.

At that hearing a large number of responsible merchants and business men from all sections of Arizona appeared. Their testimony reflects the experience of what actually existed in the intermountain territory for a period of 25 years and the handicaps and difficulties with which they were confronted before the elimination of discriminatory rates and charges in 1918. It was consistently stated by these witnesses that after the menace of fourth-section relief was removed our State began to develop distributing agencies and wholesale establishments, and that to return to the conditions which prevailed prior to that time would mean a great loss, not only to the merchants of Arizona but to the people of the entire State.

At that time one prominent merchant of Phoenix testified that the wholesale business of his firm had been built up since fourth-section relief was denied to the carriers. He stated that prior to 1918 his company was in the retail business but since that time it has carried on a wholesale business entirely. It should be remembered that the testimony of these Arizona business men was not challenged by the railroad representatives who were in attendance at the Phoenix hearing. Would not a reduction in the Arizona wholesale business inevitably throw men out of work in our State?

It is nothing new for the Chicago Tribune to advocate repeal of the fourth section. That newspaper has been printing similar editorials for more than 20 years.

As to your quotation from the address of Chairman Farrell of the Interstate Commerce Commission, I am in accord with his view that something should be done to remove the unfair competition which the railroads suffer from the truck and bus lines. But Mr. Farrell does not have to go away from Washington to make suggestions about fourth section relief. Whenever applications are submitted, he is at liberty to advance the same arguments to persuade the other Commissioners to grant relief to the railroads under what he calls "changed competitive conditions." Existing law now permits the Commission to waive the fourth section rule where such action can be properly justified.

I agree that it is unjust to require the railroads to compete, under strict Federal regulation, with busses, trucks, and steamship lines who are free to engage in such unfair competitive practices as expediency may dictate. I believe that the solution of this problem is to be found, not in the lessening of railroad regulation, but in the extension of similar regulation to all competing carriers. The first step in this direction has been initiated by the introduction of H.R. 6836, by Congressman RAYBURN, of Texas, to regulate motor vehicles engaged in interstate commerce.

Mr. Roosevelt said at Salt Lake City on September 18, 1932, "I advocate the regulation by the Interstate Commerce Commission of competing motor carriers." In view of the record he has made in redeeming his campaign pledges we may expect that under his leadership it will not be long before such legislation is enacted into law. I hope that similar legislation can be perfected for the regulation of freight rates on intercoastal steamship lines.

Nothing is more cruel than to hold out a false hope. It is equally bad to practice any deception where the welfare of one's

friends is at stake. I would betray the trust you have imposed in me if I should tell you that by the repeal of the fourth section any large number of brotherhood men will be given employment when I have before me facts which strongly indicate that such is not the case. I know you want me to tell you the truth as I see it, and that is what I have done in writing you this letter.

In conclusion let me repeat, with respect to the entire matter, that:

1. Sworn testimony of railroad officials shows that the total expected increase in tonnage from competitive Panama Canal freight would not result in any additional trains or employment of train crews.

2. Sworn testimony of responsible merchants and business men discloses that before 1918 there were practically no wholesale or jobbing businesses conducted in Arizona because of the discriminatory rail rates then existing.

3. The solution of the problem is to be found not in the repeal of the fourth section or the relaxation of railroad regulation but in the extension of similar regulation to all competing carriers.

With cordial good wishes, I remain,

Yours very sincerely,

CARL HAYDEN.

Mr. KING. Mr. President, I have received a number of petitions and communications relative to the repeal of the fourth section of the Transportation Act, which deals with the long- and short-haul clause. One of these resolutions was adopted by the Chamber of Commerce of Ogden, Utah. I ask that it be printed in the RECORD and referred to the Committee on Interstate Commerce.

There being no objection, the resolution was referred to the Committee on Interstate Commerce and ordered to be printed in the RECORD, as follows:

Whereas the Ogden Chamber of Commerce has had under consideration the question of the repeal of the fourth section of the Transportation Act, which deals with the long- and short-haul clause; and

Whereas this investigation has brought up the question as to the advantages and disadvantages to this section of the intermountain territory of such a repeal; and

Whereas it appears to the board of directors of the Ogden Chamber of Commerce that the advantages of such repeal are greater than the disadvantages and that the railroads would be allowed to compete and secure greater transcontinental tonnage and that such tonnage would increase the railroad activity at this point; and

Whereas such increase in activity would tend to greater employment of railroad men; and

Whereas Ogden is a railroad and transportation center and vitally interested in the stabilization of railroad transportation systems; and

Whereas any increased tonnage that would be received by the railroad transportation companies would of necessity increase the general business of this intermountain territory and other methods of transportation at the present time would present sufficient competition to prevent any unfair discrimination in transportation rates against the intermountain territory: Therefore be it

Resolved, That the board of directors of the Ogden Chamber of Commerce in session this 19th day of February 1934 do respectfully request our congressional delegation to use their best efforts in securing the repeal of the fourth section of the Transportation Act; be it further

Resolved, That this resolution be spread upon the minutes of this meeting and copies sent to Utah's congressional delegation and to the press.

[SEAL] L. W. NIMS,
President Ogden Chamber of Commerce.

Attest:

E. J. FJELDSTED,
Secretary.

REPORTS OF COMMITTEES

Mr. PITTMAN, from the Committee on Foreign Relations, to which was referred the joint resolution (S.J.Res. 83) amending Public Resolution No. 118, Seventy-first Congress, approved February 14, 1931, providing for an annual appropriation to meet the quota of the United States toward the expenses of the International Technical Committee of Aerial Legal Experts, reported it without amendment and submitted a report (No. 386) thereon.

He also, from the same committee, to which was referred the bill (H.R. 7808) to authorize annual appropriations to meet losses sustained by officers and employees of the United States in foreign countries due to appreciation of foreign currencies in their relation to the American dollar, and for other purposes, reported it with an amendment and submitted a report (No. 387) thereon.

Mr. GIBSON, from the Committee on Claims, to which were referred the following bills, reported them each with amendments and submitted reports thereon:

S. 1072. An act for the relief of Rufus J. Davis (Rept. No. 388); and

S. 1232. An act for the relief of George Voeltz (Rept. No. 389).

Mr. LOGAN, from the Committee on Claims, to which was referred the bill (S. 826) for the relief of Tampa Marine Co., a corporation, of Tampa, Fla., reported it with an amendment and submitted a report (No. 390) thereon.

Mr. BORAH, from the Committee on the Judiciary, to which was referred the bill (S. 2018) relative to Members of Congress acting as attorneys in matters where the United States has an interest, reported it with amendments and submitted a report (No. 391) thereon.

Mr. THOMAS of Oklahoma, from the Committee on Indian Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 1657. An act to amend section 3 of the act entitled "An act to extend the period of restriction in lands of certain members of the Five Civilized Tribes, and for other purposes", approved May 10, 1928 (45 Stat.L. 496), as amended by the act of February 14, 1931 (46 Stat.L. 1108) (Rept. No. 392); and

S. 1874. An act relative to leasing restricted lands of Indians of the Five Civilized Tribes of Oklahoma, and for other purposes (Rept. No. 393).

Mr. KING, from the Committee on the District of Columbia, to which was referred the bill (S. 2508) authorizing the Secretary of the Interior, with the approval of the National Capital Park and Planning Commission and the Attorney General of the United States, to make equitable adjustments of conflicting claims between the United States and other claimants of lands along the shores of the Potomac River, Anacostia River, and Rock Creek in the District of Columbia reported it with an amendment and submitted a report (No. 394) thereon.

He also, from the same committee, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 195. An act respecting contracts of industrial life insurance in the District of Columbia (Rept. No. 395); and

H.R. 6228. An act to provide for the appointment of a commission to establish the boundary line between the District of Columbia and the Commonwealth of Virginia (Rept. No. 396).

EXPENSES OF INVESTIGATION OF SENATORIAL CAMPAIGN EXPENDITURES

Mr. BYRNES. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably, with an amendment, Senate Resolution 174, submitted by Mr. CONNALLY on February 6, 1934, and I ask unanimous consent for its present consideration.

There being no objection, the Senate proceeded to consider the resolution.

The amendment of the Committee to Audit and Control the Contingent Expenses of the Senate was, in line 7, after the words "sum of", to strike out "$6,000" and insert "$5,000".

The amendment was agreed to.

The resolution, as amended, was agreed to, as follows:

Resolved, That the special committee authorized and directed to investigate the campaign expenditures of the various Presidential and Vice-Presidential candidates and candidates for the United States Senate, and other matters thereto related, in primaries, conventions, and general elections in 1932, is hereby authorized to expend from the contingent fund of the Senate the sum of $5,000, or so much thereof as may be found necessary, in addition to the amount heretofore authorized for said purpose.

ENROLLED JOINT RESOLUTION PRESENTED

Mrs. CARAWAY, from the Committee on Enrolled Bills, reported that on February 27, 1934, that committee presented to the President of the United States the enrolled joint resolution (S.J.Res. 80) authorizing the President to invite the States of the Union and foreign countries to participate in the International Petroleum Exposition at Tulsa, Okla., to be held May 12 to May 19, 1934, inclusive.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McNARY:

A bill (S. 2924) to include within the Deschutes National Forest, in the State of Oregon, certain public lands within the exchange boundaries thereof; to the Committee on Agriculture and Forestry.

By Mr. KING:

A bill (S. 2925) to amend the act entitled "An act to establish a code of law for the District of Columbia, approved March 3, 1901", and the acts amendatory thereof and supplemental thereto; to the Committee on the District of Columbia.

(Mr. WAGNER introduced Senate bill 2926, which appears under a separate heading.)

By Mr. PITTMAN:

A bill (S. 2927) for the relief of Las Vegas Hospital Association, Las Vegas, Nev.; to the Committee on Claims.

By Mr. HAYDEN:

A bill (S. 2928) to amend the act of Congress approved June 7, 1924, commonly called the "San Carlos Act", and acts supplementary thereto; to the Committee on Indian Affairs.

(Mr. WALSH introduced Senate bill 2929, which appears under a separate heading.)

By Mr. JOHNSON:

A bill (S. 2930) to authorize a lower rate of interest under certain circumstances for construction loans in the case of vessels built on the Pacific coast; to the Committee on Commerce.

By Mr. SHEPPARD:

A bill (S. 2931) for the relief of the heirs of Frank Boddeker; to the Committee on Claims.

(Mr. FLETCHER introduced Senate bill 2932, which appears under a separate heading.)

AMENDMENT OF NATIONAL RECOVERY ACT—NATIONAL LABOR BOARD

Mr. WAGNER. Mr. President, I desire to introduce a bill and to make a brief statement in explanation of it.

The bill which I am introducing is designed to clarify and fortify the provisions of section 7 (a) of the National Industrial Recovery Act, and to provide means of administering them through the legislative establishment of a national labor board with adequate enforcement powers.

The keynote of the recovery program is organization and cooperation. Employers are allowed to unite in trade associations in order to pool their information and experience and make a concerted drive upon the problems of modern industrialism. If properly directed, this united strength will result in unalloyed good to the Nation. But it is fraught with great danger to workers and consumers if it is not counterbalanced by the equal organization and equal bargaining power of employees. Such equality is the central need of the economic world today. It is necessary to insure a wise distribution of wealth between management and labor, to maintain a full flow of purchasing power, and to prevent recurrent depressions.

Genuine collective bargaining is the only way to attain equality of bargaining power. By section 7 (a) of the Recovery Act, Congress attempted to open the avenues to collective bargaining by restating the right of employees to act through representatives of their own choosing, free from the influence of employers. But section 7 (a) did not outlaw the specific practices by which some employers set up insuperable obstacles to genuine collective bargaining.

The greatest obstacles to collective bargaining are employer-dominated unions, which have multiplied with amazing rapidity since the enactment of the recovery law. Such a union makes a sham of equal bargaining power by restricting employee cooperation to a single employer unit at a time when business men are allowed to band together in large groups. It deprives workers of the wider cooperation which is necessary, not only to uphold their own end of the labor bargain but to stabilize and standardize wage levels, to cope with the sweatshop and the exploiter, and to exercise their proper voice in economic affairs.

Under the employer-dominated union, the worker, who cannot select an outside representative to bargain for him, suffers two fatal handicaps. In the first place, he has only slight knowledge of the labor market, or of general business conditions. His trade is tending a machine. If forbidden to hire an expert in industrial relationships, he is entirely ineffectual in his attempts to take advantage of legitimate opportunities.

No one would suggest that employers should not be allowed to employ outside lawyers, financial experts, or advisers. Secondly, only representatives who are not subservient to the employer with whom they deal can act freely in the interest of employees. Simple, common sense tells us that a man does not possess this freedom when he bargains with those who control his source of livelihood.

For these reasons the very first step toward genuine collective bargaining is the abolition of the employer-dominated union as an agency for dealing with grievances, labor disputes, wages, rules, or hours of employment.

The bill which I am introducing today forbids any employer to foster or participate in or influence any organization which deals with problems that should be covered by a genuine labor union. At the same time it does not prevent employers from forming or assisting associations which exist to promote the health or general welfare of workers, to provide group insurance, or for other similar purposes. Employer-controlled organizations should be allowed to serve their proper function of supplementing trade unionism, but they should not be allowed to supplant or destroy it.

Failure to meet the problem of employer domination over employee organizations has not been the only defect of section 7 (a) of the Recovery Act. This section provides that employees shall be free to choose their own representatives. It has been interpreted repeatedly to mean that any employee at any time may choose his own representative or may elect to deal individually with his employer. Such an interpretation, which illegalizes the closed union shop, strikes a death blow at the practice and theory of collective bargaining. It allows the unscrupulous employer to divide the workers against themselves. No real advocate of collective bargaining would argue that a worker should be free to bargain individually even after the overwhelming majority of his coworkers desire an agreement covering all.

The new legislation which I am proposing does not dictate any policy as to the closed union shop. That is a problem which labor must work out for itself. But the bill does make it clear that section 7 (a) was not intended to ban the closed union shop, and that Congress never intended to place employees in a worse position than they were before the Recovery Act was passed.

The third major defect of section 7 (a) is that it guarantees employees the right to organize, but not the right to recognition. My 6 months' experience as chairman of the National Labor Board has proved conclusively to me that the second guaranty should be firmly established by Congress. Over 70 percent of the disputes coming before the Labor Board have been caused by the refusal of employers to deal with representatives chosen by their workers.

The new bill, if enacted into law, will remedy this evil. It is modeled upon the successful experience of the Railway Labor Act, which provides that employers shall actually recognize duly chosen representatives and make a reasonable effort to deal with them and to reach satisfactory collective agreements.

The new bill sets up a permanent National Labor Board, with 2 representatives of employers, 2 of employees, and 3 of the general public; and there are provisions for the establishment of regional or local boards. The board will have power to prevent violations of the substantive features of the law by restraining orders, enforced through the courts in the same manner as the orders of the Federal Trade Commission.

In addition, the National Labor Board is given the powers of subpena and investigation necessary for the proper exercise of its various functions.

The National Labor Board, under the new legislation, is not designed to act chiefly as a policeman or a judge. Its

chief function will be to mediate and conciliate industrial disputes, and to offer its services as an arbitrator whenever the parties so desire. It will continue to promote peace rather than strife, and to appeal primarily to the better judgment and good intentions of industry and labor. My experience as chairman of the National Labor Board has confirmed my belief that most employers and employees desire to obey the law. But safeguards must be set up against the devastating effects of unfair minorities who force almost all to follow similar tactics.

The recovery program has achieved remarkable results in increasing employment, swelling the volume of industrial activity, and promoting confidence. It has made relatively slow progress in affecting that fair distribution of purchasing power upon which permanent prosperity must rest. Today, despite the minimum-wage provisions of the codes, the purchasing power of the individual employee working full time is less than it was during March of last year. This situation cannot be remedied by new codes or by general exhortations. It can be remedied only when there is genuine cooperation between employers and employees, on a basis of equal bargaining power. The only road to this goal is the free and unhampered development of real employee organizations and their complete recognition. Such development was promised by the Recovery Act. It should be guaranteed by enactment of the new legislation which is being proposed today.

Mr. President, I desire to state that this proposed legislation reflects only my own views. It does not reflect the views of the National Labor Board, because I have not submitted the bill to that Board for consideration, nor does it reflect the views of any other public official.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2926) to equalize the bargaining power of employers and employees, to encourage the amicable settlement of disputes between employers and employees, to create a National Labor Board, and for other purposes, was read twice by its title, and was referred to the Committee on Education and Labor.

Mr. WAGNER subsequently said: Mr. President, this morning I introduced a bill upon which I made a short statement explanatory of its provisions. I ask unanimous consent that in conjunction with my remarks the bill may be printed in full in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

Be it enacted, etc.—

TITLE I

SECTION 1. This act may be cited as the "Labor Disputes Act."

SEC. 2. The tendency of modern economic life toward integration and centralized control has long since destroyed the balance of bargaining power between the individual employer and the individual employee, and has rendered the individual, unorganized worker helpless to exercise actual liberty of contract, to secure a just reward for his services, and to preserve a decent standard of living, with consequent detriment to the general welfare and the free flow of commerce. Inadequate recognition of the right of employees to bargain collectively through representatives of their own choosing has been one of the causes of strikes, lock-outs, and similar manifestations of economic strife, obstructing commerce and imperiling the general welfare. It is hereby declared to be the policy of Congress to remove obstructions to the free flow of commerce, to encourage the establishment of uniform labor standards, and to provide for the general welfare, by removing the obstacles which prevent the organization of labor for the purpose of cooperative action in maintaining its standards of living, by encouraging the equalization of the bargaining power of employers and employees, and by providing agencies for the peaceful settlement of disputes.

SEC. 3. When used in this act—

(1) The term "person" includes individual, partnership, association, corporation, and the legal representative, trustee in bankruptcy, receiver, or trustee thereof, or the legal representative of a deceased person.

(2) The term "employer" means a person who has one or more employees, except that the term "employer" shall not include the United States, or any State, municipal corporation, or other governmental instrumentality, or any person subject to the Railway Labor Act, as amended from time to time, or any labor organization, or anyone acting in the capacity of officer or agent of such labor organization.

(3) The term "employee" means any individual employed by an employer under any contract of hire, oral or written, express or implied (including any contract entered into by any helper or assistant of any such individual, whether paid by him or his employer, if such assistant or helper is employed with the knowledge, actual or constructive, of the employer), or any individual formerly so employed whose work has ceased as a consequence of, or in connection with, any current labor dispute or because of any unfair labor practice: *Provided*, That the term "employee" shall not include an individual who has replaced a striking employee. Wherever the term "employee" is used, it shall not be limited to mean the employee of a particular employer, but shall embrace any employee, unless the act explicitly states otherwise.

(4) The term "representatives" includes any individual or labor organization.

(5) The term "labor organization" means any organization, labor union, association, corporation, or society of any kind in which employees participate to any degree whatsoever, which exists for the purpose, in whole or in part, of dealing with employers concerning grievances, labor disputes, wages, or hours of employment.

(6) The term "commerce" means trade or commerce, or any transportation or communication relating thereto, among the several States, or between the District of Columbia or any Territory of the United States and any State or other Territory, or between any foreign country and any State, Territory, or the District of Columbia, or within the District of Columbia or any Territory, or between points in the same State, but through any other State or any Territory or the District of Columbia or any foreign country.

(7) The term "unfair labor practice" means any unfair labor practice listed in section 5.

(8) The term "National Labor Board" means the National Labor Board created by section 201 of this act.

SEC. 4. Employees shall have the right to organize and join labor organizations, and to engage in concerted activities, either in labor organizations or otherwise, for the purposes of organizing and bargaining collectively through representatives of their own choosing or for other purposes of mutual aid or protection.

SEC. 5. It shall be an unfair labor practice for an employer, or anyone acting in his interest, directly or indirectly—

(1) To attempt, by interference, influence, restraint, favor, coercion, or lock-out, or by any other means, to impair the right of employees guaranteed in section 4.

(2) To refuse to recognize and/or deal with representatives of his employees, or to fail to exert every reasonable effort to make and maintain agreements with such representatives concerning wages, hours, and other conditions of employment.

(3) To initiate, participate in, supervise, or influence the formation, constitution, bylaws, other governing rules, operations, policies, or elections of any labor organization.

(4) To contribute financial or other material support to any labor organization by compensating anyone for services performed in behalf of any labor organization, or by any other means whatsoever.

(5) To fail to notify employees in accordance with the provisions of section 304 (b).

(6) To engage in any discriminatory practice as to wage or hour differentials, advancement, demotion, hire, tenure of employment, reinstatement, or any other condition of employment which encourages membership or nonmembership in any labor organization: *Provided*, That where a contract or agreement of any kind is or shall be in force between an employer and a group of employees, the provisions of such contract or agreement regarding conditions of employment shall not, because of anything contained in this paragraph, compel an employer to observe similar conditions of employment in his relations with all his employees: *Provided further*, That nothing in this act shall preclude an employer and a labor organization from agreeing that a person seeking employment shall be required, as a condition of employment, to join such labor organization, if no attempt is made to influence such labor organization by any unfair labor practice, if such labor organization is composed of at least a majority of such employers' employees, and if the said agreement does not cover a period in excess of 1 year.

SEC. 6. The several district courts of the United States are hereby invested with jurisdiction to prevent and restrain any unfair labor practice that burdens or affects commerce or obstructs the free flow of commerce, or has led or tends to lead to a labor dispute that might affect or burden commerce or obstruct the free flow of commerce, and it shall be the duty of the several district attorneys of the United States, but solely at the request of the National Labor Board, in their respective districts, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain any such unfair labor practices.

TITLE II

SEC. 201. There is hereby created a Board, to be known as the "National Labor Board" (hereinafter referred to as the "Board"), which shall be composed of seven members, to be appointed by the President, by and with the advice and consent of the Senate. Two of such members shall, at the time of nomination, be designated as representatives of employers, 2 as representatives of employees, and 3 as representatives of the general public. The members representing the general public shall be appointed for terms of 5 years each, and the other members shall be appointed for terms of 1 year each, and all members shall be eligible for reappointment. Any person chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he

shall succeed. The President shall designate one of the members representing the general public as Chairman of the Board. No member representing the general public shall engage in any other business, vocation, or employment. A vacancy in the Board shall not impair the right of the remaining members to exercise all the powers of the Board. The Board shall have an official seal, which shall be judicially noticed.

SEC. 202. (a) Each member representing the general public shall receive a salary of $10,000 a year. The other members shall each receive $25 per diem and necessary traveling and subsistence expenses when attending meetings of the Board. The Board shall appoint and fix the compensation of an executive secretary, and it shall have authority to appoint and fix the compensation of such attorneys, special experts, examiners, mediators, clerks, and other employees, and to establish such regional or local boards as it may from time to time find necessary for the proper performance of its duties and as may be from time to time appropriated for by Congress. The Board may make such appointments without regard to the civil service laws or the Classification Act of 1923, as amended. The Board is directed to retain the officers and employees of the National Labor Board created by the President on August 5, 1933, to the fullest extent consistent with the efficient functioning of the Board.

(b) All the expenses of the Board, including all necessary traveling expenses outside the District of Columbia incurred by the members or employees of the Board under its orders, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Board or by any individual it designates for that purpose.

SEC. 203. The principal office of the Board shall be in the District of Columbia, but it may meet and exercise all its powers at any other place. The Board may, by one or more of its members or by such employees as it may designate, prosecute any inquiry necessary to its duties in any part of the United States. A member who participates in such an inquiry shall not be disqualified from subsequently participating in a decision of the Board in the same case.

SEC. 204. The Board may, either by itself or through its agents, offer its services to the parties to any labor dispute as conciliator or mediator in such dispute, and may act as conciliator or mediator for the parties who accept such offer.

SEC. 205. (a) The Board is empowered to prevent any person from engaging in any unfair labor practice that burdens or affects commerce or obstructs the free flow of commerce, or has led or tends to lead to a labor dispute that might burden or affect commerce or obstruct the free flow of commerce.

(b) Whenever any member of the Board, or the executive secretary, or any person designated for such purpose by the Board, shall have reason to believe, from information acquired from any source whatsoever, that any person has engaged in or is engaging in any such unfair labor practice, he shall in his discretion issue and cause to be served upon such person a complaint stating the general nature of the charges in that respect, and containing a notice of hearing before either an examiner or the Board at a place therein fixed, not less than 24 hours after the service of said complaint, but the examiner or the Board shall have discretion to continue or adjourn such hearing from time to time. Any such complaint may be amended by any member of the Board or by any person designated for that purpose by the Board at any time prior to the issuance of an order based thereon; and the original complaint shall not be regarded as limiting the scope of the inquiry. The person so complained of shall have the right to file an answer, to appear and give testimony at the place and time fixed in the complaint, and to avail himself of the compulsory process of the Board in summoning witnesses in his behalf. In the discretion of the examiner or the Board, any other person shall be allowed to appear in the said proceeding by counsel or in person to present testimony. In any such proceeding, the examiner or the Board shall not be bound by the rules of evidence prevailing in courts of law or equity.

(c) The testimony taken by an examiner or the Board shall be reduced to writing and filed in the office of the executive secretary. Thereafter, in its discretion, the Board may itself take further testimony and/or hear argument. If upon all the testimony taken, the Board shall be of the opinion that any person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue an appropriate order directed to such person. The order may require such person to cease and desist from such unfair labor practice, or to take affirmative action, or to pay damages, or to reinstate employees, or to perform any other acts that will achieve substantial justice under the circumstances. Such order may further require such person to make a report from time to time showing the extent to which he has complied with the order. Until a transcript of the record in a case shall have been filed in a court, as hereinafter provided, the Board may at any time, upon such notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any finding or order made or issued by it.

(d) If such person fails or neglects to obey such order of the Board while the same is in effect, the Board may petition any district court of the United States within any district wherein the labor practice in question was engaged in or wherein such person resides or carries on business, or the Supreme Court of the District of Columbia, for the enforcement of the order of the Board, and shall certify and file in the court a transcript of the record upon which such order was entered, together with a copy of the findings and the order of the Board. Upon such filing of the petition and transcript, the court shall place such petition upon its motion or equity calendar and shall cause notice thereof to be served upon such person, and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree affirming, modifying, or setting aside in whole or in part the order of the Board. No objection to the order of the Board shall be considered by the court unless such objection shall have been urged before the Board. The findings of the Board as to the facts, if supported by evidence, shall be conclusive. If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the hearing before the Board, the court may order such additional evidence to be taken before the Board and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Board may modify its findings as to the facts, or make new findings, by reason of additional evidence so taken, and it shall file such modified or new findings, which, if supported by evidence, shall be conclusive, and shall file its recommendations, if any, for the modification or setting aside of its original order. The jurisdiction of the court shall be exclusive and its judgment and decree, affirming, modifying, or setting aside, in whole or in part, any order of the Board, shall be final, except that the same shall be subject to review by the appropriate Circuit Court of Appeals or the Court of Appeals of the District of Columbia, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U.S.C., title 28, secs. 346 and 347). The commencement of proceedings under this subsection shall not, unless specifically ordered by the court, operate as a stay of the Board's order.

(e) Any person aggrieved by an order of the Board may obtain a review of such order in any district court of the United States in the district wherein the unfair labor practice in question was engaged in or wherein such person resides or carries on business, or in the Supreme Court of the District of Columbia, by filing in such court, within 10 days after the entry of such order, a written petition praying that the order of the Board be modified or be set aside in whole or in part. A copy of such petition shall be forthwith served upon the Board, and thereupon the aggrieved party shall file in the court a transcript of the record, certified by the Board, upon which the order complained of was entered, together with a copy of the findings and order of the Board. No objection to the order of the Board shall be considered by the court unless such objections shall have been urged before the Board. The findings of the Board as to the facts, if supported by evidence, shall be conclusive. If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the hearing before the Board, the court may order such additional evidence to be taken before the Board and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Board may modify its findings as to the facts, or make new findings, by reason of the additional evidence so taken, and it shall file such modified or new findings, which, if supported by evidence, shall be conclusive, and shall file its recommendations, if any, for the modification or setting aside of its original order. The jurisdiction of the court shall be exclusive and its judgment and decree, affirming, modifying, or setting aside, in whole or in part, any order of the Board, shall be final, except that the same shall be subject to review by the appropriate circuit court of appeals or the Court of Appeals of the District of Columbia, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U.S.C., title 28, secs. 346 and 347). The commencement of proceedings under this subsection shall not, unless specifically ordered by the court, operate as a stay of the Board's order.

(f) No court shall have any jurisdiction to enjoin the Board or an examiner from taking action or holding hearings under a complaint.

(g) Petitions filed under this act shall be heard expeditiously, and if possible within 10 days after they have been docketed.

(h) Complaints, orders, and other process of the Board and its agents may be served by anyone duly authorized by the Board, either (1) by delivering a copy thereof to the person to be served, or to a member of the partnership to be served, or to the president, secretary, or other executive officer, or a director of the corporation to be served; or (2) by leaving a copy thereof at the principal office or place of business of such person, partnership, or corporation; or (3) by registering and mailing a copy thereof addressed to such person, partnership, or corporation at his or its principal office or place of business; or (4) by sending a telegraphic copy thereof addressed to such person, partnership, or corporation at his or its principal office or place of business. The verified return by the person so serving said complaint, order, or other process setting forth the manner of said service shall be proof of the same, and the return post-office receipt or telegraph receipt for said complaint, order, or other process registered and mailed or telegraphed as aforesaid shall be proof at the service of the same.

SEC. 206. (a) The Board shall have power to act as arbitrator in labor disputes. When any of the parties to a labor dispute agree to submit the whole or any part thereof to the arbitration of the

Board, and the Board accepts such submission, the agreement shall be valid, irrevocable, and enforceable as to the submitting parties save upon such grounds as exist at law or in equity for the revocation of any contract. In any case accepted by it for arbitration the Board shall have power to issue an award applicable to the submitting parties.

(b) Unless a party to the arbitration has otherwise stipulated at the time of the submission of the case to the Board, any party to the arbitration, or the Board itself, may within 1 month after the award is made, apply to the Supreme Court of the District of Columbia for an order confirming the award, and thereupon the court shall grant such an order unless the award is vacated, modified, or corrected as hereinafter prescribed. Notice of the application shall be served upon the other parties to the arbitration by the marshal of any district within which they may be found, in like manner as any other process of such court, and thereupon such court shall have jurisdiction of such parties as though they had appeared generally in the proceeding.

(c) The court may make an order vacating the award upon the application of any party to the arbitration if the Board exceeded its powers or executed them so imperfectly that a mutual and definite award upon the subject matter was not made. The court may make an order modifying or correcting the award upon the application of any party to the arbitration if (1) the award covers a matter not submitted to the Board (unless the award upon such matter does not affect the merits of the decision upon the matter submitted) or (2) the award is imperfect in matter of form not affecting the merits of the controversy. The order may modify or correct the award so as to effect the intention thereof and promote justice between the parties. A party to the arbitration, claiming to be aggrieved by the award, may apply to the court, within 1 week after the award is made, for an order vacating, modifying, or correcting the award. Notice of such application shall be served upon all other parties to the arbitration proceeding or their attorneys, by the marshals of the respective districts within which such parties may be found. For the purposes of the application, any judge who might make an order to stay the proceedings in any action brought in the same court may make an order, to be served with the notice of the application, staying the enforcement of the award.

(d) The party applying for an order confirming, modifying, or correcting an award shall, at the time the application is filed, also file the following pages with the clerk of the court: (1) An agreement to arbitrate; (2) the award of the Board; and (3) each notice, affidavit, or other paper used upon an application to confirm, modify, or correct the award, and a copy of each order of the court upon any such application. The order shall be docketed as if it were rendered in a suit in equity and shall have the same force and effect, in all respects, as, and be subject to all the provisions of law relating to, a decree in a suit in the court in which it is entered; and it may be enforced as if it had been rendered in a suit in the court in which it is entered.

SEC. 207. (a) In any dispute as to who are the representatives of employees, the Board, if the dispute might burden or affect commerce or obstruct the free flow of commerce, may investigate such dispute and certify to the parties, in writing, the name or names of the individuals or labor organizations that have been designated and authorized to represent employees. In any such investigation the Board shall be authorized to take a secret ballot of employees, or to utilize any other appropriate method to ascertain their representatives. The Board shall decide whether eligibility to participate in elections shall be determined on the basis of employer unit, craft unit, plant unit, or other appropriate grouping.

(b) In any dispute not of the character described in subsection (a), as to who are the representatives of employees, the Board may offer its services to aid in determining who are employees' representatives.

SEC. 208. For the purpose of all hearings and investigations which, in the opinion of the Board, are necessary and proper for the exercise of the powers vested in it by sections 205 and 207 (a)—

(1) Any member of the Board, or any agent designated by it for such purposes, is empowered to administer oaths and affirmations, to take depositions, subpena witnesses, take evidence, and require the production of any books, papers, or other documents which the Board deems relevant or material to the inquiry. Such attendance of witnesses and the production of such documentary evidence may be required from any place in the United States or any Territory or possession thereof at any designated place of hearing.

(2) In case of contumacy or refusal to obey a subpena issued to any person, any district court of the United States, the United States courts of any Territory or possession, and the Supreme Court of the District of Columbia, within the jurisdiction of which said person guilty of contumacy or refusal to obey is found or resides, upon application by the Board, shall issue to such person an order requiring such person to appear before the Board, or an examiner designated by it, there to produce documentary evidence, if so ordered, or there to give evidence touching the matter in question; and any failure to obey such order of the court may be punished by said court as a contempt thereof.

(3) No person shall be excused from attending and testifying or from producing books, papers, contracts, agreements, and other documents before the Board, or in obedience to the subpena of the Board or any member thereof or any agent designated by it, or in any cause, proceeding, or investigation instituted by the Board, on the ground that the testimony or evidence, documentary or otherwise, required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no individual shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, documentary or otherwise, except that such individual so testifying shall not be exempt from prosecution and punishment for perjury committed in so testifying.

(4) Witnesses summoned before the Board or any of its examiners shall be paid the same fees and mileage that are paid witnesses in the courts of the United States, and witnesses whose depositions are taken and the persons taking the same shall severally be entitled to the same fees as are paid for like services in the courts of the United States.

(5) The several departments and agencies of the Government, when directed by the President, shall furnish the Board, upon its request, all records, papers, and information in their possession relating to any matter before the Board.

SEC. 209. The Board shall have authority from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this act. Such rules and regulations shall be effective upon publication in the manner which the Board shall prescribe.

SEC. 210. Any person who shall willfully assault, resist, prevent, impede, or interfere with any member of the Board or any of its agents in the performance of his duties pursuant to section 205 or section 207 (a), shall be punished by a fine of not more than $5,000, or by imprisonment for not more than 1 year, or both.

TITLE III

SEC. 301. There is hereby created in the Department of Labor the United States Conciliation Service, under the direction of a Director of Conciliation. The Secretary of Labor shall appoint and fix the compensation of such Director, and shall have authority to appoint and fix the compensation of such commissioners of conciliation, clerks, and other officers and employees as he may from time to time find necessary for the proper performance of the duties of the Service, and as may from time to time be appropriated for by Congress. The Secretary of Labor may make such appointments without regard to the provisions of the civil-service laws or the Classification Act of 1923, as amended.

SEC. 302. It shall be the duty of the United States Conciliation Service, whenever the Director deems it desirable, to offer its services to the parties to any labor dispute, and to attempt to adjust such dispute by conciliation or mediation, or by arranging for voluntary arbitration. Nothing in this title shall limit the power given to the Secretary of Labor under section 8 of the act of March 4, 1913 (U.S.C., title 5, sec. 619).

SEC. 303. Nothing in this act shall be construed so as to interfere with or impede or diminish in any way the right to strike.

SEC. 304. (a) Wherever the application of the provisions of section 7 (a) of the National Industrial Recovery Act and/or of the act entitled "An act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes", approved March 23, 1932 (U.S.C., title 29, secs. 101–115), conflicts with the application of the provisions of this act, the provisions of this act shall prevail: *Provided*, That in any situation where the provisions of this act cannot be validly enforced the provisions of section 7 (a) of the National Industrial Recovery Act and/or of such act of March 23, 1932, shall apply.

(b) Any term of a contract or agreement of any kind which conflicts with the provisions of this act is hereby abrogated, and every employer who is a party to such contract or agreement shall immediately so notify his employees by appropriate action.

SEC. 305. If any provision of this act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this act, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

EMERGENCY FINANCIAL FACILITIES FOR MUNICIPALITIES

Mr. WALSH. Mr. President, I ask leave to introduce a bill to amend the Reconstruction Finance Corporation Act so as to extend the provisions thereof to provide emergency financial facilities for the municipalities of the Nation.

In brief, the measure is similar to House bill no. 3082, introduced in the House of Representatives by Representative EDWARD A. KENNEY, of New Jersey, which has for its purpose the extension of authority to the Reconstruction Finance Corporation to make loans to municipalities upon the pledge of their tax anticipation warrants.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2929) to amend the Reconstruction Finance Corporation Act so as to extend the provisions thereof to provide emergency financial facilities for the municipalities of the Nation was read twice by its title and referred to the Committee on Banking and Currency.

AMENDMENTS TO REVENUE BILL

Mr. BORAH submitted amendments intended to be proposed by him to the bill (H.R. 7835) to provide revenue,

equalize taxation, and for other purposes, which were referred to the Committee on Finance and ordered to be printed.

ACTIVITIES OF DEALERS IN ARMS AND MUNITIONS—CHANGE OF REFERENCE

Mr. PITTMAN. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be discharged from the further consideration of the resolution (S.Res. 179) directing an investigation into the activities of manufacturers of and dealers in war munitions, and that the resolution be referred to the Committee on Military Affairs, which committee should have jurisdiction over the proposed investigation.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

CONSTRUCTION OF DAMS AND DIKES IN OREGON

Mr. McNARY. Mr. President, I submit a concurrent resolution, which involves the changing of a date, and after it shall have been read by the clerk I will ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The clerk will read the concurrent resolution for the information of the Senate.

The concurrent resolution (S.Con.Res. 10) was read, as follows:

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate be, and he is hereby, authorized and directed, in the enrollment of the bill (S. 1759) to extend the time for the construction of dams and dikes in Lincoln County, Oreg., to prevent the flow of waters of Yaquina Bay and River into Nute's Slough, Boones Slough, and sloughs connected therewith, to correct an error by striking out, in line 1 of the House engrossed amendment, the words "June 13" and inserting in lieu thereof "June 17."

Mr. McNARY. I ask unanimous consent for the present consideration of the resolution.

There being no objection, the concurrent resolution was considered and agreed to.

FEDERAL EMERGENCY RELIEF FUNDS

Mr. ASHURST. Mr. President, I am in receipt of the following letter from Aubrey Williams, Assistant Administrator of the Federal Emergency Relief Administration:

FEDERAL EMERGENCY RELIEF ADMINISTRATION,
Washington, February 28, 1934.

Hon. HENRY F. ASHURST,
United States Senate, Washington, D.C.

MY DEAR SENATOR ASHURST: I am in receipt of your letter of February 24. We are putting into Arizona for transient care something like $250,000 per month, more than in any other State in the Union, more than we are putting into Mississippi, Arkansas, Louisiana, Tennessee, and Missouri combined.

Very truly yours,

AUBREY WILLIAMS,
Assistant Administrator.

OUR TRANSPORTATION PUZZLE—CAN IT BE SOLVED?—ADDRESS BY M. J. GORMLEY

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the RECORD an address by M. J. Gormley, president of the American Railway Association, on the subject, "Our Transportation Puzzle—Can It Be Solved?" The address was delivered before the Traffic Club of New England in Boston, Mass., on February 19, 1934. Mr. Gormley received high praise for his address. Among those who considered it one of the ablest discourses on the subject is Representative HAROLD KNUTSON, of Minnesota.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In selecting for my subject, Our Transportation Puzzle—Can It Be Solved? I feel that a word of explanation is necessary. There are all kinds of puzzles. Some of them, such as, for instance, a jig saw, with 1,500 to 2,000 pieces, can be worked only with much painstaking effort and require the expenditure of much time. If, after successfully putting one of these together, one breaks it up and endeavors to do it again, it is just as difficult a process as the first time. This type of puzzle can be solved only by trial and error, and very little knowledge can be gained in solving it once which is of any value in a second attempt.

Other puzzles, while seemingly intricate, are simple of solution if they are approached from the standpoint of a sound foundation and a real desire to solve them correctly. I believe our transportation puzzle is of this type. If this be true, it follows that now is the time when it should be solved, beginning with the foundation of a correct mental attitude on the part of all, to produce a national transportation machine adapted to the needs of commerce as well as to national defense, rather than to deal with the problem from the standpoint of a time-consuming and laborious trial-and-error method. Too much is involved, and too many people are dependent upon the railroads and transportation in general, both for service and livelihood, for us to continue to risk the hit-or-miss effort such as is ultimately successful in solving a jig-saw puzzle.

In reviewing our present transportation problem it is necessary to divide it into several parts, or shall we say puzzles. As to one of these, the resolution is principally in the hands of railroad officers; and the public, while having a decided interest in the first puzzle, must largely assume the responsibility for the solution of the others.

1. Are radical changes necessary in methods of railroad operation or in railroad facilities? The answer to this should lie with the railroads in the final analysis, but their answer must necessarily have as its basis the requirements of the public which they serve.

2. Should all forms of transportation be regulated; should any form of transportation receive Government aid in the form of subsidies to enable it to compete with any other form of transportation not subsidized? The public alone can solve this puzzle.

3. What is the proper relationship between railroad management and railroad labor? The public, to a very large extent, can determine this.

With respect to puzzle no. 1: There have been radical changes in methods of railroad operation and in railroad facilities in the past 10 years. With the adoption by the railroads in 1923 of their program for rehabilitation to meet the increasing demands of transportation, after the return of the railroads to their owners following Government operation, there has been constant change and improvement since that time, principally the result of large expenditures made for new equipment and facilities, roadways, including signals, and many innovations too numerous to mention. During this period we have seen the adoption of the air-conditioned train, and more recently the streamlined train, and various other improvements in passenger service. Even the humble iron horse has shown improvement in the past 10 years far beyond the dreams of a few short years ago.

We have also seen during this period the placing in service of 898,241 freight cars, and the retirement of greater numbers of old and obsolete cars; 15,466 new locomotives have been placed in service. We have seen an increased speed in the movement of freight trains between terminals of more than 40 percent. We have seen greater cooperation on the part of shippers, through advisory boards and otherwise, in the loading and unloading of equipment more promptly. But the money which was put into these new cars and locomotives was not spent for expansion of the railroad plant. Retirements were made in greater number than additions, with the result that the railroads now own, not including private refrigerator cars, approximately 375,000 less cars and 15,000 less locomotives than at the high point of ownership. No one can say definitely what this reduction in the ownership of cars and locomotives has meant in the annual reduction of operating expenses of the railroads, but we are on the safe side in saying that it means more than $100,000,000 per year.

Railroad progress and development, in the final analysis, can be judged by two things:

Is the service to the public improved, and has the cost of transportation been reduced?

A brief answer to these two questions, without going into all of the details, is as follows: In 1929 the railroads handled the heaviest freight traffic in their history. If the unit cost of operation had been the same during 1929 as it was in 1920, it would have cost the railroads $1,212,899,000 more to handle the 1929 traffic than it actually did cost. Even making the comparison with a more recent year than 1920, and taking a year which represented the peak of freight traffic at that time, we find that if there had been no reduction in the unit cost of railroad operation between 1923 and 1929, it would have cost the railroads $521,003,000 more to handle the 1929 traffic than it actually did cost.

The unfortunate part of this picture, however, is that we believe the public and the regulating bodies forgot the statement in the program which the railroads adopted in 1923, reading:

"The railroads of the country are raising this enormous amount of additional capital largely through borrowed money on the abiding faith in the fairness of the American people and reliance on the continuance of the policy announced in the Transportation Act, 1920, as a measure of reasonable protection to investment in railroad property."

I believe it will be recalled that there was something in that act with reference to a fair return. I believe that, if this had not been forgotten and the entire transportation situation had been considered in its true light, the railroads would not have been forced to take a 10-percent reduction in freight rates back in 1922, at a time when industry was on the upgrade and when sound economic judgment should have dictated that there be no wholesale reduction in freight rates. Here again, we find that if the reduction referred to had not been made the net return of the railroads in 1929 would have been $454,793,000 greater than it was.

Our memories are short, but I hope, nevertheless, that some of us will remember the old-time car shortages, and particularly those which occurred in the agricultural sections of the West prior to 1923. These shortages were eliminated with that year and have never since recurred. Shippers, as well as those in pub-

lic authority, commended the railroads very freely for their accomplishment in handling the peak traffic of 1929 to the entire satisfaction of all interested. While there must be a continuing improvement in the railroads, just as in any other business, and large amounts of money spent for the elimination of obsolete equipment and other facilities from year to year, I have no patience whatever with some individuals who seem to think today that the entire railroad machine is obsolete. Upon any possible basis of reasoning, how could it become obsolete at this date, hardly 4 years after it handled the largest business ever moved, and with first-class service?

We hear a great deal today about the failure of the railroads to work together, and that is one of their difficulties. I am glad to say, gentlemen, that the railroads of the country are unanimous on their legislative program. There is not a dissent among them. Does that indicate any failure to get together? They have provided the best transportation that has ever been provided in this or any other country since they got together on their program in 1923. They have unselfishly contributed to the elimination of car shortages through a high degree of cooperation with the Car Service Division of the American Railway Association. I challenge any industry in the country to show a degree of cooperation between competing units such as that given by the railroads which enabled the abolition of car shortage. The Car Service Division was given power to take cars of any road and arbitrarily divert them to territories where car shortage threatened. This was done whenever necessary, and in no other manner could the heavy grain crops of past years have been handled without car shortage and congestion. Possibly the railroads' managers do not always agree, but why should we expect them to be a different class of human nature than we find among other people and other industries. The Interstate Commerce Commission has only 11 members, yet, as I recall, there are frequently dissenting votes in their decisions. The Supreme Court of the United States, for whom we all have the greatest respect, with only nine members, does not always agree. Yet the general public seems to think that the railroads, composed of approximately 165 class I companies, not counting the numerous short lines, should always agree.

We believe today that the railroads show as great a degree of resourcefulness and cooperation with each other as industry generally.

Another so-called "railroad evil", and one which is criticized perhaps even more than the alleged failure of the railroads to act together on matters of common interest, relates to competition between railroads. Our critics may speak loudly of the wastefulness and extravagance of competition, and admittedly there have been in the past some things which they might fairly classify in that manner. But why is so little said of the other side of of the story? Why do our friends not remember that competition between railroads has not only been encouraged in the past but has in fact been forced on the railroads by law? Why is nothing said of the benefits which have come from this now so much lamented competition? Certainly it cannot be that everyone feels there have been no benefits.

The fact of the matter is that regardless of all that has been said as to competition for the acquisition of traffic, there has been just as large an amount of competition between railroads in the cutting of costs. Rates between common points naturally find the same level as between competing railroads. If one railroad can handle the traffic more cheaply than another, that is their competitive edge, and it is one which the other road will strive to overcome, and which the first road will struggle to maintain. I think everyone will admit that there is nothing wasteful or extravagant in this type of competition; it is just the opposite. We must not forget either the very real competition which exists between officers on an individual railroad, and between divisions of the road, each striving to show the greatest efficiency and to reduce operating costs.

After all, competition exists in everything we do. We have it as between individuals and as between people in all sorts of businesses. There is only one thing which can remove it, and that is communism in its most pure form. I have never thought for one minute that the American public would ever agree to surrender the competitive rights which they have always had, and which have done more than anything else to make our country the leader in every respect which it is, and I am frank to say also that I do not expect to see this competition removed as between railroads. If there is anything wrong with it as it exists today, that can be corrected, but it is certainly not necessary to sacrifice its benefits in accomplishing this. We do not shoot a man because he has a broken arm; we correct the difficulty.

No. 2. Should all forms of transportation be regulated; should any form of transportation receive Government aid in the form of subsidies to enable it to compete with any other form of transportation not subsidized?

Now, as to puzzle no. 2: There is not much question about this being a puzzle, but it would not be if it were approached by the general public and regulatory authorities solely on the basis of the country's interest in a national transportation system adequate to the needs of commerce and national defense. It never has been approached from that standpoint. In this respect we must say, however, that the various States have made greater progress in this direction than has the Federal Government. If there has been any failure as to State regulation of means of transportation other than the railroads it has been due to the lack of Federal regulation covering interstate highway transport. Without any doubt, sound thought must finally come to the conclusion that all forms of transportation should be regulated.

The railroads were regulated originally because of their failure to avoid discrimination between shippers, communities, and otherwise. We are confronted with exactly the same discrimination today in highway and waterway transportation that confronted the public in the days when the railroads were free to make rates at will, and rebates with pleasure, or otherwise (possibly otherwise). If we found it necessary to regulate it at one time in the interest of stabilized rates, so that one shipper could know what the other was paying, there is all the more reason for doing the same thing today with respect to water and highway transportation.

In the same way the question arises as to whether the Government should subsidize any form of transportation unless it subsidizes all forms. If a highway of a certain class is adequate to take care of the needs of private automobiles, which is a social problem, why should the Government expend added money in order to provide a means of transportation for use of heavier vehicles without calling upon such vehicles to pay the added cost? The latter is an economic problem, as distinguished from the social problem involved in providing highways for the private automobile.

We believe that there is only one answer to this problem, and that is that all forms of transportation should be treated alike; in brief, all should be regulated and none should be subsidized. In other words, provide an equal opportunity for all to compete for the traffic available.

In this connection, we meet with a very peculiar situation in that the principle opponents of the suggested regulation are those who manufacture the vehicles used in transportation. I think Congress and the State legislatures would be very much shocked today if the large locomotive manufacturing companies and railroad car building companies should attempt to influence the trend of regulation so far as the railroads are concerned. If this is true, why should we permit such interference on the part of the manufacturers of motor vehicles? To my mind they have no place in the question of regulation, and should eliminate themselves from that picture.

It may also well be time for the motor group to wonder whether they are serving their own best interests by opposing proper regulation of highway transport. I believe their principal revenue comes from the sale of private cars, and while I do not know where the saturation point may be, beyond which the roads may not be used by trucks without affecting the sale of private cars, I do know that the operator of the private automobile is frequently heard to criticize the number of trucks met upon the highway and their size.

Another vital question in this connection is that of expanding the transportation machine far beyond the traffic necessities. We have a law today that prevents railroad building, except with a certificate of convenience and necessity from the Interstate Commerce Commission. They have in some cases, I am glad to say, denied such applications, and I am also sorry to know that in other cases they have not, but nevertheless the law is there to prevent overexpansion. Competitive means of transportation, however, can go merrily on extending their facilities by means other than railroad, without any regard to the fact that overexpansion of transportation ultimately is of no benefit to anyone. Here again the States have been in advance of the Federal Government, but their regulation is not as effective as it would be if there were interstate regulation of highway transport.

We also go rapidly ahead with the expansion of waterway transportation, apparently with total disregard of whether it is necessary or otherwise, and also without any definite idea as to whether or not its development is economically sound. All this seems to be done with the idea that if you provide a lot of water transportation you can force down the cost of transportation by rail. The waterways can freeze up and be inoperative for 5 or 6 months a year, but the railroad must always be available to handle all traffic under any and all conditions. Therefore, why not at least give the railroads an even break with all other means of transportation? Is anything else sound from a national transportation viewpoint?

Anything that is right, I believe, will prevail in the end. Regulation of all means of transportation, including their expansion, will some day come; the sooner the better for all interested, regardless of the railroad position with respect to these matters. Approaching this problem from its purely economic standpoint, divesting it of all political considerations, most of which are local this puzzle will be solved. It will not be solved in the interest of the railroads or in the interest of the highways or waterways but solely in the interest of the public.

Now, just a word to the traffic manager: He should be classed as a part of the public. We believe that he must look at this picture from an entirely different standpoint than he has in the past, and we believe that, instead of reporting to his boss today that he has been able to chisel a few cents off the rate and thereby save his company some money, possibly by playing the truck against the railroad, that he should be able to say to his boss that "railroad transportation has increased so much, that employment in railroad shops in our town is now 1,000 instead of 500 men, as a result of which we have a greater sale for our products than before. That is more important to us than decreased freight rates."

The Government in its wisdom and as an aid to increased employment appropriated $3,300,000,000 for public works. It might surprise some people here to know that railway expenditures for materials and supplies, capital improvements, and maintenance wages for the years 1931 to 1933, inclusive, were below the average of the preceding 8 years by over $2,000,000,000 per annum. This means that the railways' contribution to economic activity and

employment was curtailed by over $6,000,000,000 during the past 3 years. This will give you some idea as to how the railroads contribute to employment under normal conditions. Depression, of course, is responsible for the major part of the reduction, but it is certainly safe to say that if the Government regulatory bodies and others had taken seriously the statement made by the railroads in connection with their famous 1923 program that it was adopted with an abiding faith in the fairness of the American people, that at least half of this expenditure would have been made through these years, and added just as much to employment, and possibly more, as did the appropriation made by the Government for public works. I merely mention these figures as indicating the importance of the railroads to the country from the standpoint of their purchasing power. Shippers, agricultural interests, and others, in viewing this transportation situation, should take into consideration that at least 60 to 80 cents out of every dollar spent for operation or materials on the railroad goes to labor directly and indirectly.

No. 3. What is the proper relationship between railroad management and railroad labor?

Now we come to the third puzzle, and this is some puzzle. Here we find ourselves confronted with the stated position of the railroad labor organizations that there should be a reduction in the bonded indebtedness of the railroads. This is a very popular idea today. Possibly it is correct, but I would not attempt at this early age of that baby to predict where it might land on its feet finally. But I would like to have someone tell me how you are going to do it unless you have the earnings necessary to bring it about. Furthermore, how can you accomplish it, when it is considered along with the other proposals with which the railroads are confronted in Congress today, with the demands of labor for a 6-hour day, full-crew law, a pension law, and train-limit law, all of which would increase operating expenses of the railroads enormously. These are the principal bills which were pending when this was written. There is no telling how many more there are by now.

It might be sufficient to say that the 6-hour law alone (and this 6-hour day, of course, with 8 hours' pay) according to the Interstate Commerce Commission, would cost the railroads between five and six hundred million dollars annually. That is the estimate of the Interstate Commerce Commission, not that of the railroads. The latter is much higher, and we believe, correctly so. What the various other things mentioned would cost is not definitely known, but we are safe in saying that the railroad bill by these various measures would be increased at least a billion dollars a year. Now, if it is difficult under present conditions to find money with which to retire bonds, where, in heaven's name, can it ever be found to pay the bill for all these things if they ever became laws?

We believe in this respect that the employees of the railroads should approach these matters from an economic standpoint which ultimately will be in their own interest, and that is that the cost of transportation must continually be reduced to the greatest possible extent, first, to retain to the railroads such of the traffic of the country as belongs to the railroads, and secondly, by reduced costs, create necessity for increased transportation. If transportation demands increase, employment will increase, and that should be the principal interest of the railroad employees from a long-time standpoint and that is the standpoint from which they should approach it, instead of striving for possible temporary benefits.

There should be no question about the policy of permitting the railroads to lay up reserves, or in other words, "put on a little fat", during times of prosperity, in order that they may maintain a more reasonable degree of employment during periods of depression. A recognition of these facts on the part of all interested will some day, we hope, soon solve this railroad puzzle.

Give the railroads today an equality in transportation regulation with other forms of transportation, and increase their traffic by 20 to 25 percent and all other major problems relating to the railroads will disappear into thin air.

The railroads have a hard route ahead of them, but they are profiting by adversity, just as did the pioneers of this country who followed the railroads in their development of the great agricultural country of the West. In other words, they can "take it on the chin", and if the referee will give them a fair deal they will resume their rightful position in the sun.

THE N.R.A.

Mr. DUFFY. Mr. President, in connection with the discussion of the N.R.A. and small industry, I ask unanimous consent to have printed in the RECORD a short letter from a prominent manufacturer of my State.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARSHFIELD, WIS., *February 26, 1934.*

Hon. F. RYAN DUFFY,
United States Senate, Washington, D.C.

DEAR SENATOR: Certain Chicago newspapers, also a few radio speakers, are misrepresenting the N.R.A. and its codes, especially as regards what they term the ill effects on small industry.

Very much contrary to the criticism indicated above, we find our industry, which is a small one, very favorably affected by the two codes of the N.R.A. under which we are operating. Just wanted you to know that we are on the side of the N.R.A. and its codes and are pulling strongly for the President and his preponderance of loyal supporters in Washington and back home. We wish him and the administration, including your good self, every success.

Yours very truly,

FELKER BROS. MFG. CO.,
A. G. FELKER, *President.*

REGULATION OF STOCK EXCHANGES

Mr. METCALF. Mr. President, by request, I ask to have printed in the RECORD an article appearing in the Washington Post on February 24, 1934, which I think will be of interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 24, 1934]

WHITNEY DENIES SENATE CHARGE OF PROPAGANDA—SAYS WARNINGS AGAINST CONTROL BILL WERE HIS DUTY

In one of the few interviews he has ever granted, Richard Whitney, president of the New York Stock Exchange, said last night that the right of free discussion of public questions has gone, and the constitutional right of free speech no longer exists in this country, if recent charges of propagandizing hurled at him were sustained by public opinion.

The charges were made by members of the Senate Banking and Currency Committee. Whitney said they were occasioned by letters addressed by him to heads of corporations whose securities were listed on the New York exchange, calling their attention to the provisions of the pending securities bill which directly affected them and their securities.

"I think the charge is unfounded," said Whitney. "I summarized the provisions of the bill and asked the presidents of corporations having stock listed on the New York Stock Exchange to give the matter their personal consideration.

SAYS ALL BUSINESS HIT

"I think every citizen has the right to call to the attention of other citizens the provisions of pending legislation which would affect them. In this case I feel the exchange was under a duty to do so.

"The corporations listed on the exchange had paid a fee to secure a public market for their securities. The pending bill would destroy this public market and would force many corporations to withdraw from listing. I think we would have been derelict in our duty if we had not called the bill to their attention. If this is propaganda, then the right of free discussion of public questions has gone and the constitutional right of free speech no longer exists."

Whitney said the proposed bill would hurt not only the business of brokers but all American industry and business as well.

"The bill", he said, "although it purports to regulate stock exchanges, is actually cleverly devised to allow the Federal Trade Commission to dominate and regulate all American business and industry and to allow the Federal Trade Commission to dictate the credit policy of our banking system with regard to security loans, which the Glass-Steagall bill vested in the Federal Reserve Board."

DENIES CRASH BLAME

Whitney said the collapse of 1933 was not due to the speculation in one or two alcohol stocks but to other more important factors. He said security and commodity prices started to rise in April as a result of abandonment of the gold standard. The fear of an inflation of our currency stimulated business, and the earnings of corporations started to rise for the first time in nearly 3 years, he added.

"Naturally", he continued, "security prices likewise rose, but the increase in the security market was as nothing compared to the rise in commodity prices. Wheat sold at more than $1.20 a bushel, and other grains rose to equivalent levels. The stock exchange was not responsible for this.

"The collapse in July did not start in the stock market but started in the grain market, where prices had reached an unsound level. The decline in commodity prices unsettled the stock market. It is to be noted that security prices have again returned to the level reached in July, whereas grain prices are still far below the peak reached in the July movement."

THE BEET-SUGAR INDUSTRY

Mr. METCALF. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Journal of Commerce, which I think is very interesting.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Journal of Commerce]

SUGAR BLOC CARRIES FIGHT TO ROOSEVELT; ASSURED OF SUPPORT—MEMBERS OF CONGRESS FROM BEET STATES LAY THREE-POINT PROGRAM BEFORE HIM—QUOTA REMOVAL URGED, BASIC COMMODITY RATING—ALSO WANT $25,000,000 FOR BENEFIT PAYMENTS ON 1933 CROP—WALLACE AIDS STIR THE PROTEST

By Clarence L. Linz

WASHINGTON, February 20.—A better deal for the domestic beet-sugar industry was promised a congressional delegation tonight by

President Roosevelt, who gave assurances that inferences that the administration was hostile to the maintenance of this industry in the United States were not based on fact.

Aroused over the utterances before the House Agriculture Committee by A. J. S. Weaver, sugar expert of the A.A.A., and apprehensive of what was said by Assistant Secretary of Agriculture Rexford G. Tugwell, Agricultural Adjustment Administrator Chester Davis, and Dr. Mordecai Ezekial, economic adviser to the Secretary of Agriculture, the beet-sugar bloc carried to the White House the industry's three-point program.

WEAVER CENTER OF FIGHT

Disclosures made before the committee yesterday by Mr. Weaver, in effect that Agricultural Department officials believe that the beet-sugar crop should be done away with, was pretty generally confirmed today by the officials named, although the latter endeavored to reassure committee members that the present control program does not contemplate such step.

The delegation carrying the protest to the White House included Senators ALVA B. ADAMS, of Colorado, and JOSEPH C. O'MAHONEY, of Wyoming, and Representatives EDWARD T. TAYLOR of Colorado, and J. W. ROBINSON, of Utah, all Democrats.

The three-point program of the sugar-beet industry is as follows:

1. Removal of quota restrictions upon domestic sugar production and authorizing the Secretary of Agriculture to determine the volume thereof annually and then allocate to other producing sections under the American flag and Cuba quotas sufficient to equal the spread between production and consumption.

2. Denomination of sugar beets as a basic commodity with the imposition of processing taxes as well as directions to the Secretary of Agriculture to see to it that processing cannot pass back to the farmers levies to be provided through marking down contract prices paid for beet production.

$25,000,000 FUND SOUGHT

3. Appropriation of $25,000,000 for the payment of benefits to beet growers, applicable to the 1933 crop, the theory being that other crops have had the benefits provided under the law and beet farmers are in need of this financing.

Beet-sugar companies, it was explained, are able to advise the A.A.A. as to from whom and in what quantities beets were procured.

In a conference which lasted for an hour and a quarter, the congressional delegation went over the general situation with the President, protesting against the declarations of Government officials indicative of the policy heretofore attributed to the Roosevelt administration of abandonment or sharp reduction of tariff protection for industries which have not shown themselves as well suited to American economic environment, sugar being in this category.

Following the conference the delegation issued the following formal statement:

"The President made it clear to us that any inferences that might have been drawn from the testimony of Mr. Weaver, of the Department of Agriculture, before the House Committee on Agriculture that the administration was hostile to the beet-sugar industry were without foundation.

TAKES ISSUE WITH WEAVER

"He assured us that Mr. Weaver did not express his sentiment and that only he, the President, and the Secretary of Agriculture were authorized to define administration policies.

"The President displayed a sympathetic attitude toward the sugar States and at the conclusion of our conference personally telephoned to the Department of Agriculture suggestions for modifications of the pending legislation designed to meet some of the conditions which we described. Amendments to the pending legislation will be drafted after conferences between representatives of sugar-producing States and the Secretary of Agriculture which are hopeful will meet the problem that confronts us."

Except that President Roosevelt has announced on numerous occasions his determination to send to Congress a request for broad authority to deal with the tariff as an incident to reciprocal trade agreements with foreign nations, he has refrained from discussing details of his policy.

However, the report of the experts of the commercial policy committee, of which Assistant Secretary of State Sayre is chairman, which has been accepted in many quarters as more or less the viewpoint of the administration, included sugar as one of the commodities that have some foothold in this country, but which, on the whole, are a burden because they possess so weak an economic basis or because they have exhausted that basis.

HIGH-TARIFF STATUS CITED

It is averred that these industries at the present time often have the highest rates of duty and despite that fact are only struggling along.

"If it were not for long tradition", continued the report, "through which the sugar industry has established so strong a place for itself that industry would probably come in this classification. In this would probably come minor or luxury branches of industry requiring large amounts of hand labor and employing only small numbers of workers."

Appearing before the committee today, Chester Davis conceded that sugar beets might be driven out of the domestic program under our long-range program, but promised that producers would be given time to find another crop to replace beets, whatever that crop may be.

Called upon by Representative HOPE (Republican, Kansas) if he agreed with Weaver's statements that Agriculture Department officials are determined to wipe out the domestic sugar industry, Assistant Secretary Tugwell said:

"I believe Mr. Weaver is a better Democrat than most of us. He believes no industry is entitled to tariff protection or to any protection unless it can stand on its own feet. I must admit that personally I agree with him.

CALLS SELF BETTER DEMOCRAT

"I believe I, too, am a better Democrat than most of the Department officials. My feeling is that the industry should be continued in sections where it cannot be supplanted by other industries."

It is understood that Mr. Tugwell collaborated with State Department experts in the preparation of the report presented to the Commercial Policy Committee.

In explaining the granting of a quota of 300,000 short tons under the 1933 production of beet sugar, he said that "this is nothing more than a compromise between conflicting interests", adding, "it is a mistake to dwell too much on the ultimate aspects of what is involved."

Throughout his testimony before the committee he referred to domestic sugar production as an expensive industry. He denied that the quota plan set forth in the President's message to Congress on that subject entails any reduction, claiming that last year's production was abnormal. He later corrected this statement, saying there would be some reduction in the normal beet-sugar output, but not in the same proportion as in the case of wheat, corn, and hogs.

EXPANSION BROUGHT UP

"Isn't it advantageous for us to increase rather than reduce acreage in view of the large areas of idle lands in the country?" Representative BOILEAU (Republican, Wisconsin) asked.

"It seems logical to us to prevent expansion until production of beets is profitable to the grower", Tugwell replied. "This bill does not make production of sugar profitable to the farmer It only makes it possible. The reason for not permitting expansion on the same basis is that the more it expands, the more expensive it becomes to the consumer. Every additional ton of beets would cost the consumer so much more."

"It does not do the farmers of the United States any good when we buy so little sugar from Cuba that they cannot buy our farm products", Dr. Ezekial contended. "The farm products we used to sell to Cuba represent more acres than are devoted to sugar production.

"If we expand our production of sugar, we go that much further toward cutting off our foreign market for farm products."

"We feel that the fact that the administration has been willing to sponsor a quota of 1,450,000 tons, which is the average of the last 3 years' production, and which is more than the continental United States ever produced except for last year", said Senator O'MAHONEY following the White House conference, "is a very good indication that there is no hostility toward the beet-sugar industry.

UNDERSTANDS PRESIDENT'S VIEWS

"We realize that the President naturally must take into consideration the national problem, and from this interview today we recognize his sympathetic understanding and that he is willing to entertain suggestions for improving the legislation from the viewpoint of sugar-producing States."

Senator ADAMS went much further than did his colleague, for he holds that the "beet-sugar industry should be encouraged to expand."

"I think it is an essential industry from the standpoint of national defense", he added.

Many members of the sugar bloc are far less tractable than Senator O'MAHONEY and are not inclined to pass the matter off so easily. They will direct their efforts, it was indicated, to substitute the beet-sugar industry's program for the Costigan bill, and President Roosevelt assured the delegation tonight that he would direct agricultural officials "to look further into the matter."

EVERY MAN A KING—ADDRESS BY SENATOR LONG

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Senator HUEY P. LONG, of Louisiana, over the National Broadcasting System, on February 23, 1934, on the subject Every Man a King.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Is that a right of life, when the young children of this country are being reared into a sphere which is more owned by 12 men than it is by 120,000,000 people?

Ladies and gentlemen, I have only 30 minutes in which to speak to you this evening, and I, therefore, will not be able to discuss in detail so much as I can write when I have all of the time and space that is allowed me for the subjects, but I will undertake to sketch them very briefly without manuscript or preparation, so that you can understand them so well as I can tell them to you tonight.

I contend, my friends, that we have no difficult problem to solve in America, and that is the view of nearly everyone with whom I have discussed the matter here in Washington and elsewhere throughout the United States—that we have no very difficult problem to solve.

It is not the difficulty of the problem which we have; it is the fact that the rich people of this country—and by rich people I mean the super-rich—will not allow us to solve the problems, or rather the one little problem that is afflicting this country, because in order to cure all of our woes it is necessary to scale down the big fortunes, that we may scatter the wealth to be shared by all of the people.

We have a marvelous love for this Government of ours; in fact, it is almost a religion, and it is well that it should be, because we have a splendid form of government and we have a splendid set of laws. We have everything here that we need, except that we have neglected the fundamentals upon which the American Government was principally predicated.

How many of you remember the first thing that the Declaration of Independence said? It said, "We hold these truths to be self-evident, that there are certain inalienable rights for the people, and among them are life, liberty, and the pursuit of happiness"; and it said, further, "We hold the view that all men are created equal."

Now, what did they mean by that? Did they mean, my friends, to say that all men were created equal and that that meant that any one man was born to inherit $10,000,000,000 and that another child was to be born to inherit nothing?

Did that mean, my friends, that someone would come into this world without having had an opportunity, of course, to have hit one lick of work, should be born with more than it and all of its children and children's children could ever dispose of, but that another one would have to be born into a life of starvation?

That was not the meaning of the Declaration of Independence when it said that all men are created equal or "That we hold that all men are created equal."

Nor was it the meaning of the Declaration of Independence when it said that they held that there were certain rights that were inalienable—the right of life, liberty, and the pursuit of happiness.

Is that right of life, my friends, when the young children of this country are being reared into a sphere which is more owned by 12 men than it is by 120,000,000 people?

Is that, my friends, giving them a fair shake of the dice or anything like the inalienable right of life, liberty, and the pursuit of happiness, or anything resembling the fact that all people are created equal; when we have today in America thousands and hundreds of thousands and millions of children on the verge of starvation in a land that is overflowing with too much to eat and too much to wear?

I do not think you will contend that, and I do not think for a moment that they will contend it.

Now let us see if we cannot return this Government to the Declaration of Independence and see if we are going to do anything regarding it. Why should we hesitate or why should we quibble or why should we quarrel with one another to find out what the difficulty is, when we know what the Lord told us what the difficulty is, and Moses wrote it out so a blind man could see it, then Jesus told us all about it, and it was later written in the Book of James, where everyone could read it?

I refer to the Scriptures, now, my friends, and give you what it says not for the purpose of convincing you of the wisdom of myself, not for the purpose, ladies and gentlemen, of convincing you of the fact that I am quoting the Scripture means that I am to be more believed than someone else; but I quote you the Scripture, or rather refer you to the Scripture, because whatever you see there you may rely upon will never be disproved so long as you or your children or anyone may live; and you may further depend upon the fact that not one historical fact that the Bible has ever contained has ever yet been disproved by any scientific discovery or by reason of anything that has been disclosed to man through his own individual mind or through the wisdom of the Lord which the Lord has allowed him to have.

But the Scripture says, ladies and gentlemen, that no country can survive, or for a country to survive it is necessary that we keep the wealth scattered among the people, that nothing should be held permanently by any one person, and that 50 years seems to be the year of jubilee in which all property would be scattered about and returned to the sources from which it originally came, and every seventh year debt should be remitted.

Those two things the Almighty said to be necessary—I should say He knew to be necessary, or else He would not have so prescribed that the property would be kept among the general run of the people, and that everyone would continue to share in it; so that no one man would get half of it and hand it down to a son, who takes half of what was left, and that son hand it down to another one, who would take half of what was left, until, like a snowball going downhill, all of the snow was off of the ground except what the snowball had.

I believe that was the judgment and the view and the law of the Lord, that we would have to distribute wealth ever so often, in order that there could not be people starving to death in a land of plenty, as there is in America today.

We have in America today more wealth, more goods, more food, more clothing, more houses than we have ever had. We have everything in abundance here.

We have the farm problem, my friends, because we have too much cotton, because we have too much wheat, and have too much corn, and too much potatoes.

We have a home-loan problem because we have too many houses, and yet nobody can buy them and live in them.

We have trouble, my friends, in the country, because we have too much money owing, the greatest indebtedness that has ever been given to civilization, where it has been shown that we are incapable of distributing the actual things that are here, because the people have not money enough to supply themselves with them, and because the greed of a few men is such that they think it is necessary that they own everything, and their pleasure consists in the starvation of the masses, and in their possessing things they cannot use, and their children cannot use, but who bask in the splendor of sunlight and wealth, casting darkness and despair and impressing it on everyone else.

"So, therefore", said the Lord, in effect, "if you see these things that now have occurred and exist in this and other countries, there must be a constant scattering of wealth in any country if this country is to survive."

"Then", said the Lord, in effect, "every seventh year there shall be a remission of debts; there will be no debts after 7 years." That was the law.

Now, let us take America today. We have in America today, ladies and gentlemen, $272,000,000,000 of debt. Two hundred and seventy-two thousand millions of dollars of debts are owed by the various people of this country today. Why, my friends, that cannot be paid. It is not possible for that kind of debt to be paid.

The entire currency of the United States is only $6,000,000,000. That is all of the money that we have got in America today. All the actual money you have got in all of your banks, all that you have got in the Government Treasury, is $6,000,000,000; and if you took all that money and paid it out today you would still owe $266,000,000,000; and if you took all that money and paid again you would still owe $260,000,000,000; and if you took it, my friends, 20 times and paid it you would still owe $150,000,000,000.

You would have to have 45 times the entire money supply of the United States today to pay the debts of the people of America and then they would just have to start out from scratch, without a dime to go on with.

So, my friends, it is impossible to pay all of these debts, and you might as well find out that it cannot be done. The United States Supreme Court has definitely found out that it could not be done, because, in a Minnesota case, it held that when a State has postponed the evil day of collecting a debt it was a valid and constitutional exercise of legislative power.

Now, ladies and gentlemen, if I may proceed to give you some other words that I think you can understand—I am not going to belabor you by quoting tonight—I am going to tell you what the wise men of all ages and all times, down even to the present day, have all said: That you must keep the wealth of the country scattered, and you must limit the amount that any one man can own. You cannot let any man own $300,000,000,000 or $400,000,000,000. If you do, one man can own all of the wealth that the United States has in it.

Now, my friends, if you were off on an island where there were 100 lunches, you could not let one man eat up the hundred lunches, or take the hundred lunches and not let anybody else eat any of them. If you did, there would not be anything else for the balance of the people to consume.

So, we have in America today, my friends, a condition by which about 10 men dominate the means of activity in at least 85 percent of the activities that you own. They either own directly everything or they have got some kind of mortgage on it, with a very small percentage to be excepted. They own the banks, they own the steel mills, they own the railroads, they own the bonds, they own the mortgages, they own the stores, and they have chained the country from one end to the other until there is not any kind of business that a small, independent man could go into today and make a living, and there is not any kind of business that an independent man can go into and make any money to buy an automobile with; and they have finally and gradually and steadily eliminated everybody from the fields in which there is a living to be made, and still they have got little enough sense to think they ought to be able to get more business out of it anyway.

If you reduce a man to the point where he is starving to death and bleeding and dying, how do you expect that man to get hold of any money to spend with you? It is not possible.

Then, ladies and gentlemen, how do you expect people to live, when the wherewith cannot be had by the people?

In the beginning I quoted from the Scriptures. I hope you will understand that I am not quoting Scripture to you to convince you of my goodness personally, because that is a thing between me and my Maker, that is something as to how I stand with my Maker and as to how you stand with your Maker. That is not concerned with this issue, except and unless there are those of you who would be so good as to pray for the souls of some of us. But the Lord gave his law; and in the Book of James they said so, that the rich should weep and howl for the miseries that had come upon them; and, therefore, it was written that when the rich hold goods they could not use and could not consume, you will inflict punishment on them, and nothing but days of woe ahead of them.

Then we have heard of the great Greek philosopher, Socrates, and the greater Greek philosopher, Plato, and we have read the dialog between Plato and Socrates, in which one said that great riches brought on great poverty, and would be destructive of a country. Read what they said. Read what Plato said; that you must not let any one man be too poor, and you must not let any one man be too rich; that the same mill that grinds out the extra rich is the mill that will grind out the extra poor, because, in order that the extra rich can become so affluent, they must necessarily take more of what ordinarily would belong to the average man.

It is a very simple process of mathematics that you do not have to study, and that no one is going to discuss with you.

So that was the view of Socrates and Plato. That was the view of the English statesmen. That was the view of American statesmen. That was the view of American statesmen like Daniel Webster, Thomas Jefferson, Abraham Lincoln, William Jennings Bryan, and Theodore Roosevelt, and even as late as Herbert Hoover and Franklin D. Roosevelt.

Both of these men, Mr. Hoover and Mr. Roosevelt, came out and said there had to be a decentralization of wealth, but neither one of them did anything about it. But, nevertheless, they recognized the principle. The fact that neither one of them ever did anything about it is their own problem that I am not undertaking to criticize; but had Mr. Hoover carried out what he says ought to be done, he would be retiring from the President's office, very probably, 3 years from now, instead of 1 year ago; and had Mr. Roosevelt proceeded along the lines that he stated were necessary for the decentralization of wealth, he would have gone, my friends, a long way already, and within a few months he would have probably reached a solution of all of the problems that afflict this country today.

But I wish to warn you now that nothing that has been done up to this date has taken one dime away from these big-fortune holders; they own just as much as they did, and probably a little bit more; they hold just as many of the debts of the common people as they ever held, and probably a little bit more; and unless we, my friends, are going to give the people of this country a fair shake of the dice, by which they will all get something out of the funds of this land, there is not a chance on the topside of this God's eternal earth by which we can rescue this country and rescue the people of this country.

It is necessary to save the Government of the country, but is much more necessary to save the people of America. We love this country. We love this Government. It is a religion, I say. It is a kind of religion people have read of when women, in the name of religion, would take their infant babes and throw them into the burning flame, where they would be instantly devoured by the all-consuming fire, in days gone by; and there probably are some people of the world even today, who, in the name of religion, throw their own babes to destruction; but in the name of our good Government people today are seeing their own children hungry, tired, half-naked, lifting their tear-dimmed eyes into the sad faces of their fathers and mothers, who cannot give them food and clothing they both needed, and which is necessary to sustain them, and that goes on day after day, and night after night, when day gets into darkness and blackness, knowing those children would arise in the morning without being fed, and probably go to bed at night without being fed.

Yet in the name of our Government, and all alone, those people undertake and strive as hard as they can to keep a good government alive, and how long they can stand that no one knows. If I were in their place tonight, the place where millions are, I hope that I would have what I might say—I cannot give you the word to express the kind of fortitude they have; that is the word—I hope that I might have the fortitude to praise and honor my Government that had allowed me here in this land, where there is too much to eat and too much to wear, to starve in order that a handful of men can have so much more than they can ever eat or they can ever wear.

Now, we have organized a society, and we call it "Share Our Wealth Society", a society with the motto "every man a king."

Every man a king, so there would be no such thing as a man or woman who did not have the necessities of life, who would not be dependent upon the whims and caprices and ipsi dixit of the financial martyrs for a living. What do we propose by this society? We propose to limit the wealth of big men in the country. There is an average of $15,000 in wealth to every family in America. That is right here today.

We do not propose to divide it up equally. We do not propose a division of wealth, but we propose to limit poverty that we will allow to be inflicted upon any man's family. We will not say we are going to try to guarantee any equality, or $15,000 to families. No; but we do say that one third of the average is low enough for any one family to hold, that there should be a guaranty of a family wealth of around $5,000; enough for a home, an automobile, a radio, and the ordinary conveniences, and the opportunity to educate their children; a fair share of the income of this land thereafter to that family so there will be no such thing as merely the select to have those things, and so there will be no such thing as a family living in poverty and distress.

We have to limit fortunes. Our present plan is that we will allow no one man to own more than $50,000,000. We think that with that limit we will be able to carry out the balance of the program. It may be necessary that we limit it to less than $50,000,000. It may be necessary, in working out of the plans, that no man's fortune would be more than $10,000,000 or $15,000,000. But be that as it may, it will still be more than any one man, or any one man and his children and their children, will be able to spend in their lifetimes; and it is not necessary or reasonable to have wealth piled up beyond that point where we cannot prevent poverty among the masses.

Another thing we propose is old-age pension of $30 a month for everyone that is 60 years old. Now, we do not give this pension to a man making $1,000 a year, and we do not give it to him if he has $10,000 in property, but outside of that we do.

We will limit hours of work. There is not any necessity of having overproduction. I think all you have got to do, ladies and gentlemen, is just limit the hours of work to such an extent as people will work only so long as is necessary to produce enough for all of the people to have what they need. Why, ladies and gentlemen, let us say that all of these labor-saving devices reduce hours down to where you do not have to work but 4 hours a day; that is enough for these people, and then praise be the name of the Lord, if it gets that good. Let it be good and not a curse, and then we will have 5 hours a day and 5 days a week, or even less than that, and we might give a man a whole month off during a year, or give him 2 months; and we might do what other countries have seen fit to do, and what I did in Louisiana, by having schools by which adults could go back and learn the things that have been discovered since they went to school.

We will not have any trouble taking care of the agricultural situation. All you have to do is balance your production with your consumption. You simply have to abandon a particular crop that you have too much of, and all you have to do is store the surplus for the next year, and the Government will take it over. When you have good crops in the area in which the crops that have been planted are sufficient for another year, put in your public works in the particular year when you do not need to raise any more, and by that means you get everybody employed. When the Government has enough of any particular crop to take care of all of the people, that will be all that is necessary; and in order to do all of this, our taxation is going to be to take the billion-dollar fortunes and strip them down to frying size, not to exceed $50,000,000, and if it is necessary to come to $10,000,000, we will come to $10,000,000. We have worked the proposition out to guarantee a limit upon property (and no man will own less than one third the average), and guarantee a reduction of fortunes and a reduction of hours to spread wealth throughout this country. We would care for the old people above 60 and take them away from this thriving industry and give them a chance to enjoy the necessities and live in ease, and thereby lift from the market the labor which would probably create a surplus of commodities.

Those are the things we propose to do. "Every man a king." Every man to eat when there is something to eat; all to wear something when there is something to wear. That makes us all a sovereign.

You cannot solve these things through these various and sundry alphabetical codes. You can have the N.R.A. and P.W.A. and C.W.A. and the U.U.G. and G.I.N. and any other kind of "dadgummed" lettered code. You can wait until doomsday and see 25 more alphabets, but that is not going to solve this proposition. Why hide? Why quibble? You know what the trouble is. The man that says he does not know what the trouble is is just hiding his face to keep from seeing the sunlight.

God told you what the trouble was. The philosophers told you what the trouble was; and when you have a country where one man owns more than 100,000 people, or a million people, and when you have a country where there are four men, as in America, that have got more control over things than all the 120,000,000 people together, you know what the trouble is.

We had these great incomes in this country; but the farmer, who plowed from sunup to sundown, who labored here from sunup to sundown for 6 days a week, wound up at the end of the time with practically nothing.

And we ought to take care of the veterans of the wars in this program. That is a small matter. Suppose it does cost a billion dollars a year—that means that the money will be scattered throughout this country. We ought to pay them a bonus. We can do it. We ought to take care of every single one of the sick and disabled veterans. I do not care whether a man got sick on the battlefield or did not; every man that wore the uniform of this country is entitled to be taken care of, and there is money enough to do it; and we need to spread the wealth of the country, which you did not do in what you call the N.R.A.

If the N.R.A. has done any good, I can put it all in my eye without having it hurt. All I can see that the N.R.A. has done is to put the little man out of business—the little merchant in his store, the little Dago that is running a fruit stand, or the Greek shoe-shining stand, who has to take hold of a code of 275 pages and study it with a spirit level and compass and looking-glass; he has to hire a Philadelphia lawyer to tell him what is in the code; and by the time he learns what the code is, he is in jail or out of business; and they have got a chain code system that has already put him out of business. The N.R.A. is not worth anything, and I said so when they put it through.

Now, my friends, we have got to hit the root with the ax. Centralized power in the hands of a few, with centralized credit in the hands of a few, is the trouble.

Get together in your community tonight or tomorrow and organize one of our Share Our Wealth societies. If you do not understand it, write me and let me send you the platform; let me give you the proof of it.

This is HUEY P. LONG talking, United States Senator, Washington, D.C. Write me and let me send you the data on this proposition. Enroll with us. Let us make known to the people what we are going to do. I will send you a button, if I have got enough of them left. We have got a little button that some of our friends designed, with our message around the rim of the button, and in the center "Every man a king." Many thousands of them are meeting through the United States, and every day we are getting hundreds and hundreds of letters. Share Our Wealth societies are now being organized, and people have it within their power to relieve themselves from this terrible situation.

Look at what the Mayo brothers announced this week, these greatest scientists of all the world today, who are entitled to have more money than all the Morgans and the Rockefellers, or anyone else, and yet the Mayos turn back their big fortunes to be used for treating the sick, and said they did not want to lay up fortunes in this earth, but wanted to turn them back where they would do some good; but the other big capitalists are not willing to do that, are not willing to do what these men, 10 times more worthy, have already done, and it is going to take a law to require them to do it.

Organize your Share Our Wealth Society and get your people to meet with you, and make known your wishes to your Senators and Representatives in Congress.

Now, my friends, I am going to stop. I thank you for this opportunity to talk to you. I am having to talk under the auspices and by the grace and permission of the National Broadcasting System tonight, and they are letting me talk free. If I had the money, and I wish I had the money, I would like to talk to you more often on this line, but I have not got it, and I cannot expect these people to give it to me free except on some rare instance. But, my friends, I hope to have the opportunity to talk with you, and I am writing to you, and I hope that you will get up and help in the work, because the resolutions and bills are before Congress, and we hope to have your help in getting together and organizing your Share Our Wealth society.

Now, that I have but a minute left, I want to say that I suppose my family is listening in on the radio in New Orleans, and I will say to my wife and three children that I am entirely well and hope to be home before many more days, and I hope they have listened to my speech tonight, and I wish them and all of their neighbors and friends everything good that may be had.

I thank you, my friends, for your kind attention, and I hope you will enroll with us, take care of your own work in the work of this Government, and share or help in our Share Our Wealth society.

I thank you.

COMPENSATION OF GOVERNMENT EMPLOYEES

Mr. HATFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an address by E. Claude Babcock, president of the American Federation of Government Employees, delivered over radio station WRC today, March 1, concerning the present status of pay-cut legislation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PAY-CUT PIGEONHOLE VETO

This evening it seems appropriate to say a few words about the action of the House of Representatives in administering a pigeonhole veto of the independent offices appropriation bill which contains the Government pay-cut provision.

Before Congress met work was started on the supply measure for the independent offices which was again chosen as the vehicle for the so-called "economy legislation." The pay-cut advocates marched up the hill with their troops gagged and bound. The measure went through committee action and then action in the House of Representatives, Senate committee action, and then Senate floor action. After this was over it was discovered there was not any pay-cut legislation for the next fiscal year left in the bill; so the pay-cut advocates marched right down the hill again by sending the bill back to the House Appropriations Committee, which according to the statements of some people is not going to take any action at all, at least for sometime. This vetoes the bill, at least for the time being, and it is appropriate to see just where we stand.

The House bill, as introduced by the Appropriations Committee, contained the following provisions detrimental to the service in the higher sense and injurious to the Government employees:

1. Ten percent pay cut for the next fiscal year.
2. Prohibition on promotions, both automatic and administrative.
3. Maintenance of over charges for Q.S.L.
4. Prohibition against reallocations, as required by the Classification Act.
5. Prohibition on the filling of vacancies.
6. Reductions in travel allowances.
7. Restrictions on transfers of noncivilian personnel.
8. Suspension of reenlistment allowances.

As before stated, all of these provisions and some other restrictions were included in the House committee's bill. None of them are desirable, and insofar as this House text is concerned, a pigeonhole veto is highly advantageous to the Government employee.

When the Senate was through with the bill, some of these unfavorable provisions were stricken out, for example, the pay cut for 1935 was eliminated, the prohibition on promotions was eliminated, and provision was made for adjustment of charges for Q.S.L. under the Hatfield amendment. Thus far, the Senate as to those provisions simply went back to the status of no legislation on the subject, so that as to these provisions the House pigeonhole veto has the same effect as the Senate action. Stated in other words, under the House pigeonhole veto, there may be no pay cut for 1935; there will be no restriction on promotions and adjustment of Q.S.L. may be made.

There are two affirmative actions, however, which were taken by the Senate, which are favorable to the employees and which would not go into effect under the pigeonhole veto. These are:

1. The reduction of this year's pay cut from 15 to 10 percent, starting February 1; and

2. The Thomas amendment, with the following three provisions:

(a) Establishment as minima of salaries for wage-board positions the wages in effect on June 1, 1932.

(b) Establishment of 40-hour week for these positions.

(c) Provision for time and a half for overtime for these positions.

So that, in summary, the effect of the pigeonhole veto by the House is to remove all of the temporary economy provisions, including the complete restoration of pay as of July 1, on the one hand, and the loss of the partial restoration as of February 1 and the Thomas amendment, on the other hand.

Whether it will be the intention of those in authority to try later to reenact some of the so-called "temporary economy provisions" is not known. However that may be, it is thought that there is high prospect for the complete elimination of the pay cut as of July 1 and a return to the normal Government standard of pay as of that date.

It may be said in passing, since there has been discussion of the effects of the Executive veto, that they would be identical with the effects discussed above of the suspending pigeonhole House veto.

The American Federation of Government Employees has been working for months to forward the President's recovery program by having governmental salaries alined with that program by having them restored to normal levels. The pay restoration, which simply means return to the Government standard, will continue to be the prime objective of the American Federation of Government Employees. Whether this objective is obtained by positive legislation, by House pigeonhole veto, or by Executive veto is comparatively unimportant. Of course, we would prefer to have the bill as passed by the Senate become law by Presidential signature, because that would entail the benefits to be derived from reduction of the pay cut in this fiscal year and from the Thomas amendment. However, we would prefer to have no legislation, and as a result the repeal of the pay cut, rather than any compromise which would continue it, the pay cut, into the next fiscal year.

For this reason, the present situation is highly acceptable to the American Federation of Government Employees and the thousands of Government employees it represents.

Thank you very much.

LET'S TALK COMMON SENSE—ADDRESS BY WILLIAM S. BENNET

Mr. HATFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a speech by William S. Bennet, a former Member of the House of Representatives, before the James G. Blaine Club, of New York City, February 8, 1934.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are many reasons why it is a pleasure to be here tonight. First, my friendship of nearly 30 years with Mr. Levinson. Second, the opportunity, at a time when serious questions must be seriously considered, to appeal before this particular group, which has demonstrated by its loyal adherence to the Republican Party in this heavily Democratic section, that it adheres to principles rather than self-interest. Third, the feeling that those of us who in this generation have had a sustained interest in American governmental questions, should, for the common good, and regardless of whether our views are either popular or agreed to, or even entirely correct, nevertheless contribute those views for the common consideration, even if for no other purpose than to form a basis of discussion.

My theme for this evening is "Let's Talk Common Sense." While you are my sole audience, I shall paraphrase the expression often used by those speaking over the radio. I, too, have an invisible audience, although of another sort—4 men: 2 Democrats and 2 Republicans. The two Democrats, respectively, my maternal great-grandfather, who cast his first vote for the second election of Thomas Jefferson in 1804, and thereafter voted the Democratic ticket exclusively until his death, in 1868; and his son, my grandfather, who during his entire life also voted the straight Democratic ticket. The other two are my paternal grandfather, first a Whig, then, with William H. Seward, one of the founders of the Republican Party in the State and Nation; and his son, my father, also a lifelong Republican. All 4 are long since dead, but I never prepare a talk of any moment on governmental subjects without bearing in mind these 4 men, differing in politics but equal in their Americanism. It has never seemed to me that any political party was worth while except one founded upon principles, and that to discuss great questions from the standpoint of party advantage was not rising to the fullest sense of responsibility. While I am a loyal Republican, addressing loyal Republicans, I shall therefore ask you to consider what I have to say from a purely American standpoint and without reference to the duty, the responsibility, the advantage, the position, or even the future of our party.

Many of the questions before us are new, and some can be described by no other term than revolutionary. For the first time in our history, persons in governmental positions in Washington,

and with access to the President of the United States, are taking the position that government under our form has failed, either in whole or in part, that the provisions of our Constitution are not wholesome and healthy safeguards of the rights of the people and a firm foundation for a proper system of government, but are bonds under which we should chafe, and that the governmental structure is antiquated and outgrown. We are actually taught that in the winter of 1933–34 chaos prevailed, and that our generation had proved itself a complete failure. This teaching has had a more far-reaching effect than those who indulged in it anticipated, and has engendered beliefs which the teachers themselves do not share. As an example—some weeks ago there sat on opposite sides of the same desk, in the N.R.A. two men, one in his late fifties, a business success, although not in the multi-millionaire class; the other, a young man of possibly 30, who one day said to his older colleague, "You ought not to be here", and in answer to the question "Why?"—"For two reasons. First, you are 20 years too old; second, you belong to a generation which has made a failure of everything." This young man believes that those who have lived and worked during the last 30 to 40 years have failed in everything, and he is typical of the school of thought which has been founded by the somewhat careless talk of some of those at present holding public office in Washington—in different ranks and in various departments. Our generation has not failed. My experience in New York City commenced in March 1893, so I can speak with the personal knowledge of an adult for a period of over 40 years. I make this challenge: If anyone will state any respect in which he thinks there has been retrogression in the last 40 years, I shall undertake to demonstrate from records that there is no aspect of our country, material or spiritual, in which there has not been improvement during those 40 years.

President Roosevelt does not believe that we have failed. In his inaugural address he said, "The people of the United States have not failed."

Two things, however, are quite true. First, some of the problems which our predecessors were unable to solve we also have been unable to solve. Second, our very material successes have created material problems not yet settled, but neither of these indicates failure.

I imagine that the young man, when he said that our generation had made a failure of everything, had in mind material things. Statistics show that we have not failed there. In 1900 our national wealth was estimated at $88,517,000,000, and our per capita wealth at $1,165. These figures had increased in 1920 to totals, respectively, of $488,700,000,000 and $4,586, and decreased in 1932 to $247,300,000,000 and $1,981, respectively. The figures for 1900 are from the Statistical Abstract of the United States, and those for 1920 and 1932 from the computations of the National Industrial Conference Board. They speak for themselves, and, on the basis of that substantial wealth, the President of the United States is confident of being able, between now and June 30, to refund $4,000,000,000 of outstanding indebtedness and borrow an additional six billions. Certainly a country which, after 5 winters of depression, can look forward confidently to increasing its indebtedness from $25,000,000,000 to $31,000,000,000, has not failed materially, even though at the close of the World War our aggregate national wealth was far higher than it is today.

History will record that the depression from which we are still suffering was world-wide, commencing in some countries before it was felt here, and in other countries later. It is useless to speak of the causes, because we do not fully know all of them. In a general way the world-wide depression hooks up with the World War, although the rapid advance in production by machinery has its place also. In our country the fall in commodity prices was the first step in the depression, and that occurred months before the stock-market crash, which was both a symptom of the depression and its great acceleration. History will also record that the world-wide rise from the depression commenced in the latter part of 1932, so that the burden of coping with the depression itself all fell upon Mr. Hoover, while the problems in relation to our emergence from the depression belong to Mr. Roosevelt. Our country has had many depressions. Those of 1837, 1857, 1873, and 1893 are probably the outstanding ones, although we had sharp panics and some liquidations in 1907 and 1921.

It is worthy of note that during no depression prior to the present one was it considered that the Federal administration had any general duty in the premises. It is true that Mr. Cleveland acted vigorously and successfully to preserve the gold standard, but that was distinctly a governmental duty and not one pertaining to the general economic welfare. It is not of record that Theodore Roosevelt, in 1907, or Mr. Wilson or Mr. Harding, in the latter part of 1920 or the early part of 1921, attempted other than strictly governmental duties. Mr. Hoover, however, was an experienced organizer. We are all familiar with his work first in Belgian relief and his post-war work in various European countries. Later, while Secretary of Commerce, he took charge of flood relief in Arkansas, Mississippi, and Louisiana in connection with the work both of the Government and of the National Red Cross. For this work he was highly commended by resolutions of the Legislatures of Mississippi and Louisiana. Still later, and in the early days of his own administration, he directed the organization of the relief work in connection with the great drought in the Middle West. His fame as an organizer of work of relief against famine, flood, and drought is securely established. With this proved ability and special training, and possibly broader world views than those who had occupied the Presidency during preceding depressions, it was but natural that Mr. Hoover should, in 1930 and subsequent years, act promptly and effectively. Under his leadership employers and labor leaders agreed, the employers not to reduce wages, the labor leaders to discourage strikes; industry agreed to expand purchases and to spread employment; community welfare organizations were formed into a national organization, which still continues under the leadership of Mr. Roosevelt, with Newton D. Baker in direct charge; the National Credit Corporation was organized and performed useful and necessary service, and, with the cooperation of the Congress, appropriations for $2,358,430,000 were made for Government public works and $1,177,500,000 for agricultural relief and loans for and to agriculture, making a stupendous total of $3,535,930,000 recommended by Mr. Hoover and appropriated by Congress during the depression period with the idea in view of minimizing unemployment; the Reconstruction Finance Corporation was organized, largely on the lines which have proved successful in the conduct of the War Finance Corporation; the hearings before the Senate Committee on Banking and Currency, culminating in the Glass-Steagall banking bill, were commenced, as was also, at the direct request of Mr. Hoover, the investigation by the Banking and Currency Committee of the Senate into security and financial conditions, which investigation has already brought about many important reforms and still continues; laws relating to farm-loan banks were amended and liberalized; and statutes permitting the organization of home-loan banks and agricultural-credit associations were passed.

Mr. Hoover was able to report, in his annual message to the Congress, on December 6, 1932, that the rise from the depression had commenced. Practically all economists and students of government now agree that the world-wide rise from the depression commenced in 1932 and still continues, although, possibly, the majority place it at a later month than July 1932, which is the month which Mr. Hoover's figures show that conditions commenced to improve in the United States. The exact minute, however, is unimportant and possibly differs in different countries of the world.

The Farm Board was not organized because of the depression but as the result of a plank in the Republican platform. Its cooperative marketing provisions remain unrepealed and are of beneficial effect to those farmers who have availed themselves of them. Its price-fixing feature unquestionably benefited individual farmers, but the service was costly. That provision was repealed, but to some extent it has been revived and continues in the work of the Agricultural Adjustment Administration.

Mr. Hoover and the two Congresses of his administration were able to accomplish all this and at the same time maintain the historic reputation of our Government for honor and integrity in all its financial dealings. Every obligation of the United States was met when due, both at home and abroad, and strictly in accordance with the terms of each agreement. Our sound-money system retained its integrity and reliability.

Our system of banking, however, proved unable to meet fully the demands of the crisis.

There has been some unjust criticism of the Democrats in the Senate and House during the Seventy-first and Seventy-second Congresses. As to the Seventy-first Congress, it is sufficient to say that there was legislation of an effective kind on every character of legislation promised by the Republican platform of 1928, except as to the antilynching bill, and the failure of that legislation was not due to Democratic opposition but to the serious doubt as to its constitutionality.

In the Seventy-second Congress the House was Democratic and the Senate, although nominally Republican with a reduced majority, was anti-Hoover. Nevertheless, Mr. Hoover was able to say in his message of December 6, 1932, "The unprecedented emergency measures enacted and policies adopted undoubtedly saved the country from economic disaster."

It is true that the Democratic House, in the short session of the Seventy-second Congress, refused to cooperate with Mr. Hoover's plan for consolidation of some 50 governmental commissions and independent agencies; but Mr. Roop, the Director of the Budget, appointed by Mr. Hoover, testifying before the Special Economy Committee of that session, when asked the question whether, in his individual judgment, it would not be better to let this matter go over to the newly elected administration, so soon to come in, said that in his opinion it would. He may have been wrong in his judgment, but one can scarcely blame a Democratic majority for believing that the incoming President of their own faith would accept at least those suggestions of Mr. Hoover which Senator KING, of Utah, a veteran Democrat and a student of Government, said, on March 12, "I heartily approve."

That session also removed the limitations which, in the prior session, it had placed on the President's exercise of the power of consolidation and reorganization, and gave Mr. Roosevelt much wider powers. For a 2-year period, Mr. Roosevelt can make any reorganizations or consolidations which he thinks will be beneficial, and such reorganizations or consolidations go into effect 61 days after they are reported to Congress, and whether Congress is in session or not during the entire 60-day period. All that Congress can do, if it does not like the President's Executive orders, is to repeal the law. It can also make his actions effective prior to the expiration of the 60-day period. Mr. Roosevelt has not taken much advantage of this statute. On June 10, 1933, he notified Congress of Executive orders which he said would effect economies of $25,000,000 annually. As the effective date of some, if not all, of these Executive orders was subsequently ex-

tended by Mr. Roosevelt, it is impossible to state the precise effect of his orders under this statute, but it is evident that the savings under them were not great.

While, as I have said, much of the criticism of the Democrats in the Seventy-first and Seventy-second Congresses was unjust and unmerited, and while in both Congresses Mr. Hoover was given a large measure of cooperation when national conditions demanded it, they undoubtedly could have given Mr. Hoover a far larger measure of cooperation with benefit to the country, and it is generally accepted as a fact that the reputation of the Seventy-second Congress for efficiency and successful legislation is not especially high.

History will record it to Mr. Hoover's credit that his defeat in November 1932 caused no abatement in either the quality or quantity of the service which he gave to the country as President between election day and March 4, 1933. In his annual message on December 6, already before referred to, after reciting the appropriations, also already mentioned, and noting that the appropriations for expenditures for Government public works in the fiscal years 1930, 1931, 1932, and 1933 were approximately eight times the cost of building the Panama Canal, he made and renewed certain recommendations: A reduction of expenses sufficient to balance the Budget; increased taxation to bring about increased income and also to take the place of certain taxation authorized in the first session of the Seventy-second Congress, which taxation had not proved either efficient or profitable. He also pointed out the defects in our banking system in some detail, and recommended its reorganization, and spoke of plans for cooperation with other governments. Later, on February 20, 1933, he recommended to the Congress Secretary Hyde's plan for the leasing of marginal lands with the expense defrayed by what we now know as processing taxes.

The defects in the banking system to which Mr. Hoover alluded are well known. On the face of it a system under which a banker accepts deposits payable on demand, and then, in order to meet the expenses of the business, loans those deposits to others at interest, but for varying periods of time, is impossible. Everyone recognizes that there are practically no banks and never have been which could or can stand a 100-percent run. I personally know of three—the First National Bank of Englewood, Cook County, Ill.; the Capital State National Bank, of Jackson, Miss.; and the Market Square National Bank, of Philadelphia, Pa. These banks have the total amount of their deposits either in their vaults in cash or in Government or other securities which could be almost instantaneously converted into cash and to an amount sufficient to pay their depositors in full. None of these banks makes very much money, but the respective depositors have an assurance of practically absolute security. I do not say that there are no other banks equally as liquid. I happen to know of these three.

While the National Credit Corporation saved many banks, and the Reconstruction Finance Corporation, between the period of its organization and December 1, 1932, made over 6,000 loans, each one of which was beneficial directly or indirectly to some bank or banks, it was inevitable that weaker units in the banking system would break down, and that, where they broke down in considerable numbers, their fall would be followed by the closing of banks which normally would have withstood the strain of the situation. In February 1933 the bank failures in Michigan were so large in amount that the Governor of that State, after a consultation with officials of the Treasury Department of the United States, issued an order closing every bank in that State, and the Congress of the United States promptly passed an act authorizing the Comptroller of the Currency to close National banks in States where the Governor had, by proclamation, closed State and private banks.

On the night before Mr. Roosevelt's inauguration, the Governors of the States of New York and Illinois, on the recommendation of the leading bankers of those States, closed every bank in those States, and the Comptroller of the Currency issued the cooperative orders to national banks, under the authority of the then recently enacted law. The closing of the remaining banks was inevitable. It is not necessary to go into the reasons. It is sufficient to say that a breathing spell was required by the banks; appreciation of the situation was necessary to the country, and the Reconstruction Finance Corporation and other agencies required a short period in which to make the proper and necessary plans for the support of the sound banks, which constituted all but a very small fraction of the entire number. Mr. Roosevelt met the banking situation courageously. He issued the necessary order for the closing of the banks, and his radio message to the people of the country, was, in my opinion, the best and most timely radio talk that any President of the United States has yet made. The closing of the banks made the immediate calling together of Congress necessary.

Mr. Roosevelt had no legislative program. In his message of March 9 he said: "In the short space of 5 days it is impossible for us to formulate completed measures to prevent the recurrence of the evils of the past." However, he had at hand Mr. Hoover's program, and his second legislative recommendation was the economy bill, embracing two of Mr. Hoover's recommendations—those permitting reduction of Government salaries and pensions and allowances to soldiers. This bill passed the House of Representatives with the aid of the recommendations of the Republican leaders there and of the votes of the majority of the Republican Members. Without that Republican support the bill would have failed, as the revolt against it amongst the Democrats was large. In putting the bill into effect Mr. Roosevelt somewhat modified Mr. Hoover's suggestions. Mr. Hoover had already secured legislation under which Government salaries had been reduced 8½ percent, and in his message of December 6 had recommended a modification of his policy and further reductions. He recommended that Government employees receiving $1,000 annually or less should not be reduced at all, and that the reduction of the salaries of others should be increased 11 percent, making an average reduction of Government salaries of 14.8 percent. Senator BORAH made a vigorous, although unsuccessful, fight in the Senate to secure this exemption of those receiving $1,000 or less. Mr. Roosevelt made a horizontal deduction of 15 percent, or only one fifth of 1 percent different from Mr. Hoover's recommendation.

As to the veterans, Mr. Hoover had recommended that the allowances to veterans of the World War whose disability was service connected and those who had become incapacitated through disability since the war should not be touched, but that allowances to others should be reexamined. Mr. Roosevelt, acting rather quickly, made deep cuts in all classes, so deep as later to bring about a reexamination in the Senate, bipartisan in its leadership, as the result of which reexamination many of those first stricken from the rolls have been restored. Restorations involving about $21,000,000 annually have been made since the 1st of January. These restorations have reduced the amount of the economies which Mr. Roosevelt promised and planned.

As the result of the organization by Mr. Hoover of the President's Organization on Unemployment Relief more than 5,000 representative enterprises in all lines of industry and commerce had adopted some plan of spreading employment—either reduced days per week, or reduced hours per day, or shortened shifts of continuous operation, or alternated shifts for individuals, or rotated days off. Some of these enterprises employed more than 1 of these 5 methods simultaneously. In August 1932 these movements were consolidated into the share-the-work movement, originated by the National Conference of Federal Reserve, Business, and Industrial Committees at a meeting held during that month in Washington, D.C. By March 4, 1933, under the energetic leadership of Walter C. Teagle, the plan was well under way.

Mr. Hoover had repeatedly recommended the suspension of the antitrust laws so far as the operations of the basic natural-resource industries were concerned.

Mr. Roosevelt called together the representatives of industry to assist in the drafting of a statute having for its purpose the assistance of industrial recovery. These representatives worked day and night for weeks, in conjunction with representatives of the administration, and drafted what afterward became, and now is, the National Industrial Recovery Act. As they drafted it, it embraced the principles of the share-the-work movement and the suspension of the antitrust laws under certain conditions, which suspension made possible agreements not only for the shortening of hours but for the increasing of wages, with the consequent increase of prices. They also worked out a plan for the necessary machinery of operation. To these two elements the Congress added, in modified form, an amendment presented prior thereto by Senator HATFIELD, of West Virginia, on three different occasions, modifying it so as to permit the President not only to increase tariffs but to impose embargoes, and limiting its operation to those cases where the increases or the embargoes would be of assistance to industry under the codes adopted under the provisions of the Recovery Act.

Mr. Hoover's agricultural recommendation of February 20 became the basis for the act under which the Agricultural Adjustment Administration is set up.

Mr. Hoover's remaining major recommendation was cooperation with foreign governments. He had agreed that our country should meet the representatives of 65 other nations in an international economic conference. He had made the necessary recommendation as to appropriations for expenses and had received the cooperation of Congress. He had not, however, agreed with the other nations as to the date. Mr. Roosevelt took up this recommendation with the ardor, the zeal, and the enthusiasm which characterize his advocacy of those matters in which he is interested. We all remember the visits to this country of the representatives of England, France, Germany, Italy, Japan, and other countries preparatory to the conference, the date of which was quickly fixed for June 1933.

The conference unfortunately proved to be a complete failure, and well-informed people assert that the silver agreement arrived at is so framed as to place most of the burdens on the United States, give most of the benefits to other signatory powers, and to cause us an expense of $90,000,000. I have not personally investigated this situation. I merely report the opinion of others.

While advocating and securing the legislation in line with Mr. Hoover's recommendations, and acting under the legislation after its adoption, Mr. Roosevelt and his advisers were also putting their own ideas into form for legislative recommendations.

So far those recommendations have related largely to legislation affecting our national currency and credit, although the Securities Act, which it is now admitted requires amendment before it can become operative and which has very slight beneficial possibilities, was the result of one of Mr. Roosevelt's recommendations. His friend and supporter, Walter Lippmann, describes it as a "naive" act, while others, both friendly and unfriendly to Mr. Roosevelt, use other and stronger terms.

As to Mr. Roosevelt's recommendations, independent of those based on Mr. Hoover's, it is sufficient to say that they have raised in the minds of the majority of our citizens serious questions as to whether the present administration prefers the Constitution as it is, or some other form of government. They have cast on our national honor the permanent blemish of repudiation of our

promise to pay the interest and principal of certain of our Government obligations in gold of the standard of weight and fineness which had existed in this country continuously since 1834. They have made both our exports and our imports more difficult, and have changed our currency system from stability to instability. They seem rapidly tending toward taking from banking, agriculture, and industry the control of their own affairs, and the creation of a condition where not only Government operation, Government supervision, and Government direction will ensue, but Government ownership must inevitably follow, and citizens now owning and controlling their own property must shortly relinquish that ownership, and, if they continue in that same business must do so as agents or employees of the Government. The only alternative is cancelation by the Government of hundreds of millions of dollars of indebtedness due the Government from private sources.

There is a widely prevalent fear that this undermining of private control of banking, agriculture, and industry must inevitably lead to changes in our Constitution, dangerous to the individual liberty of our citizens.

A sound, stable, and certain currency system is essential to our national economic life.

The maintenance of the integrity and honor of our Government in its financial operations is the desire of every good citizen, as is the keeping of our national promises as made.

Under these principles of government, the growth of our country has been steadily maintained until, even after 5 years of this great depression, our national wealth per capita stands well above that of any other of the principal nations of the world.

Without compelling necessity, and at a time when our holdings of gold were larger than those of any other one nation, we have gone off the gold standard, repudiated our obligations to holders of our bonds payable in gold, abolished any fixed standard for our currency, hampered our foreign trade by subjecting both exports and imports to the fluctuating uncertainty of our unstable dollar, made difficult and hazardous all long-term undertakings and cooperate financing, introduced a new and unnecessary risk into every American investment, thus halting that flow of capital into business necessary to continued recovery, and driving hundreds of millions of such capital into foreign investments and depositories. The full measure of business recovery cannot come so long as these grave menaces continue.

The asserted purpose of all these revolutionary changes was to bring about a rise in commodity prices, and that rise has not come. And, if the experience of other countries—Great Britain, Sweden, Japan, France, and Italy—is a guide, and there is no reason why it should not be, such increases will not come to us, as they did not come to them or to any of them through either depreciated currency, going off the gold standard, or revaluing the unit of currency.

Mr. Roosevelt's other major legislative suggestions have been the loaning and giving of money to States and municipalities for relief work, the C.C.C., the P.W.A., and the C.W.A. These are frankly measures designed to give unemployed people work and therefore should be judged with leniency.

Building unproductive public buildings is a thing to be avoided, if possible. Pericles tried it, in ancient Greece, during a depression and found that it worked all right during the construction period but that the maintenance cost thereafter was disastrous.

The most pronounced criticisms of the C.W.A. have been voiced by Gen. Hugh S. Johnson to the effect that the wages paid were badly considered and too high, that a whole lot of unnecessary work is being done, and recently, by Mr. Hopkins himself, as well as others, that graft is creeping in and that the various units are being utilized for political purposes.

The C.C.C. is subject to the least criticism. The wages paid, while high by comparison, go pretty directly to persons who need relief. The work is not competitive. It serves some useful purposes, and its long-range benefit will probably repay its entire cost.

Another project, the T.V.A., is frankly a project for the future, and has little effect on the present emergency.

Unquestionably, all these enormous expenditures of Government money have given employment to many who otherwise would have been on the straight dole; but we are faced with the question of how long we can afford to keep them up and whether we will not have to come to the dole anyway. Certainly, American citizens are not going to be allowed to die for want of food, shelter, and clothing; and if to provide these the dole is necessary, we will have to have a dole, either municipal, State, or Federal.

The question of maintaining a man's self-respect is important. I should think that employment at unnecessary work at higher than the prevailing wage, and on the recommendation of a minor political leader, would undermine self-respect quicker than maintenance by a dole, which a citizen could demand as a right under a statute. In England they have had the dole, and are now reducing unemployment. Of course, those who have had to accept the dole will have some deterioration of mental efficiency. That is, the power of initiative will be diminished. But our C.W.A. people are being affected that way also. In a small city recently the chief of police inspected the shovels being used by a C.W.A. unit and found that the blades had been reduced in size by the workers, thus making the work easier and the job longer. That unit had already lost its self-respect. On the other hand, the Emanuel Baptist Church, in Chicago, for many years has had, and still has, a one-meal-a-day bread line, at which all comers are given just enough food to maintain them until the next day. They sometimes feed 3,000 men a day. The significant fact, for our purpose, is that this service is supported by voluntary contributions, more than one half of the amount of which come from men who themselves at some time in the past have stood in that or some other bread line. Certainly the fact that these men now have incomes sufficient to permit them to contribute to the support of others is conclusive proof that they did not lose their earning capacity by themselves standing at one time in a bread line.

The most ominous fact which we have to face in the situation is that both Mr. Hoover's recommendations, as carried out by Mr. Roosevelt, and Mr. Roosevelt's recommendations, as carried out by himself and the Congress, have left 10,000,000 of our people still unemployed.

It is unquestionably true that the N.R.A. has put some people back to work. It is also true that the South, which received $160,000,000 for plowing under certain portions of its cotton crop and then produced more cotton than it had the previous year, has felt beneficially the effect of the distribution of Government moneys.

The farmers are debating the effect of the A.A.A.

Business is unquestionably better in this country, but our advance does not seem to have been as pronounced as in England, Canada, or Mexico. League of Nations figures as to England and Canada support this view. England, in particular, which has stuck to the policy of paying its way by high taxation, now has not only a balanced budget but a surplus, greatly reduced unemployment, and a national outlook of a far more cheerful character than ours, and this, although she met greater shocks and has far less substantial natural resources and less national per capita wealth than we.

We are all thankful that the automobile people in Detroit are employing twice the people in February 1934 than they did in 1933; that the business of the chain stores is greatly increased; and for every other unquestionable sign that things are better.

Nevertheless, with all this, the statistics of the Department of Labor, adjusted by the Federal Reserve Board, show employment figures as follows: September 1933, 74.3 percent of normal; October, 73.9; November, 72.4; December, 71.8. As to wages, the statistics of the same Department, not adjusted for seasonal variations, show the factory pay rolls in September at 57.6 of normal; October, 57.4; November, 53.6; December, 53.1. Production during the same period also fell from 84 percent of normal in September to 74 percent in December—a larger relative decline.

The American Federation of Labor, in the American Federationist, January 1934, page 41, said:

UNEMPLOYMENT ON THE INCREASE AGAIN—BOTH IN NOVEMBER AND THE FIRST PART OF DECEMBER UNEMPLOYMENT HAS INCREASED

"It is quite normal at this time of year for men to be laid off, both from farms and industries, but labor had hoped that this year, with all the emphasis placed by the administration on creating jobs, lay-offs at the year end would be much less severe than usual. Instead, more were laid off from mid-October to mid-November this year than last year, and trade-union figures for the first half of December show that again in December unemployment has increased slightly more than last year. These figures give the impression that industry is slackening in its efforts to create jobs and put men to work * * *.

"The worst lay-offs in November were in manufacturing, where 330,000 lost their jobs. These factory lay-offs are much larger than in any normal year for which we have records; larger also than in any year since depression."

In this connection, it is gravely important to recall that the Brookings Institute, in Current Monetary Issues, by Leo Pasvolsky, published in December 1933, points out that a country always brings about a decrease of production by creating an uncertainty as to its money.

These questions arise: Can we prosper if our 200,000 factories do not prosper? If all our efforts and the expenditure of billions of dollars during the last 5 years find us in a position where agriculture may have increased some, but not greatly, and factory employment, factory pay rolls, and factory production are now decreasing, ought we not to look for some additional remedy? How long can we continue to pay out billions of dollars a year annually for C.W.A., C.C.C., and A.A.A. if everything that we have done during the last 5 years leaves us with 10,000,000 still unemployed? Is there anything else that we can try with some chance of success?

In a talk that I made in this city on January 11, 1933, in the course of which I said, in relation to Mr. Roosevelt:

"President-elect Roosevelt has not only been intrusted by the people with the greatest public office on earth but he shares with President Hoover the period of the greatest responsibility, in our country, since Lincoln. We should not raise against his administration mere partisan obstruction. His suggestions should receive not only careful but considerate attention and be honestly, frankly, and temperately discussed. It should be kept in mind that, speaking generally, Republicans and Democrats are affected alike by the acts of Government. By captious criticism and willful misrepresentation we can hamper Mr. Roosevelt, but such means will hurt Republicans even more than Democrats. As the present minority party, we owe the country and Mr. Roosevelt's administration the duty of just, candid, and honest criticisms, when criticisms are justified; but a 'smear-Roosevelt' campaign for party advantage is not justified, would do our country no good, and might do it some harm. We cannot hurt our country to help our party."

I also said at that time the situation as to manufacturing industries in 1932, as compared with 1929, was as follows:

Summaries of totals for all manufacturing industries, 1931 and 1929

	1929	1931	Percent
Number of establishments	210,959	174,135	−17.5
Wage earners (average for year)	8,838,743	6,511,647	−26.3
Wages	$11,620,973,254	$7,225,587,464	−37.8
Cost of materials, containers for products, fuel, and purchase of electric energy	$38,549,579,732	$21,420,124,017	−44.4
Value of products	$70,464,863,443	$41,333,108,998	−41.3
Value added by manufacturer	$31,885,283,711	$19,912,984,981	−37.5

That situation has not improved. Why not use common sense? We know that from 1897 to 1909, 12 years, we were substantially prosperous, although we did have a short, sharp currency panic in 1907. We hear a good deal of talk about reciprocity and lowered tariffs. As to lower tariffs we know definitely that prosperity in this country has never increased during a period of lowered tariffs. As to reciprocal tariffs, none of the advocates of those has, so far, gone beyond the statement of generalities when there is something specific that can be discussed. Reciprocal tariffs cannot very well be discussed from the standpoint of admitting to this country, free, those things which we do not produce, upon the condition that the country exporting them, such, for instance, as Brazil in relation to coffee, should admit some of our products free, because we have already put on the free list all such articles as coffee that we do not produce, and about 65 percent of our imports, therefore, come in duty free. A reciprocal proposition consequently would have to mean that some industry now existing in our country would have to be sacrificed to permit the products of a similar foreign industry to come in. Personally, I have never been able to see how that would help anyone in our country, except those few persons employed in importing. It would not help sell our farm products abroad, because every other country is interested, as we are, in increasing the domestic markets for its own farm products, and is doing it by some form of tariff which keeps out the product of ours and all other countries. Italy, for instance, has just succeeded in creating a condition where the wheat consumed in Italy is grown in Italy. As a practical matter, it seems to me much easier to revive our own dwindling factories, and thus create a market for our farm products, than it is to attempt to get foreign countries to lower their tariffs so that their own agricultural industry can be ruined in order to help ours. Why would a wheat grower in England, France, Germany, or Italy advocate the destruction of his own farm values to benefit us so that some manufacturer in his country could ship goods to our country to injure some factory here?

A defect of our tariff system is pointed out by Dr. Arthur L. Faubel in an address before the National Association of Manufacturers, at New York City, on December 8, last. He said:

"For years we have needed a new deal on the tariff—a new deal which means a complete overhauling of our tariff policy and a scrapping of the whole tariff programs of both our major political parties. Our tariff policy has needed this overhauling for years past, during which years, by the way, we were supposed to be moving toward a so-called "scientific tariff"—not scientific in the pure laboratory sense, but scientific in the sense of recognizing, and being based on, facts. Art is supposed to create, and science to discover, but we do not yet seem to have discovered that England is not Czechoslovakia, Germany is not Japan, and France is not China.

"For a century and a half, we have enacted tariff law after tariff law with one rate per commodity regardless of the country from which the commodity comes and with a total disregard for the viciousness of the competition we ourselves foster in our markets by such a blind procedure. And we are doing this today, in the year of grace, 1933. We do it in order that we may piously advertise that we accord identical tariff treatment to all nations; and until we stop doing it, we shall be as far removed from a scientific tariff and as far removed from a new deal on the tariff as we are today.

"By our unscientific, single-rate tariff policy we penalize our import trade from the very foreign countries with which we should attempt most to stimulate it, and at the same time we give an unfair advantage to the imports from those foreign countries which economically merit the least consideration from us. Assume for the purpose of illustration that the value of a set of tableware produced in England for export to the United States is $10, that of a competing set of Czechoslovakian tableware is $8, while the value for a competing set from Japan is $6. These value figures—the $10 for England, $8 for Czechoslovakia, and $6 for Japan—are, in my opinion, very good indices of the economic status and standards of the country to which each applies. The chinaware paragraph in the present American tariff law assesses all three sets at the same ad valorem rate—70 percent. The ad valorem duty on the English set is thus $7, on the set from Czechoslovakia, $5.60, and on the Japanese set, $4.20. By our single-rate tariff policy we have increased Czechoslovakia's competitive advantage in our markets over England from $2 to $3.40, and we have increased Japan's competitive advantage over England in our markets from $4 to $6.80. In such figures as these lies the proof of the statement that our single-rate tariff policy results in our penalizing our import trade from countries whose economic standards and cost levels most nearly approach our own, at the same time that we aid and abet competition in our markets from the lower- and lowest-cost countries throughout the world. That our tariff policy actually is doing this can be shown statistically."

Possibly the situation which Dr. Faubel describes could also be met by American valuations instead of foreign valuations. This was recommended by the late Honorable Joseph W. Fordney, Chairman of the Ways and Means Committee, when the 1922 act was enacted, but rejected by the Congress.

It will be noted that I am far from giving the Republican Party a clean bill of health. I think that unquestionably they have allowed the low tariff wing of the party and the Democrats to influence them far too much. In my talk on January 11, already referred to, I also said:

"The fact is that we have not had a really adequate tariff act from a protective standpoint since the Dingley bill of 1897. That act came at the end of the depression of 1893. During that depression the evils of low-tariff rates were made apparent. The Republicans in 1896 elected William McKinley, a pronounced protectionist, and a Senate and House of protectionists. The Dingley tariff act that that Congress passed and that William McKinley signed was a real protective tariff act. Under it the country, except for the brief currency panic of 1907, prospered. No succeeding act has carried as effective protection to American industries as did that act. Each succeeding Republican act has felt, especially in the Senate, the effect of a combination of Democrats and low-tariff Republicans, which kept down rates and put on the free list the products of American factories, while the Democratic act of 1913 put even agricultural products on the free list.

"The World War prevented us from feeling fully the effect of the 1913 act. When the depression struck us in full force in 1929, we were under the tariff act of 1922, containing many rates which had been placed too low, over the voice and vote of Republican leaders who were stanch protectionists. The same influence in the Tariff Act of 1930 kept some of the rates in that law too low. For this short-sightedness we have been paying the penalty for 10 years and are now daily paying it, in increased unemployment and lowered wages.

"This situation it may require a Republican Congress and a Republican President to remedy. Still, if conditions continue bad, the Roosevelt administration may act. No more ardent low-tariff President ever went into that office than James Buchanan. But because the condition of the country demanded it, he signed, on March 3, 1861, the Morrill bill, the first Republican tariff act. History, slightly varied, may repeat itself before the close of Mr. Roosevelt's term."

As the Democratic Party, in its stated principles, has always been wrong on the tariff issue, and still is wrong, there is no use discussing it.

Under the system of foreign values permitted by the Hawley-Smoot bill, this is an illustration as to what is happening. When that act was passed, the Japanese yen was worth 50 cents in gold, and, therefore, a 40-percent tariff meant 20 cents revenue and a landed cost of 70 cents. The Japanese yen is now worth about 25 cents in gold, so that a 40-percenet tariff means 10 cents instead of 20 cents revenue and a landed price of 35 cents instead of 70 cents. Mr. Roosevelt, by his devaluation of our dollar, has disorganized our import situation in relation to the rates under the same bill, which is still the law. For instance, when he took office $1,000 would buy 25,500 francs' worth of merchandise in France. At a recent rate of exchange it required $1,560 to buy 25,500 francs' worth of merchandise in France. Using a 40-percent rate as an illustration, the duty on the $1,000 value before we went off the gold standard was $400. Using the same rate on the same article, same amount of goods purchased in France, the duty would be $624, so that for the goods that an American could buy on March 4, 1933, in France for $1,400 landed, duty paid, in our country, he now pays $2,184, or an increase of $784. The only practical way how this situation can be met is by the Frenchman's reducing his price in francs, which he may or may not be able to do, or by our abstaining from the import of those French goods, which we can do, but may not like to do. Otherwise we shall continue to pay a higher price for French goods.

It is not yet realized that the decrease in the gold content of our dollar by substantially 40 percent has tremendously increased the number of dollars which we have to pay for those things which we import. An illustration from France has already been given. Our major noncompetitive imports are coffee, raw silk, crude rubber, bananas, and tea. The devaluation of our dollar means that we have increased the amount of dollars necessary to buy these things 66⅔ percent. We once took a 5-percent tax off coffee because we did not want to tax the breakfast table, and now we impose, by a wave of the hand, a tax of 66⅔ percent. As to crude rubber, the price of that in this country went up from an index number of 100 in April 1933 to an index number of 275 in August 1933, and was about 265 in November 1933. From April to November the price of gold advanced only from 100 to about 155, so our recent legislation has made, or will make, the price of automobile tires much higher, to say nothing of coffee, tea, raw silk, and other things which we do not ourselves produce. In the meantime, our low tariffs on manufactured products—not high enough since 1909, levied on foreign values instead of American values, and affected to our detriment by the depreciated currencies of other countries—have either closed the factories or reduced their output or lowered the wages of American factories engaged in the production of about 200 different articles. Having tried a whole lot of new things, of which we knew very little, is it not about time that we tried a proper tariff, which worked well for a 12-year period so recently as 1897 to 1909. Is not that talking common sense?

"THOSE FIFTY-CENT DOLLARS"—ARTICLE BY NEIL CAROTHERS

Mr. FESS. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in the Washington Sunday Star on February 25, 1934, by Neil Carothers, professor of economics and director of the College of Business Administration at Lehigh University, on Those Fifty-Cent Dollars, What Is Devaluation? What Will the New Plan Mean to America? What the Financial Experts Think.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sunday Star, Washington, D.C., Feb. 25, 1934]

THOSE 50-CENT DOLLARS—WHAT IS DEVALUATION—WHAT WILL THE NEW PLAN MEAN TO AMERICA—WHAT THE FINANCIAL EXPERTS THINK

(By Neil Carothers, professor of economics and director of the College of Business Administration at Lehigh University)

In Germany the government temporarily in control has inaugurated a novel plan for mass sterilization. In Italy, on the contrary, the ruling power has instituted an idyllic program of mass marriages. In the United States so far the theories of legislative and executive authority have crystallized only in the form of operative experiments on the economic framework, although in justice to our administrative genius it should be mentioned that last fall the N.R.A. reported that it was seriously considering a plan to stimulate marriages, the idea being to buttress that now-forgotten failure, the buy-now campaign, with an enlargement of consumer power in the markets for wedding rings, gardenias, and striped trousers.

Dispatches from Germany indicate that any citizen who questions the Government's program of persecution and physical violence is regarded as an unpatriotic obstructionist, blind to the emergency needs of his country. So also in our own Nation there is extant the curious doctrine that the ordinary citizen must submit, without even a timid question as to the purposes of the operation, to vivisections on his money, savings, life insurance, and income. Here and there some hardy soul has called this bizarre doctrine un-American. It is much more than that; it is Russian. The implications here are somber indeed, for it is a fact of history that a democratic government that is sure of itself and its policies welcomes discussion and criticism. The savage attacks by administration officials on those who, like Alfred E. Smith and Professor Sprague, have honestly and courageously questioned Government policies give the thoughtful observer pause.

This writer, for one, does not believe that there is a present necessity for the subdued tones, the cautious indirections, and the secret discussion that veil the critical attitude toward our present monetary policy of millions of intelligent and patriotic citizens. The program is admittedly experimental, and any citizen is entitled to voice his protests against experiments that may have very tangible adverse effects on his well-being. Some day a cloistered historian exempt from mob influence and official epithet will analyze with mordant pen the administrative psychology of our time. But we are concerned here with examining the direction of the experiments in the field of American currency.

ENACTMENTS NOT UNDERSTOOD

The Congress of the United States is now 145 years old. In that long space of years, with a consistency bordering on the incredible, it has failed to understand the monetary measures it has passed. Many persons have been distressed by the ludicrous spectacle the House presented when it passed the devaluation law. That was merely history proverbially repeating itself.

But only twice in its history has Congress debased the standard gold coin it had previously established—once in 1834 and once again, 100 years later, in 1934. Those editorial savants who have been referring to the unique and unprecedented character of the devaluation law have not explored among the dry bones of monetary history. Congress devalued the standard gold dollar in 1834. The reduction was small—something over 6 percent.

The ostensible purpose was a readjustment of the bimetallic monetary system. The real purpose was somewhat different. Some trivial gold deposits had been discovered in Georgia and North Carolina. Friends of these mines concocted the measure and slipped it through Congress. They were "doing something for gold." Curious readers who want the story's ending must be told that this law, long after the Georgia mines were forgotten, destroyed the coinage system of the country. It was ultimately responsible for the gold standard, whose establishment was later so bitterly reviled by the very party responsible for the law of 1834.

But there is no analogy between the law of 1834 and the law of 1934. Our present descent down the golden stairs is less by design than by accident, although it is a natural denouement of all that has preceded. Everyday persons who are mystified by the measure are not seeking to answer the question, How did we get this way? They are much more concerned with the question, Where are we now?

A brief and summary review of the successive steps to the bottom stair of devaluation will help to answer the second question. In making this review let us weigh briefly the aims and the merits of each procedure, not with the inconsequential judgment of one critic without pretension to the role of financial oracle but with the composite view of an overwhelming majority of international monetary authorities, qualified bankers, and unbiased academic experts. Even the balanced judgment of these competent authorities may be in error, but a consensus of opinion among them is probably a better guide than the categorical last word on these issues from the radio clerics, ex-professors of sociology, silver dealers, and machinery manufacturers who are now so widely broadcasting.

BANK MORATORIUM UNNECESSARY

The bank moratorium of early March was probably an avoidable calamity; but it certainly was not avoided, and it created an imperative need for drastic emergency action. One of the first measures was an embargo on gold exports. It was probably unnecessary. The country held more than $4,000,000,000 in gold. It had withstood a loss of $700,000,000 in the fall of 1931, and later on, in the summer of 1932, another draining away of more than $400,000,000. The gold holdings in March were far in excess of our economic needs.

At the same time the redemption of paper money in gold was suspended. The gold standard was, for the time being, abandoned. Here a temporary suspension of the gold standard was harmless and possibly desirable. A week after the suspension the Government sold $750,000,000 worth of its obligations to the general public, all of them promising payment in gold. This was, of course, a prize boner, but it was accepted as a routine error which confirmed the administration's intention to return to the gold standard.

It was not to be. In April the Government prohibited the hoarding of gold, and a few days later all the gold in private hands was confiscated. An official communication from the Treasury made it clear that the gold clause in Government bonds would not be honored. Subsequently this action was confirmed by a resolution of Congress which formally abrogated the gold clause in all contracts, public or private.

These measures profoundly stirred not only America but the world. At home they breached a contract between the Government and millions of its citizens. They forced our domestic corporations to break their outstanding contracts. Abroad they shocked and distressed thousands of holders of American securities. At once the dollar of the United States went to a discount in the markets of the world, and thrifty Dutch and English and French investors in our securities learned a painful lesson.

Early in May the Thomas Inflation Act was passed, with its provisions permitting inflation of the currency by every device known to monetary practice. At the same time it was announced by radio that the administration intended to use these powers to force a rise of prices. At last the financial world had a key to the extraordinary measures instituted up to that time. The objective of these measures was an artificial stimulation of the price level.

WORLD RECOVERY CONFERENCE

Last June the representatives of a harried and weary world assembled in London to devise ways to hasten world recovery. There were two possible means to this precious end. One was the stabilization of the disorganized currencies in a score of leading nations. The other was the tearing-down of the trade barriers that have so long blocked normal international commerce. The first was essential to the second. Our emphatic rejection of all stabilization discussion killed the conference. Out of the wreckage Senator PITTMAN triumphantly pulled a floating plank that did a little something for that shabby camp follower—silver.

The exchange value of the dollar steadily declined, but our domestic prices stubbornly refused to move upward. In October a new program was announced. Newly mined American gold was to be bought at artificial prices with American funds derived from the R.F.C. If necessary, foreign gold would likewise be purchased. It was made clear by public announcement that after this new program had raised prices, the price level would be kept stable by Government action.

Nothing like this gold-purchase plan for undermining a nation's currency had ever been tried in the history of the world. Informed experts were divided between amazement and levity. The scheme proved in practice to be a grand flop. It did lead speculators to sell American dollars short, thus driving the exchanges down and causing further losses to foreign holders of American securities. It penalized the buyers of imported European goods, the innocent employees of the Government in foreign service, and American expatriates. That was all. Domestic prices did go up somewhat, but rather from the natural process of recovery and the pouring out of the alphabetical soup at Washington.

Some astute observer recently called attention to a passage in Machiavelli's Prince, that cynical work that tells monarchs how to maintain prestige. This passage urges upon princes a policy of executive action so rapid and kaleidoscopic that their subjects have no time to consider any measure before another bursts upon them. Even Machiavelli was ignorant of a highly technical law of psychology that declares that for continuous mental stimulation a constantly increasing stimulus is required.

DEVALUATION LAW PASSED

With Congress' arriving and prices still lagging, a new plan was necessary. The devaluation law was presented and passed.

In brief summary, the law provides that our standard of value shall be a unit somewhere between 60 percent and 50 percent of our ancient legal dollar; that all the gold held by the Federal Reserve banks be commandeered; that the gold be paid for with paper certificates at the old value; that the profit accruing from commandeering this gold at the old value and carrying it on the books at the higher dollar value be taken by the Government; that $2,000,000,000 of this profit be used by the Treasury in stabilization operations, at home or abroad, and that the Treasury be

empowered to administer the currency so that a stable price level is maintained within the limits of the new dollar.

The Treasury immediately issued regulations establishing a new dollar standard with a bullion value of 59.06 cents in terms of the old dollar. The people retired on January 31 with a dollar unit of 23.22 grains and arose on February 1 with a dollar unit of 13.7 grains.

Reader, if you have been restive under a humiliating consciousness of your utter inability to understand this new law, take heart. Nobody else understands it. In the raucous ululation of praise of the monetary program there is occasionally a voice declaring that our program merely follows that of other countries—France in 1928 or England in 1931, for example. Not so. The eccentric gold-purchase plan and the devaluation law are without precedent in history or recognition in theory.

Like a three-legged calf, or any other lusus naturae, the devaluation law defies explanation. It is to be administered in secret. Some authorities say that it establishes a "modified gold-bullion standard", others that it is a kind of commodity standard. The fact is that it leaves the country where it has been since last March—on an irredeemable paper-money standard subject to unpredictable and unannounced administrative operations, although under the law it is easily possible to establish a genuine gold-bullion standard, and the first steps taken have been distinctly in that direction.

LIMIT ON MANIPULATIONS

Admittedly it does give some fixed limitations to the range of manipulation. It does give promise of warding off the dreaded resort to paper-money inflation. In it there are undoubtedly indications that we are reaching the beginning of the end of currency uncertainty and disorganization. The reaction of relief evident in financial circles suggests the feelings of the Kansas farmer who emerges from his cyclone cellar to discover that part of his farm still remains.

What will happen under the law is beyond prediction. The devaluation level selected by the Tresaury—59 cents—is out of line with the actual value of the dollar at home or abroad, and this condition pulls gold away from the already harassed nations of Europe to be added to our swollen accumulations from war devaluation and nonpayment of gold obligations abroad.

Able authorities have thought that it would immediately drive France off the gold standard and force England to sue for a currency truce. The general economic effect will be to encourage exports, reduce imports, and raise the costs of imported goods to American consumers. How this pressure on burdened nations and this reduction of an already debilitated foreign trade are going to aid a stricken world is not apparent. The only immediate effects at home will be a stimulation of gold mining and a higher price for wedding rings and gold watches.

Ultimately, however, the effect of devaluation will be an artificial increase in the domestic price level, to what point no man knows. The law authorizes the use of the stabilization fund in domestic credit operations, and one critic after another has pointed out the possibilities of dangerous inflation in this power. But it is a possibility only, and there is reason to hope that the authority will be wisely exercised.

One curious development is possible. If prices do not rise rapidly, the huge stabilization fund may be expended in exchange operations abroad. If prices do rise rapidly, there inevitably, in time, will be a marked flow of gold out of this country. There is an excellent prospect that this new law will—not immediately but in due time—force a reduction of our abnormal accumulations. The framers of the measure may have provided a mechanism for a redistribution of gold that will permit the reestablishment everywhere of the gold standard they have been regarding as a failure. The President himself has commented on the possibility of a redistribution of monetary gold.

The repeal of the devaluation law, the stabilization of the American dollar at its natural unmanipulated value, and the restoration of the gold standard at that value would probably offer the best program for business recovery. But that is out of the question. Devaluation is a fait accompli. The final selection of some value within the 50–60 limits and the restoration of the gold standard at that value as soon as it is practicable would be the next best procedure under present conditions.

PRICE-RAISING PROGRAM

But the Government is committed to a program of price raising, and it has repeatedly declared its intention to keep prices stable. The devaluation law permits Treasury activities with this latter objective in view, and for months to come there may be all sorts of Treasury activities aimed at an adjustment of the price level to an arbitrary devaluation of the dollar. Whether by the time the price levels are satisfactory to the administration the plans for a stabilized dollar or a commodity dollar or a compensated dollar will be forgotten is in the lap of the gods.

The monetary program of the last year has been consistently based on assumptions that the monetary tail can wag the monetary dog. It starts with the assumption that a rise of prices is an essential cause of recovery, whereas recovery is an essential cause of a rise of prices. The gold-purchase plan was the offspring of this assumption. Business conditions determine prices at home and the value of the dollar in foreign markets, but the gold-buying program assumed that an artificial lowering of the foreign value of the dollar would change business conditions at home.

A casual inspection of works on money would reveal the defects in this theory, and a cursory glance at the experience of France, Sweden, England, or Japan would show that in practice it does not work that way. The devaluation law is predicated on the theory that a fictitious valuation of gold coin will depress the purchasing power of paper money, even though by the act itself gold is deprived of its power to influence credit and paper-money issues.

The ultimate fact is that this is a rich and powerful country, slowly but surely recovering from depression. Devaluation may not contribute to this recovery process, but it cannot greatly retard it. A rising price level derived from returning confidence and reviving industry will adjust itself to devaluation.

HUMOROUS DEVELOPMENTS

Recent developments have had their humorous aspects. The House committee's conference with Reverend Coughlin was the high point in that body's deliberations. He did not repeat his earlier proposal to issue $25,000,000,000 in paper money, a suggestion that had merit in that if a nation wishes to commit economic suicide a quick death is to be preferred. Another feature was the Senate's distress when Senator BORAH insisted, in the midst of assurances on all sides of the anti-inflation character of the bill, on quoting Prof. J. H. Rogers' official statement that the law might bring about a huge inflation. A Senator's explanation that Professor Rogers had not had time to revise his testimony lent a final touch.

But the last word goes to Prof. Irving Fisher, whose advocacy of a compensated dollar and a large-scale reflation has done so much to encourage that strange organization, the Committee for the Nation, and to promote the cause of currency tinkering. At the meeting of the economists in Philadelphia at Christmas time he said: "We should be farther on the road toward recovery today had there been no election last year."

NAVAL CONSTRUCTION

The Senate resumed the consideration of the bill (H.R. 6604) to establish the composition of the United States Navy with respect to the categories of vessels limited by the treaties signed at Washington, February 6, 1922, and at London, April 22, 1930, at the limits prescribed by those treaties; to authorize the construction of certain naval vessels; and for other purposes.

Mr. KING resumed and concluded the speech begun by him on February 9, 1934.

The speech is herewith printed entire.

Friday, February 9, 1934

Mr. KING. Mr. President, the unfinished business before the Senate, as I understand, is the so-called "Vinson naval bill", the object of which is to obtain authorization for the construction of a large number of war vessels at a cost variously estimated from seven hundred and fifty million to more than one billion dollars. The measure contains many hidden and indefinite implications as well as obligations, and prevents definite statements as to what the final commitments upon the part of our Government may be.

Of one thing we are certain: that it embarks the United States upon an enormous naval program which will impose upon the taxpayers of the United States a very heavy burden, and which will result—and of that we may be certain—in demands in other countries for increases in their naval and military strength. It must be obvious to every person who has any knowledge of history or of world conditions today that, if the most powerful Nation in the world, with a Navy second to none, enacts a measure calling for the construction of perhaps a hundred war vessels at a cost of hundreds of millions of dollars—indeed, of perhaps more than a billion dollars—other nations will feel constrained to increase their military strength and to impose additional taxes upon their people necessary to accomplish that end. In my opinion this is a most inopportune time to pass a measure such as the one under consideration. It is bound to arouse apprehensions and resentments in all parts of the world. It will arrest movements seeking international cooperation and improved world conditions and will tend to arouse latent forces hostile to world peace.

As I understand the Vinson bill, it is in contravention of at least one existing treaty. It certainly is not in harmony with the Washington Treaty of 1922 insofar as that treaty deals with capital ships. I repeat, it will have serious repurcussions not favorable to the maintenance of peace and harmonious relations among the nations of the earth. However, it is not my intention to discuss the Vinson bill upon this occasion but to call the attention of the Senate to the Philippine question. In my opinion it is germane to a dis-

cussion of the naval bill now before us for the reason, among others, that it is urged that we must have a poweful Navy for the protection of our Territories and possessions far beyond the boundaries of continental United States.

Mr. VANDENBERG. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. CLARK in the chair). Does the Senator from Utah yield to the Senator from Michigan?

Mr. KING. I yield.

Mr. VANDENBERG. Before he leaves the other subject will the Senator amplify for me just one statement that he made, namely, that the bill is in contravention of existing treaties?

Mr. KING. If I properly interpret the Vinson bill, our Government is committed to the formulation of a plan for the construction of capital ships prior to the termination of the Washington Treaty which limits naval armaments. As the Senator knows, under the terms of the Washington Treaty, there was to be no capital-ship construction until the expiration of the treaty; and indeed, the treaty provides, as I recall, that it may be continued in force beyond 1936. Certainly the spirit if not the letter of the treaty prohibits the formulation of plans for the construction of battleships until after the expiration of the treaty.

The treaty means that the signatories to the same shall not formulate plans for the building of capital ships until after the treaty has expired and until it shall be definitely determined that it is not to be continued for a further period provided for under the terms of the treaty. Any law passed by this or other signatories to the treaty, indicating a purpose to enter upon the construction of capital ships or to prepare plans for the capital ships before the expiration of the treaty, would, in my opinion, be in contravention of its terms.

The bill before us authorizes, if I properly interpret it, the preparation of plans now or within the immediate future for the building of capital ships, construction to commence, if not before, certainly within a few hours or a day after the treaty has expired. If our Government now enters upon the preparation of plans for battleships or battle cruisers, though it says it will not lay down a keel until the next day after the treaty expires, it is manifest that such a policy would provoke fears and resentments and lead the other nations, signatory to the treaty, to prepare plans for the building of battleships before the treaty is terminated.

I was observing when the Senator propounded his question, that a discussion of the Philippine question is pertinent at this time, when naval bills are under consideration and enormous appropriations are being authorized for war vessels which, it is alleged, are necessary for the protection and defense of the United States and its territorial possessions. When our naval experts are preparing plans for naval construction, they contemplate such as will attempt the protection of the Philippine Islands. They frequently talk about Hawaii and Guam and the Canal Zone and the Philippine Archipelago, and indicate that our naval policy must envision the protection of these outlying possessions. Perhaps they do not indicate how much larger the Navy should be because of these possessions than if our country consisted only of the territory lying between the Atlantic and Pacific Oceans and the Canadian line upon the north and Mexico and the Gulf of Mexico upon the south.

It is certain, however, that a considerable part of appropriations sought for naval purposes is based upon the assumption that these territorial possessions must be defended, and that our naval strength must therefore be greater than if we were required to defend only continental United States. Therefore, in a discussion of naval appropriations, the Philippine question or the Philippine problem, or the protection of the Philippines, is brought forcibly to our attention.

I have heard the suggestion that the retention of the Philippines furnishes a pretext for increased naval appropriations. At any rate we hear discussions as to the necessity of building a Navy sufficiently powerful for the protection of our outlying possessions, including the Philippine Islands.

Mr. President, if we had respected the solemn promises made to the Filipinos and given them political independence, we would have been relieved of the necessity of formulating a naval policy of the magnitude demanded by naval authorities as well as by many of our citizens. However, it should be said that no matter how large our Navy might be, our Government would experience difficulty in protecting the Philippine Islands from any great naval power. Theodore Roosevelt, as I shall point out later, stated that the Philippine Archipelago was an "Achilles Heel", and he indicated that it would be difficult to protect those far-off islands. Mr. Roosevelt also stated that there was a moral obligation resting upon us, growing out of the provisions of the Jones Act of 1916—wherein we solemnly promised the Filipinos freedom as soon as they could establish a "stable government"—to carry out that promise.

Senators will recall that President Wilson in his last message to Congress stated that we had promised independence to the Filipinos, and that they had established a stable form of government, and it was therefore our duty, as it should be our pleasure, to grant to them the independence which they covet. Notwithstanding the promises made by Presidents of the United States and various officials speaking for the Government, we have refused to grant to the Filipinos independence. For a number of years, measures have been introduced in both branches of Congress providing for Philippine independence, but they have failed of passage. Delegations have repeatedly visited the United States representing the unanimous sentiment of the Philippine people, and they have petitioned and implored Congress to enact measures providing for Philippine independence.

It has been my pleasure upon a number of occasions during the past 10 years to offer bills in this body under the terms of which the Filipinos were authorized to form a constitution and to set up a government of their own choosing. I have also offered resolutions requesting the President of the United States to enter into negotiations with governments having interests in the Pacific for the purpose of obtaining a treaty which would neutralize the Philippines and recognize their territorial integrity and political independence. In my opinion, no sufficient reasons have been submitted in justification of the refusal of Congress to grant the petitions and pleas of the Filipinos for independence.

At the last session of Congress the so-called "Hawes-Cutting-Hare bill" was passed. It was not a measure that met the solemn promises made by our Government to the Filipinos, nor did it meet their desires or aspirations. President Hoover vetoed the measure and assigned a number of reasons, some of which, in my opinion, justified his action.

Before the Senate acted upon the measure last referred to, I tendered a bill which would have permitted the Filipinos their independence within a short time. It met the approval of substantially all Filipinos, but unfortunately the Senate rejected it, and, as indicated, gave support to the Hawes-Cutting-Hare bill, which the Filipinos promptly rejected.

With respect to the measure which I offered, it not only had the approval of substantially all, if not all, of the Provinces and municipalities of the Philippines, but also of all civic, educational, and political organizations. They regarded it as a measure which would fully redeem the promises made that when a stable government was established the sovereignty of the United States would be withdrawn from the Philippines, and the Filipinos would have a government of their own choosing. The Filipinos quite naturally approved the measure which I offered or one containing similar provisions.

The American Federation of Labor gave its approval, declaring in favor of the absolute and immediate independence of the Philippines. Leading farm organizations of the United States and various agricultural and other associations over and over again recorded their views in favor of

independence for the Philippines. Notwithstanding the unanimous sentiment of the Filipinos and the almost unanimous approval of the American people, Congress refused to pass a measure granting independence.

I have insisted that the wishes of the Filipinos should be the paramount consideration; that when they demanded independence and when they had met every requirement made of them by our Government, their demands and petitions should be granted.

Mr. President, immediately after we had conquered the Philippine Islands it was declared by the President of the United States and others that we held them as a trustee, and repeatedly declarations were made by the Chief Executives of the United States that it was not the purpose of our Government to retain control over the Philippine Islands indefinitely, but that when a stable government was established we would withdraw from the archipelago and leave the control of the islands in the hands of the Philippine people. Our duty is to execute the trust in behalf of the cestui que trust. We are not to be the beneficiaries, and our duty is to consider their interests and their desires and to surrender control when they have established a stable government.

May I state that there must be no technical or equivocal meaning ascribed to the words "stable government." It has been argued by some officials of the United States that a stable government implies a government that has all the elements of permanent, political, economic, and industrial stability; that political stability or an orderly government with law-abiding citizens would not alone meet the requirements of a "stable government."

In opposing measures for independence some officials of our Government have declared that it must be demonstrated beyond question that the Filipinos must have not only law and order and stability in their governmental operations but that looking over a long period of years it must be apparent and indeed certain that economic and industrial conditions will be such as to insure and guarantee economic and industrial stability.

Various reasons have usually been found by governments for their control over alien races and colonies and territorial possessions.

Often it has been claimed in behalf of the assertion of authority and power over alien races and conquered peoples that they were unable to govern themselves or that the control by a powerful nation would be promotive of their welfare and best interests. Mr. President, many excuses have been offered for imperialistic policies, but history has not infrequently challenged the justice and wisdom of such policies whether political or economic. It is true that benefits may sometimes result to backward peoples from control by powerful and enlightened nations; nevertheless, many wrongs have been committed against helpless people by powerful nations under this and other pretexts.

The law of evolution finds exemplification among peoples. The progress of peoples may be slow, requiring decades, and indeed centuries, for backward races to raise themselves to the level of enlightened and progressive nations. Under imperialistic policies serious wrongs, and indeed crimes, have been committed. Peoples have been held in slavery, physical and economic, as well as mental. Self-determination is the right of small states. As I have indicated, the Filipinos did not invite us to their shores. For 200 years they had sought independence and had engaged in many conflicts with Spain in order that they might be free. They had set up a government before we conquered them and had adopted a constitution republican in form, a constitution which contained in spirit, if not in letter, many of the provisions found in our Constitution. They opposed our military adventure which landed thousands of American soldiers upon their shores. They fought with courage our military advances, and for nearly 2 years resisted our military and naval forces. At last they were defeated and submitted to American rule; but though they have benefited in many ways under American occupation, they have never lost their desire for independence, and their aspirations and ideals have rather grown in strength and intensity as the years have passed.

There has been established a stable government in the Philippines and its economic stability compares favorably with that which exists in many countries of the world.

Recurring for a moment to the conflict to which I referred, the Filipinos under General Aguinaldo had control of the entire archipelago, except the city of Manila, when American troops were landed upon their shores. The control of the Philippine government extended over the islands and the people were giving generous and loyal support to the new republic which they had set up. After the overthrow of the Aguinaldo government, the Filipinos adjusted themselves as rapidly as possible to American control, and joined hands with American officials and representatives in an endeavor to bring about harmonious relations and to promote the economic and political well-being of the people. The progress of the Filipinos has been not only satisfactory but quite extraordinary. They have demonstrated their capacity for self-government and enlightened progress. They have developed industries, advanced in education, and established schools and hospitals. They have enacted laws which are fair and just and established a judicial system under which order prevails and justice is administered. Their agrarian policies have been wise and under them most of the people have their own homes and farms. While not wholly self-contained they have many natural resources and advantages which insure economic stability and growth. Certainly they provide concrete evidence of their ability to maintain liberal political institutions and sound economic policies.

There are 13,000,000 Filipinos, more than 90 percent of whom are Christian. There is homogeneity and racial solidarity. There are, of course, some disturbing factors as there are in every country; but speaking generally, I think it must be said that, compared with many other countries, they have resources, achievements, material and moral strength, that justify their demands for independence and their faith in their own future.

Mr. President, I protest against holding indefinitely under the control of the United States these far-off islands. They have rejected the bill which we attempted to foist upon them and it is our duty to pass a measure before we adjourn that will give to them their freedom.

(At this point Mr. KING yielded the floor to Mr. BLACK.)

Tuesday, February 27, 1934

Mr. KING. Mr. President, a few days ago, when the so-called "Vinson bill" was under discussion, I obtained the floor for the purpose of discussing a pertinent matter, to wit, the Philippine question. After having spoken for a short time, I was required to yield the floor because a matter of great importance, involving, it was claimed, the power of the Senate to conduct investigations in the interest of the public, was presented for consideration.

In the observations which I submitted I attempted to show that the Filipinos have established a stable government and were entitled to the independence which had been solemnly promised them by our Government. I referred to measures which I had from time to time offered in the Senate during the past 10 years which provided for their independence. Among the bills to which I referred was one presented to the Senate on the 4th day of January of this year. A similar measure had been offered by me during the last session of Congress as well as preceding sessions. I invite the attention of the Senate to the bill which I offered on the 4th day of January of this year, which I send to the desk and request that it be read.

The PRESIDING OFFICER. The clerk will read as requested.

The Chief Clerk read as follows:

A bill (S. 2064) to enable the people of the Philippine Islands to adopt a constitution for a free and independent government, and for other purposes

Whereas the act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autono-

mous government for those islands", approved August 29, 1916, declared it to be the purpose of the people of the United States to withdraw their sovereignty over the Philippine Islands and to recognize their independence as soon as a stable government can be established therein; and

Whereas a stable government has been established and is being maintained in the Philippine Islands; and

Whereas the Filipino people have petitioned the Government and people of the United States to declare the Philippine Islands free and independent: Therefore

Be it enacted, etc., That the Philippine Legislature is hereby authorized to provide for the election of delegates to a constitutional convention, which shall meet in the hall of the house of representatives in the capital of the Philippine Islands at such time as the Philippine Legislature may fix, not earlier than 8 months and not later than 1 year after the enactment of this act, to formulate and draft a constitution for a free and independent government of the Philippine Islands. The Philippine Legislature shall provide for the necessary expenses of such convention.

SEC. 2. The constitution formulated and drafted by the constitutional convention shall, either as a part thereof or in an ordinance appended thereto, provide substantially as follows:

(1) That the property rights of the United States in the Philippine Islands shall be promptly adjusted and settled, and that all existing property rights of citizens or corporations of the United States shall be acknowledged, respected, and safeguarded to the same extent as property rights of citizens of the Philippine Islands.

(2) That the debts and liabilities of the Philippine Islands, its Provinces, cities, municipalities, and instrumentalities, which shall be valid and subsisting at the time of the approval of the proposed constitution, shall be assumed by the government established thereunder; and that where bonds have been issued under authority of an act of Congress of the United States by the Philippine Islands or any Province, city, or municipality therein, the Philippine government will make adequate provision for the necessary funds for the payment of interest and principal, and such obligations shall be a first lien on the taxes collected in the Philippine Islands.

(3) That the officials elected pursuant to the provisions of this act for the Philippine government to be formed under the constitution thereof shall be constitutional officers of said government and qualified to function in all respects as if elected directly pursuant to the provisions of the constitution and shall serve their full terms of office as prescribed in the constitution.

(4) That by way of further assurance the government of the Philippine Islands will embody the foregoing provisions (except par. 3) in a permanent treaty with the United States.

SEC. 3. If a constitution is formed in compliance with the provisions of this act, the said constitution shall be submitted to the people of the Philippine Islands for their ratification or rejection, at an election to be held within 6 months after the completion of the constitution, on a date fixed by the Philippine Legislature, at which election the qualified voters of the Philippine Islands shall have an opportunity to vote directly for or against the proposed constitution, or for or against any proposition separately submitted. Such election shall be held in such manner as may be prescribed by the Philippine Legislature, to which the return of the election shall be made. The Philippine Legislature shall by law provide for the canvassing of the return and if a majority of the votes cast on that question shall be for the constitution, shall certify the result to the Governor General of the Philippine Islands, together with a statement of the votes cast thereon, and upon separate propositions, and a copy of said constitution, propositions, and ordinances.

SEC. 4. The Governor General of the Philippine Islands shall, within 6 months after the receipt of such certification, issue a proclamation for the election of the officials provided for in the constitution, such election to take place not earlier than 6 months nor later than 8 months from the date of the proclamation of the Governor General. The election of such officials shall be held in such manner as may be prescribed by the Philippine Legislature.

SEC. 5. The returns of the election of the officials for the independent government of the Philippine Islands shall be certified by the Governor General of the Philippine Islands to the President of the United States, who shall, within 3 months after the receipt of such certification, issue a proclamation reciting the facts of the formation of the constitution for the Philippine Islands and the election of the officials provided for in such constitution as hereinbefore provided, announcing the results of such election and designating a time, not earlier than 4 months and not later than 6 months after the date of the issuance of such proclamation, when the government of the Philippine Islands will be turned over to the duly elected officers, and such officers will begin to function under the constitution. At the time designated in such proclamation the President of the United States shall withdraw and surrender all rights of possession, supervision, jurisdiction, control, or sovereignty then existing and exercised by the United States in and over the territory and people of the Philippine Islands, and, on behalf of the United States, shall recognize the independence of the Philippine Islands as a separate and self-governing nation and acknowledge the authority and control over the same of the government instituted by the people thereof.

SEC. 6. The President is requested, at the earliest practicable date, to enter into negotiations with foreign powers with a view to the conclusion of a treaty for the perpetual neutralization of the Philippine Islands, after Philippine independence shall have been achieved.

SEC. 7. Upon the proclamation and recognition of the independence of the Philippine Islands under their constitution, the President shall notify the governments with which the United States is in diplomatic correspondence thereof and invite said governments to recognize the independence of the Philippine Islands.

SEC. 8. At least 1 year prior to the date fixed in this act for the independence of the Philippine Islands, there shall be held a conference of representatives of the Government of the United States and a committee designated by the Philippine Legislature, such representatives to be appointed by the President of the United States and the Chief Executive of the Commonwealth of the Philippine Islands, respectively, for the purpose of formulating recommendations as to future trade relations between the Government of the United States and the independent government of the Philippine Islands, the time, place, and manner of holding such conference to be determined by the President of the United States.

SEC. 9. Upon the final and complete withdrawal of American sovereignty over the Philippine Islands the immigration laws of the United States (including all the provisions thereof relating to persons ineligible to citizenship) shall apply to persons who were born in the Philippine Islands to the same extent as in the case of other foreign countries.

SEC. 10. This act shall take effect upon its passage.

Mr. KING. I shall not take the time of the Senate to analyze all of the provisions of this measure. From a reading of the same, Senators will perceive that it is a comprehensive measure and, if enacted into law, would enable the Filipinos to achieve their independence within 2 years. If they availed themselves of the flexible provisions of the bill with reference to the calling of conventions, voting upon the constitution formed, the election of officers, and so forth, a period of 3½ years would elapse before the sovereignty of the United States would be withdrawn and an independent government, provided for in the measure, established. The bill authorizes the Philippine Legislature to provide for a constitutional convention at which a constitution for a free and independent government of the Philippine Islands is to be prepared. The constitution so formulated shall contain provisions calling for the adjustment and settlement of existing property rights of citizens or corporations of the United States and also provisions that will safeguard the rights of the citizens of the Philippine Islands to the same extent as the rights of the citizens of the Philippine Islands are protected. The constitution shall contain provisions recognizing the debts and liabilities of the islands, together with their Provinces and municipalities, all of which are to be assumed by the government established under the constitution. These and other provisions are to be embodied in a permanent treaty with the United States.

The constitution is to be submitted to the people, and, if approved, elections are to be held for choosing the officials provided for in the constitution. After the constitution is adopted and the constitutional officers are chosen the President of the United States is required to withdraw and surrender jurisdiction, control, or sovereignty existing and exercised by the United States, and, in behalf of the United States, shall recognize the independence of the Philippine Islands as a separate and self-governing nation.

An important provision of the bill provides that the President shall enter into negotiations with foreign powers to conclude a treaty for the perpetual neutralization of the Philippine Islands. Another important provision of the bill requires that a conference shall be held at least 1 year prior to the date fixed for the independence of the Philippine Islands to which representatives of the United States and a committee designated by the Philippine Legislature shall meet for the purpose of formulating recommendations as to future trade relations between our Government and the Philippine government when its independence is achieved.

Mr. President, in my opinion a majority of the Members of Congress favor the measure which I have offered or one containing similar provisions; but I appreciate the fact that sufficient opposition will be encountered in the Senate to prevent its passage. There seems to be a plan on foot to revive the rejected and dead Hawes-Cutting-Hare bill and, with but slight and unimportant modifications, to force it through Congress in order that it may be resubmitted to the Filipinos. I do not understand the reasons which prompt this course. This rejected measure was presented to the

Filipinos and thoroughly discussed and canvassed in all parts of the archipelago.

When the measure passed the Congress over the veto of President Hoover and its provisions were made known to the Filipinos there was manifested profound disappointment and a spirit of resentment. The Filipinos believed that our Government had failed in its promise to give them independence, and some of the Filipinos did not hesitate to charge that they had been betrayed. The Hawes-Cutting-Hare bill was not an independence bill. It was a hybrid measure and contained the seeds of discord, distrust, disappointment, and perhaps consequences of a serious character.

Certainly under the terms of the bill contingencies might arise and conditions might develop which would deny the Filipinos independence for an indefinite period and at the same time require of the United States the assertion of authority and control under circumstances that might be highly disadvantageous if not dangerous to the Republic.

Some of the dangers, open and hidden in the bill, were discussed in the Senate when it was under consideration and were discussed by the Filipinos in various parts of the archipelago. General Aguinaldo, Mr. Quezon, and many leading Filipinos perceived the dangers in the measure and likewise its failure to provide for the independence of the Filipinos, at least under the most favorable conditions, for 15 to 17 years.

I repeat when I say that the measure was wholly unacceptable to the Filipinos, and when its provisions became known, was rejected; and I emphasize the statement that I am unable to understand the reason why the administration and the Congress do not immediately pass a measure that will provide for the independence of the Filipinos.

Mr. President, I appreciate the fact that the bill which has just been read is not formally before the Senate and that many of the Senators are eager to pass the so-called "Vinson bill", which, as I have heretofore stated, would authorize an enormous sum, perhaps exceeding a billion dollars, for the construction of vessels of war. We refuse to pass a bill giving freedom and independence to 13,000,000 people, who for years have been pleading for that boon, but demand the speedy passage of a bill which will increase the burdens of taxation resting upon the American people and arouse fears and apprehensions in the minds of millions of people beyond our shores. The Vinson bill is avowedly a military measure. It calls for enormous appropriations of a military and naval character. At a time when our Nation should assert itself in an irresistible movement for reduction of armaments, demands are made in the Senate, and, for that matter, in other parts of our country, that our military and naval burdens be increased and that this democratic Republic establish itself as the unchallenged naval power of the world. Our military burdens, as I have had occasion heretofore to remark, exceed those of any nation and our annual expenditures for our Army and Navy are greater than those of any nation, exceeding the largest appropriation of any other nation by, perhaps, $200,000,000.

It is obvious that this naval bill, authorizing a sum so stupendous to be expended in the construction of war vessels, will arouse, as I have stated, fears and, indeed, resentments in other nations.

We could render important service to our country and to world peace and fellowship by materially limiting expenditures for military purposes and inviting all nations to join in reducing military appropriations and adopting measures that would result in world disarmament. In my opinion it is most unfortunate for the advancement of world peace that this naval bill should be before Congress at this time. We are confronted with important, if not serious, economic and industrial questions. They should engage our attention and we should not be distracted by the consideration of measures which relate to war and provide for large increases in our naval armaments. We should now substitute for the naval bill under consideration the measure which has been read at the desk providing for the freedom of a liberty-loving people. The passage of a Philippine bill would not only be a redemption of solemn promises but it would create a new star in the firmament of nations; it would liberate 13,000,000 people and confer upon them the right to shape their own destiny, to live their own lives, and to take their place among the free peoples of the earth. It would demonstrate that this Republic is free from imperialistic designs and refuses to enter upon imperialistic policies.

Mr. President, I return to a thought I was discussing a few moments ago to the effect that I was unable to understand the reason for an attempt to revive the discredited and rejected Hawes-Cutting-Hare bill and to force it again through the Senate. I cannot help but believe that if this measure is revived, many of the Filipinos will regard the action of our Government as an attempt to coerce them into the acceptance of a measure which they had rejected.

The Filipinos had fully discussed this law. A few able Filipinos had eloquently urged their countrymen to accept it. It was discussed in the Philippine Legislature and every argument that could be adduced in justification for its adoption by the Filipinos was presented. The Philippine people rejected it. They believed that their rejection of the bill was final; and they believed, as they had a right to believe, that the American Congress would promptly enact a measure that would permit them to set up a government of their own choosing. The Hawes-Cutting-Hare bill they regarded as a hybrid measure, a measure that neither granted liberty nor provided for their economic freedom. I find no justification in support of a plan to reenact the rejected bill and to further attempt to secure its approval by the Filipinos.

The Hawes-Cutting-Hare bill was vetoed by President Hoover, but Congress passed it over his veto. He stated in his veto message that—

> The American people consider that they have discharged the responsibilities to the Philippine people and have carried out the altruistic mission which we undertook. If we have no further national stake in the islands, if the Philippine people are not prepared for self-government, if they cannot maintain order in their institutions, if they cannot defend their independence, we should say so frankly on both sides.

In my opinion we have met the suggestions made by President Hoover, and should frankly declare our purpose to grant them immediate independence. I have argued that they have a stable government that was the sine qua non provided in the Jones Act of 1916.

President Wilson declared that they had met the requirements made of them, that they had a stable government and were entitled to the independence which they coveted.

That declaration by the President was made, as I recall, in 1919. Since then further tests have been applied to the Filipinos which they have met. They have proven that the statement of President Wilson was justified; they have law and order; courts which administer the law with celerity and justice. There is abundant evidence of the fact that they have a stable government, and orderly and law-abiding people; and political institutions under which individual liberty may be enjoyed and democratic institutions maintained.

Perhaps technically few nations are stable—politically or economically. Nations and governments rise and fall and people reach a high stage of civilization and then waste away. If a stable government means one susceptible of no change then no government is stable. Indeed growth, development, and progress must come to nations as well as to individuals. Many people believe that our Government is undergoing radical changes. There are some who believe that these changes are indicative of a lack of stability and presage most serious and disastrous consequences. But the Filipinos, as I have indicated, possess those institutions indicative of economic and political stability. Certainly their government is more stable than that of many governments throughout the world. As stated, they have just laws and impartial courts, presided over by jurists of ability and integrity. Their judicial system, indeed, is one which calls for commendation. I invite attention again to the fact that

they have developed a most excellent educational system. They have a large number of schools attended by more than 1,000,000 students.

The overwhelming majority of the people have their own homes, and the government and the people are comparatively free from debt and certainly are freer from the serious economic problems that confront many of the peoples of the world. They have a fair and just system of taxation; they have a balanced budget, and their government and the municipalities and provinces meet their obligations. There is less of a spirit of unrest or discontent than is found in many of the most powerful nations in the world.

Senators will recall that in the hearings before the Senate Committee on Territories and Insular Affairs, under the previous administration, the then Secretary of War, Mr. Hurley, contended that stable government meant economic stability, and the inference was drawn that if economic stability was lacking, political independence was not possible. Mr. President, if I properly interpret the position of some of those who appeared before the committee, it was to the effect that a people that had political stability and maintained law and order were not entitled to the claim of possessing a stable form of government if there were economic problems and difficulties either imminent or possible. It has been contended by some who appeared before the committees of the House and the Senate, when the Philippine question was under consideration, that if the Filipinos were granted independence, within a few years thereafter, the economic situation would be such as to create revolutions, with the possible and indeed probable overthrow of their government. Those dire prophecies, Mr. President, in my opinion, do not rest upon a proper interpretation of realities. By that I do not mean that if the Filipinos were granted their independence within the next 2 or 3 years they would be free from economic difficulties.

I think it quite probable that they would have problems of more or less seriousness to meet and to solve. That, however, is the case of all governments today, and that will be the case so long as human governments exist. The solution of one problem today, whether it be economic, political, or industrial, will be met by another problem upon the morrow. There is confusion in the economic and political systems of the world. There are disturbances and dislocations, some of which may eventuate in more serious conditions, and the possible, indeed, probable important modifications of governmental structures and political institutions.

The Philippine Republic, when it shall be established, will, like all governments, have its problems, but the solution of problems is one of the responsibilities resting upon individuals, communities, and governments. There are some persons who contend that our economic situation is unsatisfactory, and it is evident that the economic condition of many countries is unstable. Economic disturbances, resulting from the World War and from other causes, are found in most nations. Industrial revolutions are threatening the peace and stability of some governments, and certainly such disturbances interfere with the cordial international relations which should exist among civilized nations.

Referring to President Hoover's veto message, I think we "have discharged our responsibilities" to the Filipinos and they are grateful for the contribution which this Republic has made to their political and economic growth and progress. I think it will be conceded that we have "carried out the altruistic mission which we undertook." Many believe, I might say in passing, that altruistic purposes were not primarily the reason for our seizure of the Philippine Archipelago and the superimposition upon the Filipinos at the point of the sword the authority of the United States.

Mr. Hoover used the words, "If we have no further national stake in the islands." Whatever those words imply, I have no hesitancy in stating that our Government has no further national stake in the Philippines. The retention of the Philippines is of no national advantage; indeed, by many it is believed that their retention is a distinct national disadvantage. Certain military experts have insisted that in the event of international conflicts the Philippine Archipelago is a liability rather than an asset to this Republic.

I have referred to the statement made by Theodore Roosevelt to the effect that from a military point of view the Philippines are an embarrassment rather than an advantage. I repeat, therefore, Mr. President, that we have no national stake in the sense that we will enjoy any advantage by retaining jurisdiction over the Philippine Islands.

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. KING. I yield.

Mr. VANDENBERG. Certainly the situation is hazardous under the terms of the Hawes-Cutting Act if we are to be left in the Far East with serious responsibilities for what may happen, and a total lack of authority under the terms of the Hawes-Cutting Act to administer that responsibility.

As I conceive the situation, there could not be created a more desperately dangerous situation than is created by the Hawes-Cutting Act, which precipitates us into a responsibility which we can in no sense forfend, in no sense defend, in no sense protect against a calamitous crisis until the actual crisis shall have come upon us. It seems to me what the Senator says is utterly justified in view of the formula that has been written.

Mr. KING. The Senator from Michigan now, as always, speaks forcefully and eloquently, and I am in substantial agreement with the statement just made by him. May I add that the Senator from Michigan, when the Hawes-Cutting-Hare bill was under discussion at the last session of Congress, submitted it to a most deadly and devastating analysis. He demonstrated that it did not measure up to the promises which had been made by our Government and that it would be highly disadvantageous to the Filipinos as well as to this Republic. I should be glad if Senators and those who have not made a study of the provisions of the Hawes-Cutting-Hare bill would read the address delivered by the Senator. I am sure if they did, they would reach the conclusion that the measure referred to and which, as I understand, is to be revived in this body, did not meet the promises made by our Government to the Filipinos and if carried into effect would result in most serious difficulties.

Mr. President, again referring to the sentence in President Hoover's veto message, I submit that if we have no national stake in the Philippines, our primary concern should be to enact a measure under which independence may be obtained by the Filipinos and withdraw from the islands at as early a date as possible and surrender control over the islands to the government which the Filipinos may establish. In my opinion it would be a great object lesson to the world if this Republic should withdraw its sovereignty over those distant isles, and bid Godspeed to the free and independent government there set up, as it assumed an honored place among the nations of the earth. To have contributed to the establishment of a free and independent government would be an honor of which this Nation now and in all future times might be proud.

Again referring to President Hoover's veto message, it would be a necessary implication therefrom that if the Philippine people are prepared for self-government and can maintain order, then the duty would rest upon the United States to grant them independence. Perhaps I am repeating when I refer to the fact that they give evidence of greater ability to maintain a stable government than many of the governments of the world.

Without desiring to make invidious comparisons, I think it may be truthfully said that the conditions in the Philippine Islands warrant the conclusion that a government there by the Filipinos would possess many advantages over those found in some other countries. In the first place, they have a homogeneous people, 13,000,000 in number. They have a larger population than many countries and the area of their territory likewise exceeds that of many other nations. There are more than 12,000,000 Christian people in the Philippine Islands, and approximately 400,000 Mohammedans. The

overwhelming majority of the people are imbued with the same religious sentiments and influenced by the same political ideals. This was demonstrated when a constitution was prepared under the Aguinaldo regime. It contained some of the provisions found in our Constitution and indicated that the people desired a liberal and progressive government resting upon democratic principles.

I referred a few moments ago to the great interest which the people have taken in education. With more than 8,000 public schools and more than 30,000 teachers, to say nothing of their universities and higher institutions of learning, they give evidence of their desire to occupy a high place among the civilized nations of the world. Their schools and educational institutions are far more numerous than those found in many other countries. Art and culture were brought to them by Spain, and they have, under the years of American occupancy, absorbed a political philosophy emphasized in the Declaration of Independence, and expressed in the political institutions of this Republic. The younger generation of Filipinos find much of their inspiration in the teachings of Washington and Jefferson, Lincoln and Wilson, and the great leaders of public thought in America.

Perhaps it is repetition, but I desire to again refer to the constitution prepared by the Filipinos under the Aguinaldo regime. The Mololas constitution was republican in form. It contained a tripartite division of power patterned along the lines of our own Constitution. It contained in substantial form the Bill of Rights with its restraints upon the central authority and its protection of individual rights and liberties. The Filipinos desired a republican form of government, and the Mololas constitution proved that they were not unacquainted with the liberal forms of government existing in the world.

I have no doubt, if we shall afford them an opportunity, the Filipinos will draft a constitution—liberal and progressive—that will embody within it many, if not most, of the important provisions found in the Constitution of the United States.

Mr. President, I appeal to the Senate to turn from the consideration of military and naval measures for the purpose of considering a measure dealing with the liberty and freedom of 13,000,000 people, a people who want liberty, a people who can maintain law and order and liberal institutions.

If our Government shall retain control over the Filipinos for an indefinite period, will they be better prepared for self-government than they are now? Can we assure them and the world that at the expiration of that period the government which they may set up will be immune from difficulties, domestic and international? No guaranty of that character may be made in behalf of any nation. The convulsions in Latin America, Spain, and other European countries during the past century furnish evidence of the fact that political institutions, economic conditions, governmental structures will be subjected to strains and assaults and earthquakes, producing serious and doubtless, in some instances, disastrous results.

The Filipinos do not favor Nazi philosophy or Fascist programs or monarchial institutions. There are many persons who believe that there are only three democratic governments in the world today. That number, however, is too small, but unfortunately it is true that in many countries there is a subsidence of true and genuine democratic spirit, and an inclination to create powerful bureaucracies and executive authority of almost unlimited power. I contrast this tendency with the spirit of the Filipinos and reach the conclusion from this comparison that the Filipinos possess characteristics and qualities justifying the belief that they are capable of self-government and are able to maintain democratic institutions and a liberal and progressive government even in this confused transitional and tempestuous period. Of course, with the passage of the years any government that the Filipinos may establish, as well as governments now existing or hereafter developed, will undergo change. Society and peoples are in a condition of flux and static, and stagnate conditions must yield to evolutionary, not to say dynamic, forces. There is an analogy between the development in biological fields and the evolutionary changes in social and political institutions. Herbert Spencer's philosophy demonstrates that we must be prepared to witness evolutionary development in human institutions. Undoubtedly human institutions tend toward heterogeneity as in the biological field the homeogeneous yields to the heterogeneous.

Mr. President, I cannot refrain from again referring to the eloquent passage in President Hoover's veto message, in which he said:

> * * * We are here dealing with one of the most precious rights of man—national independence interpreted as separate nationality. It is the national independence of 13,000,000 human beings. We have here a specific duty. The ideals under which we undertook this responsibility, our own national instincts, and our institutions which we have implanted on these islands breathes with these desires.
>
> It is a goal not to be reached by yielding to selfish interests, to resentments, or to abstractions, but with full recognition of our responsibilities and all their implications and all the forces which would destroy the boon we seek to confer and the dangers to our own freedom from entanglements which our actions may bring. Neither our successors nor history will discharge us of responsibility for actions which diminish the liberty we seek to confer nor for dangers which we create for ourselves as a consequence of our acts.

I desire to emphasize the statement which I have just read from President Hoover's message.

> * * * We are here dealing with one of the most precious rights of man—national independence interpreted as separate nationality. * * *

Mr. President, we are dealing with precious rights of man and yet we have denied the Filipinos these precious rights—national independence interpreted as separate nationality. President Hoover links the precious rights of man with the national independence of 13,000,000 human beings. I challenge attention to the fact that we have a specific duty and that is to recognize the precious rights of 13,000,000 people now and to grant them now their independence.

President Hoover made a further statement, referring to the Hawes-Cutting-Hare bill:

> * * * This legislation puts both our people and the Philippines people not on the road to liberty and safety, which we desire, but on the path leading to new and enlarged dangers to liberty and freedom itself. * * *

The Senator from Michigan, in the great speech to which I have referred, pointed out the dangers to the Filipinos, as well as the dangers to our Government, under the provisions of the Hawes-Cutting-Hare bill if it should be put into operation. Some of the dangers to which he referred were those undoubtedly in the mind of President Hoover and to which he adverts in his veto message. They were dangers which the Filipinos themselves recognized when they rejected the measure; they were dangers and disadvantages recognized by the Philippine veterans in the series of resolutions which they adopted, condemning the Hawes-Cutting-Hare bill, and by Mr. Quezon, one of the Philippine leaders in an address immediately after its enactment, and in resolutions adopted by the Philippine Legislature when its members rejected the Hawes-Cutting-Hare bill.

Mr. President, may I say to my Democratic associates that we are not following pledges in Democratic platforms, when and if we give support to measures containing provisions such as found in the Hawes-Cutting-Hare bill. The Democratic Party followed the recommendations of President Wilson in the last message which he delivered to Congress where he, in effect, declared it to be the duty of Congress to give immediate independence to the Filipinos.

As a member of the Democratic Convention of 1920, I had the honor to draft the plank which in effect called for the independence of the Philippines. In 1924, I was a delegate to the Democratic Convention in New York and prepared the plank appearing in the platform which reads as follows:

> The Filipino people have succeeded in maintaining a stable government and have thus fulfilled the only condition laid down

by Congress as a prerequisite to the granting of independence. We declare that it is now our liberty and our duty to keep our promise to these people by granting them immediately the independence which they so honorably covet.

This plank is substantially the statement contained in President Wilson's message to Congress. Senators will observe that the Democratic Party in its platform declared it to be "our duty to keep our promise to the Filipinos by granting them immediately the independence which they so honorably covet." Neither Mr. Wilson nor the Democratic convention declared in favor of a hybrid measure such as the Hawes-Cutting-Hare bill. On the contrary, they declared for the immediate independence of the Filipinos. In view of this promise, as well as others made by Democratic leaders and by Democratic National Conventions, there can be no excuse for this Congress to deny immediate independence to the Filipino people. These platform declarations are a condemnation of the Hawes-Cutting-Hare bill or any measure similar to it. I insist, Mr. President, that we redeem this promise, as well as others made, and pass the measure which I have introduced or one containing like provisions.

In 1928 the Democratic Party again spoke upon this question, and declared in its platform that—

The Philippine people have succeeded in maintaining a stable government and have thus fulfilled the only condition laid down by the Congress as a prerequisite to the granting of independence. We declare that it is now our duty to keep our promise to those people by granting them immediately the independence which they so honorably covet.

May I add by way of parenthesis that I was a delegate to the convention in 1928 and joined in endorsing this plank. It will be observed that the same pledge is there made, "That it is our duty to keep our promise to the Filipino people and to grant them immediately the independence which they so honorably covet."

In the light of these declarations, as well as others made by Democratic leaders, I repeat, there can be found no excuse for violating these promises and for refusing promptly to pass legislation granting the Filipinos their independence.

I protest against the efforts which are being made to bludgeon the Filipinos into an acceptance of the Hawes-Cutting-Hare bill. As stated, they rejected this measure, and to now revive it would be regarded as a coercive effort upon the part of our Government to compel its acceptance.

If Congress should pass the discredited and rejected Hawes-Cutting-Hare bill, the Filipinos could not regard it otherwise than as a threat that if they did not accept it they would obtain nothing better.

Mr. President, I would regard such a course as unworthy of this Republic. Let us say to the Filipinos that we will redeem promises which have been made; that we will respond to their desires and give to them a fair and just measure under which they may set up a government which meets their desires and aspirations. Let us not say to them when they ask for bread, "You shall have only stone."

Mr. President, I understand that it is desired that adjournment be taken at this time. I will therefore yield the floor.

Wednesday, February 28, 1934

Mr. KING. Mr. President, at the hour of adjournment yesterday I was discussing some questions pertinent to the Philippine problem. I understand that today the Senator from Louisiana [Mr. LONG] suggested that the measure offered by me granting independence to the Filipinos be taken up for consideration and passed; and, as I understand, he made the suggestion that if that were done it would relieve us of some responsibilities in the Orient which now rest upon us and which may be provocative of national, if not international controversies. I shall be happy if the Senate would put aside the pending bill and promptly pass the Philippine bill, which I had the honor to offer. But I fear all appeals to pursue that course will be unavailing.

Mr. President, at the last session of Congress there was forced through the Senate over the protests of the Filipinos and objections of many Senators, and, I believe, over the objection of a majority of the American people, a bill which it was alleged would give independence to the Filipinos and take that question out of the domain of national and international concern.

That measure was an apple of discord. It provoked resentments and animosities in the Philippine Islands, and in a way drove a wedge, though a rather small one, between various elements in the Philippine Islands.

Mr. President, I think that measure was calculated to do harm rather than to promote the welfare of the Filipinos. I regarded it as a most unwise, not to say unfair and unjust, law; and the results have vindicated the prophecies made by some of us at the time the measure was under consideration in this Chamber.

Quite recently I have received a number of telegrams and messages from the Philippines condemnatory of that measure, some of them, incidentally, condemning the efforts which, I understand, are being made to revive and revitalize the dead Hawes-Cutting-Hare law. One of the telegrams, dated the 22d of February, reads as follows:

Tell Gabaldon he is the representative here sent by the Philippine Legislature for the purpose of conveying to the American people, to the President of the United States, and the American Congress the views of the legislature and the Filipinos, particularly the views of the Philippine Legislature, in rejecting the so-called "Hawes-Cutting bill."

Mr. LONG. Mr. President, I do not like to disturb the Senator, but what has been the last position of the Filipinos as expressed from Manila?

Mr. KING. In opposition.

Mr. LONG. They do not want the Hawes-Cutting law?

Mr. KING. They rejected it and are still opposed to it.

Mr. LONG. Have they not asked for more immediate independence?

Mr. KING. They have repeatedly during the past 10 years demanded immediate and absolute independence. They have endorsed a measure, the so-called "King bill", which is pending in the Senate.

Mr. LONG. How long would they have to wait for independence under the King bill?

Mr. KING. Under the King bill, if the Filipinos avail themselves of the minimum provision, they would have their independence in less than 30 months; and if they avail themselves of the flexible provision of the bill, it would be 38 months. The minimum and flexible provisions relate to the time within which conventions may be called and plebiscites held.

Mr. LONG. I do not want to interrupt the Senator again, but, if he will permit me, I should like to ask one question. While I voted for the Hawes-Cutting bill, because it was the only thing we could get a vote on at the time, if we cannot free those people in 2 or 3 years, I cannot see how we are ever going to free them.

Mr. KING. I think the suggestion of the Senator is pertinent. So many contingencies may arise under the Hawes-Cutting measure that the United States might remain in control for years if not indefinitely.

Another cablegram sent by a Filipino organization is as follows:

JANUARY 22, 1934.

Tell Gabaldon convey President Roosevelt, Presiding Officers of Congress, Senator KING, American Press Civic Union mass meeting held today. Thousands attended. Different political, religious creeds unanimously adopted resolution supporting immediate approval Congress King bill granting Philippines complete, absolute independence 24 to 40 months; elimination naval military coaling reservations; discussions economic, immigration, neutralization treaties should not block proclamation date independence. Mailing resolutions.

UNION.

On February 3, the following cablegram was sent to Hon. Manuel Quezon, head of the Philippine delegation, now in Washington for the purpose of obtaining legislation granting independence to the Philippines:

MANILA, *February 3, 1934.*

President QUEZON,
Washington, D.C.:

Following resolutions unanimously adopted at mass meeting composed of more than 30,000 persons after torch parade from Azcarraga to Luneta about 3 miles long held this evening:

"Whereas during the present session of the Congress of the United States Senator KING has presented a bill providing for the granting of independence to the Philippines after the time absolutely necessary to effect the orderly transfer of the sovereignty of the United States to the people of these islands, a period which is estimated to be not more than 3 years;

"Whereas the said King bill does not provide for the retention by the United States of military reservations after the recognition and proclamation of independence;

"Whereas according to said bill the present trade relations between the United States and the Philippines will not be altered and the American immigration laws will not be applied to Filipinos before the recognition of independence;

"Whereas the King bill, of all the various bills pending before the Congress, including the Hare-Hawes-Cutting law, is the one which is most similar in its fundamental provisions to the plan submitted by the Quezon delegation now in the United States and is the one most in consonance with the historic aspirations of the Filipino people for the enjoyment of immediate, complete, and absolute independence solemnly embodied and formulated in various resolutions of the legislature and the commission of independence and in the platforms of all political parties in the Philippines;

"Whereas the Philippine Legislature, in keeping with section 17 of the act of Congress commonly known as the "Hare-Hawes-Cutting law", and voicing the genuine sentiment of an overwhelming majority of the Filipino people, has rejected said law;

"Whereas the movement in the United States to extend the period for acceptance of the Hare-Hawes-Cutting law in its present form is contrary to the principles of a representative government, inasmuch as the Philippine Legislature has already taken action in accordance with section 17 declining to accept the said law:

"Now, therefore, this popular mass meeting, called by the Association of Veterans of the Revolution, the Labor Congress, the Federation of Labor of the Philippines, the Anticoalition of the Democrata Nacionalista Consolidado, and the Radical Parties, resolves, as it does hereby resolve, to endorse and support the bill presented by Senator KING, and hereby petitions Congress to enact the same during the present session; and, if this be not possible, that it enact any other independence law which does not contain the provisions of the Hare-Hawes-Cutting law objected to by the Philippine Legislature, thereby giving a noble and glorious consummation of the unselfish and altruistic task which America has undertaken in these islands."

"Whereas the King bill, providing for independence in 3 years and without American military reservations, is pending before the Congress of the United States;

"Whereas the movement now organized by certain elements in the United States to review the Hare-Hawes-Cutting law, which has been rejected by the Filipino people through their constitutional representatives, is designed to block the King bill;

"Whereas there is urgent need of union and solidarity among all Filipinos, regardless of party affiliations, to obtain immediate, complete, and absolute independence: Now, therefore, be it

"*Resolved*, That this mass meeting of Filipinos opposed to the Hare-Hawes-Cutting law hereby appeals to our countrymen who are in favor of the Hare-Hawes-Cutting law to forget partisan differences for the sake of our beloved country and to join in endorsing and supporting the King bill, which provides for immediate, absolute, and complete independence.

"*Resolved further*, That a certified copy of this resolution be personally delivered to the presidents of all the political parties in the Philippines."

Mass meeting requests you kindly transmit above resolutions to President and Congress.

Similar resolutions received from Philippine Civic Union, Cagayan Labor Union, Provincial Board Pangasinan, Presidents' Assembly, Rizal Guerra Patriotica, and Democratas Capiz.

PAREDES RECTO.

Mr. President, my information is that many mass meetings were held in various parts of the Philippines, at which resolutions were adopted condemning the Hare-Hawes-Cutting bill and protesting against any effort to revive it. These resolutions also endorsed the bill which I introduced and which is now pending in the Senate.

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. KING. I yield.

Mr. VANDENBERG. Does the Senator interpret these resolutions as also meaning an acquiesence in complete, immediate, and absolute abandonment of all market advantages in the United States under the tariff?

Mr. KING. Yes. That is to say—and I shall supplement the resolutions just submitted by communications which I have received from the Philippine Islands—the Filipinos are willing to meet whatever disadvantages, and there will be some, may arise by reason of independence within 3 years, in order to have the boon of independence.

Mr. VANDENBERG. What I had in mind was this. I had understood that the thought in the islands which was favorable to what we will call immediate independence, in 2 or 3 years, also contemplated a post-independence period of economic readjustment, and I was wondering whether these resolutions embraced some such subsequent period of tariff advantage, or whether the phrase "immediate, complete, and absolute independence" means what it says.

Mr. KING. I have no doubt but what the resolutions mean what they say. Undoubtedly some Filipinos would like an understanding or arrangement with the United States, under the terms of which, after independence is obtained, there might be some reciprocity, some reciprocal trade relations mutually beneficial to the two countries; but rather than have the Hawes-Cutting measure imposed upon them or have independence postponed for an indefinite period, they prefer absolute and immediate independence, as provided in the so-called "King bill."

Mr. VANDENBERG. And the Senator thinks that these native Filipinos, in passing upon these resolutions, did so with an understanding that it might cost them their complete free markets in the United States?

Mr. KING. Undoubtedly.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. KING. I yield.

Mr. TYDINGS. What I say has no reference to the Senator, but it is also fair to say that the sugar interests in the United States are very much in favor of complete, absolute, and unconditional independence immediately.

Mr. KING. So far as I am advised, the agricultural interests in continental United States, including the producers of sugar, believe that the Filipinos should be permitted to set up their own government. I might add that the labor organizations also have joined in demanding independence for the Philippines.

The Senator's remarks have no relation to the question under discussion.

Permit me to read another cablegram received on the 3d of this month, addressed to Commissioner GUEVARA:

Following resolving clause was adopted at a mass meeting composed of more than 30,000 people—

And so on. It is substantially the same resolution as that which I read a moment ago. I call attention to it because it was sent to Commissioner GUEVARA, who is here in Washington, whereas the other was sent to Mr. Quezon and Mr. Gabaldon, two of the representatives sent here by the Philippine Legislature to present to the President of the United States and to the Congress the views of the legislature in opposition to the Hawes-Cutting-Hare bill and to petition for the enactment of legislation that will give independence to the Philippines.

Mr. VANDENBERG. Mr. President, does the Senator further yield?

Mr. KING. I yield.

Mr. VANDENBERG. How would the Senator harmonize a willingness to completely surrender the free-trade market privileges in the United States with the fact that the Governor General of the Philippine Islands is cabling us at the present time that even the imposition of a 5-cent tax on oil would utterly ruin some 3,000,000 Filipino farmers? How can those two propositions be harmonized?

Mr. KING. Mr. President, in my opinion a proper understanding of the conditions existing in the Philippine Islands, and the relations existing between the Philippines and our Government, will enable us to reconcile the statement made by the Governor General, if there is any real conflict. Undoubtedly restrictions imposed upon Philippine exports to the United States will, under present conditions, prove disadvantageous to the Philippines. Senators know that the Filipinos protested against our Government forcing free trade upon them and denying them the right to seek markets in other parts of the world. By our policy we have, in effect, compelled the Filipinos to trade only with the United States. We have forbidden them to impose tariff duties in order that they might obtain revenues and, as I

have stated, have practically foreclosed them from entering the markets of the world. Under these conditions they have been forced into the development of certain industries the products of which were brought to the United States. They have been compelled to receive our exports and we have sent to the Philippine Islands large quantities of agricultural and other commodities each year. I think, perhaps, the Governor General has exaggerated the effect of the imposition of the excise taxes referred to, though I believe the revenue of such excise taxes will be of disadvantage to the Filipinos.

In all the hearings before committees Senators know that persons representing various interests, presenting the strongest possible arguments, do not always confine themselves to the fields of logic and accuracy. It is obvious that if we continue to hold the Philippines under the existing law, the Filipinos and the Governor General, whoever he may be, will endeavor to secure all reasonable trade advantages with the United States. Our policy has encouraged American investments in the Philippines and Americans have been largely responsible for the increased production of sugar and copra and its products. Undoubtedly, as I have indicated, if we had not forced free trade between the two countries, certain industries would not have attained their present status and markets in various parts of the world would have been opened up for Philippine products. The unwisdom of the tariff and commercial policy which we have forced upon the Filipinos has become apparent and it is certain that to continue the present situation will multiply the difficulties to be encountered when we attempt to change the present status or to give to the Filipinos their independence. We have attempted to impose upon the Filipinos a policy somewhat similar to that which George III sought to force upon the American Colonies. We have cut off the trade of the Filipinos with other nations and forced them to deal almost exclusively with the United States. Such a course was bound to develop problems and conditions increasingly difficult of solution and, in the end, perhaps injurious to the Filipinos. This very situation is a powerful argument in favor of granting to the Filipinos their independence.

So I have no difficulty in reconciling the requests which may have come from the Governor General with the statement which I have made, that the Filipinos, while it is true they would prefer a situation that would enable them to have reciprocal advantages after independence, will take independence, take it now, take it within the next 2 or 3 years under the terms of the bill referred to, rather than have the Hawes-Cutting bill revived, or continue the present status.

Mr. VANDENBERG. Mr. President, will the Senator yield to permit me to make a further statement?

Mr. KING. I yield.

Mr. VANDENBERG. I cordially join the Senator, as he knows, in opposition to the extension of the Hawes-Cutting bill. I have no sympathy whatever with any such purpose. But it seems to me that the Senator's bill, the so-called "King bill", needs an appendix, to wit, a formula for the subsequent progressive recession in American tariffs, so that the republic which we thus launch under our beneficent auspices, will have a chance to survive, and succeed, and stabilize itself in a post-independence period of 5 or 10 years, during which they can gradually accommodate themselves to their new economic status.

Mr. KING. May I inquire of my friend from Michigan whether the suggestion which he has made contemplates that they should have their independence within the next few years?

Mr. VANDENBERG. Yes; as soon as possible.

Mr. KING. But that there should be reciprocal relations between the United States and the Philippines during which the Filipinos would receive some benefits from such relations?

Mr. VANDENBERG. During a limited period of years, so that they could, as rapidly as possible, accommodate themselves to the new status.

Mr. KING. But that would be under their own government.

Mr. VANDENBERG. That would be entirely under their own government.

Mr. KING. And we would cut loose from the obligation to defend them against aggression, if there were any?

Mr. VANDENBERG. Precisely, which is at the base of my entire viewpoint. The Senator knows that my fundamental objection to the Hawes-Cutting bill is that we have 18 years of responsibility without authority, and if anything is to happen I want it to happen under their flag rather than ours.

Mr. KING. Mr. President, with that explanation, and I was under the impression that that was the view which my friend entertained, I shall not oppose an amendment to the bill if proposed.

The point I am trying to make, Mr. President, is that it is unfair to the American people, and to the Filipinos, to have the sword of Damocles, so to speak, hanging over their heads. American capital in the Philippines does not know what to do. The Filipinos do not know what to do. They have the threat of the revival of the Hawes-Cutting bill, which they have rejected for reasons substantial and warranted. They fear other legislation that, perhaps, will be as objectionable as the Hawes-Cutting bill. They do not know what their status is going to be. I think we owe it to them, as well as to ourselves, to liquidate this question in an honorable and just way at the earliest possible moment, so that the Filipinos will know what their future shall be, that they may shape their domestic as well as their international policies in a way they believe will be most advantageous, and so that our country will know what its relations to the Philippines are, what its obligations are, and what in all fairness ought to be done in that post-independence period to which the Senator from Michigan referred.

I desire to read another cablegram received on the 20th:

American business men control the correspondents—

That is, the correspondents in the Philippine Islands, meaning thereby that some of the news reports from the Philippine Islands are garbled and may not be relied upon. This cablegram was sent in view of a statement appearing in one of the papers published in Manila that an agreement had been made here in the United States by Gabaldon and some of the delegates sent to the United States by the legislature, under the terms of which the Hawes-Cutting bill was to be revived. Some American papers have carried that statement.

Returning to the cablegram:

American business men control the correspondents. No majority leader accepts modification. Nobody mentions 17 years. Aguinaldo veterans, labor organizations, Philippine church, entire people supporting the King bill. Recent monster demonstrations the best evidence. If defeated will resort to boycott.

Mr. VANDENBERG. Mr. President, may I interrupt the Senator once more?

Mr. KING. I yield.

Mr. VANDENBERG. I think that cablegram further identifies the thought I was expressing a few moments ago. In all my conversations with General Aguinaldo it has been my understanding that he always linked a post-independence era of economic readjustment with immediate independence. So I am again wondering whether the demands which the Senator is reading do not in fact mean that absolute, complete, and immediate independence is a thing associated with a post-independence era of economic readjustment? Has that not always been the Aguinaldo program?

Mr. KING. I do not quite assent to the statement made by my friend. I thought that I had with me a speech recently delivered by Aguinaldo, a speech printed in extenso, which I should like to call to the attention of the Senator.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. KING. I yield.

Mr. TYDINGS. I do not want to transgress upon the Senator's time, because when he has finished I desire to make a statement about this subject matter in my own time, but I am in a position to say that in the last 3 weeks I have been

in communication, both in person and by cablegram, with all the leaders of Filipino politics in both factions, including the last mission and the new mission, General Aguinaldo, the speaker of the house, the president of the senate, and many others, and I am happy to report that they are all, without exception, in agreement for a bill which will shortly be introduced in this Congress.

Mr. KING. Mr. President, the Senator has information quite different from that which comes to me. Within the past 3 hours I have conferred with Mr. Gabaldon, one of the ablest men in the Philippine Islands, who is here as a delegate, named by the Philippine Legislature. He stated that there has been no understanding, no agreement; that he knows of none, and he assents to none. He informed me that Mr. Quezon has not assented to any agreement of the character indicated. It is evident from the Senator's statement that efforts are being made to induce some Filipino leaders to agree to a plan to revive the dead Hawes-Cutting-Hare bill. If not, why the cablegrams to and communications with persons in the Philippine Islands? It is easy to surmise the purpose—though it is not now manifest what representations are made to Filipino leaders.

Recurring to the position of Aguinaldo, I have here a statement made by him in a speech delivered after the passage of the Hawes-Cutting bill, in which he says:

> At the outset I wish to state that it is not true that under the Hare-Hawes-Cutting Act, Philippine independence will be automatically granted within the next 10 or 12 years. According to the speeches in Congress when the bill was being discussed, the actual concession of freedom may not take place until 14 or 16 years from the inauguration of the Philippine Commonwealth; provided (and this is a vital proviso) that it is not arrested by intervention of the United States for any of the many causes enumerated in the act.

The able Senator from Michigan [Mr. VANDENBERG], when the bill was under consideration, pointed out some of the causes that might lead to intervention by the United States anterior to the expiration of the time mentioned in the bill, and this able Philippine leader perceives the same dangers and the same menace.

Referring to the Hawes-Cutting bill, he further states:

> In other words, it may take all in all at least half a century for the Philippines to obtain her liberty. In other words, under the law, another period of probation is required of us with all the doubts and contingencies and unforeseen developments that may arise during the next 14 years.
>
> If the prerequisite prescribed in the Jones law, namely, that as soon as a stable government was established independence would be granted, had not yet been complied with, another period of probation might have a semblance of justification. It is incontestable, however, that 16 years ago, President Wilson had certified that we had already a stable government in these islands and he had advocated that independence be granted us in justice to our aspirations. Why then should we voluntarily accept another period of trial? Why not ask instead that our republic be restored even subject to some such supervision as is provided for in the Hare-Hawes-Cutting law? This will be a million times more reasonable than the status that is being proffered to us under the law. We will have instead an international personality of our own and we will have such instrumentalities at our command as will enable us to develop our latest energies and resources and to make our country strong, not artificially as now but in fact. There is no visible reason at all why the Philippine Republic could not be established within the next 4 or 5 years. There is no reason why we should select the status of a commonwealth which does not differ radically from the form of government that is provided in the Jones law.
>
> An analysis of the Hare-Hawes-Cutting Act will inevitably reveal that with the exception of a few remaining positions to be Filipinized and the power of making appointments and preparing the budget the autonomous powers that we now enjoy are not increased one whit. It will be discovered further that in exchange for these seeming concessions we shall have to sacrifice the present free-trade arrangement and our right of immigration with all the benefits that this arrangement entails for our country.
>
> In exchange for actual independence, I venture to assert that we are ready to undergo sacrifices of whatever nature and form. I believe that our country would undergo unspeakable hardships for the cause for which she has labored all these years. Unless however, it is independence that we are actually getting, I doubt whether our people would submit to unnatural impoverishment.
>
> * * * * * * *
>
> It is unnecessary on this occasion to go into the other details of the law. It is sufficient to state that our country is hopelessly divided on this, the greatest national issue that has yet confronted her. The debates that are raging around the law will sow the seeds of discord among our people for many years to come. It is clear that this contingency could very well be avoided by the enactment of a more liberal legislation, one that is more responsive to our national desire for liberty.
>
> Our task at present, as I see it, is to seek a common ground, a formula of union, so to speak. We should exert efforts to formulate a plan which would be acceptable to all. I believe that in the plan which I have been proposing during the last few weeks the country can find this middle ground and could adopt it as a meeting point without embarrassment to anyone.
>
> I propose that we unite so that we could have a legislation whose principal features would be as follows:
>
> 1. That the Philippine Republic be restored automatically within 4 or 5 years from the enactment of a law providing for such independence.
> 2. That during the said period of 4 or 5 years the present free-trade arrangement continue to the mutual benefit of both the United States and the Philippine Islands.
> 3. That immediately after the Philippines, if America desires it, all free-trade arrangement recognition of the independence of between her and the Philippines be terminated.
> 4. That during the 4 or 5 years, transition period we be allowed to negotiate with foreign countries for such commercial relations and agreements as may be mutually beneficial after the free-trade arrangement with the United States shall have been terminated.
> 5. That we be given liberty to legislate about our own currency.
> 6. That in the meantime also we be allowed to organize the nucleus of our national defense and to lay the basis for future diplomatic relations with other countries.
> 7. That all such concessions and power of intervention as may be demanded of us by the United States be embodied in a treaty to be signed after our independence is recognized by her.
> 8. That the payment of our bonded indebtedness be not demanded until the period of its maturity, because it is already so provided in the contract of indebtedness.
> 9. That all economic restrictions desired be on the basis of reasonable reciprocity.
>
> The foregoing, my countrymen, in its barest outline is an independence plan which I believe would be accepted by everybody concerned. It should be acceptable to us because it hastens the concession of freedom and because it removes all uncertainty about it. It should be acceptable also to the agricultural and industrial interests of the United States because competition from Philippine products will be eliminated within the short period of 4 or 5 years.
>
> I beseech the support of the country as regards this plan. It is the only feasible plan, as I see it, considering the conditions now prevailing in the United States. It is also the only feasible plan that could make us happy. If under this plan we shall have to undergo hardships just the same, they are hardships that will be doubly welcome because they are in exchange for our coveted freedom.
>
> We are at the crossroads, as it were, to our national destiny. The time calls for serene reflections and for courageous decision. By striving for the enactment of a more liberal independence law we certainly could not be accused of not desiring our freedom. On the contrary, we are thereby making known our determination to face the consequences of an independent existence. Let us thereby show that if we could have our national ideals achieved during the next 4 or 5 years we are disposed to forego all the advantages of our association with the United States.

Mr. President, General Aguinaldo, in the statement which I have just read, presents arguments against the Hawes-Cutting-Hare bill which, it seems to me, cannot be controverted. I cannot believe that he has modified or repudiated the views therein expressed. It seems impossible that he could have assented to a measure not yet prepared, but which, as the Senator from Maryland says, is shortly to be introduced, which would be at variance with his expressed views. It is possible, however, that certain promises have been made as to the terms of the bill which may have inclined him reluctantly to approve a prospective and indefinite measure. I can understand that the Filipinos, rather than continue the present situation, would yield to propositions repugnant to them and not oppose a bill though it was not in accord with their views and failed to give to their country the liberty which the Filipinos demand. I challenge attention to the concluding propositions submitted in General Aguinaldo's address, among them that the Philippine Republic be restored automatically within 4 or 5 years; that prior to independence the present trade relations shall continue for both the benefit of the United States and the Philippine Islands, but that as soon as independence is achieved that shall be terminated. An important provision is that during the transition period before independence the Filipinos be allowed to negotiate with foreign countries for such commercial relations as may be beneficial after independence has been obtained.

Section 17 of the Hare-Hawes-Cutting Act specifically provides that:

The foregoing provisions of this act shall not take effect until accepted by concurrent resolution of the Philippine Legislature or by a convention called for the purpose of passing upon that question as may be provided by the Philippine Legislature.

In accordance with this provision, the legislature may act directly on the law or call a convention for the purpose of accepting or rejecting it. No plebiscite for this purpose was contemplated. The Philippine Legislature having chosen to act directly on the law, its action in declining to accept it is as perfectly legal as any action of a convention called by it for the purpose of considering the bill.

Long before the Hawes-Cutting bill was enacted, the legislature, directly or through the Philippine Independence Commission, had already recorded opposition to many of the provisions of the bill.

On November 5, 1932, the Independence Commission gave specific instructions to the Philippine Mission in Washington, in a declaration embodying the wishes of the Philippine Legislature as to the kind of bill acceptable to it. These declarations were confirmed and ratified by the Philippine Legislature in its Concurrent Resolution No. 19, adopted November 9, 1932.

It will be recalled, Mr. President, that the commission sent here to secure independence had been instructed by organizations representing the Philippine people, and by the Philippine Legislature, as to the form and spirit of the measure that would meet the wishes of the Filipinos. The Hawes-Cutting bill was at variance with these instructions; it was not responsive to the desires and aspirations of the Filipinos and, as stated, was not in harmony with instructions given the mission which came to Washington to labor for and appeal for complete, absolute, and immediate independence. I now present a concurrent resolution expressing the sense of the Philippine Legislature with reference to independence bills pending consideration in Congress. It was prepared after the legislature learned of the bills presented to Congress, and for the purpose of instructing the mission which came to Washington to labor for independence.

Concurrent resolution expressing the sense of the Philippine Legislature with reference to the independence bills pending consideration in the American Congress

Resolved by the House of Representatives, the Philippine Senate concurring, That the following declaration be adopted as expression of the unanimous sense of the Philippine Legislature:

First. That it is the aspiration of the people of the Philippines to have immediate, absolute, and complete independence.

Bear in mind these are the instructions so far as the Legislature of the Philippines had the power to instruct those whom they sent here to represent the Filipinos.

Mr. LEWIS. Mr. President, was that before we voted on the bill?

Mr. KING. Yes; several months. I continue reading:

Second. That, if the United States Congress is not disposed to pass at the coming session an act granting such immediate, absolute, and complete independence, the Philippine Legislature trusts that it will at least pass an act designating the date when independence will be granted, and that the delay will be only that absolutely required to transfer sovereignty and make the necessary readjustments for the proper protection and safeguard of the interests of both countries, and that in the meantime more ample powers be conferred upon the people and government of the Philippine Islands than they now have as regards the management of their domestic affairs without undue restrictions and the preparation of the country for its future responsibilities as an independent and sovereign state, and that the tariff regulations between America and the Philippines be based on just reciprocity or, at least, be not detrimental to the Philippine Islands.

Senators will see that is an alternative. They pray, first, for complete, immediate, and absolute independence. Then, if the United States is not disposed to grant their plea, they ask that a date be designated at which sovereignty may be transferred from the United States to the government to be formed by the Filipinos. The concurrent resolution continues:

Third. That if the United States will insist upon reservations for naval and coaling stations, such will be established in Manila Bay or any other ports of importance for the commerce of the Philippine Islands.

Fourth. That the legislature reiterates its confidence in the legislative mission at present in Washington and hopes that the same will do all it can to secure legislation in consonance with the foregoing declarations and fundamentally satisfying the political aspirations of the people of the Philippine Islands.

Fifth. That it acknowledges and appreciates the sentiment in favor of the Philippine ideals at present prevailing in the Congress of the United States, and, therefore, trusts that said Congress will pass an act granting us immediate, absolute, and complete independence or, at least, legislation fulfilling the requirements above set forth.

On December 10, 1932, when news of the approval of certain amendments to the Hawes-Cutting bill, adversely affecting Philippine rights and interests, reached Manila, President Quezon, in behalf of the legislature, sent a telegram to the Philippine Independence Mission in Washington, which in part is as follows:

It seems there is no way of obtaining the passage of a law that will give due consideration to the rights and interests of the Filipino people, and I am sure that I am voicing the unanimous sentiment of our people in urging you to press for immediate independence, and if this is impossible in this session, let there be no bill.

Those were the final instructions given to the mission here when information was brought back to Manila of the numerous amendments which were offered to the bill known in the House as the "Hare bill", and in the Senate as the "Hawes-Cutting bill."

Shortly before the approval of this measure by the Senate a meeting was held in Manila by the Independence Commission, on the 17th of December 1932; and the presiding officers of the legislature were authorized to send to the Philippine independence mission in Washington the telegram which I am about to read. People in the Philippine Islands, through mass meetings, through their civic organizations, through their political organizations, through the legislature, and through the political organization which has directed, if I may use the expression, the campaign for independence for a number of years, were alert as to the steps which were being taken in the House and in the Senate dealing with the question of Philippine independence.

This is the telegram which was forwarded:

At meeting held today Independence Commission unanimously approved all cables heretofore sent you and speech President Quezon as expressing unanimous sentiment members thereof and Filipino people summarized as follows: First, immediate, complete, and absolute independence has ever been and is desire of Filipino people. Second, willingness compromise on postponement independence or transitory period not over 10 years promised upon conditions that during said period local government will be really autonomous and regulations commercial relations and immigration would be mutually beneficial to both American and Filipino peoples or at least not destructive of our industries nor offensive to our race, as specifically pointed out in the resolution and instructions taken by Aquino. Third, restriction of entry Filipino products and immigration to America on any basis without similar restriction to American goods and Americans entering Philippines is in itself unjust and can only be accepted if limitations and basis thereof are as specifically mentioned in aforementioned resolution and instructions. Fourth, any bill postponing independence or containing transitory period under conditions different from above will not be accepted if submitted to Philippine Legislature for approval, and if no submission is provided will be strongly protested by same and Filipino people.

(At this point Mr. KING yielded the floor for the day.)

Thursday, March 1, 1934

Mr. KING. Mr. President, on three recent occasions I have submitted to the Senate views relating to the Philippine problem, and upon each occasion have been required to yield for the consideration of other matters. Yesterday I yielded to the Senator from Maryland [Mr. TYDINGS], who desired to present some views relating to the Philippine situation. I made a brief reply to his statements.

During his address he stated in substance that negotiations were in progress for the purpose of agreeing, if possible, upon a new bill dealing with the Philippine situation. As I understood the Senator, representatives of various groups had assented in principle at least to the bill which he has in his mind but has not been reduced to writing. Evidently it is in a nebulous condition and is dependent upon uncertainties and contingencies for any form it may assume.

Several days ago my attention was called to a statement appearing in the press to the effect that an agreement was about to be reached under the terms of which the Hawes-Cutting-Hare Act, with slight modifications, would be revamped and passed by Congress, and, further, that representatives of the Filipinos who were here were agreeable to the proposed plan.

I had had a number of interviews with Mr. Quezon, the chairman of the Philippine delegation—sent here to urge the enactment of an independence law—since he came to the United States a few weeks ago, and during the same he led me to believe that he was opposed to the Hawes-Cutting-Hare Act and favored the bill which I had offered and which is pending in this body. After reading the newspaper reports, I wrote Senator Quezon as follows:

WASHINGTON, D.C., *February 18, 1934.*

DEAR SENATOR: Upon two occasions recently, in our conversations respecting the Philippine situation, I understood you to state definitely that you were opposed to any measure that would attempt to revive the dead Hawes-Cutting bill and revitalize it; further that you favored the bill which I offered and which is now pending (S. 2064, 73d Con., 2d sess.) or one containing substantially the same provisions.

Yesterday there appeared in the New York and Washington papers, and doubtless others, statements to the effect that a plan might be adopted which would revive the Hawes-Cutting bill, with some of the provisions eliminated. I gained the impression from the newspaper statements that an understanding between the administration and the leaders of the Filipinos might be reached that would result in an effort to reenact the Hawes-Cutting measure in order that another opportunity might be given the Filipinos to register their approval or disapproval of the measure referred to.

I have been reluctant to believe that you and the members of your delegation are willing to have the Hawes-Cutting bill revived by Congress. I have assumed from what occurred in the Philippine Islands with respect to the Hawes-Cutting bill that it was wholly unsatisfactory to the Filipinos and that any attempt to revive it would meet with their disapproval.

It is my intention to press for the consideration of the measure which I offered and to urge the enactment of my bill or some other measure containing similar provisions. I shall be glad to be advised if my understanding of your position is correct and also whether you and the members of your delegation favor the passage at this session of Congress of a measure containing provisions similar to those contained in my bill.

Sincerely yours,

WILLIAM H. KING.

Hon. MANUEL L. QUEZON,
Waldorf-Astoria Hotel, New York, N.Y.

In reply to my letter Senator Quezon wrote, as follows:

THE WALDORF-ASTORIA,
New York City, February 20, 1934.

Hon. WILLIAM H. KING,
United States Senate, Washington, D.C.

MY DEAR SENATOR KING: In answer to your letter of February 18, I beg to inform you, as follows:

First, that your understanding of my position, as I stated to you in our previous conversations respecting the Philippine situation and with particular reference to the Hawes-Cutting bill, as well as to your bill (S. 2064, 73d Cong., 2d sess.), is absolutely correct.

Second, that I have, however, expressed myself as being ready to agree to the revival of the Hawes-Cutting bill, if it is amended in certain particulars and with certain understandings, provided your bill fails to secure the approval of Congress.

If, therefore, you should press for the consideration of your bill and urge its enactment I, as well as the members of my delegation, will support it in preference to the revival, with amendments, of the Hawes-Cutting bill.

You are, I am sure, informed that there have been popular demonstrations in the Philippine Islands supporting your bill, and that the leaders of the legislature asked me to endorse it.

Very sincerely yours,

MANUEL L. QUEZON.

Mr. President, it will be observed that in my letter to the distinguished leader of the Philippine delegation I definitely inquired whether he approved the bill which I had introduced, or whether he approved the attempt to revive and revitalize the dead Hawes-Cutting measure. His reply is definite and conclusive. He favors the bill which I offered providing for the immediate independence of the Philippines. If, however, my bill cannot be passed, he expresses his willingness to consider some other measure involving, doubtless, some provisions similar to those in the Hawes-Cutting bill.

A day or two ago I stated, Mr. President, in my discussion of this question that I believed attempts were being made, I will not say to coerce, but to induce the Philippine leaders, the Philippine Legislature, and the Filipino people to endorse the Hawes-Cutting bill with some modifications. I repeat, Mr. President, that I believe efforts are being made by persons in Washington, by business interests in the Philippine Islands and in the United States to revive the Hawes-Cutting bill, and I have no doubt, from information conveyed to me, that the Filipinos are told by the interests to which I have referred, if not by others, that unless they accept the Hawes-Cutting bill with some slight amendments, they will get nothing, and that the present status of the islands will be maintained, subject to restrictions which may be imposed upon exports from the Philippines to the United States.

I can understand, Mr. President, how men desiring independence, when confronted with the choice of remaining in a subordinate and colonial condition, rather than have desired independence, would reluctantly assent to a measure containing objectionable and repugnant provisions far below what they desire, yielding not what they have anticipated, so they will not continue in the position in which they have existed for many years.

I can understand that some Philippine leaders, rather than continue the present situation, may be willing to accept a measure, though most objectionable, but which perhaps will confer some benefits not now enjoyed, but I aver now as I have averred upon a number of occasions, that the Filipinos, overwhelmingly, favor the bill which has been offered by myself, or a similar measure which will result in their independence within the next 3 or 4 years.

There were provisions in the Hawes-Cutting bill that were obnoxious to them, and I do not believe that under any circumstances the Filipinos are willing to accept the Hawes-Cutting bill in its present form. It may be, as indicated by the Senator from Maryland [Mr. TYDINGS] yesterday, that an objectionable and indeed obnoxious plan might be accepted if the Filipinos were convinced that complete and immediate independence could not be obtained. The Philippines are dominated by the United States, and their inhabitants realize that they can obtain only what this Government grants. Their political status makes equal opportunities for bargaining impossible. They must take that which is given them.

In view of the statements contained in the Senator's letter, as well as communications which I have received from the Philippine Islands and from Filipinos, including a member of the mission now in Washington, I regard it as a duty to demand the enactment of a measure containing provisions found in the bill which I have offered. I shall ask the chairman of the committee to call his committee together at an early date for the purpose of considering the bill which I have offered, with a view to having it reported and acted upon by the Senate in the near future. If the Senate is unwilling to pass this bill, then we may be driven to the extremity of accepting some other measure unsatisfactory to the Filipinos. I hope that such a situation may not be created.

Mr. President, I received this morning a letter from one of the members of the Philippine delegation now in Washington, which reads as follows:

Hon. WILLIAM H. KING,
United States Senate, Washington, D.C.

MY DEAR SENATOR: With reference to the newspaper report appearing in column 6, page 11, of today's issue of the Washington Post, to the effect that Senator TYDINGS advised the Senate "that all Philippine leaders and factions had agreed to the plan" of reviving the Hare-Hawes-Cutting law with certain modifications, I wish to confirm the statement I made to you yesterday that at least 3 of the 4 members of the Philippine delegation now in Washington have not given their assent to such plan in writing or otherwise.

Senator Quezon himself, the chairman of our delegation, informed you in a letter dated February 20, "that there have been popular demonstrations in the Philippine Islands supporting your bill, and that the leaders of the legislature asked him to endorse it."

May I not ask you to kindly have this letter read into the RECORD for the information of the Members of the United States Senate?

Very truly yours,

ISAURO GABALDON,
Member of the Philippine Delegation.

Senator Quezon's letter is in harmony with the views of members of the delegation who have conferred with me quite recently. It is in harmony with statements made by Senator Quezon to me within the past 3 or 4 weeks.

In my remarks yesterday I called attention, Mr. President, to the fact that the Legislature of the Philippine Islands voted upon the question as to whether the Hawes-Cutting bill should be approved or rejected, and it was rejected. The legislature also passed the necessary measure appointing a delegation, headed by Senator Quezon, to visit the United States and to inform the President and Congress and the American people that the legislature, as well as the people of the Philippine Islands, were hostile to the Hawes-Cutting bill and would not give it their approval.

Continuing the observations I was making yesterday afternoon at the hour of adjournment, may I say that the Philippine Legislature, convinced that the Hare-Hawes-Cutting Act, as finally passed by Congress, over the veto of President Hoover, did not satisfy the aspirations of the Filipino people, nor was it in accordance with the instructions which the Philippine Legislature had given to their delegation here, declined to accept the measure. This declination or refusal to accept it occurred upon two occasions. First, when, as an incident to the discussion of the plebiscite bill, sponsored by the opponents of the Hawes-Cutting Act for the purpose of submitting it to the people, and before the legislature was to act in accordance with the decision of the electorate, Senator Osmeña, in behalf of the minority, agreed to abandon the plebiscite after he was served with notice by President Quezon that if the legislature were to act upon the law directly, it would be rejected under the provisions of section 17 of the act, and that thereupon Senator Osmeña presented a resolution for the formal acceptance of the act. Upon a vote the resolution failed of passage in the senate by a recorded vote of 15 to 4.

Senators will recall that Senator Osmeña is one of the leaders of the Filipinos. He is one of the intellectuals in the islands, a man of property and standing, and has been selected upon a number of occasions to come to the United States to advocate immediate and absolute independence for the Philippines.

When in Washington the last time he came charged with the duty of demanding immediate independence for the Filipinos. He and Speaker Roxas urged the passage of an act granting independence; but later, as I am advised, they stated reluctantly, I am told, that they would accept the Hawes-Cutting bill. When they returned to the Philippine Islands, having given their assent to the Hawes-Cutting bill, they attempted to induce the people to accept it and secure its ratification. Senator Osmeña in the senate offered a resolution of ratification. After considerable campaigning and discussion in the Philippine Islands, it became apparent that the Filipinos would reject the Hawes-Cutting bill. Thereupon the advocates of ratification abandoned their desire for a plebescite and agreed upon submitting the question to the Philippine Legislature.

The result in the Senate, as I have stated, showed a vote of 15 to 4 against the law.

Both the agreement and the resolution presented by Senator Osmeña are found in concurrent resolution no. 45, which is as follows:

Concurrent resolution confirming and ratifying the action of the senate in disapproving at its session on October 7, 1933, the proposed concurrent resolution 28, entitled "Concurrent resolution accepting the act of Congress of January 17, 1933, generally known as the "Hare-Hawes-Cutting Act."

Whereas at the session of the senate on October 7, 1933, during the consideration of house bill no. 2800, which provides for a plebiscite on the Hare-Hawes-Cutting Act, when the debate thereon had already been closed and a motion made for the passage of said bill, there was presented, for insertion in the record, a document of the following tenor:

"The undersigned, on behalf of the majority and minority, have agreed that there be no plebiscite in view of the fact that it has not been possible to arrive at an agreement on the manner in which the same shall be held, and in order to save the country the unnecessary expense of holding said plebiscite.

"MANUEL L. QUEZON,
"*On behalf of the majority.*
"SERGIO OSMEÑA,
"*On behalf of the minority.*"

Senator Quezon has been the outstanding leader in the Philippines for many years; and Senator Osmeña, representing the minority party, has also been a leader of distinction and ability in the islands.

Continuing with the resolution:

Whereas, immediately after the introduction and reading of the foregoing document, the senior senator from the tenth district [Mr. Osmeña] introduced proposed concurrent resolution no. 28, which, copied literally, reads as follows:

"Concurrent resolution accepting the act of Congress of January 17, 1933, generally known as the "Hare-Hawes-Cutting Act."

"*Resolved by the Senate, the House of Representatives of the Philippines concurring,* To accept the act of Congress of January 17, 1933, entitled, 'An act to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands, to provide for the independence of the same, and for other purposes' generally known as the 'Hare-Hawes-Cutting Act', in accordance with the provisions of section 17 of said act."

Whereas, when the Senate considered the foregoing proposed concurrent resolution and voted upon the same by ayes and nays, the same failed of passage by 15 votes against 4: Now, therefore, be it

Resolved by the Senate, the House of Representatives of the Philippines concurring, To ratify and confirm, as they hereby do ratify and confirm, the action of the senate in disapproving proposed senate concurrent resolution no. 28, entitled "Concurrent resolution accepting the act of Congress of January 17, 1933, generally known as the 'Hare-Hawes-Cutting Act.'"

The secretary of the senate certifies that this resolution, which originated in the Philippine Senate, was adopted by it October 9, 1933, and by the house of representatives October 10, 1933.

This action by both branches of the Philippine Legislature reflects the views of the Filipinos, and should have terminated all efforts to force upon them a governmental system repugnant to their wishes. But we now have notice that the rejected and repudiated plan is to be resurrected, galvanized, and imposed upon the people, who doubtless believe that they are in no position to engage in a protracted struggle with this great Nation.

Mr. President, the Legislature of the Philippine Islands adopted another resolution informing Congress of its rejection of the Hawes-Cutting-Hare Act, and of the appointment of a commission to visit the United States and seek the enactment of a law that would meet the aspirations of the Filipinos.

The resolution is as follows:

Concurrent Resolution 46

Concurrent resolution informing the Congress of the United States that the Philippine Legislature, in its own name and in that of the Filipino people, declines to accept the act of Congress entitled "An act to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands, to provide for the independence of the same, and for other purposes", in its present form and appointing a committee to proceed to the United States at the earliest practicable time to seek amendments to said act of Congress, or the enactment of such new legislation as will fully satisfy the aspirations of the Filipino people, to become at the earliest practicable date a free and independent nation, under conditions and circumstances that will not imperil the political, social, and economic stability of their country

Whereas the Congress of the United States on the 17th day of January 1933 enacted a law entitled "An act to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands, to provide for the independence of the same, and for other purposes", commonly known as the "Hare-Hawes-Cutting law";

Whereas section 17 of said law provides that the provisions of the same "shall not take effect until accepted by concurrent resolution of the Philippine Legislature or by a convention called for the purpose of passing upon that question as may be provided by the Philippine Legislature";

Whereas the Philippine Legislature fully appreciates the good will shown by the Congress of the United States toward the people of the Philippine Islands and its efforts to finally settle the Philippine question by enacting said law;

Whereas the Philippine Legislature believes that in providing that the said law shall not take effect until accepted by the Philippine Legislature or by a convention called for the purpose of passing upon that question, the Congress of the United States intended to secure a frank and honest expression of the will of the Filipino people regarding the above-mentioned law;

Whereas the Philippine Legislature is opposed to the acceptance of said law in its present form because, in the opinion of the legislature, the law does not satisfy the national aspirations nor does it safeguard the welfare of the Filipino people or the sta-

bility of the social, economic, and political institutions of their country: Now, therefore, be it

Resolved by the house of representatives (the Philippine Senate concurring), That the Philippine Legislature, in its own name and in that of the Filipino people, inform the Congress of the United States that it declines to accept the said law in its present form because, in the opinion of the legislature, among other reasons, the provisions of the law affecting trade relations between the United States and the Philippine Islands would seriously imperil the economic, social, and political institutions of this country and might defeat its avowed purpose to secure independence to the Philippine Islands at the end of the transition period; because the immigration clause is objectionable and offensive to the Filipino people; because the powers of the High Commissioner are too indefinite; and finally because the military, naval, and other reservations provided for in the said act are inconsistent with true independence, violate national dignity, and are subject to misunderstanding.

Resolved further, That a joint legislative committee of the senate and the house of representatives be appointed, as it is hereby appointed, subject to the directions, purposes, and authority herein stated, to be composed of the Honorable Manuel L. Quezon, president of the Philippine Senate, as chairman of the committee on the part of the Philippine Senate; the Honorable Quintin Paredes, speaker of the house of representatives, as chairman of the committee on the part of the house; Hon. Elpidio Quirino, majority floor leader of the senate; Hon. Jose C. Zulueta, majority floor leader of the house of representatives; Hon. Sergio Osmeña, senator from the tenth district; and Hon. Pedro Guevara, Resident Commissioner to the United States, and that an invitation be and is hereby extended to Gen. Emilio Aguinaldo, president of the erstwhile Philippine Republic; Hon. Juan Sumulong, former Senator; and Hon. Isauro Gabaldon, former senator and Resident Commissioner, to join said legislative committee and form a part thereof, General Aguinaldo as honorary chairman and the others as members.

The committee thus constituted shall proceed to the United States as soon as convenient in the interest of the public service and convey to the Congress of the United States the appreciation of the Filipino people for the enactment of the law of Congress entitled "An act to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands, to provide for the independence of the same, and for other purposes."

The committee shall at the same time express to the Government and people of the United States the objections to the said law and the reasons therefor, and petition the President and the Congress of the United States for changes therein or the enactment of such new legislation as will fully satisfy the aspirations of the Filipino people to become at the earliest practicable date a free and independent nation under conditions and circumstances that will not imperil the political, social, and economic stability of their country.

The Philippine Legislature approaches the Government and people of the United States through this committee in the hope and confident expectation that they will not ignore the appeal of the Filipino people—a people who, in the language of every American President since the inauguration of American rule, have been placed by Divine Providence under the protecting care of the American Nation so that they may enjoy the blessings of freedom and happiness which are the heritage of the people of the United States.

Adopted October 17, 1933.

Mr. President, we frequently hear American orators, on the 4th of July and on other patriotic occasions, refer to great state papers that were adopted by legislatures and committees prior to the Revolutionary War addressed to His Majesty King George III, of Great Britain, and to the Parliament of Great Britain, setting forth the grievances of the American colonists, appealing for liberty, for independence, and for a redress of grievances. We have a state paper here, a resolution adopted by the Legislature of the Philippines, which, in its temperate tone, in its strong expressions of the desire for liberty, in its clear recitation of the mistakes and evils of the bill which we passed as a ground for rejecting it, it seems to me should appeal to the Congress of the United States and to the American people and lead to the enactment of a law in consonance with their national aspirations. Yet, professing democracy, as we do, stating that our Government is founded upon the consent of the governed, we have rejected for years the earnest and eloquent appeals of the Filipinos for independence and have listened too often to selfish demands and to captious opposition as justification for the denial of the liberty which the Philippine people have coveted.

I cannot understand, Mr. President, the indifference of Congress and the American people to the appeals of these 13,000,000 people living far across the Pacific. Aside from the questions of liberty and of justice, which are involved, or should be involved, in legislation which is sought, there is the question of our own interests. I insist, however, Mr. President, that any material interests of the American people in the Philippines must be subordinated to what is infinitely more important—the interests and the liberty of the Filipinos. We may derive benefits from trade relations with the Filipinos; it may be to the advantage of some American capitalists to retain the Philippines; but, Mr. President, the great underlying fundamental question which must be solved now or in the future—and it should be solved now—is, Have we the right to hold in subjection, under American rule, 13,000,000 people who are demanding at our hands that freedom and independence which they covet and to which they are entitled?

As I stated yesterday, whenever it is suggested that independence should be granted to the Philippines, the claim is made that such a course would be premature; other critical voices are raised in opposition upon the ground that they might become the victims of Japan's aggression; a number of fanciful objections are urged, as they always have been and always will be urged, when the question of duty, the question of liberty, the question of granting a people rights which they are entitled, are presented for consideration. We should brush these objections aside and, here and now, Mr. President, resolve that notwithstanding opposition in obedience to the appeals, indeed, the demands, of the Filipinos for independence, we shall enact a law that will meet their aspirations.

Recurring to the resolution just read, it is to be noted that this repeated action of the Philippine Legislature is not an isolated expression of the popular will in the Philippine Islands. In fact, the respective stands taken by the members of the legislature were based upon the concensus of opinion of their constituencies after a country-wide campaign in favor of or against the acceptance of the act, which campaign began almost immediately after the passage of the act over the veto of President Hoover. The discussions for 10 months prior to the final affirmative action of the legislature refusing to ratify the Hawes-Cutting Act were as prolonged and exhaustive in the Provinces as they were in the legislative chambers. Every sentence—indeed, I was about to observe, every comma—and every paragraph of the Hawes-Cutting Act was subjected to careful examination and analysis; whatever benefits, if any, that might be derived were properly appraised and weighed, and the evils and objections that were palpable—and, indeed, which were subtle and hidden—were discovered and denounced in the press and in the discussions in the legislature as well as upon the hustings throughout the islands.

Mr. LONG. Mr. President——

The PRESIDING OFFICER (Mr. ERICKSON in the chair). Does the Senator from Utah yield to the Senator from Louisiana?

Mr. KING. I yield.

Mr. LONG. I do not wish to violate any confidence, but the Senator, I see, has on his desk a letter from one of the Philippine delegation. Has that letter been read to the Senate?

Mr. KING. I read it into the RECORD this morning.

Mr. LONG. It shows that some of them have not consented to the Hawes-Cutting bill, as I understand.

Mr. KING. That is correct; and I have a letter from Senator Manuel Quezon, which is practically in harmony with the statement contained in the letter; and that also has been read into the RECORD this morning.

At no time in the history of the Philippine Islands has there been a more intelligent discussion of a public issue. The Hare-Hawes-Cutting Act did not only give the people a wider perspective of their country's future, but, in taking sides thereon pro and con, the people were motivated by a high sense of responsibility.

Provinces, municipalities, political parties, and public meetings, as well as private and nonpolitical entities, adopted resolutions in favor of or against the acceptance of the Hare-Hawes-Cutting Act by the people. An over-

whelming majority of these resolutions are against the acceptance of the law.

The Association of Veterans of the Revolution, headed by General Aguinaldo, also went on record on September 17, 1933, as against the Hawes-Cutting Act, in a declaration approved at an extraordinary convention of the association.

In two instances, the issue as to whether the Hawes-Cutting Act should be accepted by the people or not was submitted to the electorate. In the special election in the Province of Batangas to choose the successor of Representative Alas, now secretary of the public works and communications of the Philippine cabinet, the issue as to the acceptance or rejection of the law was squarely presented to the people, and Representative Diokno, who was elected by an overwhelming majority against his opponent, was for the rejection of the law, while his opponent was for its acceptance. In another special election, in the Province of Zambales, to choose the successor of former Representative Anonas, now under secretary of public works and communications, not a single candidate for the office ran on a platform in favor of the acceptance of the law, while Representative Dantes, who emerged victorious, was openly against the acceptance of the Hawes-Cutting Act. That is to say, in that electoral district there was not a single Filipino who favored, so far as the record shows, acceptance of the act; and the unanimous vote of the district was in favor of Representative Dantes, who ran upon a platform in opposition to its ratification. These two special elections took place before the legislature finally declined to accept the law.

Mr. LONG. Mr. President, will the Senator let me interrupt him again?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana?

Mr. KING. I yield.

Mr. LONG. I have here a little book containing the Democratic and Republican platforms. My recollection is that the Democratic Party never has changed its position on the question the Senator is discussing; that it maintained the same position in 1932 that it held in 1928 and 1924 and on back beyond that time. Have we not always stood for the immediate independence of the Philippine Islands? Was not that the way we expressed ourselves at Chicago in 1932?

Mr. KING. As I have heretofore stated, the Democratic platforms since 1920 declared in favor of Philippine independence.

Mr. LONG. The law which has been passed by Congress on the subject is the same as nothing, for the Filipinos have not accepted it; and our plain duty is, it seems to me, to go ahead and carry out the pledges of the Democratic platform on this subject.

Mr. KING. The Senator will remember that some cynic has said that platforms are for the purpose of riding on during campaigns, but to get off from after campaigns are ended.

Mr. LONG. I should like to stay on this one.

Mr. KING. So should I.

Mr. LONG. I wondered why we could not attach the King bill to the pending naval construction bill. It is a very germane subject. We would not need to have half the Navy provided for in the naval construction bill if we got rid of the Philippine Islands.

Mr. KING. I may say to the Senator that I should be very happy to substitute the King bill, so-called, for the naval construction bill, but the Senator will notice that when we are talking about a naval bill we find great enthusiasm in Congress and among many citizens, but when we seek legislation providing freedom and liberty there is a negative attitude.

The appropriations thus far made for the Navy for the ensuing year will exceed $500,000,000, taking into account the allocations made by the Public Works organization. And the pending Vinson naval bill authorizes hundreds of millions of dollars for new war vessels. Large numbers of persons are clamoring for work, many of our public schools are closed because of lack of funds, and yet we do not hesitate to appropriate $400,000,000 for the ordinary expenses of the Navy for the next fiscal year, and will authorize approximately $1,000,000,000 for new naval construction. The appropriations for the Army for the next fiscal year will total $400,000,000. Yet we proclaim to the world that we are the strongest and most sincere advocates of peace, and are carrying high the banner of international peace and good will, and are the chief supporters of policies calling for world disarmament.

The concrete facts placed in juxtaposition to our claims lead many to question the sincerity of our professions.

May I say in passing that we have appropriated, during the past 6 or 7 years, more than $200,000,000 annually in excess of the largest appropriation made by the greatest military power on earth. We denounce France and other countries because of their navalistic and militaristic propensities, and meanwhile we are spending $200,000,000 to $300,000,000 a year more than any other country on earth for those purposes.

Mr. LONG. Mr. President, I have found the platform declaration. In 1932, we said:

> We advocate independence for the Philippines.

In 1928, we said:

> The Filipino people have succeeded in maintaining a stable government and have thus fulfilled the only condition laid down by the Congress as a prerequisite to the granting of independence. We declare that it is now our duty to keep our promise to these people by granting them immediately the independence which they so honorably covet.

Apparently we are on record with reference to the matter.

Mr. KING. Perhaps the Senator was not in the Chamber 2 or 3 days ago when I was discussing the Philippine question, when I referred to the action of the Democratic Party in several national conventions to which I was a delegate, and to the planks in Democratic platforms, several of which it was my privilege to prepare.

The Democratic Party has stood unequivocally for the independence of the Philippines, and it is in a position now to redeem its platform pledges and fulfill the promises which it has made to the Philippines.

The Democratic National Convention, which met July 4, 1900, declared in its platform that—

> We declare again that all governments instituted among men derive their just powers from the consent of the governed; that any government not based upon the consent of the governed is a tyranny; and that to impose upon any people a government of force is to substitute the methods of imperialism for those of a republic.

This declaration was made soon after we had superimposed upon the Filipinos by military force the authority of the United States. We carried the Stars and Stripes into the islands; we waged war against the Aguinaldo government and by armed forces overthrew it and destroyed the Philippine Republic. This platform further declares:

> We assert that no nation can long endure half republic and half empire, and we warn the American people that imperialism abroad will lead quickly and inevitably to despotism at home. * * *
>
> We condemn and denounce the Philippine policy of the present administration.

That was the administration of Mr. McKinley.

> * * * We favor an immediate declaration of the Nation's purpose to give the Filipinos, first, a stable form of government; second, independence; and, third, protection from outside interference, such as has been given for nearly a century to the Republics of Central and South America.

That was in effect a declaration in favor of extending the principle of the Monroe Doctrine to the Philippine Islands, so that when independence was granted, as we promised, they might find some protection under the aegis of a Pacific Monroe Doctrine.

The Democratic convention which met July 6, 1904, declared that—

> We oppose, as fervently as did George Washington himself, an indefinite, irresponsible, discretionary, and vague absolutism and a policy of colonial exploitation, no matter where or by whom invoked or exercised. We believe, with Thomas Jefferson and John Adams, that no government has a right to make one set of laws for those "at home" and another and a different set of laws, absolute in their character, for those "in the colonies." All men

under the American flag are entitled to the protection of the institutions whose emblem the flag is. If they are inherently unfit for those institutions, then they are inherently unfit to be members of the American body politic. Wherever there may exist people incapable of being governed under American laws in consonance with the American Constitution, the territory of that people ought not to be a part of the American domain.

We insist that we ought to do for the Filipinos what we have done already for the Cubans, and it is our duty to make that promise now and, upon suitable guarantees of protection to citizens of our own and other countries resident there at the time of our withdrawal, set the Filipino people upon their feet, free and independent to work out their own destiny.

Mr. President, the overwhelming majority of the American people, in my opinion, desire that the Filipinos shall have independence. The labor unions for years have unanimously declared in favor of measures which granted absolute and immediate independence to the Filipinos, and, as I have heretofore stated, the agricultural organizations of the United States have likewise insisted that the aspirations of the Filipinos should be recognized. In the various hearings held by both the House and the Senate during the past 8 or 10 years, when measures were under consideration dealing with the Philippine question, representatives of the organizations referred to have appeared and submitted cogent reasons in favor of the demands of the Filipinos for independence.

Mr. President, I referred a few moments ago to the petition or memorial of the Filipino veterans. This organization is composed, as I am advised, of thousands of Filipinos who were under the leadership of Aguinaldo in the contest between the Philippine Republic and the United States. At a convention of these veterans, held at the stadium on September 17 last, they adopted a declaration and memorial eloquent in terms and powerful in its appeal to the United States for independence. They declared that the Hawes-Cutting bill was destructive of their ideals of political independence and that its provisions were repugnant to the ultimate aim of the American policy to place the Filipino people in a position to assume the responsibilities and enjoy all the privileges of complete independence.

The memorial contains a searching analysis of the Hawes-Cutting-Hare bill and adduces reasons which, in my opinion, cannot be refuted justifying the Filipinos in rejecting the same.

After a review of the provisions of the measure, the memorial declares:

> We feel obliged, for these reasons, to consider it our bounden duty to recommend to our countrymen, and especially to the members of the association, to express courteously but firmly their disapproval of the Hawes-Cutting-Hare law. * * *

I should be glad to insert this strong and able memorial in the RECORD, but will not ask for that privilege at the present time, but I sincerely hope that Senators will read the same. I am sure that they will be moved by the recitations contained therein and the arguments so powerfully marshaled against the acceptance by the Filipinos of the measure referred to.

Mr. President, Hon. Isauro Gabaldon, as Senators will recall, was for a number of years one of the Philippine Commissioners to the United States. He was chosen by the Philippine Legislature as one of the delegates to visit the United States in connection with Senator Quezon and others, and protest against the Hawes-Cutting bill and to plead for legislation providing for Philippine independence.

It was his duty to present the cause of his country to the President of the United States, and accordingly wrote him on the 18th of January of this year, as follows:

> THE FAIRFAX HOTEL,
> *Washington, D.C., January 18, 1934.*
>
> The honorable the PRESIDENT OF THE UNITED STATES,
> *The White House, Washington.*
>
> MR. PRESIDENT: As a member of the delegation appointed by the Philippine Legislature to deal with the Government of the United States on the question of Philippine independence, I deem it my duty to bring to your attention the grave injustice that would be inflicted upon the inhabitants of the Philippine Islands by a delay in the granting of the freedom for which they fought in fields of battle and have struggled incessantly in times of peace.
>
> Three days ago, on the 15th instant, to be exact, Philippine Resident Commissioner CAMILO OSIAS, one of the staunchest supporters of the Hawes-Cutting-Hare law, and who has, using his own words, "just returned from the Philippine Islands, after several months spent in visiting various provinces, cities, and municipalities, meeting and conferring, not only with our leaders, but with the masses of the people", declared on the floor of the House of Representatives "that the Filipino people continue in their firm conviction that the early grant of Philippine independence is the proper solution of American-Filipino relations." He said further, that "On this fundamental point the Filipinos are united."
>
> It is important to note in connection with the foregoing statements that they were made by Commissioner Osias while pleading for an extension of the time set in the Hawes-Cutting-Hare law for its acceptance by a "concurrent resolution of the Philippine Legislature or by a convention called for the purpose of passing upon that question." I deem it of the highest importance also, to call attention to the fact that the lower house of the Philippine Legislature had already passed a bill submitting the Hawes-Cutting-Hare law to the decision of the electorate of the Philippines, and the majority in the Philippine Senate had agreed in caucus to approve it, when those who caused the United States Congress to enact said law, and now claim that the Filipino people had been deprived of the opportunity to vote on the question, signed an agreement to submit it to and abide by the decision of the Philippine Legislature.
>
> I am entirely in accord with the statement of the chairman of our delegation that when the Philippine Legislature declined to accept the Hawes-Cutting-Hare law it did so in compliance with the wishes of the overwhelming majority of the people of the Philippine Islands.
>
> TARIFF PROTECTION
>
> I am not unmindful, Mr. President, of the economic set-backs that may follow the immediate granting of Philippine independence, but I cannot share the view that the continuation of the free trade between the United States and the Philippine Islands for a period of 10 years would render the transition from the condition of a dependent country into that of a free and independent nation immune to the inconveniencies—political, social, economic, and otherwise—attending every human reform or departure from a long-established habit or order of things.
>
> In stressing the necessity of a 10-year period of economic readjustment, the eventual ruin of the Philippine sugar industry is brought forth as the outstanding illustration. This industry, it is contended, has been built and developed under the protecting wings of the Tariff Act of 1909, and it is further alleged that "this industry is entirely dependent at present for its continued existence upon the tariff protection of the United States." If this statement is correct, the inescapable conclusion is that an extension for 10 or 20 or 50 years of such protection under conditions barring its further expansion would not save the Philippine sugar industry from eventual ruin, thus necessitating the continuation of the present tariff protection for an indefinite period of time.
>
> There is but one course known that can be pursued to place Philippine sugar on a competitive basis, and that is the lowering of the cost of production. This can only be achieved by reducing the prevailing wage scales and overhead in the operation of sugar centrals, or by the use of better fertilizers and of sugarcane varieties yielding more sugar without increasing acreage. It is a well-known fact that present wages in the Philippine sugar industry have reached their lowest level, and it is generally conceded that sugar centrals "in the Philippines have already attained a high degree of efficiency", and that "if there would be any room for improvement in that direction, it would have very little effect on the cost of production."
>
> It is apparent, therefore, that the extension for any length of time of the privileges at present enjoyed by Philippine sugar in the American market will not enable this product to compete with similar commodity produced in other countries. On the contrary, the maintenance of the present tariff relationship between the United States and the Philippine Islands would hinder the expansion of American sugar industry and retard the reorganization of the Philippine sugar and other industries from a condition of tariff dependency to one of competitive soundness.
>
> If the Philippines were a free and independent nation, her industries could be revamped and developed on the basis of fair competition, which is the only fundamentally sound economic policy. Reciprocal trade treaties with other countries could be resorted to as a means of offsetting differences in cost of production.
>
> EFFECT OF IMMEDIATE INDEPENDENCE ON THE FINANCES OF THE GOVERNMENT
>
> I submit that the Philippine government does not have to depend on the income derived from the sugar industry to enable that government to perform its duties and responsibilities toward the inhabitants of the islands and the world at large.
>
> It is asserted that approximately 40 percent of the revenues of the Philippine government is contributed by the sugar industry. Granting, for the sake of argument, that this is correct, I still maintain that this gap in the governmental finances can be spanned by the application of Philippine tariffs on all importations. Under present trade arrangements over 65 percent of the goods imported into the islands is admitted duty free. To this may be added the proceeds from a general reduction in salaries and allowances in the higher brackets of the present governmental structure, which are higher than the salaries and allowances assigned to officials of equivalent category in Great Britain and other European countries, in Japan, and in many of the South Ameri-

can countries. Again, there is ample room in the present governmental organization for further simplification.

In fact, during the last 15 years the revenues of the Philippine government registered increases and decreases of approximately ₱20,000,000 without affecting in the least the ability of the government to meet its bonded indebtedness and to carry on the normal functions of a stable and well-regulated government.

You have, Mr. President, recently stressed the significance of a statement made by the late President Wilson that human liberty is paramount and that it should always receive higher and preferent consideration over trade and other material factors involved in the relationship of the peoples of the earth. In line with this lofty idealism, may I not submit that sugar, coconut oil, and cordage benefit but a negligible minority of the Philippine population? Shall the Filipinos be driven to face a situation similar to that confronting the United States at present where 15 percent of the population control the wealth and the destinies of the remaining 85 percent?

THE WILL OF THE FILIPINO PEOPLE

I deem it contrary to the expressed will of the people of the Philippine Islands to make the granting of their independence contingent on any consideration other than that specified in the Jones law, namely, the establishment of a stable government That this condition had already been met is attested by the message sent by President Wilson to the United States Congress on December 16, 1920. He said: "Allow me to call your attention to the fact that the people of the Philippine Islands have succeeded in maintaining a stable government since the last action of Congress in their behalf." The next logical and honorable step, therefore, that the people and the Government of the United States should take in connection with Philippine-American relations is the restoration of the Philippine Republic.

I am constrained to disagree with the proposals that the grant of Philippine independence be postponed to July 4, 1940; that a more autonomous government be established in the meantime, and that trade relations between the United States and the Philippines be continued as they are under certain limitations, because these proposals involve an unauthorized modification of the will of the Philippine electorate as expressed in every election held in the islands since 1907. On these elections the majorities controlling both houses of the Philippine Legislature were elected on the strength of their pledge that they would petition the Government and appeal to the people of the United States for the granting of "the immediate, absolute, and complete independence" of the Philippine Islands.

Any solution of the Philippine question based on representations amendatory of the expressed will of the electorate of the islands would necessarily involve the un-American and undemocratic decision that those chosen by the people to speak for them have the right to alter the mandate they received from that people. If such theory should be upheld, it would virtually destroy the representative form of government instituted in the Philippines by the United States and successfully maintained by the Filipino people for the past thirty-odd years, setting up in lieu thereof an oligarchy.

RECOMMENDATIONS

For the reasons stated, and true to the aspirations of the people of the Philippine Islands as expressed in every popular election held from 1907 to 1931, inclusive, I beg to recommend the enactment of a law providing substantially the following:

1. The immediate calling of a constitutional convention in the Philippine Islands for the purpose of drafting a constitution for a free and independent government of the Philippine Islands.
2. The submission of this constitution to the people.
3. The holding of elections for the offices provided in the constitution upon adoption thereof.
4. Recognition of the Philippine Republic upon the installation of the officials provided in the constitution, not later than 3 years from the date of the enactment of the law.
5. Trade relations to be determined in a conference between representatives of the United States and of the Philippine Islands to be held at such time and place as the President of the United States may designate after independence shall have been achieved.

Respectfully submitted.

ISAURO GABALDON,
Member Philippine Delegation.

Mr. President, it will be perceived that the recommendations contained in this important paper presented to the President of the United States are in harmony with the bill I have had the honor to present, and which is now before the Senate committee. It is known as "Senate bill 2064." In the measure I have offered there is a provision for the calling of a constitutional convention and for an election to follow to determine whether the people will accept or reject the constitution which shall be prepared and tendered to them for their support or rejection. It provides that after the constitution shall have been accepted, if it shall be, elections shall be held to fill the various offices provided for in the constitution. Then, further, the bill provides that after the elections shall have been held and the facts shall have been certified to the President of the United States, he shall, upon examination of the constitution and being satisfied that it is in harmony with the terms of the act to which I have referred, issue a proclamation and recognize the independence of the Philippine Islands, and shall notify the governments with which the United States is in diplomatic correspondence thereof, and invite said governments to recognize the independence of the Philippine Islands.

The bill also contains this important provision:

At least 1 year prior to the date fixed in this act for the independence of the Philippine Islands there shall be held a conference of representatives of the Government of the United States and a committee designated by the Philippine Legislature, such representatives to be appointed by the President of the United States and the chief executive of the Commonwealth of the Philippine Islands, respectively, for the purpose of formulating recommendations as to future trade relations between the Government of the United States and the independent government of the Philippine Islands. * * *

Finally, the bill provides that—

Upon the final and complete withdrawal of American sovereignty over the Philippine Islands the immigration laws of the United States (including all the provisions thereof relating to persons ineligible to citizenship) shall apply to persons who were born in the Philippine Islands to the same extent as in the case of other foreign countries.

Mr. President, if the bill which I have offered is enacted into law the Filipinos within approximately 31 monthhs thereafter, if they shall avail themselves of the provisions of the same, may achieve complete independence. If they avail themselves of the flexible provisions of the bill with respect to the calling of conventions, and so forth, a maximum period of 43 months would elapse before our flag would be withdrawn and our sovereignty over the islands extinguished. Within a period, therefore, of from 2½ years to 3½ years, under the terms of the bill which I have offered, the Philippines would become an independent nation. A new star would be added to the great galaxy of nations and the Philippine Republic would launch its ship of state upon the great international sea.

If this happy event were to transpire, we know that the new republic would be accompanied by the hopes, the good wishes, and indeed, the prayers of the American people for the happiness, welfare, and felicity of its inhabitants.

Mr. President, what a splendid act it would be for our country if it shall be said that it aided in the establishment of a new nation and that nation republican in form; that it aided in giving birth to the only republic in the Orient. If this were done, our Nation would wear a crown of honor in all the centuries to come. The opportunity is before us; the duty is ours. It would be to the discredit of this great Nation if it failed to place in the hands of the Filipinos the flag of a free people, and the symbol of an independent nation.

I appeal to the Senate, to the Democrats in this and in the other branch of the Congress, to enact legislation for which the Filipinos are pleading, and to redeem the solemn promises which have been made, that independence would be granted to them.

I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ERICKSON in the chair). The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Costigan	Keyes	Robinson, Ark.
Ashurst	Cutting	King	Robinson, Ind.
Austin	Dickinson	La Follette	Russell
Bachman	Dieterich	Lewis	Schall
Bailey	Dill	Logan	Sheppard
Bankhead	Duffy	Lonergan	Shipstead
Barbour	Erickson	Long	Steiwer
Barkley	Fess	McAdoo	Stephens
Black	Fletcher	McCarran	Thomas, Okla.
Bone	Frazier	McGill	Thomas, Utah
Borah	George	McKellar	Thompson
Brown	Gibson	McNary	Townsend
Bulkley	Glass	Metcalf	Trammell
Bulow	Goldsborough	Murphy	Tydings
Byrd	Gore	Neely	Vandenberg
Byrnes	Hale	Norris	Van Nuys
Capper	Harrison	Nye	Wagner
Caraway	Hatch	O'Mahoney	Walcott
Carey	Hatfield	Overton	Walsh
Clark	Hayden	Patterson	Wheeler
Connally	Hebert	Pittman	White
Coolidge	Johnson	Pope	
Copeland	Kean	Reynolds	

Mr. LEWIS. I desire to announce the absence of the Senator from South Carolina [Mr. SMITH], occasioned by a death in his family.

Mr. TOWNSEND. I wish to announce the unavoidable absence of my colleague the senior Senator from Delaware [Mr. HASTINGS], occasioned by a death in his family.

Mr. HEBERT. I desire to announce that the senior Senator from Pennsylvania [Mr. REED] is absent on account of illness.

I also wish to announce that the junior Senator from Pennsylvania [Mr. DAVIS] and the Senator from South Dakota [Mr. NORBECK] are necessarily absent.

The PRESIDING OFFICER. Ninety Senators have answered to their names. A quorum is present.

Mr. KING. Mr. President, I desire to offer three amendments to the pending naval construction bill, the third one of which I regard as of very great importance, and I wish to call the attention of the Senate to it, and to have it printed in the RECORD. It provides:

No contract shall be entered into for the construction of any of the vessels herein referred to or authorized to be constructed, until and unless Congress shall appropriate money for the construction of the same.

The PRESIDING OFFICER. The amendments will be printed and lie on the table.

Mr. POPE. Mr. President, I desire to discuss briefly House bill 6604, known as the "Vinson bill", now before the Senate. I have given serious thought to the purpose and effect of this measure. It provides for the construction prior to December 31, 1936, or soon thereafter, of an aircraft carrier, 99,200 tons of destroyers, and 35,530 tons of submarines. It further authorizes the President to increase Navy airplanes to the number of 2,184. It adopts a policy of building our Navy to the limits of the Washington and London Treaties. It further contains an unusual provision authorizing the President to replace, by modern vessels, capital ships and cruisers when allowed by the treaties.

The estimated cost of the 5-year building program, not including any replacement of any capital ships and cruisers, is about $475,000,000, besides some $95,000,000 for airplanes. This does not include, of course, the allotment of some $275,000,000 from the Public Works Administration now being used by the Navy Department. And it does not include the amount of some $284,000,000 provided in the naval appropriations bill which passed the Senate a few days ago. It appears that the total amount authorized in this bill, together with the P.W.A. allotment and the naval appropriations bill, will reach the huge sum of about $1,125,000,000 for our Navy.

It is not possible for me to conclude that this vast expenditure is necessary or advisable. It seems to me entirely out of harmony with the disarmament policy frequently announced by this administration and out of harmony with any policy of economy in governmental expenditures.

On May 16, 1933, President Roosevelt thrilled the peoples of the world by his message to the sovereigns and presidents of the nations in which he urged practical measures of disarmament in order "to carry to victory our common struggle against economic chaos." He further said:

Our duty lies in the direction of bringing practical results through concerted action based upon the greatest good to the greatest number. Before the imperative call to this great duty petty obstacles must be swept away and petty aims forgotten. A selfish victory is always destined to be an ultimate defeat. The furtherance of durable peace for our generation in every part of the world is the only goal worthy of our best efforts.

In his address on December 28, 1933, before the Woodrow Wilson Foundation the President again said:

Let every nation agree to eliminate over a short period of years, and by progressive steps, every weapon of offense in its possession, and to create no additional weapons of offense.

While it is true the President urged disarmament on the basis of an agreement among the nations, and such an agreement has not yet been reached, the spirit of the President's appeal should be followed by our Nation at least to the extent of a minimum expenditure for increase of armaments for the national defense. Let it be conceded that an efficient navy adequate for the national defense is necessary. I am in favor of nothing less.

The question then arises as to what is an efficient and adequate navy for this purpose. On this point it is expected there will be honest differences of opinion. Such differences, however, in large part arise upon differences of opinion as to the scope of the naval policy of our Nation.

With respect to our naval policy, it seems clear to me that our Navy Department espouses a different policy than that followed by our Government in adopting the Washington and London Treaties.

In the annual report of the Secretary of the Navy in 1933 the Secretary defined the fundamental naval policy of the United States. He said such policy is "to maintain the Navy in sufficient strength to support the national policies and commerce, and to guard the continental and overseas possessions of the United States." Again in the same report, he uses the language, "To control the sea in defense of the Nation and its interests." This language was frequently used by the sponsors of this bill in the House within the last few days—that is, "to control the sea in the defense of the Nation and its interests." The implication of this is that the United States should have a navy of sufficient strength to operate and to compete in Asiatic waters—to maintain by force control over the seas so as to protect our trade routes and our insular possessions in the Far East.

Now I submit that such a policy is not in harmony with that adopted by our Government in the Washington and London Treaties. In submitting the Washington Treaty to the Senate for ratification, President Harding repeatedly referred to the delicate problem of armaments in the Far East. He insisted that such problems must be settled by compact and not by force. In the course of his communication to the Senate he used this language:

I am ready to assume the sincerity and dependability of the assurances of our neighbors of the Old World, that they will respect our rights, just as I mean to respect theirs. I believe there is an inviolable national honor, and I bring to you this particular covenant in the confident belief that it is the outstanding compact of peace for the Pacific, which will justify the limitation of armament and prove a new guaranty to peace and liberty, and maintain sovereignty and free institutions.

Here then is a pronouncement by the President and a treaty avowing the policy of protection of our overseas possessions by agreement and not by force—by mutual compact and not by a superior navy. In pursuance of that policy the United States renounced its right to build up and fortify its naval bases in the Pacific.

It is generally conceded that a navy far beyond treaty strength is necessary to compete successfully in Asiatic waters; that a treaty navy could not control the sea in the protection of our interests in the Orient. To adopt a policy of creating a navy to control Asiatic waters would start a mad race in armaments, intense and dangerous, and contrary to the statements and conduct of our responsible statesmen.

In this difference as to naval policy, I am frankly in favor of the attitude expressed by our Government in the Washington and London Treaties. Under such policy I have reached the conclusion that our Navy, with 20 new ships now under construction from regular appropriations, and 32 under construction from the Public Works Administration allocation of $275,000,000, is entirely adequate for our national defense, always bearing in mind the natural advantages of our geographical location.

Now let us see what the status of our Navy will be on December 31, 1936, as compared with the navies of the British Empire and Japan under the programs already authorized.

According to the testimony of Admiral Standley before the House Committee on Naval Affairs a few days ago, the property investment of the United States in its Navy is $1,116,844,837, as compared with $1,038,787,200 by the British Empire, and $705,114,400 by Japan. It will be observed that the United States has a substantially larger investment in its Navy than either of these other nations. (Hearings before House Committee on Naval Affairs, Jan. 23, 1934,

p. 205.) The same witness (p. 199) testfied that the United States has 372 vessels now built, with a tonnage of 1,038,600, and 52 vessels building and appropriated for, with a tonnage of 222,060. The British Empire has 292 vessels, with a tonnage of 1,174,349, with 47 vessels building and appropriated for, with a tonnage of 124,135. Japan has 221 vessels, with a tonnage of 758,261, with 45 vessels building and appropriated for, with a tonnage of 123,132. It may be easily observed, therefore, that the United States does not suffer by this comparison. No inferiority of our Navy appears from these figures. On the other hand, our Navy is substantially equal to that of the British Empire and distinctly superior to that of Japan.

It is said, however, that many of our ships will be over-age by December 31, 1936, a greater number than in the case of either Great Britain or Japan; that of our 15 capital ships only 7 will be under-age at that time; that many of our cruisers, most of our destroyers, and many of our submarines will be over-age, and that the United States will be placed at a disadvantage as compared with these other nations.

The figures submitted by Colonel Roosevelt, of the Navy Department, at the recent hearings do not disclose any such condition. He introduced a table at the recent hearings (p. 168) showing comparisons of under-age vessels on December 31, 1936.

At this point I will ask to have inserted in the RECORD as part of my remarks table III, part III, of the hearings before the House committee.

The PRESIDING OFFICER (Mr. BROWN in the chair). Without objection, the table will be printed in the RECORD.

The table is as follows:

TABLE III, PART III.—*Comparison of treaty vessels now in existence that will be under-age on Dec. 31, 1936, plus those building and projected prior to Dec. 31, 1936 (figures as of Nov. 1, 1933)*

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Illinois?

Mr. POPE. I yield.

Mr. LEWIS. The junior Senator from Idaho is making a very interesting presentation of a very important governmental subject touching the Navy and the defense of our country. I am attracted by his duscussion, and note, if I do not misunderstand him, that there is a variance between the policy of the bill now tendered, known as the "naval construction bill" and that of the document to which the able Senator from Idaho alludes as the Treaty of Washington. I will take the liberty to ask him at such point in his address, able as it is, as is convenient, to designate wherein the difference, the antagonism, is between the bill as it is now presented and what he calls the Treaty of Washington?

Mr. POPE. I shall be glad to do that. I shall deal with that question later in my address, but if I shall not cover it amply, I will make an effort to answer the Senator's question more specifically.

It will be noted from the table which I have had placed in the RECORD that the United States will in 1936 have 106 under-age ships, with a tonnage of 793,120, while the British Empire will have 152 ships under-age, with a tonnage of 685,128, and Japan will have 179 under-age ships, with a tonnage of 664,578. On the basis of tonnage, it clearly appears that the United States Navy will be substantially superior to either Great Britain or Japan in 1936.

Mr. DUFFY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Wisconsin?

Mr. POPE. I yield.

Mr. DUFFY. At what point is it that a ship of our Navy is considered under-age or over-age, as the Senator uses those terms?

Mr. POPE. It depends upon the ship. The cruisers have an age limit of 20 years; the destroyers have age limits of from 16 years to 18 years, depending upon the date when they were constructed.

The figures just stated by me indicate what would be the status without the Vinson bill, and without the program provided in it. Admitting that Japan will build to treaty strength, the United States will still have a substantial superiority over the Japanese Navy.

Moreover, this is not the whole story. To leave these figures stand as indicating the real strength of the United States Navy would present a misleading picture. We now have 15 capital ships, 1 of which is over the 20-year age limit fixed by the treaties for such ships. By December 31, 1936, 6 others will be over-age, leaving 8 under-age at that time. Every one of these capital ships that would be over-age at the expiration of the treaty has been modernized. The *Arkansas*, the *New York*, the *Texas*, the *Oklahoma*, the *Nevada*, the *Pennsylvania*, and the *Arizona* will be technically over-age at that time. They have been modernized at an expense of some $37,000,000. In addition to that, three other capital ships, the *Mississippi*, the *New Mexico*, and the *Idaho*, have been or are being modernized at a cost of about $30,000,000.

And what is the effect of modernizing these ships?

Admiral Rock, Chief of the Bureau of Construction and Repair, testified that the modernization work would add from 10 to 15 years to the life of these vessels. To quote his words, he says:

> I think the added length of life would be largely a military matter. I think the life of the material would be increased from 10 to 15 years * * *. It will actually add to the life some 12 to 15 years, besides bringing them quite up-to-date from every angle. (Navy Department appropriation bill 1932, hearings before the Subcommittee of House Committee on Appropriations, p. 570.)

According to this statement from this highly competent authority, every one of our capital ships would be up-to-date from every angle on December 31, 1936. We would have 15 modern capital ships equal, if not superior, to those of any nation in the world. They are an efficient part of our fleet. They will be an efficient part of our fleet in 1936 and for many years to come. So much for the capital ships.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. POPE. I yield.

Mr. McKELLAR. The Senator knows why, of course, those ships had to be modernized. In the Treaty of Washington of 1922, by which there was to be naval equality between the United States and Great Britain, it developed 6 months after the treaty was signed that America had 18 and Great Britain 21 capital ships. In addition to that 13 of America's 18 capital ships had guns which shot their missiles from 3 to 5 miles less than the range of the guns on Great Britain's ships, for the reason that the guns on our ships had less elevation than those on the British ships. We undertook to elevate our guns on the 13 ships, but Great

Britain objected. Some years afterward, while getting other concessions from us in regard to our Navy, Great Britain graciously permitted the guns on our ships to be elevated. That is what the Senator has in mind when he refers to the modernization of these ships. It means that at this late day we have elevated the guns on our ships so that they may shoot comparatively as far as the guns on British ships. So far as capital ships are concerned, I want to say that we are not only not on a parity with Great Britain but we are miles and miles from a parity with Great Britain.

Mr. POPE. Exactly, and I thank the Senator. Year after year when demand has been made for appropriations to modernize our ships statements have been made that such modernization will extend the life of those ships for a period of years, and, as Admiral Rock has stated, it brings them up to date from every angle. When calculations are made that do not take into consideration these under-age ships and do not consider the fact that they have been modernized, such calculations are misleading and do not tell the real story as to the strength of our Navy.

But what about the destroyers? Let us analyze that situation for a moment. Under the London Treaty the principal powers agreed that destroyers laid down before 1919 would have an age limit of 12 years, and those laid down after 1919 an age limit of 16 years. Those are the age limits rather than 16 and 18 years as I indicated a few moments ago.

Bear this in mind: The United States has a larger number of destroyers than any other naval power, 251 ships totaling 267,470 tons. But it may be said that every one of those destroyers will be technically over-age by 1936—a strong argument that has been made is that they will be over-age by 1936. Let us see about that.

Does this mean that the ships will be discarded? Not at all. Many of them will be retained and ready for active service and form a substantial part of the Navy in 1936. Ninety-seven of them were laid down after the armistice at a cost of $181,000,000. They were well constructed and have been well preserved and are probably superior to vessels of like type of the other naval powers. It further appears that 57 of these technically over-age destroyers were reconditioned in 1930 at the request of the Navy Department, at a cost of approximately $4,000,000. Both Admiral Rock and Admiral Hughes have testified with reference to the destroyers that the efficient life of those ships would be extended for a period of 10 years.

By 1936 the United States will have 32 new under-age destroyers, 57 reconditioned, 97 well built after the armistice and well preserved, and the remaining number of varying but substantial usefulness. Great Britain will have, in 1936, 39 under-age destroyers and 147 over-age, a total of 186. While we will have a smaller number of under-age destroyers, by reason of the condition of our technically over-age destroyers we will have a superiority over Great Britain. Japan will have 83 under-age and 45 over-age. On the basis of these facts, even if Great Britain and Japan are reconditioning over-age vessels as we are, the United States, according to the testimony of the naval authorities themselves, will have actually superior strength because of the number and condition of fighting units.

An analysis of the submarine strength and cruiser strength and the number and caliber of guns, which I have examined and which are contained in tables presented by the Navy Department at the recent hearing, convinces me, and I think will convince any other fair-minded person that our Navy is, and will be in 1936, without the program of the Vinson bill, second to none in strength and efficiency.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Tennessee?

Mr. POPE. Certainly.

Mr. McKELLAR. The Senator has evidently given this matter great study. I should like to have him compare the cruiser strength of Great Britain, Japan, and the United States. How do they compare?

Mr. POPE. I should prefer to present the table of the Navy Department to cover that point. I have not analyzed the cruiser strength as I have that of the destroyers and capital ships.

Mr. McKELLAR. That will be entirely satisfactory. We can ascertain it from the table. But, as a matter of fact, we are inferior to both Japan and Great Britain in cruiser strength. I cannot say that I endorse it, but my information is that many experts now believe that cruisers are the real backbone of the Navy. Certainly other nations are pursuing that course. If that is so, we are behind both Japan and Great Britain in cruiser strength.

Mr. REYNOLDS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from North Carolina?

Mr. POPE. Certainly.

Mr. REYNOLDS. May I make inquiry of the Senator from Idaho whether or not the table which he proposes to place in the RECORD relative to the strength of the navies of Japan, Great Britain, and the United States will also embody information as to the number of submarines owned and operated at the present time by those three great nations, and likewise the number of airplanes used in connection with naval operations at the present time?

Mr. POPE. I shall be glad to obtain the data as to airplanes, but the table does not show the airplane strength. It does show the data as to submarines and as to cruisers, both of which I shall be very glad to supply for the RECORD.

Mr. REYNOLDS. Then, for my information, may I inquire what is the distinction between a capital ship, a cruiser, and a first-class battleship?

Mr. POPE. I should have to ask someone who could give a technical definition to answer the Senator.

Mr. REYNOLDS. I am merely asking for information.

Mr. McKELLAR. The battleship comprehends the largest vessel of the greatest number of tons and with the heaviest armor of any ships. It is in a class by itself. The cruiser class comes next. We have an agreement, of course, that cruisers shall not be built larger than 10,000 tons.

Mr. REYNOLDS. What is the maximum tonnage of battleships?

Mr. McKELLAR. I think the largest afloat is the *Hood*, owned by Great Britain, of about 42,500 tons, if I recollect the figures correctly. Great Britain has much larger battleships than ours, and more of them.

Mr. REYNOLDS. Is there a maximum tonnage set for battleships?

Mr. McKELLAR. There is a maximum tonnage set for battleships under the treaty of 1922, or the Washington Treaty, as it is known. The exact tonnage is not in my mind now, but it is in the neighborhood of 50,000 tons. The propaganda which resulted in that convention or treaty was based on the idea that our naval construction should be regulated so that Great Britain and the United States should have navies of equal strength and Japan a navy as 3 is to 5. In other words, the slogan in 1922 when that treaty was entered into was 5–5–3—Great Britain, 5; the United States, 5; and Japan, 3. Those proportions have since been very greatly disregarded.

I want to say for the benefit of those who are interested in our Navy that in 1922, when the treaty was negotiated, the United States had the largest navy in the world, and without a word we sank 835,000 tons of capital ships which had cost something like $500,000,000. We sent them to the bottom of the sea, while other nations sent down practically nothing except obsolete ships. We destroyed the United States Navy that had been built up under Woodrow Wilson. We sent to the bottom of the sea 12 great new battleships, substantially complete, which had cost hundreds of millions of dollars. We sent those new battleships to the bottom of the sea, absolutely destroying our Navy at that time.

Mr. REYNOLDS. Does not the Senator, therefore, think we made a very great mistake by so doing?

Mr. McKELLAR. I do. I said so then and I say so now. I never had a different opinion about it. We would not

now have to build up our Navy, as is proposed in the pending measure, if it had not been done, for the very foolish, the ridiculously foolish act upon our part of sinking 835,000 tons of great battleships that had just been completed and 2 or 4 more which were incomplete. We sent them all to the bottom of the sea.

Mr. REYNOLDS. I thank the Senator for enlightening me.

Mr. BORAH. Mr. President, if we had not sent them to the bottom of the sea, they would now be obsolete or obsolescent.

Mr. McKELLAR. The Senator is entirely mistaken about that.

Mr. BORAH. No; I do not think so.

Mr. McKELLAR. I will prove it to the Senator in a minute.

Mr. BORAH. I do not believe the Senator can do so.

Mr. McKELLAR. Oh, yes, I can; because 18 that we retain at this moment are still in commission and are among those we now have.

Mr. BORAH. Exactly, and they are now passing out.

Mr. McKELLAR. They may be passing out, but they are not obsolete.

Mr. BORAH. We have not any use in the world for them. If we were to go to war, we would have to recondition them in a very marked way before we could use them.

Mr. McKELLAR. The junior Senator from Idaho [Mr. POPE] has just undertaken to prove by the facts that the ships which we did retain were old. We sank the new ones in our naval fleet and we retained the old ones. He says they have been revarnished and modernized and now are being used.

Mr. BORAH. At a cost of $37,000,000.

Mr. McKELLAR. Yes; at a cost of $37,000,000. If the authorities looking after the Government's interests had retained the new ones instead of having retained the old ones, they would not have had to be modernized.

Mr. KING. Mr. President, will the Senator yield?

Mr. POPE. I yield to the Senator from Utah.

Mr. KING. I have just entered the Chamber, and have not heard all the statement of the Senator from Tennessee; but if he intended to convey the meaning that we sank a lot of new ships, I desire to dissent from that statement.

Mr. McKELLAR. Mr. President——

Mr. KING. Let me complete the statement. Then the Senator can reply if he desires.

If the Senator will read the report that was submitted by Secretary Hughes, who was the chairman of the conference, he will discover that we completed two of those ships upon which but little had been expended. One was the *West Virginia*. Upon the other ships—in fact, upon all the ships that were in process of construction—there had been expended, at the time the treaty was entered into, a little more than $300,000,000. That, of course, was lost, other than that considerable part of the $300,000,000 which had been devoted to the construction of the two new ships which are now a part of our Navy.

We lost approximately $200,000,000 which had been expended upon vessels that were provided for in the 1916 program. With reference to some of these capital ships, the keels had not been laid; they were really paper ships; upon some 10 percent only of the entire cost had been expended.

Mr. President, Japan scrapped a number of ships, and the tonnage that Great Britain scrapped was equal to that which we retired. Undoubtedly, if the United States had proceeded with the 1916 program, which called for naval expenditures, directly and indirectly, of approximately one and one half billion dollars, then the United States would have had the most powerful fleet in the world. Indeed, the treaty left the United States a fleet stronger as a fighting force than that of any other nation. Today, gun for gun and ship for ship and man for man, we have as powerful a Navy as any in the world.

Mr. McKELLAR. Mr. President, if the Senator from Idaho will yield to enable me to say just a word——

Mr. POPE. I yield.

Mr. McKELLAR. My recollection and that of the Senator from Utah are very different about the state of the ships that we actually sank. My recollection is that there were 10 completed new battleships that went to the bottom of the sea, and 1 that was something like 75 or 80 percent completed, and the other one 20 percent completed; but there were 14 great battleships in all, counting the 2 that were not completed.

The other countries sank blueprints, if they sank anything. They destroyed blueprints and obsolete ships, as against our brandnew, tremendously costly ships. My recollection is that they cost about $40,000,000 apiece, and there were 12 of them complete, amounting to about $500,000,000.

Those are the facts. That was the costliest conference America ever had. It cost this country at least $500,000,000, without a single benefit accruing to America; and, in addition to that, the other nations never reduced their navies in actual strength at all. The result is that Great Britain today has by far the largest navy in the world, and America is in doubt as to whether her's or Japan's is the largest.

Those are the facts.

Mr. REYNOLDS. Mr. President, will the Senator from Idaho yield to me for just a moment?

Mr. POPE. I yield.

Mr. REYNOLDS. Why did we sink our new, expensive ships and permit the other nations to sink their old, used, and worn ships?

Mr. McKELLAR. Simply because the representatives of the other nations, their diplomats, were better diplomats than ours. They were better traders than ours, and we were simply outtraded; and the greatest and best navy the world had ever known went down under the waters of the Atlantic Ocean.

Mr. REYNOLDS. In other words, we win all the wars and lose all the conferences. [Laughter.]

Mr. McKELLAR. That is like winning a judgment and losing on the execution, as we lawyers know.

Mr. REYNOLDS. Yes.

Mr. KING. Mr. President, will the Senator from Idaho yield?

Mr. POPE. I yield.

Mr. KING. I apologize to my friend from Idaho and the Senate for intruding into the discussion when the Senator from Idaho has the floor; but I desire to express my dissent from the statement made by the Senator from Tennessee [Mr. McKELLAR], nor do I agree with the statement just made by the Senator from North Carolina [Mr. REYNOLDS].

Mr. President, I do not agree with the statement that we lost by the treaty. I do not agree with the Senator from Tennessee that we were outgeneraled at the conference, or that our representatives to the conference were inferior to those who represented the other nations.

One of the ablest Senators who has adorned this Chamber was Hon. Oscar W. Underwood. He was the leader of his party in the House as well as in the Senate. He brought the Democratic Party to a high state of efficiency and aided in securing important victories. In the Senate of the United States he occupied a high place, and is regarded now by those who love justice and liberty and Democratic principles as one of the ablest men who ever was in this body. He was a member of the delegation representing the United States, as was Mr. Justice Hughes, now the Chief Justice of the United States; Elihu Root and Senator Lodge.

Does any one dare to challenge the ability, statesmanship, and diplomatic skill of Chief Justice Hughes or Oscar W. Underwood, or the others who represented us in that conference? We could match wits with any nation or with any diplomats, and would successfully maintain the honor and interests of the United States.

That treaty was approved by the Senate. It met with the approval of the American people; and, in my opinion, it is rather late to now rise in this Chamber or elsewhere and condemn Mr. Hughes and the others who with him represented our country in the great work which they accomplished.

One other word:

In 1915–16, when the smoke of battle was in the eyes of the world, we were flagellated by the militarists and navalists in the United States, and we formulated the so-called "1915–16 naval program", which called for the expenditure of approximately one and one half billion dollars in great battleships and necessary auxiliary craft.

When the American people comprehended the magnitude of that plan they insisted that it should not be carried into effect. The Senator from Idaho [Mr. BORAH] offered in the Senate a resolution, which was adopted, calling for a suspension of the work upon this unjustifiable program. President Harding, be it said to his credit, invited the leading nations of the world to a conference for the purpose of securing a limitation of armament. Their representatives came to Washington to participate in such conference. When Secretary of State Hughes came before the assembled body on the first day of the session and submitted the American program it met with the approval of the people, not only of the United States but of the world.

His thesis was that if the United States went forward with that program it meant that other nations would increase their naval armaments, thus creating a competition that would increase the burdens of debt and multiply the dangers of conflicts. I might add parenthetically that when Japan was made aware of the magnitude of our 1916 naval program her leaders took cognizance of the same, which led to demands for the construction of a much larger navy than Japan possessed or contemplated then building. They asked the reason why the United States was to build 16 battleships and cruisers and auxiliary naval vessels costing such a huge sum. Many American newspapers at that time, and some of the jingoists and chauvinists in our own country, were stating that war between the United States and Japan was inevitable. That led Japan to formulate a naval policy calling for large expenditures. She began laying down keels of six capital ships, one of which was the *Matsui*.

Great Britain, which had not built a single war vessel after the war, then began to revise her naval estimates. She had, prior to the Conference, consigned to the scrap heap more than 300,000,000 tons of her naval craft. When we were pushing this 1916 program and the attention of the world was being challenged to the menace which it constituted, then it was felt that a halt must be called; President Harding, responding to the wishes of the American people, and to the views of people in other lands, called the Conference of 1921–22.

I have here before me the report submitted by Secretary Hughes following the Conference, and when the Senator from Idaho concludes I shall call attention to what was done with respect to the ships which were partially completed and those which were preserved.

I thank the Senator for yielding to me.

Mr. POPE. Mr. President, I appreciate the suggestions of the Senators. I know it is repeatedly stated, as was stated by the Senator from Tennessee [Mr. MCKELLAR] and by the Senator from North Carolina [Mr. REYNOLDS], that the United States destroyed ships, and other nations destroyed blueprints. I admit that I am no expert in this matter. I have given it only such study as a citizen can give it; but the facts as I have discovered them do not warrant any such broad statement as that.

Mr. MCKELLAR. Mr. President, if the Senator will yield, in volume 3 of Treaties and Conventions from 1778 to 1927, on pages 3106 and following, he will find data showing that his information is incorrect. He will find a statement of the number of blueprints that were sunk, the ages of the several vessels sunk, and all the facts.

Some Senator asked me while I was on my feet a moment ago as to how many battleships, in tons, the nations were limited to. I will give that information, if the Senator will yield.

The United States was allowed—and, remember, this was under a 5-5-3 program—to 500,650 tons, and Great Britain to 580,450 tons. I do not consider those tonnages the same at all. Great Britain had one ship, the *Hood*, of 41,000 tons. I said previously it was 42,500, but I was mistaken; it was 41,200.

Mr. LONG. I think the Senator said 41,000.

Mr. MCKELLAR. Then I was practically correct; it is of 41,200 tons. The number of battleships allowed Great Britain was 22, as against 18 for the United States. I repeat the assertion: No nation was ever more outtraded in regard to any international conference than the United States was outtraded by British diplomats in the year 1922 in the Treaty of Washington.

Mr. LONG. Mr. President, will the Senator from Idaho pardon me one moment?

Mr. POPE. I yield.

Mr. LONG. I do not believe the Senator from Tennessee means what he has just said. He stated that Great Britain had never outtraded us as they had in the treaty of 1922. Evidently the Senator has not read the St. Lawrence Waterway Treaty, because in that treaty we have proceeded to go a little further. We are not only sinking ships in American waters but this time we are taking American money to build a Canadian canal, with Canadian labor and Canadian material, to take away an American lake and American navigation. I just wanted the Senator to know that he may be right about 1922, though I do not know, but when the Senator has read the St. Lawrence Waterway Treaty he will see that Great Britain improves all the time.

Mr. MCKELLAR. Mr. President, if the Senator from Idaho will permit me just a moment, that treaty has not been made final yet, and my statement still stands.

I want to call the attention of the Senator from Idaho to the fact that under the Washington Treaty we destroyed 32 great battleships, 14 of which were new. Great Britain destroyed 22 old hulks, ships that were out of date, and some blueprints. That is all she destroyed. We destroyed a new navy; she destroyed an out-of-date navy.

Mr. NYE. Mr. President, will the Senator yield to me?

Mr. POPE. I yield.

Mr. NYE. I presume that in Great Britain men take their places in deliberative halls and state that the United States destroyed ships which were obsolete and of no account and that Great Britain destroyed her best, just as we hear in our own Chamber.

Mr. TRAMMELL. Mr. President, we must depend on the facts in determining whether our ships were old and dilapidated ships or were modern ships, and ships in course of construction. At least 12 of them were in course of construction. The others were new ships, in the main. I think the facts would not justify the contention that Great Britain destroyed new ships and that we destroyed old ships. The facts demonstrate, as was stated by the Senator from Tennessee, that we destroyed good ships, and destroyed many that were in the course of construction.

Mr. BONE. Mr. President, will the Senator from Idaho yield to me to ask the Senator from Tennessee a question?

Mr. MCKELLAR. If the Senator from Idaho will yield, I will be glad to answer if I can. I have been speaking on the spur of the moment, because the Senator from Idaho was discussing our Navy—and I want to say that he was discussing it well. I admire the way he is handling himself on the floor, and I congratulate him; but it seemed to me that there was one statement in which he was not absolutely accurate, and I interrupted. I did not intend to have him interrupted as we have interrupted him, and I apologize to him.

Mr. BONE. I understand that some of the ships that were scrapped were in process of being built.

Mr. MCKELLAR. Yes.

Mr. BONE. I was wondering whether the Government of the United States, at the time of the scrapping of those vessels, paid the private shipbuilding companies a bonus or subsidy, following out the usual war experience, because of the taking away of their contracts.

Mr. MCKELLAR. I was a Member of the Senate in 1922, but I was rather a younger Member in those days, and I had not made the careful examination of subsidies which I have since made.

Mr. BARKLEY. Mr. President, I thought the Senator was still a younger Member.

Mr. McKELLAR. I profoundly thank the Senator.

Mr. POPE. Mr. President, I admit my inability to discuss with the Senator from Tennessee the details of the Washington Conference; that was held long before my day in public life. But I want to call the attention of the Senator to the fact that there are millions and tens of millions of people in this country who believe that the solid facts which were accomplished at the Washington Conference and at the London Conference in the way of getting the great nations of the world together, to sit around a table here and elsewhere to discuss disarmament would be of greater value than the ships which may have been destroyed by the various nations.

I am wondering whether a Senator of the great ability of the Senator from Tennessee would disregard the value of a disarmament conference, or whether he would urge that we should go forward and enter into a mad race of armaments, to see which nation in the world had more money and more ability to construct ships and build superior navies. We will have to take one thing or the other, either agree to discuss the matter and arrive at a compact, as President Harding said when he was submitting the Washington Treaty to the Senate, or are going to disregard all compacts and enter into a mad race of armaments, depending upon the ability of the nations to build ships.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER (Mr. BARKLEY in the chair). Does the Senator from Idaho yield to the Senator from Tennessee?

Mr. POPE. I yield.

Mr. McKELLAR. Of course, I am a peace-loving man, and in every way in the world I want to have peace preserved. It goes without saying that no sane man would want otherwise. But I happened to be a Member of the Senate, I will say to the Senator from Idaho, when three conferences were held on disarmament. The first one was in Washington, in 1922, when we were shamelessly outgeneraled in the conference. We sank our own Navy, and no other nation sank any substantial part of its navy.

We do not have to have a conference in order to sink our Navy. We can pass a measure, and if it meets the President's approval, we can sink our Navy by ourselves. We do not need a conference with other nations in order to sink our own Navy; and that is what we did in 1922.

In 1927 there was another conference of a like kind, while Mr. Coolidge was President, which met in Geneva, as I remember, and that conference was about to result in another horrible catastrophe for the American Navy, but President Coolidge was canny enough to call away the American delegates and not enter into that treaty. That conference never eventuated in anything.

Two years later, after Mr. Hoover became President, we entered into another conference, at London, in order to limit our armaments, and the United States again, if I remember correctly, sank about one fourth of her then Navy, and the other nations made substantially no changes. The result is that our experience of the last 12 years shows that the United States is the only nation willing to disarm in these conferences.

I am perfectly willing to admit that I am tired of conferences. I am tired of having our Government go into a conference and have a very great part of the American Navy sunk while no other nations sink any part of their navies, or any substantial part of them. I am tired of it; I do not like it; and I want to know what is to be done before we enter a conference. I hope no conference will be held in 1936 further to sink the American Navy.

The Senator from Florida [Mr. TRAMMELL], the Chairman of the Committee on Naval Affairs, has a bill now before the Senate, and my intention is to vote for that bill; but if I thought that as soon as we started to build the ships provided for in that measure we were going to have a conference with foreign nations, in 1936 or at any other time in the near future, and that we were going to sink the ships now proposed to be built, I would not vote for the bill, because I do not think we ought to build a navy and then have our diplomats sink it.

Mr. NYE. Mr. President, I wonder if the Senator is prepared to advise the Senate whether or not there is any nation on earth that spends more money getting ready for more war than does the United States?

Mr. POPE. My information is distinctly that the United States has spent more money than any other nation in the world in preparation for war.

Mr. McKELLAR. Mr. President, inasmuch as I was asked for a number of facts a while ago, and in view of the fact that my memory might be a little treacherous, would the Senator from Idaho object to my putting a table in the RECORD at the point where I was asked the question? I do not think it will hurt the Senator's speech at all. If he thinks it will, the table can be placed in the RECORD at the end of the Senator's speech.

Mr. POPE. I should prefer, Mr. President, to have it appear in the RECORD at the end of my speech.

Mr. McKELLAR. Mr. President, I then ask unanimous consent that the table I have presented be inserted in the RECORD at the end of the Senator's speech.

The PRESIDING OFFICER (Mr. BARKLEY in the chair). Without objection it is so ordered.

(The table presented by Mr. McKELLAR appears in the RECORD at the conclusion of the speech of Mr. POPE.)

Mr. LONG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Louisiana?

Mr. POPE. Mr. President, I do not desire to yield any further.

Mr. LONG. Mr. President, may I ask one question of the Senator from Tennessee? I want my friend from Tennessee, who lives on the Mississippi River, to bear in mind that the Government appropriated a lot of money to make the Mississippi River navigable, depending upon the waters of Lake Michigan to do so, and after we built up the Mississippi it is now being proposed that all that work be scrapped, just as was done in the case of our battleships. I hope the Senator from Tennessee will bear that fact in mind when the Senate comes to vote on the Great Lakes-St. Lawrence Deep Waterway Treaty.

Mr. McKELLAR. Mr. President, I will bear it in mind.

Mr. POPE. Mr. President, in my opinion we are not justified in adding this large burden of expense to the backs of our already overburdened taxpayers. I have taken the position in the Senate that in my judgment, after an analysis of our Navy, we are prepared to defend our own country. We are not prepared to defend the Philippine Islands. It would take a greater navy than that provided by the Washington Treaty to do so. But we are prepared to defend the continental United States and our insular possessions in the neighborhood of this country. On that basis, in my judgment, we have a Navy that is sufficient for our defense.

Early during the special session of Congress last year the President urged upon Congress a policy of drastic economy. He pointed out a deficit of some $5,000,000,000 in the operating revenues of the Government, and urged the enactment of the so-called "economy bill." This cut the salaries of all Federal employees 15 percent, it eliminated positions of employment, it cut compensation and pensions of veterans, and it called for sacrifices all along the line in Government expenditures. Every Senator knows something of the extent and effect of these sacrifices.

A few weeks ago, in spite of this policy of economy, due largely to necessary emergency relief expenditures, the country was advised that our national deficit has reached the unprecedented figure of some $7,000,000,000, and that borrowings of some $10,000,000,000 would be necessary. The veterans have been cut some $350,000,000, the Federal employees have been cut in the neighborhood of $200,000,000. Almost every day there is brought to our attention such cuts in essential Government services in our States that it is difficult to continue anything like efficient operation.

I supported the economy bill, believing it necessary to preserve the financial integrity of the Government and to bring some measure of relief to the taxpayers of the country who were being crushed under the burden.

I did not like to cut the pensions of the veterans who were in need, or to cut the salaries of our governmental employees, but I was led to believe that with our Nation facing a deficit of $5,000,000,000 it was necessary to preserve the financial integrity of our country, and that all down the line we should make sacrifices in order to accomplish that purpose.

Now it is being proposed, under this bill, to create over and above the $275,000,000 P.W.A. allotment and the $293,000,000 regular naval appropriations, the additional burden of about one half billion dollars for still more ships—a program which I believe I have demonstrated is wholly unnecessary for our national defense.

This fund would be sufficient to restore every just demand of the veterans of all wars and to eliminate every salary cut. It would go far toward meeting housing and slum problems. It would open up thousands of schools now closed for lack of funds, leaving tens of thousands of American children without the opportunity of even an elementary schooling. It would supply funds for hundreds of meritorious public works projects in the cities, counties, and States throughout the Union. In some States, including my own, disastrous floods have destroyed roads and bridges, wiped out the homes and destroyed millions of dollars' worth of property of our people, leaving many families destitute. They are appealing to the Government for help in their dire need. In the Northwest, the wheat farmers are pleading for the adoption of a program for making loans to the wheat growers similar to the programs already in operation for loans to corn and cotton growers. They are met with the statement that money is not available for this purpose.

We cannot make loans to our wheat growers. We cannot meet the needs of our people for the relief of those who have suffered in flood disasters. We are required at the present time to lay off millions of people who have been employed under the C.W.A. because we do not have sufficient funds. The financial integrity of our Nation demands that we economize in that respect. Yet we will turn around and spend $500,000,000 for more ships, and for what purpose? Because the Secretary of the Navy says we should have a policy that will enable us, in effect, to compete with all nations in Asiatic waters.

If it could be demonstrated here that we need a larger navy to defend our country, I will vote for an appropriation sufficient to supply such a navy. I cannot be convinced from the figures that we do not have such a navy now, taking into consideration the ships that are being built, taking into consideration those that have been proposed and for which appropriations have already been made. As I have pointed out here, we compare very favorably with the other great naval powers of the world. I believe we do have a Navy which is already authorized by existing legislation that will afford an adequate national defense.

Mr. President, it seems to me it would be in the public interest, in the interest of human welfare and happiness of our people the country over, that this large amount of money be not unnecessarily expended on further naval armaments but be expended upon programs for the constructive relief of our people and communities throughout the country.

In conclusion, let me say that I cannot adhere to the philosophy that the establishment of superior armaments is an assurance against war. History does not support such a contention. If anything were necessary to demonstrate the unsoundness of such a philosophy, the military policies of the great European nations immediately prior to the World War ought to be conclusive. Germany, Great Britain, and France were engaged for decades in a race in armaments. Long before 1914 every thoughtful student of world affairs realized it was only a matter of time until these nations would enter upon a war that would threaten their very existence. Of course, the leaders of these nations always insisted that the constant, never-ending increases in armaments were for the purpose of defending the nation and its interests. The leaders of each nation contended that peace would be promoted by superior armaments. This was the way, they said, to insure peace.

The inevitable result of such a philosophy and such a policy is now a ghastly matter of history. Such a result has always followed such a policy and always will. Will not the leaders of nations ever learn? Will not they realize this is not the way to peace? Did not the World War, with its terrible toll of death and destruction, with its direct death loss of 10,000,000 young men and its property loss of some $200,000,000,000, with its inevitable accumulation of debts and economic maladjustments, and with the sufferings of its victims ever since—we hear about those victims from morning till night in the discussion of the veterans' legislation; we hear of the sufferings of the men who represented us in the great World War; are we to now embrace the same philosophy and pursue the same course for the future? Are we to enter into this mad race of armaments with the nations of the world when history points to us the inevitable effect of such a policy?

Mr. President, we have weighed that policy and found it wanting. I am profoundly convinced that peaceful relations among the nations of the world will not come through strivings for superior armaments. I believe that such a policy brings us nearer to another world war. If enduring peace ever comes, it must come another way. It must come through cooperation among the nations. It must come through a determination by the leaders of the world to settle their disputes through peaceful means.

Millions of people throughout the world were heartened a few years ago when the Kellogg Peace Pact was adopted by the nations of the world as a policy. This treaty, signed by some 60 nations, including the United States, Great Britain, and Japan, solemnly condemned recourse to war for the solution of international controversies and renounced it as an instrument of national policy in their relations with one another.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Tennessee?

Mr. POPE. I prefer not to yield now, Mr. President.

Mr. McKELLAR. I know the Senator does not want to state his facts wrong. Just after the signing of that peace treaty China and Japan were at war, and Russia also, and they were signatories to that peace treaty.

Mr. POPE. Yes; but does the Senator contend that, therefore, the signing of the Kellogg Peace Pact was not worth while?

Mr. McKELLAR. I do not think it was worth while at all. I do not think it has done a particle of good.

Mr. POPE. The Senator and I disagree on that subject.

Mr. KING. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Utah?

Mr. POPE. I yield.

Mr. KING. If he was so meticulously desirous for the accuracy of his facts, why did the Senator from Tennessee state that Russia was at war immediately after the signing of the Kellogg-Briand Pact? Russia was not then at war and is not now at war with any country on earth.

Mr. McKELLAR. Anyway, there were statements to that effect, and I was referring to war in fact. Certainly, however, the Senator will not deny that China and Japan were both signatories to the Kellogg Peace Pact and both were at war in less than a year after they had signed it.

Mr. KING. There was no declaration of war. I do concede that Japan, without justification, invaded the territory of China.

Mr. McKELLAR. And both were signers of the Kellogg treaty.

Mr. KING. Exactly. So also there are men who have agreed to abide by municipal law, and yet the courts are filled with persons who breach the law; and because a nation may violate a treaty is no argument against coopera-

tion among the nations with a view to the elimination of war and the promotion of peace.

Mr. POPE. I thank the Senator from Utah.

Mr. President, the point that I desired to make was that some years ago we adopted a policy represented by the Kellogg Peace Pact. I am thoroughly in sympathy with that policy, because, as it seems to me, the adoption of any other policy, such as a policy for increasing our armament to be stronger than all other nations, is not a policy that will eventually promote enduring peace.

The Kellogg Peace Pact provided—

> that the settlement or solution of all disputes or conflicts of whatever nature or of whatever origin that may rise among them shall never be sought except by pacific means.

This, I believe, is the true policy of our Government. I am sure it expresses the overwhelming sentiment of the plain American people.

[The table submitted by Mr. McKELLAR, to be printed in the RECORD at the conclusion of Mr. POPE's remarks, is as follows:]

Scrapping of vessels

United States:	
Battleships completed	18
Battleships building	7
Battle cruisers building	4
Total	29

Percent completed

Battleships:	
Washington	75.9
South Dakota	38.5
Indiana	34.7
Montana	27.6
North Carolina	36.7
Iowa	31.8
Massachusetts	11.0
Battle cruisers:	
Lexington [1]	33.8
Saratoga [1]	35.4
Constellation	22.7
Ranger	4.0
Constitution	15.4
United States	12.1

Cost

The 18 battleships cost	$103,341,026
Recovered when sold	1,506,614
Total expended on vessels building	149,251,961
Expended for scrapping	26,663,623
Grand total expended	277,695,994

As a result of the London treaty three more battleships were scrapped—*Florida*, *Utah*, and *Wyoming*.

Expenditures as a result of scrapping

	United States [1]		Great Britain [2]		Japan [3]	
	Number	Tons	Number	Tons	Number	Tons
Completed:						
Battleships	19	289,580	16	322,950	9	149,801
Battle cruisers			2	52,700		
Cruisers			4	72,100	3	42,950
Total	19	289,580	22	447,750	12	192,751
Under construction:						
Battleships	7	291,800			2	79,958
Battle cruisers	6	261,000			2	82,000
Total	13	552,800			4	161,958
Grand total	32	742,380	22	447,750	16	354,729

[1] Value, $277,695,994. [2] Value, $169,936,567. [3] Value, $106,796,300.
Cost to complete, $178,000,000.

Mr. KING. Mr. President, I apologize for intruding upon the Senate for a moment, but when the Senator from Tennessee [Mr. McKELLAR] made certain statements critical of our representatives at the Conference of 1922, I felt constrained to register my dissent. I reiterate what I then said as to the ability of our representatives, Judge Hughes, Elihu Root, Senator Lodge, Oscar Underwood, and as advisers former Senator Sutherland, now upon the Supreme Court Bench of the United States, and a number of other distinguished Americans, and also admirals and military officials who were familiar with the military and naval needs of the United States. So far as I am advised, they approved the work of the Conference and the report submitted by Secretary Hughes.

Mr. FESS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Ohio?

Mr. KING. I yield.

Mr. FESS. Confirmatory of what the Senator has said about the high standing of the representatives of the United States, I wish to state that I was in a conference where Arthur Balfour, the head of the British delegation, expressed the highest opinion of the American delegation and used this expression:

> Your Secretary of State, Mr. Hughes, is the most dominating figure I have met in 40 years of public service.

Mr. KING. It seems to me that in any tribunal in the United States there should be no occasion to defend the high standing, the intellectual power, the great ability, as well as the patriotism, of our delegates to that conference nor our delegates to the London Conference; and when the able Senator from Tennessee stated that as a result of the Naval Conference at London—and our distinguished leader on this side of the aisle was one of the American delegation—we lost four ships, I could not see any justification for the statement which he made. His statement, in effect, if I understood him correctly, was that at the Washington Conference we were outwitted and that at the London Conference our delegates, Senator REED, Senator ROBINSON of Arkansas, and others, failed or did not at least protect the rights of our Government, as a result of which we were the losers as we were at the Conference of 1922. With these views I do not agree.

Mr. ROBINSON of Arkansas. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Arkansas?

Mr. KING. I yield.

Mr. ROBINSON of Arkansas. If the right to construct under the London Treaty had been availed of by our Government, the position of the United States would have been very much stronger under that treaty than it is. It would have put the United States on a parity with the greatest sea power on earth, and at the same time would have limited naval construction so that the competition which is now threatened could not have existed.

Mr. KING. I agree with the Senator. Mr. President, I do not like comparisons instituted between representatives of our Government and the representatives of foreign governments to the disadvantage of our representatives. I think that in conferences that have taken place in which the United States has participated the honor of our Government has been maintained and the rights of the American people and of the American Government have been protected. Who could challenge the ability and integrity, the high standing and the intellectual qualifications of Justice Hughes and Elihu Root, and the late Oscar Underwood, to whom I referred a few moments ago, a great leader in the House of Representatives, a great leader in the Senate?

Now, coming down to what was done, the able Senator from Tennessee repeatedly stated that we sank 15 or 16 battleships and battle cruisers. I think that the Senator is entirely mistaken.

Mr. McKELLAR. Oh, no; I said we had sunk 12 new ones and 2 that were in the process of building and that, in all, we sank 22.

Mr. KING. Mr. President, let us read the record. Much as I respect my dear friend, I prefer the statements of those who signed the treaty, who participated in its negotiation, and who drew it, rather than the imperfect recollection of my friend from Tennessee. I read now from the report which was signed by our delegates and submitted to the Congress of the United States. Here was the plan:

> The United States is now completing its program of 1916, calling for 10 new battleships and 6 battle cruisers.

[1] Converted to aircraft carrier.

To which I referred, and I condemned that navalistic policy which would have compelled the United States to spend a billion and a half dollars for its completion. Senators may recall that we were conjured to vote for that program as a threat to compel European nations to abandon navalistic activities upon their part; but evidently the war spirit got possession of us and, after the war was over, a Nation-wide propaganda was carried on, participated in by admirals and navalists and Army officers, that we build up the greatest navy in the world, a navy that would overwhelm all nations, and also greatly increase other military forces. Under the whip and spur of that propaganda, which was wholly unwarranted, we went forward in the construction of that program until the resolution of the Senator from Idaho [Mr. BORAH] challenged the attention of the American people to the serious consequences that would follow its execution. Then, when Mr. Harding came to the Presidency, he called the conference to which reference has been made.

Mr. SHIPSTEAD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Minnesota?

Mr. KING. I yield.

Mr. SHIPSTEAD. I should like to observe that foreign governments only retarded their naval program until they got their debts canceled, and got our taxpayers to pay their debts, and until they could borrow more money. Then they again started on a naval building program.

In reference to the treaty of London, it seems to me all we got out of that treaty was the necessity for spending a billion dollars or more. We were told it was a disarmament treaty. It placed the sanction of the great powers of the world upon larger navies than were ever before known.

Mr. KING. Mr. President, I shall not further allude to the London conference, but I intend to proceed to refer to the report of the Washington Conference of 1922.

Mr. Hughes and the other delegates in their report stated that, instead of completing them, as was indicated by my friend, we had expended $330,000,000 on all those capital ships. That is all that had been expended, and I might add that of them we have now two or more that were a part of that $330,000,000 which were expended.

Mr. SHIPSTEAD. Mr. President, can the Senator tell us what will be the cost of the present program?

Mr. KING. The cost runs into almost astronomical figures. I do not know what the present program is. I may say that we have recently passed a naval appropriation bill providing for the ordinary expenses of the Navy for the next fiscal year calling for expenditures of between $300,000,000 and $400,000,000. The Public Works Administration assigned, out of the money that ought to have gone for public works and for relief, $238,000,000 for new naval war vessels, and, as I recall, $90,000,000 additional for naval purposes. We have an aggregate of between six and seven hundred million dollars for the Navy.

Now, we have before us this bill authorizing $450,000,000 more for the construction of 101 more naval vessels, and, of course, when those vessels shall have been built it will mean further auxiliary craft. There are no capital ships authorized by the pending bill. Then it will be said we have all these smaller craft and we must have additional capital ships; then we must have a larger naval personnel; then we must have other auxiliaries incidental to a big navy. The cost may run into the hundreds of millions of dollars in excess of the billion dollars which I have suggested.

Mr. SHIPSTEAD. Mr. President, will the Senator permit me to offer a further observation?

Mr. KING. Certainly.

Mr. SHIPSTEAD. I do not intend to interrupt the Senator unduly, but I desire to invite his attention to the fact that I have been informed that the Naval Academy at Annapolis has lost its standing as an accredited college because of the type of the personnel of its faculty. I am told that on account of the program of economy the Naval Academy has lost its standing as an accredited college because there were not sufficient funds to hire as members of the faculty men of sufficiently high standing to enable the Academy to have a curriculum that would enable it to maintain its high standing as an accredited college, as it has done in the past.

If that be true, I should like to know whether, of the hundreds of millions of dollars that are being spent, any money is provided to give the Naval Academy the standing it ought to have among colleges of the United States as a recognized accredited college. I think that is a serious matter. We spent hundreds of millions of dollars for building naval vessels and to maintain the Naval Academy to train officers to handle those vessels, and yet the Naval Academy has a scholastic standing of such a low order that it cannot be maintained on a basis of equality as an accredited college among the colleges of the United States.

Mr. KING. Mr. President, I commend the observations of the able Senator from Minnesota to the Committee on Naval Affairs or to the Committee on Education and Labor of the Senate, with a view to framing some policy that will enable it to secure and maintain higher scholastic standards at the Naval Academy.

Mr. FESS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Ohio?

Mr. KING. Certainly.

Mr. FESS. I fear the observations just made, which are correct, may be misinterpreted as a reflection upon the type of teaching at the Naval Academy. There certainly is no higher grade of teaching anywhere in the subjects specially taught than is to be found at the academy. The difficulty is the curriculum has not been sufficiently broadened so that the civilian professors can improve that regular curriculum of the academy and make it a unit in the college association. It ought not to be understood that the quality of teaching at the academy falls below the standard. It does not. It is only a question whether the number of teachers there is sufficient.

Mr. TRAMMELL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Florida?

Mr. KING. Certainly.

Mr. TRAMMELL. I rose when the Senator from Ohio rose, and he has stated in substance what I intended to state. It is not a matter of money. It is a matter of policy that brought about the present condition. We have the teachers at the Naval Academy, but there has been some conflict as to whether or not the authorities there should use more civilian teachers or should use naval officers for the purpose of teaching. I do not believe that is the cause of the Naval Academy not being considered an accredited college. It is more along the line suggested by the Senator from Ohio [Mr. FESS], and it is for the reason stated by him that the Naval Academy is not recognized as an accredited college. It is not a question of money. The appropriations have been ample to maintain a proper teaching force right along, and the appropriations now are ample.

Mr. SHIPSTEAD. Mr. President, I did not intend to reflect on the personnel of the teaching staff at Annapolis. My information is as I have stated. I do not refer now to strictly naval subjects, but to academic subjects. My information is that, instead of hiring professional civilian teachers, officers are taken from the Navy who have not been attending school for 8 or 10 years and who have not taught academic subjects and are placed in charge of instruction at Annapolis. That is my information. If I am incorrectly informed, I should be glad to be corrected.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

BERYL M. M'HAM—VETO MESSAGE (S.DOC. NO. 147)

The PRESIDING OFFICER (Mr. BARKLEY in the chair) laid before the Senate a message from the President of the United States, which was read, as follows:

To the Senate:

I return herewith S. 558, "An act for the relief of Beryl M. McHam ", without my approval.

I am constrained to take this action on the record as reported to me by the Secretary of War, a copy of whose communication, setting forth the record and recommending against the approval of the bill, I am transmitting herewith for the information of the Senate.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 1, 1934.*

The PRESIDING OFFICER. The question is, Shall the bill pass, the objections of the President of the United States to the contrary notwithstanding?

That question will be pending, and in the meantime the President's message, the accompanying paper, and the bill will be printed and lie on the table.

FEDERAL EMPLOYMENT STABILIZATION OFFICE

The PRESIDING OFFICER laid before the Senate a message from the President of the United States, which was read, and, with the accompanying paper, ordered to lie on the table, as follows:

To the Congress:

Pursuant to the provisions of section 1, title III, of the act of March 20, 1933 (ch. 3, 48 Stat. 8, 16), I am transmitting herewith an Executive order which (1) revokes so much of section 1 of Executive Order No. 6166 of June 10, 1933, heretofore transmitted to the Congress, as provided for the abolition of the Federal Employment Stabilization Board and the transfer of its records to the Federal Emergency Administration of Public Works, (2) abolishes the Federal Employment Stabilization Board, (3) establishes in the Department of Commerce an office to be known as the " Federal Employment Stabilization Office ", and (4) transfers to such office the functions, personnel, records, and property of the Federal Employment Stabilization Board.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 1, 1934.*

OFFICES AND LIVING QUARTERS FOR AMERICAN OFFICIALS IN MOSCOW, RUSSIA (S.DOC. NO. 149)

The PRESIDING OFFICER laid before the Senate a communication from the President of the United States, transmitting an estimate of appropriation for the Department of State for the fiscal year 1935, to remain available until expended, amounting to $1,165,000, for the expenses of erecting suitable buildings to afford permanent offices and living quarters for all American officials and employees stationed in Moscow, Russia, which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

GUARANTY OF PRINCIPAL OF HOME OWNERS' LOAN CORPORATION BONDS (S.DOC. NO. 148)

The PRESIDING OFFICER laid before the Senate a message from the President of the United States, which was read, referred to the Committee on Banking and Currency, and ordered to be printed, as follows:

To the Congress:

On January 10 I recommended to the Congress the passage of legislation guaranteeing the principal as well as the interest of the $2,000,000,000 of bonds authorized for the refinancing of agricultural indebtedness.

I now recommend that the Home Owners' Loan Act be similarly amended. The purpose of such legislation, as in the case of farm financing, will be to assure the continued progress on a self-sustaining basis of the making of loans for the purpose of refinancing home mortgages without interruption. There is the same reason for acknowledging publicly what already amounts to a moral obligation in respect to these bonds as there was in the case of bonds authorized to be issued through the Farm Credit Administration.

By making provision for an exchange of the new type of bonds guaranteed as to principal as well as interest for those already issued, those mortgagees who have shown their willingness to cooperate with the Government's program by accepting the original bonds will be placed on an equal footing with mortgagees who will hereafter obtain the fully guaranteed obligations proposed by this legislation.

Out of the funds which may be made available as a result of the proposed guaranty of principal of these bonds the Home Owners' Loan Corporation should be enabled to extend further assistance for the modernization of homes as well as for the making of repairs. Authority should also be given to the Home Owners' Loan Corporation to purchase bonds of the Federal home-loan banks, thus enabling the Corporation to make funds available to those banks and to building and loan associations which are in need of financing in order to encourage private building.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 1, 1934.*

Mr. FLETCHER. Mr. President, I wish to introduce a bill to guarantee the bonds of Home Owners' Loan Corporation and ask that it may be referred to the Committee on Banking and Currency.

The PRESIDING OFFICER. Without objection, the bill will be received and so referred.

The bill (S. 2932) to guarantee the bonds of Home Owners' Loan Corporation, to amend Home Owners' Loan Act of 1933, and for other purposes, was read twice by its title and referred to the Committee on Banking and Currency.

GREAT LAKES-ST. LAWRENCE WATERWAY TREATY

Mr. LEWIS. Mr. President, I deplore that I must confess that I have pleaded with the able Senator from Nevada [Mr. PITTMAN], chairman of the Foreign Relations Committee, all too frequently; and it is now, in response to a desire to name a date for voting upon what we speak of as the St. Lawrence Treaty, that I am again suggesting to the eminent chairman of the Foreign Relations Committee that he submit the proposed unanimous-consent agreement which he has discussed with me.

Mr. PITTMAN. Mr. President, I presented on yesterday a proposed unanimous-consent agreement to vote upon the Great Lakes-St. Lawrence Deep Waterway Treaty on the 14th day of March. At that time the Senator from Oregon [Mr. MCNARY] asked that the request go over, stating that it might possibly be brought up today. I should like to know if the Senator from Oregon has any objection to the request being submitted today.

Mr. MCNARY. Mr. President, the Senator has correctly stated the situation that existed yesterday. I objected to the proposed unanimous-consent agreement because of the absence of the leader on the Democratic side and because there were many absentees on either side of the aisle at that time. I am willing to hear the proposal today. If the Senator desires to submit the request for unanimous consent at this time, I shall have to suggest the absence of a quorum before he does so.

Mr. PITTMAN. I think it proper that there should be a quorum called. After the quorum is called I shall then submit the unanimous-consent agreement.

Mr. MCNARY. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Clark	Hale	McNary
Ashurst	Connally	Harrison	Metcalf
Austin	Coolidge	Hatch	Murphy
Bachman	Copeland	Hatfield	Neely
Bailey	Costigan	Hayden	Norris
Bankhead	Cutting	Hebert	Nye
Barbour	Dickinson	Johnson	O'Mahoney
Barkley	Dieterich	Kean	Overton
Black	Dill	Keyes	Patterson
Bone	Duffy	King	Pittman
Borah	Erickson	La Follette	Pope
Brown	Fess	Lewis	Reynolds
Bulkley	Fletcher	Logan	Robinson, Ark.
Bulow	Frazier	Lonergan	Robinson, Ind.
Byrd	George	Long	Russell
Byrnes	Gibson	McAdoo	Schall
Capper	Glass	McCarran	Sheppard
Caraway	Goldsborough	McGill	Shipstead
Carey	Gore	McKellar	Steiwer

Stephens	Townsend	Van Nuys	Walsh
Thomas, Okla.	Trammell	Wagner	Wheeler
Thomas, Utah	Tydings	Walcott	White
Thompson	Vandenberg		

Mr. LEWIS. Mr. President, at this time I desire to announce the absence of the senior Senator from South Carolina [Mr. SMITH], occasioned by death in his family.

The PRESIDING OFFICER. Ninety Senators have answered to their names. A quorum is present.

Mr. PITTMAN. Mr. President, as in open executive session I propose a unanimous-consent agreement, which I send to the desk, and ask to have stated.

The PRESIDING OFFICER. The proposed unanimous-consent agreement will be stated.

The legislative clerk read as follows:

Ordered, by unanimous consent, That on Tuesday, March 13, at the hour of 12 o'clock noon, the Senate, in open executive session, will proceed to the consideration of the Great Lakes-St. Lawrence Deep Waterway Treaty, Executive Calendar No. 1, and that after the hour of 12 o'clock meridian on the calendar day of Tuesday, March 13, 1934, no Senator shall speak more than once nor longer than 20 minutes upon the pending Great Lakes-St. Lawrence Deep Waterway Treaty, nor more than once nor longer than 10 minutes upon any amendment that may be pending or that may be offered thereto, or upon any reservation that may be pending or that may be offered to the resolution of ratification; that no amendment or reservation shall be formally proposed which shall not have been presented on or before the calendar day of Tuesday, March 13, 1934; and that on the calendar day of Wednesday, March 14, 1934, at not later than the hour of 6 o'clock p.m., the Senate shall proceed to vote without further debate upon all questions arising in the parliamentary disposition of the said treaty.

The PRESIDING OFFICER. Is there objection to the unanimous-consent agreement submitted by the Senator from Nevada? The Chair hears none, and the agreement is entered into.

THE OIL INDUSTRY

Mr. LONG. Mr. President, I have risen for the purpose of getting before the Senate, and I hope before some of the boards and departments of the Government operating here in the Capital, the effort of the independent oil people of this country to be heard on the code of fair competition.

It has been announced by General Johnson that he was going to hear any and all persons in interest who wished to appear with regard to the operations of these various codes; and the independent oil people have undertaken to present their case here against the monopoly that has been thrust upon them through the guise and practices of Government administrators. They have been unable to get any hearing whatever and unable even to get the kind of conference that apparently has been granted to everyone else.

I have been handed a letter from W. G. Williams, of Fort Worth, Tex., and I desire to read the letter. It is dated February 28, 1934, and is as follows:

FORT WORTH, TEX., *February 28, 1934.*

Gen. HUGH S. JOHNSON,
Administrator National Recovery Administration,
Commerce Building, Washington, D.C.

DEAR SIR: Pursuant to your notice of public meetings on administration and improvement of codes of fair competition, I wish first to make the following statement. On Monday, the 26th instant, after being shuttled back and forth from one individual to another in the Petroleum Administrative Board, Mr. C. Fahy, vice chairman, informed me that representations regarding the oil code would not be heard at these public meetings; while Mr. Fahy was definitely ascertaining this for me, I contacted Dr. Compton, who informed me that representations from the oil industry would be heard at these meetings.

These two widely divergent statements left me in a quandary, so I contacted the Honorable Donald R. Richberg, who agreed with Dr. Compton that representations from the oil industry would be welcomed.

Still feeling a sense of insecurity in the matter, I wrote both yourself and Hon. Harold L. Ickes regarding the question of jurisdiction in these hearings, and this morning I am in receipt of a letter from the Honorable Nathan R. Margold, chairman of the Petroleum Administrative Board, reading as follows:

"The Secretary of the Interior has requested me to acknowledge the receipt of your letter of February 26 and to state that the code hearings, beginning on February 28, will not include hearings on complaints under the oil code."

Obviously discretion requires that the wishes of the administrator of the petroleum code be respected, but in view of numerous letters and telegrams, copies of certain of which I attach hereto, I am impelled to ask your indulgence in presenting the attached statement which, I believe, is of such constructive character that the Petroleum Administrative Board cannot take offense at my presenting.

Respectfully,

W. G. WILLIAMS.

242 HOTEL CONTINENTAL,
Washington, D.C.

Mr. President, there is presented and attached here another letter, dated February 28, which sets out some of the conditions I have been complaining about on the floor of the Senate, to which I have not been able to secure attention, or any reasonable effort to correct—the domination of this industry that has not only been fastened upon these people under private control, but how they have taken charge of the Government boards to a point where they may do nothing whatever except perpetuate Standard Oil control over the oil industry of this country.

I am going to read from the letter of the fair-minded people who have handed me this document.

FEBRUARY 28, 1934.

Hon. HUGH S. JOHNSON,
Administrator N.R.A., Washington, D.C.

SIR: Your public notice divides the hearings on the codes of fair competition into five groups, and in accordance with this schedule, in behalf of individuals and associations in the oil industry, whom I represent in this matter, I offer the following suggestions and criticisms.

Employment: Through increased prices to consumers, the income of the oil industry under the code of fair competition, has been increased according to reliable information, in the sum of $833,000,000 annually, while the pay rolls of the industry have been increased by only $112,000,000.

That means they have increased the prices around 8 for 1 as compared to what they are paying the labor.

From personal investigation covering the oil refineries in the Houston area, the writer has definitely ascertained that the incomes, under the code, of skilled workers had been decreased approximately 25 percent.

I further found that many violations of the code existed, principally amongst the integrated companies—

I am going to explain in a word what he means by that.

These evasions usually consisting of transferring an hourly-pay man to the position of supervisor on a monthly salary and increasing his working hours ad lib.

The oil industry has suffered but little hardship during the depression as reliable statistics show that consumption of petroleum products during the depression years have been but little diminished.

Due to the development of highly efficient refining methods, refinery throughout per man per day has been more than doubled and increasing installations of these modern methods causes labor in the industry to face progressively increasing unemployment. Therefore, it is timely that the working hours of skilled labor in the industry should be reduced to not more than 24 hours per week.

Mr. President, one of the largest oil refineries in the world is in Baton Rouge, La., and they have recently laid off about one half of all their workers because they have installed labor-saving devices which have increased the output of their refinery, but which have decreased the number of their employees about 50 percent. I know that this gentleman in that particular is stating the facts. The letter states:

The Southwest Petroleum Association has circularized Congress and the country with the following statement:

"INCREASE WAGES

"Commodity prices are advancing. Wages must and can be increased at same time. Revise all labor codes at once, thus making increases fair and competitive; $5 per day minimum will provide new markets and prove profitable investment for all industry. Raw materials and wages alike affect cost of finished products. Five cents per barrel increase in price of crude oil is absorbed by oil industry without comment, because competitive. Five cents per barrel added to pay roll by revision of labor code will do untold good, and, because competitive, will work hardship on no one."

I draw to your attention that the oil code, as originally signed by President Roosevelt, contained a labor clause providing a minimum hourly wage scale and a differential which would restore to skilled labor its 1929 rate of pay. The September 13 revision of the code eliminated the differential clause and substituted therefor a provision that regional committees should have jurisdiction in the matter, and I draw to your attention the fact that these regional committees, so far as I have been able to learn, have given no attention whatsoever to the matter of the wages of skilled labor.

I cite you the case of the Crown Central Petroleum Co., in Houston, Tex., which, under the code, added 40 employees to its pay roll but that the increase in pay roll per month amounted to only $1,350.

Trade practices, costs, and prices: In my opinion, definite protection against destructive trade practices can only be achieved by prohibition against selling below cost plus a fair profit and by providing and enforcing such severe penalties that everyone will hesitate to commit an infraction of such law.

Protection against excessive prices and monopolistic tendencies can only be assured by rigid and vigorous application of our existing antitrust laws.

In this connection I draw to your attention the practice of certain California gasoline manufacturers who, by unlawful agreement, approved by the oil administrator, are retailing gasoline in the States of Washington and Oregon, 500 miles from the source of production, at 16 cents per gallon, less tax, and at the same time shipping the same character of gasoline through the Panama Canal to the Atlantic seaboard, a distance of over 5,000 miles, and retailing same at 12½ cents per gallon, less tax.

Mr. President, that is what they always have done. They have always been allowed to do it. When they were freezing us out in the State of Louisiana, they were retailing oil down there at a price that was considerably below the cost of production, and shipping the same oil out to the coast, to California, where at the time there was not any such production as there later was, and were selling it out there, after paying the freight charges, above what they were paying then. And here they are today, supposed to be operating under the administration of the United States Government, shipping oil 500 miles and selling it right here in the United States for 16 cents a gallon, and then shipping it 5,000 miles, through the Panama Canal, and selling it at 12½ cents, in order to break down the little independent man who may have a little business which they want to recapture.

They have not changed at all. I knew this was going to happen the minute they began to write an oil code, and when they called in Mr. Walter C. Teagle, the president of the Standard Oil Co., and when they called in the various and sundry other allied henchmen of this Standard Oil monopoly, when they called in the Mellon interests and called in the Rockefeller interests, and practically put them in charge of writing a code and prescribing the terms of the operations, I knew that that was not going to change them. You can put the stamp of the United States Government on one of these men if you want to, but it does not change him any more than it would change a leopard to give him a bath. There is the same proposition with the Government signet over them. The only difference is that they are a little bit more rapacious when they have the Government seal backing up their maneuvers than they are at any other time. This statement continues:

Obviously these companies are making an excessive profit on the Pacific coast or are selling at too low a price on the Atlantic coast, yet it is all being done under a code of fair competition.

Obviously they ought not to be selling the gasoline where they had to ship it but four or five hundred miles at 16 cents a gallon and at the same time sell it on the Atlantic coast, after bringing it 5,000 miles through the Panama Canal, at 12½ cents. Why do they do that? Because there is an independent oil industry over in this section of the country which they have not wiped out. Later on they will do the same thing on the other side.

The statement continues:

Through shipper ownership of pipe line transportation facilities, 21 integrated companies dominate and control the production and price of crude oil; through ownership of 85 percent of the retail outlets of the country, these same interests dominate the retail prices of petroleum products.

Control of these transportation and marketing facilities is a violation of the law—

It always is—

but continues under the code of fair competition in the face of President Roosevelt's declaration on April 4, 1933, that the pipe lines should be divorced from shipper ownership.

I have before me, but shall not read, one of the pronunciamentos issued by the President of the United States in order to prevent a strangle-hold being had on the oil industry and the oil men being frozen out of business. They had to divorce the pipe lines from the producing and refining companies just as we divorce a railroad from a coal mine; just as we divorce a railroad from a coal company that sells coal. The President of the United States issued a pronunciamento on the 14th day of April 1933 commanding that those pipe lines had to be divorced from the oil-producing companies and from the oil-refining companies, and they sent and got Mr. Teagle and brought him here and put him in charge of this business, and they have not paid any more attention to it than if it had never been written.

They went along killing rats the same as they did, except that they have the Government seal and signet behind it and are doing it a little faster. In other words, they have raised their margin seven hundred million more dollars, and they are mulcting the American people more than they were before the code of fair competition and are using the United States Government seal and protection, and sell the oil, where they ship it 500 miles, for 3½ cents more per gallon than where they have to bring it around through the Panama Canal 5,000 miles.

This crowd has done this, Mr. President, every time. We have to regulate the oil industry, in order to make it fair. During the war an oil administrator was appointed, a man by the name of Mark W. Requa, who was supposed to come from an independent oil industry on the Pacific coast, from California, and at that very time when Mr. Requa was administrator here in Washington, they began to freeze out the Pine Island field in Louisiana, in which I was personally interested. We came to Mr. Requa to get some help, and Mr. Requa gave us to understand he was closing up his office and was going to leave right away. We found that he was an officer of the Standard Oil Co. of California, and we might just as well have gone to 26 Broadway.

Now, I read a little further from this statement:

Trade practices—competitive relationship: The producing, refining, and marketing costs of the integrated companies are greatly in excess of the costs of the nonintegrated units in the industry, obvious costs being those of national advertising and of free service offered at their filling stations.

Should the independent retailer offering an unadvertised brand of gasoline attempt to pass on to the consuming public part of his lower costs, we find him termed "a chiseler and a cutthroat", guilty of unfair practices, and a threat to national recovery.

Such libelous statements can be considered as coming only from the mouthpiece of monopoly or those suffering under an aberration of monopolistic philosophy.

No code of fair competition can be successfully applied unless it gives honest consideration to differences in costs of production, distribution, and sales, and to deny the consumer any savings which any unit in the oil industry is able to pass to the public is a little short of criminal under the conditions prevailing in this country at the present moment.

Code authority organization: A code administration dominated, or having as its only executive advisors, committees composed almost 100 percent of executives of the predominating financial interests in an industry, is incapable of either formulating or executing a code of fair competition.

The oil industry is today governed not by a disinterested public official but, in the last analysis, by a committee whose controlling thought is to increase the earnings of their companies.

The best evidence of this is their indifference in the matter of wage scales for their employees and of increased prices to the consumers.

While the integrated companies number but little more than a score, independents in the industry number many thousands. Yet this small handful of men dominate the operation of the code of fair competition while the vast majority are compelled to swallow the medicine prescribed by this group of monopolists and await an antidote to be delivered by the Petroleum Advisory Board, if, as, and when the independent operator manages to make his complaint heard.

Financing the code administration is proposed by levying a tax of one tenth cent a barrel on all oil produced and refined. Such a tax should yield an annual revenue of nearly $2,000,000, and we submit that with such an income the administration of the code can do anything it likes and that neither individuals nor groups can successfully cope with unfair orders, regulations, or decrees.

This tax applies equally upon those who signed the code and those who did not, and in effect, is "taxation without representation." The petroleum industry is already the most excessively taxed business in America, the tax far exceeding the wholesale value of its products.

That additional tax should be imposed to carry out unfair, illegal, and monopolistic rules, regulations, and decrees is certain to breed eventual trouble of a serious nature.

Minorities: The justification for the enactment of unfair rules and regulations is that 85 percent of the industry participated in forming such rules and regulations.

In this supposedly free America, votes are cast by men and not by dollars, and we submit that the governing body under the oil code represents an infinitesimal minority when counted in terms of men instead of in terms of dollars.

That such a small group representing a phase of monopoly which has existed for nearly three quarters of a century is able to dictate to the vast majority of those engaged in the oil industry, is incompatible with our business principles and it is time that our President and his trusted lieutenants opened their eyes to what is being done to American consumers as well as to small businesses in the oil industry.

Star-chamber proceedings: Those formulating the policies to be followed on the oil code of fair competition conduct their discussions and deliberations behind closed doors.

This policy is quite different from the policy announced by Administrator Johnson in his opening speech at the beginning of the N.R.A. conferences. "In addition to all this, there is not a single important action taken by N.R.A. that is not the result of a public hearing. In those hearings every person from Communist to conservative, who asserts any interest in the subject matter, is invited to get up and make any criticism, comment, or suggestion that may occur to him and never has anyone been denied, curtailed, or silenced. It all gets in the record and is considered when action is taken."

Attached hereto, and marked "Exhibit A", are copies of communications from members of the oil industry which I desire to be made part of the record. Also attached hereto is copy of a Memorial to Congress, marked "Exhibit B", which "memorial", based on information of entirely reliable character, shows that the oil industry has been administered to the detriment of American consumers.

Respectfully submitted.

W. G. WILLIAMS,
242 Hotel Continental, Washington, D.C.

EXHIBIT "A"

By all means General Johnson's open hearings should include oil matters. At Washington last week Margold admitted inability and helplessness to enforce the rule against selling below cost and refused to assist in enforcing it. This rule is the heart of the covenant for independent marketers and without it the oil code is favorable to major companies only. We have submitted proposed rules against selling below cost, but oil administration is not acting on this vital subject. We believe open hearings will bring this weakness in the oil code to public attention and we then have some hope of correction. Hence we urge inclusion of oil matters in public hearings; hope you may lend assistance to that end.

L. L. CORYELL & SON,
Lincoln, Nebr.

If no public oil code hearing is held we independents are ruined. Entire code being twisted to fit major companies. General Johnson against price fixing, so are consumers and independents. Unless public hearings held we cannot oppose its subterfuge, the pooling and marketing agreement. WNAX sent petitions bearing 200,000 signatures against price fixing to Senators FRAZIER, DICKINSON, BULOW. Confer and obtain them if they can be of value to you.

THE HOUSE OF GURNEY, INC.,
Yankton, S.Dak.

Wire received. Our association not satisfied of desirability of appearing at Johnson hearings. Have, however, requested information whether hearings have jurisdiction over oil code. Believe point you raise pertinent.

RICHARD F. CLEVELAND,
Baltimore, Md.

Certainly should demand public hearings on oil code and get publicity on fact Ickes and monopoly entirely satisfied with their monopoly-controlled code, while Johnson apparently wants to give small business a hearing, and we hope a square deal.

JACK DANCIGER,
Fort Worth, Tex.

Re tel.: I cannot advise you. I am without sound information. So many things in the code, so many things to think about that it makes me dizzy.

H. H. CAMPLIN, *Enid, Okla.*

Re tel.: If code hearings under Johnson are as per my understanding, to correct inequalities and any hardships contrary to spirit Industrial Recovery Act, cannot conceive of any reason why oil code should be excluded, and do not believe this hearing will exclude oil code.

D. W. HOVEY, *Houston, Tex.*

Believe our chances better in open hearing before anybody and everybody. Ickes and petroleum administrative board take direction from planning and coordinating committee. Why should oil industry be singled out and put in a different category than other industries, to be crushed by monopoly? If independents are to survive, they must have a code of fair competition. We must make Secretary Ickes realize his star-chamber methods only confirm further the independents' suspicion that he is accepting the dictates of monopoly. If Johnson's ideas of open hearing for other industries is right and proper, the oil hearings likewise should be brought into the open.

DANCIGER REFINERIES, INC.,
BOUDREAU, *Tulsa, Okla.*

I want to read just a line or two now from a memorial which has been presented to the Congress of the United States. I know how busy we are, and I know that perhaps some of us will never read this, and some of us may not know just exactly what it means when we do read it. But I want to read a few lines, which I can pick out from this booklet which has been handed us. There are tables and statistics in this so that we can verify everything the booklet contains, charts and diagrams and everything else. I am going to read just a few of the salient things. One thing that appears here is this:

The real issue of the petroleum industry is one of monopoly.

That is the trouble with the petroleum industry. Monopoly is the one trouble with the petroleum industry. How they manipulate their exports and imports, and pick the season; how they pick the price on the west coast and the price on the east coast, where they will stand a difference maybe of 10 cents a gallon, and the way gasoline is an important link in breaking up an independent producer or refiner; how they will bring oil around perhaps some four or five thousand miles and sell it cheaper than they are selling it at the place where it starts, where the event may justify them doing it.

From this issue arise the causes of all the industry's problems, no one of which is susceptible of solution except through the final and complete elimination of monopolistic practices.

This oil monopoly has been before the Supreme Court of the United States, and countless other courts, time after time, and I do not remember a time when it has not been found that the charges made by States and various sundry independent interests crying out against what has been practiced upon them and upon their independent industry were not substantiated.

This real issue has divided the industry between giant oil corporations (the monopoly) on the one hand and the so-called "independent" (the rank and file of the industry) on the other.

* * * * * * *

In 1926, Walter C. Teagle, head of the Nation's greatest oil combine, argued splendidly before the Federal Oil Conservation Board to the effect that price should control the productive processes, and against "conservation"—American Petroleum Institute.

The American Petroleum Institute was not a thing on earth but a lot of Standard Oil agencies, which had formed themselves into what they called a "petroleum institute", just like the Edison Institute is for the Power Trust—hiding behind a mask every time they can until they are discovered, and then they go out and change the name, and put up some other name. I do not know what name they have now. Probably it is the "code of fair competition" they are trading under now.

Later, before the same Board, the Honorable Charles Evans Hughes, then counsel for the monopoly-supported American Petroleum Institute, presented probably the most able legal argument ever briefed against the matter of Federal control of oil production in the different States. Judge Hughes ridiculed, in most effective manner, the idea of Federal control and argued the fallacy of the idea of the exhaustion of our petroleum resources—"exhaustion" being one of the basic arguments for conservation.

* * * * * * *

It apparently was decided that the most effective means of eliminating the new peril would be to force the closing in of the wells which were the source of competitor's supply.

Then the memorial proceeds to detail and outline the propaganda which eventually led to this code of fair competition we have today. Now what are they going to do?

I state here, Mr. President, I was not able to dispute the statement of the President of the United States that he was going to divorce these various and sundry institutions; that he was going to make that pipe line the same as a railroad; that he was going to throw that pipe line open to everybody; that he was going to make the producer be one thing; he was going to make the pipe line be another thing; he was going to make the refinery be another thing and the filling

station be something else. I was not able to dispute the President's statement, Mr. President, because he said so in writing and gave it out to the world, and we naturally went along feeling that way.

It was on April 3, 1933, President Roosevelt in a letter to the Governors of oil-producing States said—I am now quoting the President's words:

The report of the Independent Petroleum Association Opposed to Monopoly recommends "the enactment of emergency legislation by Congress divorcing oil pipe lines engaged in interstate commerce from other branches of the oil industry." I am of the opinion that this is a reasonable request and that such legislation should be enacted at as early a date as possible.

That is the President's statement. I read further from the memorial:

Following the courageous and categorical statement of the President with respect to the divorcement of pipe lines, the Congress, in the National Industrial Recovery Act, specifically provided for such divorcement in section 9 (b) of that act. In the administration of the act, however, a strange atmosphere of quiet has prevailed regarding the divorcement which met with high Presidential favor and which was provided for by Congress itself.

We not only had the action, Mr. President, of the President of the United States but we put it into the National Recovery Act, in section 9 (b), that they should make the divorcement of these pipe lines from the refineries and from the production, and they have not paid any more attention to that. Instead of that, they called in Mr. Teagle, and they made him the master of the law that was supposed to have regulated and to have curbed him. Why, one might as well have gone out and made Jesse James the administrator to keep robbers from doing business in 1800-some-odd as to have passed a law to put Mr. Teagle into the position in which he was placed—placing him in charge of the enforcement of the law—as the result of which he has come to Washington and has undertaken to do this work and is master of the law that was supposed to have regulated and curbed him. We have here the charts and other proof in corroboration of everything which we have said in this memorial.

The memorial further says:

A thorough understanding of the pipe-line situation would seem sufficient to stimulate action on the part of the Oil Administrator toward the objectives early recommended by the President and already provided for by Congress. The Administrator, as late as November 27, 1933, announced the inception of an investigation by the Petroleum Administrative Board of Pipe Line Operations. His announcement stated that a subcommittee of the planning and coordination committee was being consulted by him for suggestions and recommendations. The difficulty here lies in the fact that monopoly itself dominates the planning and coordination committee.

Of course, it does. There is a footnote at this point, which I will read:

Investigations by Attorney General James V. Allred, of the State of Texas, revealed the fact that the Independent Petroleum Association of America and the Texas Oil & Gas Conservation Association, two of the largest reputedly "independent" organizations, whose presidents are members of this committee, have received considerable money for support from major organizations of the monopoly.

The memorial then continues—

This domination appears through two different channels. (1) The direct and well-known representatives of monopoly as members of the committee itself, and (2) the indirect or secret representatives of monopoly in the persons of psuedo-independent members of the committee—those who pose as independents but who, in reality, head associations known, by public records, to be in the pay of monopoly—the "decoys of monopoly."

Mr. President, without reading any further from this book, I want to say that we undertook to divorce these companies in the State of Louisiana. They did try to divorce them in the State of Oklahoma. But, Mr. President, because of the fact that we have never been able to get the United States Government to do one living thing, if we write a law on the books of Congress providing that something is going to be done today, and that law must be administered, one of the very men that is supposed to be regulated is called and put in charge of the law that was passed to curb him; so we have never been able to touch the oil monopoly of this country, and it does not look like we ever shall.

We have here a code of fair competition, and right in the teeth of Congress it is shown to Congress that they are taking oil and selling it for 16 cents a gallon right where they produce it, and that they are hauling the same oil 5,000 railroad- or steamship-miles and selling it for 12½ cents in order to break up the little independent refinery and the little independent producer, and we sit here and say it is under the code of fair competition, and the great Government of the United States is trying to tell somebody that it is trying to protect the people. That is what we are allowing to be done, Mr. President, here in the United States today. Those are the facts. They will not be disputed, cannot be disputed. The record is here before the Congress. They come to Washington and ask to be heard, and they are told that they cannot be heard. There is going to be no hearing. It would not make much difference if they did hear them, Mr. President; I do not think it would do them a bit of good if they did get heard. But that is one right which we thought we had in this country—that they would hear us.

But they do not even afford them that right now. They have even taken from them the right to be heard in the public forum when a discussion of this kind is supposed to occur here in Washington, D.C.

I ask the Members of the Senate, and the Members of the Congress of the United States, who will be supplied with a copy of this memorial, together with the maps and the charts and the information, which nobody can dispute, to some evening take a few hours, just 2 or 3 hours, and run through this booklet with its charts and diagrams which prove every statement I have read to you, and say whether or not we are going to permit such monopolies to operate under the codes and through the forms of law we have passed to protect our people, and by providing a code of fair competition to the people of the United States and the oil industry.

NAVAL CONSTRUCTION—UNANIMOUS-CONSENT AGREEMENT

The Senate resumed the consideration of the bill (H.R. 6604) an act to establish the composition of the United States Navy with respect to the categories of vessels limited by the treaties signed at Washington February 6, 1922, and at London April 22, 1930, at the limits prescribed by those treaties; to authorize the construction of certain naval vessels; and for other purposes.

Mr. CONNALLY. Mr. President, with the consent of the Senator from Arkansas [Mr. ROBINSON] it was my purpose during the afternoon to move to lay aside temporarily the pending business and ask the Senate to consider House bill 7478, known as the "Jones-Connally cattle bill." I should like to have the attention of the Senator from Oregon [Mr. MCNARY]. The Senator from Wyoming [Mr. CAREY] is very much interested in this measure, and some days ago urged that I not move to take it up in his absence. I have consulted with the Senator from Wyoming and he is willing that the bill be taken up at any time beginning on Monday. I am wondering if I can secure an agreement on the part of the Senator from Arkansas to that effect.

Mr. ROBINSON of Arkansas. Mr. President, I had arranged with the Senator from Oregon [Mr. MCNARY] and other Senators who are interested in the pending bill to submit a request for unanimous consent. I will now submit that request, with the leave of the Senator from Texas.

Mr. CONNALLY. I yield.

Mr. ROBINSON of Arkansas. If the request shall be agreed to, then I hope some arrangement may be entered into to consider the bill which the Senator from Texas has in mind.

Mr. President, I ask unanimous consent that when the Senate concludes its labors today it take a recess until next Monday; and that not later than 4 o'clock next Tuesday the Senate proceed to vote without further debate on the pending bill, and on all amendments that may be pending or that may be offered.

Mr. BORAH. Mr. President, will that not interfere with calling the bill up at any time any Senator wishes to speak on it?

Mr. ROBINSON of Arkansas. It will not. It is not the intention to lay the bill aside until the final vote is had, if any Senator desires to discuss it; but the opportunity may arise to proceed with other business if no Senator wishes to speak on the naval construction bill.

The PRESIDING OFFICER. The unanimous-consent request is of such a nature that it requires a quorum call; does it not?

Mr. ROBINSON of Arkansas. It does.

Mr. McNARY. Mr. President, my attention was diverted for the moment, and I did not hear what the Senator from Arkansas said. What was the nature of the proposal?

Mr. ROBINSON of Arkansas. My request as submitted is that when the Senate completes its labors today it take a recess until next Monday at 12 o'clock, and that on next Tuesday at an hour not later than 4 o'clock the Senate proceed to vote, without further debate, on all amendments that may be pending or that may be offered and upon the bill to its final disposition.

Mr. McNARY. Mr. President, I have no objection to that.

Mr. BONE. Mr. President, I do not know that I correctly understand the suggestion of the Senator from Arkansas. There are some amendments pending to this bill. As far as I am concerned, I do not want to consent to any curtailment of debate until those amendments are out of the way. After they are out of the way I do not care how much we curtail debate or how soon we vote.

Mr. ROBINSON of Arkansas. Mr. President, of course, it is impossible to discontinue proceedings in the Senate over the week-end unless some arrangement for a vote on the bill can be made. I had hoped, and still hope, that we may be able to have tomorrow and the next day for office work.

Mr. BONE. I am quite certain we can dispose of the amendments in 5 minutes if the opportunity may be afforded. The Senator from Florida [Mr. TRAMMELL] can present the amendments and we can quickly dispose of them, instead of wasting time.

Mr. McNARY. Mr. President, will the Senator from Arkansas yield?

Mr. ROBINSON of Arkansas. I yield.

Mr. McNARY. Let me suggest the modification that we limit debate on Tuesday after 2 o'clock, let us say.

Mr. ROBINSON of Arkansas. I think that is a good suggestion. As the Senator knows, I had intended to offer the request in that form at the suggestion of others.

Mr. McNARY. Yes.

Mr. ROBINSON of Arkansas. I modify the request, Mr. President, as follows: I ask unanimous consent that when the Senate completes its labors today it take a recess until noon Monday next, and that after the hour of 2 o'clock on Tuesday next no Senator shall speak more than once nor longer than 10 minutes upon any amendment that may be pending or upon the bill, and that at not later than 4 o'clock the Senate proceed to vote on all amendments that may be pending or that may be offered and upon the bill to its final disposition.

The PRESIDING OFFICER. The request of the Senator from Arkansas cannot be put without the presence of a quorum being established.

Mr. McNARY. Just a moment, Mr. President.

Mr. ROBINSON of Arkansas. I will say to the Senator from Oregon that I am not proposing that the Senate take a recess earlier than 5 o'clock; it is in mind that probably we should discontinue work today at that time; but the arrangement as now proposed will afford 10 minutes on any amendment and on the bill between the hours of 2 o'clock and 4 o'clock on Tuesday next; and I think that should be adequate.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Adams	Bankhead	Borah	Byrnes
Ashurst	Barbour	Brown	Capper
Austin	Barkley	Bulkley	Caraway
Bachman	Black	Bulow	Carey
Bailey	Bone	Byrd	Clark
Connally	Hale	McKellar	Shipstead
Coolidge	Harrison	McNary	Steiwer
Copeland	Hatch	Metcalf	Stephens
Costigan	Hatfield	Murphy	Thomas, Okla.
Cutting	Hayden	Neely	Thomas, Utah
Dickinson	Hebert	Norris	Thompson
Dieterich	Johnson	Nye	Townsend
Dill	Kean	O'Mahoney	Trammell
Duffy	Keyes	Overton	Tydings
Erickson	King	Patterson	Vandenberg
Fess	La Follette	Pittman	Van Nuys
Fletcher	Lewis	Pope	Wagner
Frazier	Logan	Reynolds	Walcott
George	Lonergan	Robinson, Ark.	Walsh
Gibson	Long	Robinson, Ind.	Wheeler
Glass	McAdoo	Russell	White
Goldsborough	McCarran	Schall	
Gore	McGill	Sheppard	

Mr. LEWIS. Mr. President, please let me announce the absence of my colleague the junior Senator from Illinois [Mr. DIETERICH], who has been summoned from the Chamber, and also the absence of the Senator from South Carolina [Mr. SMITH], occasioned by a death in his family.

Mr. HEBERT. I desire to announce that the senior Senator from Pennsylvania [Mr. REED] is absent from the Senate on account of illness, and that the junior Senator from Pennsylvania [Mr. DAVIS] and the Senator from South Dakota [Mr. NORBECK] are necessarily detained from the Senate.

The PRESIDING OFFICER. Ninety Senators have answered to their names. A quorum is present.

The Senator from Arkansas has submitted the following request for unanimous consent:

That when the Senate completes its labors today it take a recess until noon Monday next, and that after the hour of 2 o'clock on Tuesday next no Senator shall speak more than once nor longer than 10 minutes upon any amendment that may be pending or upon the bill, and that at not later than 4 o'clock the Senate proceed to vote on all amendments that may be pending or that may be offered and upon the bill to its final disposition.

Is there objection?

Mr. FRAZIER. Mr. President, I should like to ask a parliamentary question.

Mr. CONNALLY. Mr. President, I had the floor when interrupted.

The PRESIDING OFFICER. The Senator from North Dakota will state his parliamentary question.

Mr. CONNALLY. I yield to the Senator from North Dakota.

Mr. FRAZIER. Does the agreement mean that a Senator may speak for 10 minutes on any amendment or on the bill?

The PRESIDING OFFICER. The agreement provides that no Senator between the hours of 2 o'clock and 4 o'clock on Tuesday next may speak more than once or for longer than 10 minutes on the bill or any amendment.

Mr. FRAZIER. That means that a Senator may speak for 10 minutes on any amendment and 10 minutes on the bill itself?

The PRESIDING OFFICER. That is correct.

Mr. FRAZIER. I have no objection to the agreement.

The PRESIDING OFFICER. Without objection, the agreement is entered into.

INCLUSION OF CATTLE AS A BASIC COMMODITY

Mr. CONNALLY. Mr. President, I desire to submit a request for unanimous consent. I ask that after the disposition on Tuesday of the naval construction bill, concerning which an agreement has just been reached, it will be in order to take up House bill 7478, which proposes to include cattle as a basic commodity under the Agricultural Adjustment Act.

Mr. McNARY. Mr. President, the measure referred to by the Senator from Texas has been before the appropriate committees of Congress for some time, and there has been a great division of thought with respect to it. The senior Senator from Wyoming [Mr. CAREY], as was the late Senator from Wyoming, Mr. Kendrick, is very much opposed to the inclusion of cattle as a basic commodity in the Agricultural Adjustment Act. The Senator from Wyoming is absent this afternoon, and on account of his absence I cannot consent to the proposed unanimous-consent agreement.

However, on Monday or Tuesday, if he shall then be present, as I expect him to be, and he should be willing to co-

operate with the Senator from Texas in regard to this measure, I shall not make any objection; but I suggest to the Senator from Texas that in the meantime he omit further effort to secure a unanimous-consent agreement, and renew his request on Monday, when the Senator from Wyoming shall be present.

Mr. CONNALLY. Mr. President, not for the purpose of influencing the Senator from Oregon, but merely to show the good faith of the Senator from Texas, I will state that I have today consulted the Senator from Wyoming [Mr. CAREY], and he expressed his entire willingness that the bill might be taken up on any day, beginning next Monday. I should not have made the request but for the fact that I first consulted the Senator from Wyoming, because I knew of his interest in the measure, and I had assured him that before I made a motion to take up the bill in the Senate I would consult him. I repeat, I am not seeking to influence the Senator from Oregon; he may rely on his own communication with the Senator from Wyoming; but I make that statement in order to justify my own good faith.

Mr. McNARY. I have no doubt of the conference the Senator had with the Senator from Wyoming. Nevertheless, inasmuch as I have been advised one way and the Senator from Texas has been advised another way, I think it is perfectly fair that we should, as a matter of compromise, wait until Monday, when I am sure we can get together.

Mr. CONNALLY. Then, I now serve notice that on Monday I shall renew the request, and I hope the Senator from Oregon in the meantime will communicate——

Mr. McNARY. I think it entirely proper that the Senator from Texas should renew the request on Monday, and in the meantime I shall see the Senator from Wyoming [Mr. CAREY].

Mr. CONNALLY. And communicate directly in person with the Senator from Wyoming as the Senator from Texas did.

NAVAL CONSTRUCTION

The Senate resumed the consideration of the bill (H.R. 6604) to establish the composition of the United States Navy with respect to the categories of vessels limited by the treaties signed at Washington February 6, 1922, and at London April 22, 1930, at the limits prescribed by those treaties, to authorize the construction of certain naval vessels, and for other purposes.

Mr. TRAMMELL. Mr. President, I think that we should be able to dispose of at least one or two amendments this afternoon that have been proposed to the naval construction bill. I should like very much to dispose at least of the pending amendment before we recess this afternoon. I have not heard any objection to the amendment which relates to a limitation of profits. I ask that we may consider and dispose of the amendment at the present time.

Mr. McNARY. Mr. President, what is the amendment to which the Senator from Florida refers?

Mr. TRAMMELL. It is an amendment which restricts the profits in the construction of vessels and aircraft to not exceed 10 percent of the cost.

Mr. McNARY. Is it a committee amendment?

Mr. TRAMMELL. It is a committee amendment. It is offered instead of a provision which was adopted by the House. It carries out the same purpose and object, but the Senate committee amended the House provision. I ask unanimous consent that the amendment may be considered at this time.

Mr. McNARY. If it is a committee amendment, and if it is the pending question, the Senator does not need unanimous consent for its consideration.

Mr. TRAMMELL. It has been the pending question for 3 or 4 days, and I am anxious to get rid of it.

The PRESIDING OFFICER (Mr. DUFFY in the chair). Let the amendment be read for the information of the Senate.

The CHIEF CLERK. On page 4, section 3, it is proposed to strike out all of the proviso on lines 11 to 15, inclusive, and insert in lieu thereof the following:

Provided, That any profit resulting from any contract, or subcontract, of $10,000 or more, payable from such funds as may hereafter be appropriated for the vessel or vessels and aircraft authorized herein, or vessels heretofore authorized but not yet contracted for, or payable by the contractor to any subcontractor, shall not exceed 10 percent of the cost of performing such contract or the subcontract, respectively. All contractors and subcontractors shall report the net profits from such contracts, under oath, to the Secretary of the Treasury of the United States, upon the completion of the work under such contract or subcontract. Such report shall provide such information and be on such forms as shall be prescribed by the Secretary of the Treasury. All profits of either the contractor or subcontractor in excess of said 10 percent shall be and become the property of the United States of America and shall be collected by the Secretary of the Treasury by suit or otherwise, and be paid into the Treasury of the United States under such rules and regulations as the Secretary of the Treasury may prescribe.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Florida.

Mr. FRAZIER. Mr. President, it seems to me the amendment should have some further consideration and discussion. I agree that the amendment offered by the chairman of the Committee on Naval Affairs makes the bill much more preferable than the form in which it was passed by the House, but it seems to me there is room for some further discussion and improvement.

I have here copies of resolutions adopted by the American Federation of Labor at their annual convention in 1933 and in 1932. They went on record as favoring the building of the ships for the Navy in the Government shipyards and referred to supposed graft and the very large profits that have been made in the past.

Mr. NORRIS. Mr. President, may I inquire if the amendment proposed interferes with other amendments to be offered or which have been adopted providing for the building of more ships in Government shipyards? I am asking for information. Would there be any conflict between the amendments?

Mr. TRAMMELL. Mr. President, this amendment limits the profits. The Senator from Washington [Mr. BONE] has an amendment which he intends to offer providing for utilization of Government plants for the building of aircraft, and for the equipment of present plants for that purpose, and proposing to adopt a policy on the part of the Government providing for the building of at least a part of the aircraft at Government plants.

Mr. NORRIS. Is there any conflict between the two amendments?

Mr. TRAMMELL. Absolutely none whatever.

Mr. NORRIS. I could not see any.

Mr. TRAMMELL. In a way they are companion amendments, seeking to accomplish economy and the curtailment of undue profits on the part of private builders. I had hoped we could get the amendment out of the way and then take up the amendment of the Senator from Washington in order that it might be considered and, if agreed to, taken to conference.

There is only one suggestion I am going to make with reference to his amendment, and that is that in the preparation of plans for the building of aircraft the equipment should be provided to enable them to build not less than 25 percent of the aircraft to be constructed. With such a provision inserted, I should be very glad, so far as I am personally concerned, to accept the amendment of the Senator from Washington and let it go to conference.

Mr. NORRIS. But that has nothing to do with the amendment now pending, has it?

Mr. TRAMMELL. No; it is a different amendment. I have never heard any controversy about the pending amendment. I had hoped that we could get rid of it and then take up the amendment of the Senator from Washington.

Mr. BONE. Mr. President, may I inquire if the Senator from North Dakota [Mr. FRAZIER] is aware of the fact that the matter he is discussing is already in the bill? There is in the bill, on page 3, an amendment which has already been agreed to relating to that subject. There is a provision that a part of the contemplated shipbuilding shall be done in Government yards. I think the Senator is rather

objecting to something that does not really exist. The amendment now referred to by the Senator from Florida is wholly apart from that matter.

Mr. FRAZIER. I understand that.

Mr. President, I was about to quote from resolutions adopted by the American Federation of Labor at their 1933 convention held in Boston, I believe. I want to read just a paragraph:

> Whereas, during the political campaign of 1932, the Honorable Franklin D. Roosevelt, candidate for President, repeatedly asserted that taking the profits out of war should be made a national policy and, to that end, the construction of naval vessels and the production of munitions of war should be confined to navy yards and arsenals.

The bill provides that 50 percent of the ships shall be built in private yards. Of course the limitation of profits is a good thing so far as it goes, but in my opinion it does not go far enough. The limit should be reduced to a smaller percentage than is provided for at the present time.

The resolutions wind up with this paragraph:

> *Therefore be it resolved*, That the officers of the American Federation of Labor are hereby directed to immediately urge upon the President of the United States the desirability of giving practical effect to the national policy of taking the profits out of war by having the construction of naval ships, machinery, and other equipment for such vessels, and the manufacturing of war munitions, confined to navy yards and arsenals, and to correcting existing deviations from this policy insofar as the law permits.

In 1932 the American Federation of Labor adopted similar resolutions in regard to the building of ships in the Government yards.

After the Vinson bill was introduced in the House, and the provision was placed in the bill to build 50 percent of the ships in private yards, the New York Times, in its index of stock prices, gave the percentage of increase of some of the stocks of airplane companies, shipbuilding, and related companies.

During the month of January, while this measure was pending, according to this statement, the stock of the Aviation Corporation of Delaware increased 28.1 percent.

The increases in other companies are as follows:

	Percent
Bendix Aviation	31.8
Bethlehem Steel	26.2
Bethlehem Steel preferred	17.5
Curtiss-Wright	95.2
Curtiss-Wright A	86.3
Douglas Aircraft	82.5
Electric Boat	80.6
New York Ship	75.5
New York Ship preferred	60.3
United Aircraft & Transport	13.6
United States Steel	15.4
United States Steel preferred	6.3
Wright Aeronautical	232.2

Those are the increases that occurred while this bill was pending in the House, showing that it had the effect of increasing, in one case to 232.2 percent, the value of the stock of the various companies that apparently expected to reap benefit out of the building of the ships that will be authorized under this bill, if it is passed. The increases ranged all the way from 6.3 percent to 232.2 percent, showing the source of a great deal of the propaganda that is back of this authorization to build up the United States Navy to a point where it will be a little larger than that of Great Britain. That is all it is, and that is the only excuse that can be given at this time for a bill of this kind—namely, to bring our Navy ultimately up to a point where it is a little larger than that of Great Britain—and these figures show that the people who are backing it are the ones who expect to make a profit out of the shipbuilding and out of the preparedness and the building up of the Navy.

I desire to read some of the statements made by some of these companies of the profits they have made in the past. These figures are of interest in connection with this bill, showing profits in the shipbuilding industry.

For the single item of armor plate, between 1887 and 1915, the Bethlehem Steel Corporation secured contracts from the United States Government amounting to $42,000,000. Under the 1916 naval program, the Bethlehem Shipbuilding Corporation received $134,000,000 for the construction of 85 destroyers. At the time this company was building the ships for the American Navy it was also filling orders for foreign governments.

Mr. BONE. Mr. President, will the Senator yield?

Mr. FRAZIER. Yes.

Mr. BONE. May I ask the Senator if he intends to propose an amendment covering the ground covered in the amendment suggested by the Senator from Florida [Mr. TRAMMELL]? Possibly we can arrive at some common ground, some common understanding with the Senator as to what he thinks the profit should be. If the amendment is wrong in tenor, tone, or purpose, we can change it. I suggest that because certainly most of us desire to curb these profits. I should like to know whether the Senator is going to suggest an amendment.

Mr. FRAZIER. Mr. President, one of the oldest and largest subsidiaries of the Bethlehem Steel Corporation is the Bethlehem Shipbuilding Corporation, which specializes in the construction of naval vessels and large merchant ships. It was this company which, with two other shipbuilding firms, paid William B. Shearer $25,000 to attend the Naval Conference in 1927. After the failure of the conference the Bethlehem Shipbuilding Corporation received contracts for three 10,000-ton cruisers for the Navy, at a total cost to the Government of approximately $33,000,000. Since 1916 this company has built more than 100 vessels for the Government at a cost of more than $250,000,000. I do not know what its percentage of profit was, but naturally it was a lot more than 10 percent.

The Bethlehem Shipbuilding Corporation, the New York Shipbuilding Corporation, and the Newport News Shipbuilding Co. have just been awarded contracts for 13 of the 21 war vessels to be built in private yards under the 1933 naval program, financed in large part by Public Works funds. The value of these contracts is approximately $100,000,000, apportioned among the three firms as follows:

Bethlehem Shipbuilding Corporation, 1 heavy cruiser and 4 destroyers, $27,304,000.

New York Shipbuilding Co., 2 light cruisers and 4 destroyers, $37,454,000.

Newport News Shipbuilding Co., two aircraft carriers, $38,000,000.

Four smaller firms were awarded the remaining eight vessels, destroyers, and submarines at a total contract price of approximately $24,000,000.

This is a report from the Foreign Policy Association.

Counsel for the Bethlehem Steel Corporation testified, in a suit brought by the Government for $11,000,000 of alleged excess profits, that the United States Steel Corporation made a profit on war-time contracts of more than 50 percent, as compared with the Bethlehem Shipbuilding Corporation profit of 21 percent. That statement is found in the New York Times of 1931.

The copper companies also are interested in this shipbuilding program.

The Utah Copper Co. in 1917 made a profit of $32,000,000, which was 200 percent of its capital stock, and in 1918 a profit of $24,750,000, which was 150 percent of its capital stock; and other companies made nearly as large profits.

Last summer, when the shipbuilding program was on and some contracts were being let under the 1933 shipbuilding program with money that was transferred from Public Works funds, while those contracts were pending, according to information I have, the Chairman of the Naval Affairs Committee of the Senate, the Senator from Florida [Mr. TRAMMELL], wrote an open letter to the President calling his attention to some of the apparent discrepancies in some of these contracts. I desire to read part of that letter. I take it the Senator from Florida has no objection. This letter was under date, I believe, of August 1, 1933:

> I have been quite interested in analyzing the bids opened by the Navy Department on July 26, 1933, which were submitted by the shipbuilders on naval construction. I believe that thorough study of the matter should be made.
>
> It is my information that on September 16, 1931, the Bethlehem Shipbuilding Corporation bid for one 1,500-ton destroyer $2,728,-

500. On July 26, 1933, the Bethlehem Shipbuilding Corporation bid for an identical destroyer $2,670,000, or a decrease in price of $58,500.

On December 14, 1932, the Bethlehem Shipbuilding Corporation bid for an 8-inch-gun heavy 10,000-ton cruiser $8,196,000. On July 26, 1933, the Bethlehem Shipbuilding Corporation bid for the same cruiser $11,720,000, or an increase in price of $3,524,000.

There appear to have been but four bidders on cruisers and eight on destroyers. Gulf Industries, Inc., of Pensacola, Fla., appears to have submitted bids on the destroyers. It is my information that in addition to the facts outlined above it was known in advance which of the four companies bidding on the cruisers would be low on each of the several items, and it appears to have been known in advance that the position of each of the said shipbuilders would be protected by bids submitted by the remaining shipbuilders. For instance—

Bethlehem Shipbuilding Corporation, $11,720,000.
New York Shipbuilding Corporation, $12,100,000.

Just a little higher.

Newport News Shipbuilding & Dry Dock Co., $13,800,000.

Still a little higher.

United Dry Docks, Inc., $14,800,000.

Still a little higher.

The bid of the New York Shipbuilding Corporation on the two light cruisers was protected by the other three bidders, as follows:

New York Shipbuilding Co., $11,657,000.
Bethlehem Shipbuilding Corporation, $12,780,000.
Newport News Shipbuilding & Dry Dock Co., $13,900,000.
United Dry Docks, Inc., no bid.

I am unable to justify in my mind the increase in cruisers, because, as indicated in the 1932 and 1933 bids, particularly when those bids are compared with the destroyer bids of 1931 and 1933, I am convinced that the cruiser bids should be rejected.

Your attention is invited to the fact that the Gulf Industries, Inc., of Pensacola, Fla., in its letter to the Secretary of the Navy dated July 29, 1933, stated that it is prepared to submit bids on cruisers which will save the Government millions of dollars, and this is so whether the bidding is reopened by private negotiations or a call for new bids.

I bespeak your careful and thoughtful consideration of this request that the cruiser bids be rejected.

I want to compliment the Senator from Florida, the Chairman of the Committee on Naval Affairs of the Senate, for taking this interest and writing this letter to the President of the United States. I understand, however, that these bids were approved as made.

Mr. KING. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Utah?

Mr. FRAZIER. I yield.

Mr. KING. Was any information furnished by the President, or any department of the Government, indicating that there was a combination in the bidding, that competition had been prevented, and that a fair price had not been obtained by the Government in these contracts?

Mr. FRAZIER. So far as I know, there was not.

Mr. KING. Was a satisfactory response made to the inquiry of the Senator from Florida?

Mr. TRAMMELL. Answering the inquiry, Mr. President, I will state that through the Secretary of the Navy some inquiry was made. I gave the names of certain people who made statements to me. Inquiry was made of those people and the situation was investigated. I do not think they were more than a couple of days going into the matter, because it was stated to me that a similar complaint had reached the Department prior to the time it had come to me, and that they had already been making a preliminary investigation.

As I recall, the Department reached the conclusion that most of the information stated was hearsay and there were no facts to sustain the contention of collusion. A letter addressed to me also stated that they did not believe that the company which claimed to have made the lowest bid, which was a Pensacola, Fla., company, was in a position to execute the work. That was, in substance, the way the whole matter was concluded with regard to the correspondence.

Mr. KING. Mr. President, in view of the recent revelations connected with the contracts made by the War Department, and in view of the communication to which the Senator has referred, as well as other statements appearing in the press, as I am advised, relative to combinations which resulted in a lack of competition, I venture to suggest that it seems to me the Senate committee, even at this late date, ought to inquire into the matter, and bring before them witnesses, or at least those who could throw some light upon the subject, because we have reason to believe that in the case of many governmental contracts there has not been that competition which there should have been, and that the Government has been improperly treated, I was going to say; at any rate, the Government has been exploited, I fear, in relation to some of these contracts. I wish the able and vigilant Senator who is Chairman of the Committee on Naval Affairs would pursue the matter further. I am not satisfied with the report which, I understand, has been made. I feel sure there are others who entertain the same view I have.

Mr. FRAZIER. Mr. President, I think the Senator from Utah is absolutely correct when he says that the Government has been exploited. My colleague, Senator NYE, offered a resolution for an investigation of the shipbuilding contracts, and that is now pending before the Committee on Foreign Relations, I understand.

I think these naval increases ought to be delayed until some investigation is made. Of course, there is no real excuse for this bill at the present time. The regular naval appropriation bill which we passed some few days ago authorized and made appropriations for the building of the Navy up to the London Treaty strength during the fiscal year starting the 1st of July and ending on June 30, 1935, so that there will be another session of Congress, anyway, before the program provided under the pending bill could go into effect. It is just a sort of a bluff on the part of the big-navy crowd, it seems to me, and on the part of those who are interested in making profits out of preparedness, to have this authorization bill passed at this time.

The Senator from Tennessee has made the point that there was to be another disarmament conference in 1935. It seems to me it would be well to hold up this authorization until after that conference, and to act on it, if necessary, at the next session of the Congress, a year from now. That would be plenty of time.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield to me?

Mr. FRAZIER. I yield.

Mr. ROBINSON of Arkansas. The principal naval powers, other than the United States, have already carried forward construction to the limit of their agreement under the 1930 London Treaty, in consequence of which the United States is distinctly a second- or third-class naval power.

Mr. FRAZIER. I would like to have the Senator explain why he terms the United States a third-class naval power.

Mr. ROBINSON of Arkansas. I was just about to do that; but before proceeding with that thought, let it be stated that in conferences where subjects of this nature are dealt with, usually the status quo is taken as the basis for future arrangements. Of course, it may easily be said it is not the logical basis. Nevertheless, usually nations do not scrap construction already begun. I know the exceptions to that.

The reason the United States may be designated as a third-class naval power, certainly as a second-class naval power, is found in the fact that the legislation carried in the pending bill was not enacted following the London Conference. It is also found in the fact that the United States did not build up to treaty strength, whereas the other two principal naval powers, namely, Great Britain and Japan, did so.

Under the London Treaty, with due deference to the statement attributed to the Senator from Tennessee, there was effected an arrangement by which there should be an absolute equality of naval strength between the United States and Great Britain. The ratio between Japan and the United States as to certain categories not regulated in the Washington Conference was fixed at 7 to 10, instead of 6 to 10, for the very controlling or influential reason that Japan already had the ships in those categories, or the greater number of them.

Japan has built up to the full limit of her treaty authorization; Great Britain has done the same thing; and the

United States until quite recently has had no naval construction since the time of the London Treaty, and in consequence, many of our ships in the regulated categories are old, some of them are obsolete, and we have a very much reduced naval power compared to what would have existed if we had chosen to build up to the treaty limit.

There is no question but that the United States is an inferior naval power at this time. I know one can easily inflate himself with enthusiasm and mix it with patriotism and boast about what we are and what we can do and what we have; nevertheless, when we compare our Navy, in its present condition and strength, with those of the other great naval powers, we find we are at least a second-class power, and there is much argument to support the contention that we are a third-class power.

Mr. FRAZIER. Mr. President, I will concede that at the present time the Navy of Great Britain is probably a little better than ours, but I cannot see how anyone, by the greatest stretch of the imagination, could put Japan's Navy ahead of that of the United States at the present time.

Mr. ROBINSON of Arkansas. Many of her ships are new, with new equipment.

Mr. FRAZIER. We have provided for a reconditioning of our ships, which will make them practically new. That was what was done when we passed the $37,000,000 bill for reconditioning, just a year or two ago.

Mr. ROBINSON of Arkansas. Reconditioning is in process, but it has not been accomplished, and we are not only falling behind in number but we have been falling behind in reconditioning.

Mr. FRAZIER. As I understand it, this will not add to the number of ships of the Navy. It will just mean that we are to scrap those we have and will have to build new ones. That is all this would result in.

Mr. ROBINSON of Arkansas. Under the provisions of the bill we will build practically up to treaty strength.

Mr. FRAZIER. We are up to that in numbers now.

Mr. HALE. We are up to it in actual numbers, but as the Senator has said, our ships are old.

Mr. ROBINSON of Arkansas. They are obsolete.

Mr. HALE. They are obsolete.

Mr. FRAZIER. Of course they are obsolete, according to some definitions.

Mr. ROBINSON of Arkansas. We might preserve them as souvenirs——

Mr. FRAZIER. That is all they are good for any way.

Mr. ROBINSON of Arkansas. As of the time when we were still a sea power, and we shall still have the same number that we now possess; but mere souvenirs are not of very great value in sea power.

Mr. FRAZIER. Of course there is a wide difference of opinion as to the value of these vessels, even the largest and newest ones, in the event of another world war. I have here some figures on the percentage of increase in expenditure for preparedness, etc., on the part of the largest naval powers during the 16 years since the World War. The figures, of course, include both the Army and the Navy. These figures are for a year ago.

Great Britain spent $535,000,000. The percentage of increase was 42.

France spent four hundred and fifty-five and three-tenths million dollars, an increase of 30 percent over the expenditure 16 years ago.

Italy spent two hundred and fifty-nine and nine-tenths million dollars, or an increase of 44 percent.

Japan spent two hundred and thirty-two and one-tenth million dollars, an increase of 142 percent.

Russia spent $579,400,000, an increase of 30 percent.

The United States spent $727,700,000, the highest expenditure by far of any of the nations, and an increase of 197 percent. I hope the Senator from Arkansas gets that point.

The United States—this peace-loving country of ours, of which we are so proud, which stands for world peace and disarmament and the Kellogg Peace Pact and all that—spent last year $727,700,000 for preparedness and upkeep of the Army and the Navy, an increase of 197 percent in the last 16 years. That is almost twice as much as any other nation on earth spent during the same time.

What we spent last year was not so much, by several million dollars, as we spent the year before. In the 3 years prior to that we spent over $800,000,000; and yet we are being asked now to pass a bill to scrap a lot of the naval vessels we have and build new ships, to have a little better floating palaces for the officers who will have charge of those new ships.

I do not blame the officers a bit. I do not blame the shipbuilding companies who want to make a profit, or the munitions factories, or the other people who expect to make a profit on these things. I cannot, however, quite get the viewpoint of the Members of the United States Congress in authorizing the expenditure of half a billion dollars during the present hard times to carry out this program for the second year to follow—the year after next. The next fiscal year is taken care of under the regular Navy appropriation bill, and this is for the year beginning July 1, 1935.

Mr. President, I have a little booklet entitled "The Armaments Racket", written by an Englishman. I did not go into his history to find out just who he was or why he wrote the pamphlet. A great deal is said about rackets nowadays. The author of the book is P. E. T. Widdrington, and it is published by the Morehouse Publishing Co., of Milwaukee, Wis.

The international traffic in war armaments is one of the greatest menaces to the peace of the world today.

That is the way he starts his introduction, and I think he is absolutely correct.

Mr. McKELLAR. Mr. President, did the Senator say that the pamphlet is by an Englishman?

Mr. FRAZIER. Yes, Mr. President; it is written by an Englishman. I understand he is a clergyman in England.

Mr. McKELLAR. Naturally the English people are satisfied to let the status quo remain. They have the largest navy in the world.

Mr. FRAZIER. The author of the pamphlet is a clergyman of the Church of England. I do not know whether or not the English are satisfied. Their armament companies and munitions companies and shipbuilding companies are, I think, just as anxious to see the United States build a larger navy as are companies of that kind in the United States.

The pamphlet goes on to show that the armament companies of Great Britain, in London and other sections of England, sold munitions to countries that were about to go to war. They sold to both sides. In one case an English armament company sent some representatives, acting in a more or less official capacity, to induce countries not to go to war. The purpose was to persuade them that they were not prepared for war, and by the time they had reconsidered and had made their preparations this English company sold to both sides the guns and other instruments necessary for war, whereupon they proceeded to fight.

The article shows that Great Britain used its influence as a member of the League of Nations to discourage wars between some countries; and while the officials of the Government were trying to discourage war, their munitions factories went ahead and sold to both sides, in some instances, the munitions with which to carry on war and, of course, at a great profit.

This little booklet has also a chapter on the American Racket, in which it quotes from some books which I have on my desk, one written in the United States, much along the same line, showing the great profits that have been made by the shipbuilding companies and the munitions companies, showing also that there has been a regular racket to exploit the Government and the taxpayers of the United States, as well as of other countries, in the preparedness program.

It is said the preparedness program is one for defense. That, of course, is a debatable question; and I intend, before I get through with this discussion, to go into the particular feature as to whether the creation of a great Navy, or pre-

paredness for defense, as we are told it is, really is preparedness for defense, or whether in truth it is preparedness for war, and whether it has a tendency to bring on war rather than to prevent war.

I believe I can show by competent authority that in times past the creation of a great navy, for the avowed purpose of preparedness, has made for war and not for peace.

I have here a very interesting little booklet, the Background of the London Naval Conference, written by Mrs. Morgan, associate secretary of the National Council for the Prevention of War, and published by the same organization, with headquarters in Washington, D.C. It gives some very interesting figures, and I desire to quote some of them. Mrs. Morgan attended the London Conference, and I talked with her on several occasions after she returned. She is one of the best-informed persons on naval power, what the conference tried to do, and what it did do, I have ever met. She also gives some figures on the cost of ships and the cost of operating them.

Mr. ROBINSON of Arkansas. Mr. President, may I inquire if the Senator from North Dakota desires to conclude his remarks this evening?

Mr. FRAZIER. No; I do not. I will yield the floor for the day at this point.

COMPENSATION OF GOVERNMENT EMPLOYEES AND VETERANS

Mr. STEIWER. Mr. President, the newspapers today and yesterday carried stories purporting to show the cost resulting from the amendments agreed to in the Senate in its consideration of the independent offices appropriation bill. There was some justification for the figures used by a number of newspapers founded upon a statement made by the Senator from South Carolina [Mr. BYRNES] at the time the bill was under consideration. His statement will be found at page 3297 of the CONGRESSIONAL RECORD.

I have no criticism to make of the statement as such, but I note that inadvertently some figures were included which did not result from the action of the Senate.

The Senator included an item of $21,000,000 which he expressly stated was made necessary by the Executive orders of the President issued on January 19, 1934. There was also included an item of $215,000,000 in round figures relating to the increase in salaries of Federal employees.

An analysis of that item discloses that the figure which he used not only included the amount resulting from the action of the Senate but it included the entire restoration, and embraced as well the first 5-percent restoration for the fiscal year 1935, which was provided in the bill as it passed the House of Representatives.

I find by making the calculation again, taking into consideration the amount resulting from the action of the House, that the increased amount caused by the action of the Senate in providing complete pay restoration is not $215,000,000, but is $152,775,625.

Mr. BONE. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Washington?

Mr. STEIWER. I yield for a question only, because I am anxious to conclude.

Mr. BONE. Is the amount which the Senator mentioned the amount over and above that which the Byrnes amendment would have required?

Mr. STEIWER. No; it is the amount over and above that which is provided by the House in the 5-percent restoration which that body wrote into the bill for the fiscal year 1935.

Mr. BONE. That is on the matter of salaries of Government employees?

Mr. STEIWER. Yes. I want to refer to several substantial factors which are involved in the consideration of these figures. The total amount added by the Senate, eliminating the items to which I have referred, which were inadvertently included, is not $354,000,000, but is a figure approximating $270,000,000.

That figure would be literally correct except that neither the Senator from South Carolina nor the Senator from Oregon in the consideration of the matter took into account some miscellaneous items contained in the bill, such as automatic promotions and administrative promotions. However, these items will not to any considerable degree affect the figures.

Mr. President, I now come to a feature which to me is far more important. The difference in costs between the House provision and the Senate amendment is one thing. The difference in costs between the action of the Senate by the passage of the bill and the proposals submitted by the Senator from South Carolina, with either the actual or tacit approval of the administration, presents an entirely different question. In order to arrive at that difference I requested the clerk of the Committee on Appropriations to prepare the figures showing the exact differences between the bill as it passed the Senate and the proposals made by the able Senator from South Carolina. The clerk of the committee resorted, in compliance with my request, to the facilities of the Veterans' Administration, the Bureau of the Budget, and possibly to other official sources. I have here, and in just a moment will send to the desk, the figures indicating the differences which are so significant. Before I do so, however, I want to state briefly what they are.

So far as the pay-cut restoration is concerned in the fiscal year 1934, there is no difference, because in the proposal made by the Senator from South Carolina there was to be a 5-percent restoration effective February 1, and in the action taken by the Senate we find the same result.

In the fiscal year 1935 the proposal of the Senator from South Carolina was that there should be a 10-percent restoration. The action of the Senate resulted in a 15-percent restoration, so that the difference between the administration proposal submitted by the Senator from South Carolina and the action taken by the Senate is merely 5 percent of the total salary expenditures. That 5 percent, according to figures furnished to me by the clerk of the Committee on Appropriations, is $63,000,000. So the difference between the action of the Senate and the proposal made on behalf of the administration is in the sum of $63,000,000.

Mr. VANDENBERG. Mr. President, may I ask the Senator a question at that point?

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Michigan?

Mr. STEIWER. I yield.

Mr. VANDENBERG. Even that difference might not exist under the proposal submitted by the Senator from South Carolina, if I understand the situation correctly, because there was permission granted to the President even to restore that 5 percent.

Mr. STEIWER. That is true. That is the maximum difference, and that difference might not obtain in the event the President should see proper, because of changed economic conditions, to restore the remaining 5 percent. In other words, it might ultimately result that there will be no difference at all either in the fiscal year 1934 or the fiscal year 1935.

Referring to the various veterans' items added to the bill by the Senate, the Veterans' Administration has taken the bill section by section in a tabulation which has been furnished to the Committee on Appropriations. I have a copy of this tabulation in my hand and I understand a copy has also been furnished the Senator from South Carolina [Mr. BYRNES].

The total estimated increase resulting from all the veteran amendments agreed to by the Senate reaches the sum of $118,253,700. In a similar way the Veterans' Administration analyzed the proposal made by the Senator from South Carolina with respect to veterans' benefits. The total cost estimated by that agency of those various proposals amounts to $63,749,000. Therefore, the difference between the two propositions, namely, the aggregate amount provided by the action of the Senate and the aggregate amount which would have been provided had the Senate agreed to the veterans' proposals of the Senator from South Carolina [Mr. BYRNES], is $54,500,000. I might add that in one or two instances it is my opinion that the estimates of the

Veterans' Administration are excessive, but accepting them as correct, for the purposes of this comparison, the difference, I repeat, is only $54,500,000.

So, assuming that the President should take no action during the year 1935 with respect to pay cuts, the maximum difference possible between the action taken by the Senate upon pay cuts and upon veterans' benefits for the balance of the year 1934 and for the year 1935 will amount to a sum which will not exceed $118,000,000.

Mr. President, this is a large sum, but it is not comparable with the figure of $354,000,000. It does not approximate the corrected figure of $270,000,000, and in relation to the appropriations that are voted by this Congress in these days, it is not such a staggering sum.

I refer to the matter in order that the correct figures may be exhibited in the RECORD, and merely to make one comment; that is, if this great figure of $354,000,000 is being used to influence the country, or to influence the Congress, or if it is to be employed to provide an excuse for a veto, it is fair to say that it is not the correct figure; that the differences between the administration and the action taken by the Senate may be summed in the total of approximately $118,000,000; and that in the consideration even of that difference we are to remember that so far as the veterans are concerned all this legislation relates to crippled, to sick, and to indigent veterans who have served our country in time of war.

It seems to me, Mr. President, that in dealing with a group of that kind, and in the circulation of reports as to the cost, we should at least adhere to the facts.

I send to the desk the figures furnished by the Veterans' Administration, and ask that they be printed in the RECORD at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

Independent offices appropriation bill

AMENDMENTS TO TITLE III (VETERANS' PROVISIONS), H.R. 6663

Calendar day Feb. 27	Amendment proposed by—	Miscellaneous provisions	Rates	Average monthly payment	Estimated number of cases on rolls	First year additional cost
Title III:						
Secs. 27, 28	Steiwer	Service connection restored to World War veterans on rolls Mar. 19, 1933, with certain exceptions.	Rates in effect Mar. 19, 1933, $10-$100.	$43.70	329,853	$44,933,000
Sec. 29	do	Hospitalization and domiciliary care extended, within the limits of existing Veterans' Administration facilities, to non-service-connected cases, where veteran is unable to defray expenses.				(1)
Sec. 30	do	Restores to the rolls Spanish War veterans and dependents receiving pensions on Mar. 19, 1933.	90 percent of rate in effect Mar. 19, 1933.		[2] 195,000 [3] 38,600	[2] 61,487,000 [3] 8,077,000
Sec. 31	do	Restores to the rolls emergency officers receiving retirement pay Mar. 19, 1933, where disability is directly due to service.	Rates in effect prior to Mar. 19, 1933.	139.00	2,600	2,942,000
Sec. 32	do	Restores to rolls veterans injured while receiving training or hospitalization.	Rates in effect under Public, 2, and Public, 78.	34.50	62	25,700
Sec. 33	do	Allows beneficiaries to participate in decisions with respect to claims for benefits.				(1)
Sec. 34	do	Provides that service-connected monetary benefits shall be entitled "compensation."				(1)
Sec. 35	do	Provides benefits shall not be retroactive				(1)
Sec. 36	White	Provides for payment of compensation at total rates where permanent total for insurance has been allowed by courts.		56.30	1,000	700,000
Sec. 37	George	Provides for payment of term insurance where claim was filed prior to Mar. 20, 1933, and maturity of contract had been determined by Veterans' Administration.			100	58,000
Sec. 38	Bone	Provides for double pension for dependents of men who died on the *Shenandoah*, *Akron*, and *J-3*.	Double rates		75	30,000
Title II:						
Sec. 26	Goldsborough	Provides that there shall be no reduction in compensation on blind cases.				(4)
Total cost of amendments [5]					567,290	118,253,700

AMENDMENTS TO TITLE III, H.R. 6663, PROPOSED BY SENATOR BYRNES

Title III	Byrnes	Provides for payment at 75 percent of old rate to veterans denied service connection by special board until final decision by Board of Veterans' Appeals.		[6]	29,000	$10,900,000
Do	do	Provides for protection afforded by Public, 78 for presumptive cases.			13,000	2,000,000
Do	do	Hospitalization and domiciliary care				(1)
Do	do	Restores to rolls Spanish War veterans and dependents receiving pensions on Mar. 19, 1933.	75 percent of rates in effect Mar. 19, 1933.		[2] 195,000 [3] 38,600	[2] 45,153,000 [3] 5,696,000
Total cost of proposed amendments [5]						63,749,000

[1] No additional cost.
[2] Veterans.
[3] Dependents.
[4] Cost included in secs. 27 and 28, title III.
[5] Estimated.
[6] Cost for 1 month is $908,300, if cases are continued on rolls 1 year, cost would be $10,900,000.

USE OF MONEY IN ELECTION CAMPAIGNS

Mr. NYE. Mr. President, I approach with more than a little embarrassment a subject upon which I feel called upon at this moment to speak.

Why is it that men with high purpose, given power, sometimes grow drunk under it—grow blind to principles they once expounded as being fundamental?

In North Dakota we have had reason to grow proud of years of divorcement from the influence of money in the conduct of election campaigns. Under the leadership of the Nonpartisan League my State has demonstrated that election campaigns can be conducted and won without resort to bags of money. Time and again there has been demonstrated ability to carry on most intelligent campaigns without the necessity of access to large campaign funds.

Yet, under the same political banner today, men thought to have been uncompromising in their belief in a clean, unbridled election system are in some evidence as leaning strongly to practices which all too clearly mark a would-be return to campaign-funds corruption—corruption now not so serious, perhaps, but corruption nevertheless, and bound to grow unless checked.

Two years ago I gladly gave my support to one who, I believed, would contribute much of good to my State as its Governor. Under his administration courageous things have been done in cooperation with farm organizations which

had programs intended to save to families their homes. But with this courage there has developed, seemingly, a spirit which has found money and the accumulation of large campaign funds to accomplish reelection a very positive consideration. As is usually the case, this urge has not been confined within bounds which seem to be at all reasonable.

I am very sorry to have to say that in my State the itch for political funds has gone so far as to find men allegedly demanding toll of even those who accomplish employment through funds afforded by the Federal Government through agencies like those of Emergency Relief and Public Works.

If there were absence of law to prevent political assessments in cases of this kind, the practice would still invite condemnation. But since there is law to govern in such cases, there is room for something more than condemnation, and there is natural expectation that the Federal Government will proceed with action. On the face of the record written as a result of investigation by Federal authorities, I cannot do other than urge that the departments concerned proceed with speed in actions against those alleged to be guilty of wrongdoing as a result of their urge for money to maintain newspapers and prepare for future election campaigns. Let the ax fall where it will, even though it shall involve indictment and trial of one rewarded by election to so high an office as that of Governor of the State I love and happily call home.

In fairness, it should here be said that the findings reported to have been submitted by Federal investigators to their departments here in Washington do not in any way reflect upon the men who are now entrusted with supervision of the Emergency Relief and Public Works programs in my State, excepting alone the Governor. As relates to the Emergency Relief program, I understand that Administrator Hopkins has this day retired the Governor from his post on the relief commission in my State.

While I deeply regret that the course of the law may be about to move in a direction certain to prove injurious to men who have been among my best friends, I regret still more deeply the evidence of their departure from the cause of government and politics free of the blighting influence of campaign money—an influence which destroys decency and fair play wherever it takes determined root, and I desire always to be counted among those ready to see the roots destroyed as soon as and wherever they are in evidence.

To make men and women who have employment feel that their continued employment is dependent upon their paying a percentage of their wage to the maintenance of a political machine constitutes an order which I cannot and do not seek to defend, even when such defense might be in the interest of those whose friendship I have enjoyed in both a political and a social way.

If such action as it is contemplated departments will take in the matter reveals that there was not justification for the action taken or criticism offered, I should feel myself owing an apology to those who today appear as offenders against decency and fair play. However, the record as prepared up to this time all too clearly reveals justification for the urge that steps be taken to prosecute those who may be found to be guilty of the distasteful practices which are alleged.

Mr. FRAZIER. Mr. President, I am very sorry to hear the statement of my colleague; but, of course, if there has been misuse of Government funds, a thorough investigation should be made, as I understand will be done. Then full determination can be had as to guilt or innocence, and, of course, proper action will be taken.

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the Vice President:

H.R. 93. An act to authorize the Secretary of War to sell to the Plattsburgh National Bank & Trust Co. a tract of land comprising part of the Plattsburgh Barracks Military Reservation, N.Y.;

H.R. 715. An act to award the Distinguished Service Cross to former holders of the certificate of merit, and for other purposes;

H.R. 6219. An act to repeal certain specific acts of Congress and an amendment thereto enacted to regulate the manufacture, sale, or possession of intoxicating liquors in the Indian Territory, now a part of the State of Oklahoma;

H.R. 7205. An act to provide for the care and transportation of seamen from shipwrecked fishing and whaling vessels;

H.R. 7554. An act to extend the times for commencing and completing the construction of a bridge across the Missouri River at or near Farnam Street, Omaha, Nebr.;

H.R. 7705. An act to extend the times for commencing and completing the construction of a bridge across the Mississippi River between New Orleans and Gretna, La.; and

H.J.Res. 278. Joint resolution to amend Public Act No. 81 of the Seventy-third Congress, relating to the sale of timber on Indian land.

EXECUTIVE SESSION

Mr. ROBINSON of Arkansas. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDING OFFICER (Mr. DUFFY in the chair) laid before the Senate several messages from the President of the United States submitting nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

Mr. PITTMAN, from the Committee on Foreign Relations, reported favorably the following nominations in the Diplomatic and Foreign Service:

George S. Messersmith, of Delaware, to be Envoy Extraordinary and Minister Plenipotentiary of the United States of America to Uruguay;

J. Butler Wright, of Wyoming, to be Envoy Extraordinary and Minister Plenipotentiary of the United States of America to Czechoslovakia;

John C. Wiley, of Indiana, to be consul general; and

George C. Hanson, of Connecticut; Angus I. Ward, of Michigan; and Charles E. Bohlen, of Massachusetts, to be secretaries in the Diplomatic Service.

Mr. McKELLAR, from the Committee on Post Offices and Post Roads, reported favorably the nominations of sundry postmasters.

The PRESIDING OFFICER. The reports will be placed on the calendar.

THE CALENDAR

The PRESIDING OFFICER. The calendar is in order.

NOMINATIONS PASSED OVER

Mr. ROBINSON of Arkansas. Mr. President, the first two cases on the calendar, the nomination of Robert H. Jackson to be general counsel of the Bureau of Internal Revenue, and the nomination of Daniel D. Moore to be collector of internal revenue, will go over under arrangements heretofore effected and announced. It is expected that these nominations may be disposed of in the early future.

The PRESIDING OFFICER. The nominations will be passed over.

FEDERAL RADIO COMMISSION

The Chief Clerk read the nomination of Anning S. Prall, of New York, to be a member of the Federal Radio Commission.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

THE NAVY

The Chief Clerk read sundry nominations for promotions in the Navy.

Mr. TRAMMELL. I ask that all the nominations for promotions in the Navy be confirmed en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered, and the nominations are confirmed en bloc.

THE MARINE CORPS

The Chief Clerk read sundry nominations for promotions in the Marine Corps.

Mr. ROBINSON of Arkansas. I ask that the nominations in the Marine Corps be confirmed en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered, and the nominations are confirmed en bloc.

RECESS TO MONDAY

Mr. ROBINSON of Arkansas. I move, pursuant to the order heretofore entered, that the Senate take a recess until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 5 o'clock and 21 minutes p.m.) the Senate, under the order previously entered, took a recess until Monday, March 5, 1934, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 1 (legislative day of Feb. 28), 1934

FOREIGN SERVICE OFFICERS

The following-named Foreign Service officers to be diplomatic and consular officers of the grades indicated, as follows:

SECRETARY IN THE DIPLOMATIC SERVICE

Karl deG. MacVitty, of Illinois.

CONSUL GENERAL

H. Earle Russell, of Michigan.

APPOINTMENT, BY TRANSFER, IN THE REGULAR ARMY

TO ADJUTANT GENERAL'S DEPARTMENT

Capt. Frank Huber Partridge, Infantry (detailed in Adjutant General's Department), with rank from July 1, 1920.

TO ORDNANCE DEPARTMENT

Second Lt. Douglas Glen Ludlam, Cavalry (detailed in Ordnance Department), with rank from June 9, 1928.

TO AIR CORPS

Second Lt. Harry Hollingsworth Geoffrey, Field Artillery (detailed in Air Corps), with rank from June 12, 1930.

PROMOTION IN THE REGULAR ARMY

TO BE COLONEL

Lt. Col. Laurence Verner Frazier, Corps of Engineers, from February 26, 1934.

TO BE LIEUTENANT COLONEL

Maj. Jacob Loucks Devers, Field Artillery, from February 26, 1934.

TO BE MAJOR

Capt. Larry McHale, Field Artillery, from February 26, 1934.

TO BE CAPTAIN

First Lt. Engmann August Andersen, Quartermaster Corps, from February 26, 1934.

TO BE FIRST LIEUTENANTS

Second Lt. John James Earle, Jr., Coast Artillery Corps, from February 23, 1934.

Second Lt. Robert Frederick Tate, Air Corps, from February 26, 1934.

PROMOTIONS IN THE NAVY

MARINE CORPS

Lt. Col. Benjamin S. Berry to be a colonel in the Marine Corps from the 1st day of March 1934.

Maj. Ross S. Kingsbury to be a lieutenant colonel in the Marine Corps from the 1st day of March 1934.

Maj. Edwin N. McClellan to be a lieutenant colonel in the Marine Corps from the 1st day of March 1934.

Capt. Edwin P. McCaulley to be a major in the Marine Corps from the 1st day of March 1934.

Capt. Graves B. Erskine to be a major in the Marine Corps from the 1st day of March 1934.

Capt. Louis R. Jones to be a major in the Marine Corps from the 1st day of March 1934.

First Lt. Gordon Hall to be a captain in the Marine Corps from the 1st day of March 1934.

First Lt. William S. Fellers to be a captain in the Marine Corps from the 1st day of March 1934.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 1 (legislative day of Feb. 28), 1934

MEMBER OF THE FEDERAL RADIO COMMISSION

Anning S. Prall to be a member of Federal Radio Commission.

PROMOTIONS IN THE NAVY

To be rear admirals

Adolphus Andrews
Manley H. Simons
William S. Pye

To be captain

Claudius R. Hyatt

To be commanders

Richard H. Knight	Herbert K. Fenn
Hugh L. White	Paul Hendren

To be lieutenant commanders

Dixie Kiefer
Palmer M. Gunnell
Frank E. Vensel, Jr.

To be lieutenants

Ezra M. Ellis	Roy W. Lajeunesse
William J. Mitchell	Archibald G. W. McFadden
John A. Marsh	Charles W. Oexle
Sherman E. Burroughs, Jr.	Edwin J. Taylor, Jr.
Louis D. Sharp, Jr.	Charles C. McDonald
William E. Verge	Edgar T. Neale
Neill Phillips	Erskine A. Seay

To be lieutenants (junior grade)

John M. Lewis	Edward E. Colestock
William M. Drane	William W. Lowrey
James E. Kyes	Douglas B. Brokenshire
Paul P. Blackburn, Jr.	William E. Ellis
Everett O. Rigsbee, Jr.	Charles L. Westhofen
Edmund S. L. Marshall	Hugh C. Haynsworth, Jr.
James G. Lang	Frederick M. Reeder

To be dental surgeon

Thomas L. Sampsell

To be passed assistant paymaster

Malcolm A. Norcross

To be chief gunners

George A. Ney	William A. Shields
Jesse L. Holloway	John W. Hutchinson

To be chief carpenter

Lloyd V. Scott

MARINE CORPS

Russell B. Putnam to be assistant paymaster.
Julian P. Willcox to be lieutenant colonel.
Harold D. Hansen to be first lieutenant.
Jefferson G. Dreyspring to be first lieutenant.
Elmer E. Barde to be chief quartermaster clerk.

HOUSE OF REPRESENTATIVES

THURSDAY, MARCH 1, 1934

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D.D., offered the following prayer:

O Thou, the true and living God, we thank Thee for life; it is so rich in mercy and so crowded with interest. Springing out of grateful hearts, we bring to Thee glad faces and happy spirits. We praise Thee that Thy encircling arms are ever watchful, strong, and very near. O free us from all illusions and vanities; root and ground us in the precious realities of faith and character. Heavenly Father, lead us this day with willing minds, loving hearts, and with both hands. Captivate us by the thought of Thy majesty, power, and condescension. Great God, make us heralds of good news; let morning light glimmer out of fading dreams; help all who are in the songless valley of doubt and who are hungering for what they cannot say. In our prayer, O God, we beseech Thee that our whole country may be led to Thy holy altar; let Thy everlasting verities be sounded everywhere. Make the impure pure, the dishonest honest, the selfish unselfish, the mean generous; and all glory be unto Thy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Horne, its enrolling clerk, announced that the Senate had passed without amendment bills and a joint resolution of the House of the following titles:

H.R. 93. An act to authorize the Secretary of War to sell to the Plattsburgh National Bank & Trust Co. a tract of land comprising part of the Plattsburgh Barracks Military Reservation, N.Y.;

H.R. 715. An act to award the Distinguished Service Cross to former holders of the certificate of merit, and for other purposes;

H.R. 6219. An act to repeal certain specific acts of Congress and an amendment thereto enacted to regulate the manufacture, sale, or possession of intoxicating liquors in the Indian Territory, now a part of the State of Oklahoma;

H.R. 7205. An act to provide for the care and transportation of seamen from shipwrecked fishing and whaling vessels;

H.R. 7554. An act to extend the times for commencing and completing the construction of a bridge across the Missouri River at or near Farnam Street, Omaha, Nebr.;

H.R. 7705. An act to extend the times for commencing and completing the construction of a bridge across the Mississippi River between New Orleans and Gretna, La.; and

H.J.Res. 278. Joint resolution to amend Public Act No. 81 of the Seventy-third Congress, relating to the sale of timber on Indian land.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, joint resolutions of the House of the following titles:

H.J.Res. 93. Joint resolution to prohibit the exportation of arms or munitions of war from the United States under certain conditions; and

H.J.Res. 207. Joint resolution requiring agricultural products to be shipped in vessels of the United States where the Reconstruction Finance Corporation finances the exporting of such products.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 421. An act for the relief of Joseph Gorman;

S. 458. An act for the relief of Lyman I. Collins;

S. 521. An act for the relief of Henry Poole;

S. 870. An act for the relief of L. R. Smith;

S. 872. An act to facilitate the use and occupancy of national-forest lands for purposes of residence, recreation, education, industry, and commerce;

S. 1091. An act conferring jurisdiction upon the Court of Claims of the United States to hear, consider, and render judgment on the claims of Elward F. Goltra against the United States arising out of the taking of certain vessels and unloading apparatus;

S. 1138. An act authorizing transfer of an unused portion of the United States Range Livestock Experiment Station, Mont., to the State of Montana for use as a fish-cultural station, game reserve, and public recreation ground, and for other purposes;

S. 1164. An act to amend an act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, and acts in amendment thereof;

S. 1754. An act to extend the times for commencing and completing the construction of a bridge across the Mississippi River at or near New Boston, Ill.;

S. 1820. An act to amend the Code of Law for the District of Columbia;

S. 2043. An act to amend the act of May 22, 1928, entitled "An act to authorize the collection, in monthly installments, of indebtedness due the United States from enlisted men, and for other purposes";

S. 2089. An act to amend the Code of Laws for the District of Columbia, approved March 3, 1901, as amended (D.C. Code, title 5, ch. 3), relating to building and loan associations;

S. 2139. An act for the relief of the Western Union Telegraph Co.;

S. 2267. An act for the relief of Isaac Pierce;

S. 2313. An act providing for the suspension of annual assessment work on mining claims held by location in the United States and Alaska;

S. 2359. An act to provide for the disposition of unclaimed deposits in national banks;

S. 2445. An act to authorize the Secretary of the Navy and the Secretary of Commerce to exchange a portion of the naval station and a portion of the lighthouse reservation at Key West, Fla.;

S. 2509. An act to readjust the boundaries of Whitehaven Parkway at Huidekoper Place, in the District of Columbia, provide for an exchange of land, and for other purposes;

S. 2550. An act granting an easement over certain lands to the Springfield Special Road District in the county of Greene, State of Missouri, for road purposes;

S. 2554. An act for the relief of Cohen, Goldman & Co., Inc.;

S. 2675. An act creating the Cairo Bridge Commission and authorizing said commission and its successors to construct, maintain, and operate a bridge across the Ohio River at or near Cairo, Ill.;

S. 2687. An act for the relief of Alfred W. Kliefoth;

S. 2688. An act to validate payments for medical and hospital treatment of members of Reserve Officers' Training Corps and citizens' military training camps;

S. 2696. An act to amend an act entitled "An act granting a charter to the General Federation of Women's Clubs";

S. 2731. An act for the relief of the State of California;

S. 2742. An act to authorize the Secretary of War to abandon or evacuate real estate no longer required for cemeterial purposes in Europe, and for other purposes;

S. 2766. An act to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes; and

S. 2790. An act for the relief of the Charlestown Sand & Stone Co., of Elkton, Md.

The message also announced that the Senate had agreed to a concurrent resolution of the following title, in which the concurrence of the House is requested:

S.Con.Res. 10. Concurrent Resolution relative to the enrollment of Senate bill 1759.

INDEPENDENT OFFICES APPROPRIATION BILL

Mr. WOODRUM. Mr. Speaker, I ask unanimous consent to address the House for 2 minutes for the purpose of making an announcement.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. WOODRUM. Mr. Speaker, the independent offices appropriation bill (H.R. 6663) is on the Speaker's table, having come over from the Senate with sundry amendments.

In the Senate a number of very important amendments were added to this bill, affecting not only the pay of Federal employees, but other provisions of the economy act, the compensation of Spanish-American War veterans and their dependents, and the compensation of World War veterans and their dependents.

Under the regular rules of the House an appropriation bill coming back from the Senate with amendments would go to the Appropriations Committee for such consideration as that committee in its judgment sought to give it. While we do not follow that policy, bills usually being sent to conference by unanimous consent, it seems to me the interest of the Members and the country in these amendments being so great, that in order to give the Membership ample opportunity to study and understand these amendments and determine what the future course of action of the House should be on this bill, it should take the regular course and go to the Appropriations Committee.

Mr. Speaker, is it necessary for any motion or proceedings to be initiated here for that to be done?

The SPEAKER. In reply to the gentleman from Virginia the Chair desires to say that he recognizes the fact that this is a matter of great importance, and he thinks that the Senate amendments to the bill ought to be first considered by the Appropriations Committee of the House before it goes to conference. Recognizing this and agreeing with the suggestion the gentleman from Virginia has just made, the Chair has referred the bill and Senate amendments to the Committee on Appropriations, and the bill is therefore no longer on the Speaker's table.

Mr. SNELL. Mr. Speaker, will the gentleman yield for a question?

Mr. WOODRUM. I yield.

Mr. SNELL. It is reported in the press this morning that it will be the policy of the majority to hold this bill in the Appropriations Committee perhaps until the end of the session and eventually possibly not pass it at all but pass a continuing resolution to take care of the necessary expenses of the independent offices. Is there anything to this report?

Mr. WOODRUM. I may say to the gentleman from New York that I cannot be responsible for press reports as to what the policy of the administration is going to be.

The purpose of the gentleman from Virginia is just as he stated—that the bill ought to go to the Appropriations Committee, there to be studied and considered, and to have appropriate action taken by the committee when it understands thoroughly the effect of the amendments that have been added by the Senate.

Mr. SNELL. Do I understand that the gentleman in no way approves and will not aid and abet any such policy which could only make the House look more incompetent than some people think it is by refusing to act on the responsibilities that come to it?

Mr. WOODRUM. I do not agree with the gentleman's inference that the House looks incompetent.

Mr. SNELL. I said that reference had been made. Certainly we are day by day abdicating some of our rights and I do not want to do it any longer. We on this side are willing to act on this bill, and pass on its merits; and I hope the gentleman from Virginia will bring it back to the House in a reasonable length of time. I appreciate the fact that the decision of the Speaker is absolutely correct, but am sorry we cannot consider it at once.

[Here the gavel fell.]

Mr. TARVER. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended 1 minute in order that I may ask a question.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. TARVER. The gentleman speaks of this action as being the regular course. Will the gentleman kindly point out to the House any instance within the last several years when this course has been followed with reference to an appropriation bill?

Mr. WOODRUM. If the gentleman will pardon me, I said that under the regular rules of the House this is the normal course. It is not the regular course.

Mr. TARVER. I misunderstood the gentleman.

Mr. WOODRUM. This is not a regular situation; it is a very unusual situation.

Mr. TARVER. I understood the gentleman to say that the bill ought to follow the regular course.

Mr. WOODRUM. I said it ought to follow the regular rules of the House.

Mr. TARVER. Will the gentleman indicate to the House how many years it has been since this course has been followed with regard to an appropriation bill sent back by the Senate with amendments?

Mr. WOODRUM. No; I do not remember any similar course, neither do I remember any similar situation.

Mr. TARVER. Then it is a very unusual course instead of the regular course.

Mr. WOODRUM. No; it is in accordance with the regular rules of the House.

Mr. TABER. Mr. Speaker, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. TABER. I think it would be very desirable that each Member of the House have in front of him a statement, which I would suggest the gentleman from Virginia prepare, showing what the additional cost to the Government would be both with reference to employees and with reference to veterans between the two propositions, the one proposed by Senator BYRNES, representing the administration, and the other the way the bill passed the Senate.

Mr. WOODRUM. I am assuming that when the Appropriations Committee comes to study the bill it will get that information and bring it to the House in its report in the regular way.

[Here the gavel fell.]

Mr. O'MALLEY. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended 1 minute.

Mr. McGUGIN. Mr. Speaker, I object.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Latta, one of his secretaries, who also informed the House that on the following date the President approved and signed bills of the House of the following titles:

On February 26, 1934:

H.R. 890. An act for the relief of Henry M. Burns;

H.R. 5241. An act to authorize the settlement, allowance, and payment of certain claims, and for other purposes;

H.R. 5243. An act to provide for the reimbursement of Guillermo Medina, hydrographic surveyor, for the value of personal effects lost in the capsizing of a Navy whaleboat off Galera Island, Gulf of Panama; and

H.R. 7928. An act to amend subsection (b) of section 12 of the act entitled "An act to provide for the establishment of a corporation to aid in the refinancing of farm debts, and for other purposes", approved January 31, 1934.

DEPARTMENT OF AGRICULTURE APPROPRIATION BILL

Mr. SANDLIN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H.R. 8134) making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1935, and for other purposes; and pending that, may I say that I have discussed the matter with the gentleman from North Dakota [Mr. SIN-

CLAIR], and it is agreeable to him that general debate on this bill close not later than 4:15 this afternoon.

Mr. SINCLAIR. That is satisfactory to this side.

Mr. BYRNS. Mr. Speaker, pending that motion, may I ask the gentleman to yield in order that I may make a statement to the House which I think I ought to make?

A day or two ago, in reply to a question from the gentleman from New York, I stated it was my hope that the House might agree to adjourn tonight until Monday, but, as every Member of the House knows, the conditions which caused me to make that statement have changed; therefore it is not necessary to adjourn over tomorrow. We have an appropriation bill pending, and there are one or two other small matters that will take very little time and which we can easily dispose of tomorrow. We can then adjourn over until Monday. I feel in justice to myself that I ought to make this statement in view of my answer to the gentleman from New York the other day.

Mr. BANKHEAD. Will the gentleman yield for a question?

Mr. BYRNS. I yield to the gentleman from Alabama.

Mr. BANKHEAD. In reference to the items to be considered, has the gentleman made arrangements on his program with respect to the rule providing for an investigation by the Committee on Military Affairs?

Mr. BYRNS. That was one of the matters I had in mind and the gentleman from Alabama [Mr. STEAGALL] has a bill that he says will take very little time, but it is most important that the bill pass not later than tomorrow.

Mr. SNELL. Those are the two matters that the gentleman is going to take up tomorrow?

Mr. BYRNS. Yes.

Mr. SNELL. But we will take up this appropriation bill first?

Mr. BYRNS. Yes. We have been adjourning a little early recently, and I hope the House will remain in session tomorrow until all these matters can be disposed of.

Mr. SABATH. It was generally understood that we would have a night session. Will it be necessary to have a night session this evening?

Mr. BYRNS. I think so. The night session is solely for the purpose of calling the Private Calendar, and I think the night session is important for that reason.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H.R. 8134, with Mr. GREGORY in the chair.

The Clerk read the title of the bill.

Mr. SANDLIN. Mr. Chairman, may I make a brief statement? The time of general debate has been limited to 4 hours, and the requests of the different Members have been taken into consideration. Therefore, the chairman of the subcommittee will not be able to yield any time other than the time already promised.

Mr. SANDLIN. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. GRISWOLD].

Mr. GRISWOLD. Mr. Chairman, day before yesterday the gentleman from New York [Mr. FISH] spoke to the House on the soldiers' bonus and veterans' legislation. He said it was merely a political gesture—that the object of some Members was the corralling of votes in the next election. That was the substance of his remarks.

I want to call the attention of the gentleman from New York to one thing wherein he may get behind the veterans and which is not a political gesture and corralling votes for the next election.

In this country we have approximately 24,000 incompetent cases, wards of the Veterans' Bureau, helpless men with dead minds in living bodies. I want to call attention to the fact that one bank that is guardian for 54 wards in one day transferred 54 pieces of real estate on which it held mortgage to its wards, many mortgages then being in default and foreclosed within 30 days thereafter at the expense of the wards.

Mr. FISH. Will the gentleman yield?

Mr. GRISWOLD. I yield.

Mr. FISH. What does the gentleman suggest should be done to remedy the situation? I want to go along with him.

Mr. GRISWOLD. On January 9 I introduced a resolution in the House providing for an investigation of this situation. That resolution is now before the Rules Committee. It is House Resolution No. 213.

Mr. FISH. The gentleman knows how little influence we have on this side in formulating legislation, but I can assure the gentleman that I will try to persuade the Republican members of the Rules Committee to support his resolution, because if there is any crookedness in looking after incompetent veterans it should be investigated.

Mr. GRISWOLD. I am calling attention to it for this reason, and this is not any political football.

Mr. FISH. Will the gentleman yield further?

Mr. GRISWOLD. I will.

Mr. FISH. And these men cannot speak for themselves, and the gentleman from Indiana should be congratulated and commended for calling attention to it.

Mr. GRISWOLD. I want to call attention to another case, where, according to an investigation by a leading newspaper, wards were deprived of $317,000 by one institution which was guardian for less than 100 of these wards. The officers of this institution formed a real-estate company with the same officers as those of the institution as officers of the real-estate company and then sold real-estate bonds to these wards when the taxes had been delinquent on the real estate for 2 years, and the guardian's report was approved by the Veterans' Administration.

Mr. PATMAN. Will the gentleman yield?

Mr. GRISWOLD. I yield.

Mr. PATMAN. The gentleman knows that the Veterans' Administration is making an investigation of these charges now.

Mr. GRISWOLD. That is my understanding; but I had the matter up with the Veterans' Administration as long ago as 2 years, and they did not act.

Mr. PATMAN. Does the gentleman say they have not acted in any case?

Mr. GRISWOLD. There may have been some kind of an investigation.

Mr. PATMAN. I think if the Veterans' Bureau is not doing what it should do that it should be investigated.

Mr. GRISWOLD. I think they should.

Mr. MILLER. Mr. Chairman, will the gentleman yield?

Mr. GRISWOLD. Yes.

Mr. MILLER. Are not all of these cases under the supervision of the various probate courts in the States where they are pending, and does not the probate court in connection with the supervision of the Veterans' Bureau have a superintending control over the guardians and over the investments that the guardians make?

Mr. GRISWOLD. The Veterans' Bureau also holds a supervising capacity in most of these States. A report to the court cannot be approved until after it has been approved by the Veterans' Bureau, and, further, in every one of these cases of which I am speaking, the Veterans' Bureau's attorneys in writing have approved the reports.

Mr. MILLER. I agree with what the gentleman has said with reference to the statutory provision concerning the regulation or supervision of the Veterans' Bureau, but suppose this should happen? Suppose the Veterans' Bureau makes a recommendation that the probate court finally refuses to approve. Then where is the guardian?

Mr. GRISWOLD. If the probate court makes an order that the Veterans' Bureau refuses to agree with, the compensation of the ward is shut off by the Veterans' Bureau.

Mr. MILLER. Do they go that far, and is the Veterans' Bureau so arbitrary in its action as to divest the probate court—a constitutional court in many respects—of that authority which it has?

Mr. GRISWOLD. The Veterans' Administration does it in this way: The Veterans' Administration attorney will

appear before the court and tell the court that unless the court acts as the Veterans' Administration sees fit the compensation of the helpless ward, this man in the hospital, will be cut off.

Mr. MILLER. In other words, they are undertaking to usurp the functions of the court?

Mr. GRISWOLD. They are.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. GRISWOLD. Yes.

Mr. PATMAN. Does the gentleman state that the Veterans' Administration or anyone connected with it is now failing or refusing to do what should be done in an investigation of these cases that the gentleman has mentioned?

Mr. GRISWOLD. I am saying that the Veterans' Bureau is investigating these cases, or they say they are, but they are investigating them with the same forces that are responsible for the thing that happens. They are investigating them with the same men who have the written approval on record, on file with the clerks of these courts, approving these acts that they are now investigating.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. GRISWOLD. Yes.

Mr. O'CONNOR. I understand the gentleman had a conference with General Hines and with Mr. Roberts, the chief counsel, and that an investigator was going to be appointed. Did they appoint someone who has been concerned with these matters before?

Mr. GRISWOLD. I do not know whom they appointed, or whether they have appointed anyone.

Mr. O'CONNOR. I understood that they were going to appoint somebody who would be satisfactory to the gentleman. Was that arrangement ever carried out?

Mr. GRISWOLD. The Veterans' Administrator stated that he would appoint someone who would be satisfactory to me.

Mr. O'CONNOR. Has he done it?

Mr. GRISWOLD. He has not, to my knowledge.

Mr. O'CONNOR. Does the gentleman know whether he has ever appointed anybody?

Mr. GRISWOLD. I do not. I know they sent a Veterans' Administration attorney out to Indiana, who was there for some time.

Mr. O'CONNOR. And the gentleman's complaint was against these Veterans' Bureau attorneys who had already been connected with this matter?

Mr. GRISWOLD. Yes.

Mr. O'CONNOR. And the gentleman wanted somebody who had not been connected with it, some impartial person?

Mr. GRISWOLD. And I think further than that, that these things are wide-spread. It is not only in Indiana but it is in Chicago and in Detroit. The Veterans' Bureau attorneys themselves will admit it, and that something should be done.

Mr. O'CONNOR. What I want to make clear is that it has been intimated that an impartial person would be appointed who was satisfactory to the gentleman or the people making the complaint. There was some information that that had been done?

Mr. GRISWOLD. Not to my knowledge.

Mr. O'CONNOR. I understand now that it has not been done?

Mr. GRISWOLD. Not to my knowledge.

Mr. PARSONS. Mr. Chairman, will the gentleman yield?

Mr. GRISWOLD. Yes.

Mr. PARSONS. The gentleman made the statement that he took this matter up with the Veterans' Bureau as far back as 2 years ago. What has the Bureau been doing in the past 2 years if they have not had this matter fully investigated?

Mr. GRISWOLD. That is one of the things that I should like somebody to tell me. The investigation starts now, locking the barn after the horse is stolen, with no change in the policy of the Veterans' Administration, nothing to prevent it occurring again, with these boys in these locked hospitals, where they cannot help themselves.

The Veterans' Administration has insisted, and has pronounced it as their policy, that banks and trust companies act as guardians for these wards to the exclusion of their friends and relatives who are interested in them. The Veterans' Administration has declared this policy even in States where a bank or trust company is not required to give bond, and individuals are required to give bond in twice the value of the estate. And because of this idiotic policy of the Veterans' Administration, millions of dollars paid by this Government to these veterans as compensation for their injuries have been lost. By this policy of the Veterans' Administration it has made it possible for one of the greatest legalized rackets in the United States to be born.

I referred to the officers of one of these banking institutions that was acting as guardian, organizing a real-estate company. In that company the president of the bank, acting as guardian, was president of the real-estate company. The secretary of the bank and son of the president was the secretary of the real-estate company. One of the stockholders of the bank was the vice president of the real-estate company.

This interlocking aggregation then unloaded the bonds of this real-estate company to the amount of $30,500 onto their wards when all the real-estate bonds so unloaded have defaulted. As a part of this same racket of these same bank officials, it is interesting to note that one of these professional racketeers was a practicing physician, one Dr. E. O. Harrold. Day after day this physician received pay from the guardian for professional services to a ward although the ward was eligible to, and received medical attention from, the veterans' hospital at the expense of the United States. A man does not have to be superintelligent to realize the benefits that could accrue to the officers of a bank acting as guardian through a set-up of this kind.

In this connection it is interesting to note that this same Dr. Harrold wrote to me on January 9, 1933, protesting against the payment of the soldiers' bonus and in favor of the Economy Act, and said:

> Talk to any man who is not living in the hope of receiving benefits from such legislation and who is not already receiving such benefits and practically no one fails to object to this unsound extravagance.

I wonder if the doctor had a premonition that his racket was to be broken up; and that since he could not profit off the mentally disabled victims of the war, that they should be cut from the pay rolls. This same doctor's wife, Ione D. Harrold, wrote me as follows:

> As an intelligent woman and voter I resent being represented by you in Congress.

If the proof of her intelligence is to be found in the approval of the conduct of this racket of her husband, then I pray God we may have less crooked intelligence and more people, honest but ignorant.

In case after case the reports show that mortgages were made by the bank with the bank's funds to certain individuals on their real estate, and that when such real estate depreciated in value, so that it was not worth the mortgage, that these banks then sold the mortgages to their wards, and the Veterans' Administration filed its written approval of the sales. No one knows—no one can know at this time the losses sustained. Banks acting as guardians have sold to their wards, not only in one case but in many cases, real-estate bonds on property the taxes on which had been delinquent for 2 years, and the real-estate companies were all companies in which the officers of the bank were interested.

At Marion, Ind., where is located one of these veterans' mental hospitals, a bank acting as guardian for many veterans sold to those wards bonds of the Mangallie Co., a company that was indebted to the bank at the time the bonds were sold, and a company that was prohibited by the securities act of Indiana from selling stock or bonds in that State. Thousands of dollars were lost by these wards through the unloading of this worthless stock to protect the bank from losses of the Mangallie Co.

I have copies of reports filed by these institutions that were acting as guardians that show vouchers for the ex-

penditure of $170 in 1 month and the only statement for the expenditure was "incidentals." In one case the guardian spent $1,700 for one of these veterans in 26 months and shows for all the $1,700 merely the word "incidentals." And this incidental expenditure was approved by the Veterans' Administration. According to the last report filed the ward was in this mental hospital of the Veterans' Administration with his own expenses being paid by the Government. There are vouchers on file in guardianship reports in the Grant Circuit Court of Indiana showing that the head of the Veterans' Administration hospital, Colonel McLake, received money for living expenses for these wards that were in that institution with their expenses paid by the Government.

In one case a patient in the hospital, that the evidence showed was so insane that he could not appear in court for a hearing, was allowed to purchase in a period of 13 months a Harley-Davidson motorcycle and an Oldsmobile coupe at a cost of nearly $1,600. The expenditure was made without a court order, contrary to the State law, but the account was approved by the attorney for the Veterans' Administration. The record does not show who used these conveyances, but it might be interesting to inquire whether it is also the policy of the Veterans' Administration, if the patient himself used the automobile, to send insane men out to drive automobiles on our highways and streets.

In case after case there are carried at par, on the accounts of these veterans, bonds of firms that have been bankrupt for 5 years, and these accounts have been approved in writing by the attorneys for the Veterans' Administration. What is true in the State of Indiana is true in Chicago. It is true in Detroit. Time prevents my bringing other cases to your attention.

The Government pays salaries to lawyers in the Veterans' Administration to check these guardian reports. The policy is to approve them before the court passes upon them, and they have approved them in writing to the clerks of these courts where no authority was secured from the courts before the investments were made.

Whether the lawyers assigned to this work by the Veterans' Administration have been inefficient or incompetent or willfully blind I do not know. It is time that the people of the country knew about it. In many cases the veteran, unprotected by anyone and subject to this policy of racketeering, has lost all. But on the books of the Veterans' Administration his accounts are carried at 100 cents on the dollar because the loss has not yet been determined.

My resolution, no. 213, is an attempt to have these evils corrected. It is an attempt not only to see that the guilty are punished, but it is an attempt to so frame legislation that like occurrences will be prevented in the future.

I called the attention of the House on last June 1 to the type of some of the lawyers who are serving in the Veterans' Administration. I gave days and dates of the court record to show how some of these lawyers had been admitted to the bar. I cited the Indiana statutes regarding admission to the bar. My plea for a change then went unheeded. Today we reap the results of this arrogant inefficiency.

There are good lawyers in the Veterans' Administration, but they are bound to the wheel of the system, and we can only achieve results by changing the system that puts its stamp of approval on such detestable acts as are going on today.

The mentally disabled veteran has been made a prey to all kinds of get-rich-quick and easy-money operators. Members on the floor of this House complain about the injustices worked upon the veterans through the Economy Act. I agree with them. The Economy Act was too drastic, and because I believed it was too drastic I voted against it. But if there were injustices worked on the veterans through the Economy Act, then the injustices worked upon these veterans through the guardianship racket is criminal and there is no excuse even in the name of economy.

The record is literally loaded with cases throughout this country where banks and individuals acting as guardians have rid themselves of worthless securities by unloading them on their wards. Other cases where banks acting as guardians have sold them doubtful securities and obtained brokerage fees for so doing.

We work ourselves into a lather because someone tries to shake down Jake the Barber, of England and Chicago, on a kidnap scheme and then sit idly by while mentally afflicted veterans in locked wards of Veterans' Administration hospitals are the victims of a shakedown by their guardians and are being systematically robbed of the money Uncle Sam gives them because of their injuries.

It is time that Congress, it is time for the American Legion, it is time for the Veterans of Foreign Wars and the D.A.V., if they are really sincere in their desire to help their comrades, to help these men suffering from mental disabilities locked in hospitals in insane wards. Because "God has decreed a clot of blood shall swerve a hair's breadth and mar their reason", they are unable to help themselves. They have no friends or organizations to fight for them. They are war's forgotten casualties.

Mr. Chairman, I am pleading with the membership of this House to see that these men who have given more than their lives, these men who have given their reason for the benefit of their country, are protected. They have no one to protect them but Congress. They may be protected and looked after through the passing of this resolution that will throw the books of the Veterans' Administration and these guardians open to a thorough investigation and let the people of this Nation know the methods of the miserable scoundrels who have duped our veterans.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. SINCLAIR. Mr. Chairman, I believe it is about time that we should say something about this bill. As a member of the Committee on Appropriations I shall endeavor to do so. The subcommittee spent about 4 weeks holding extensive hearings in preparation of the bill. Under the able, tactful, and courteous leadership of the gentleman from Louisiana [Mr. SANDLIN] information was obtained which made it possible for our subcommittee to frame a bill which I believe will have general approval of all sections of the country and which at the same time is well within the Budget estimates. There has been a good deal of criticism during the past week of the Department of Agriculture. I do not agree with all of that. I think the Department of Agriculture is manned with some of the ablest scientists that we have in this Nation, and they are doing a splendid work in handling the most intricate problems of agriculture. Of course, we have heaped upon that department a great deal of extra and unusual work, particularly under the new recovery legislation, and the criticism of some of my colleagues of that work is criticism that might very well be directed at the Congress of the United States itself, because the Congress is responsible for having passed the legislation.

The scientists in the Department of Agriculture are constantly carrying on studies and experiments all looking to a solution of the many problems facing the farmer. Among other things, these experiments include selection and improvement of types of seed, methods of planting, and cultivation, control of insect, and plant diseases, all of which have been worth millions of dollars more than the annual cost of the Department. Someone has said that if human life is ever destroyed on this earth it will be because of the ravages of insects and plant diseases. These scientists, in my judgment, stand between us and the visitation of such a calamity. I need but call attention to the losses resulting to cotton growers from the pink bollworm, to wheat growers from blackstem rust, to stockmen from foot-and-mouth disease, and to the damage done by other insects and diseases which attack the farmer's crop, in order for you to realize the enormous importance of continuing these preventive measures. At the present time the central Northwest is threatened by a scourge of grasshoppers.

There is an item carried in this bill of $2,000,000, to control and eradicate this pest. I am very anxious that this legislation should be passed at the earliest possible date, because it will not be long before these grasshopper eggs

in the infested area will be hatching, and, unless we meet the scourge early, it will be no use to meet it at all. The method of control is to spread poison bait for the young hoppers to feed upon before green vegetation is available.

Mr. HOPE. Will the gentleman yield?

Mr. SINCLAIR. I yield.

Mr. HOPE. Does the provision which this bill carries make appropriation for grasshopper control applied to a limited area in the Northwest, or is it available for the entire country?

Mr. SINCLAIR. The provision makes it available for the entire country, I believe, except that the cooperation of States and counties must be obtained in the distribution of the bait. A survey has been made to ascertain the areas which are most threatened. This indicates there are about 13,000,000 acres of cultivated lands in about eight States that are dangerously infested with grasshopper eggs. The worst infestation lies along the international boundary between the United States and Canada, from the Rocky Mountains to Lake Superior. This condition has been growing worse for the past 4 years. Last year a new species put in an appearance, known as the migratory grasshopper. It is a close relative of the old Rocky Mountain locust which wrought such destruction in the early seventies of the last century. This is not a local or State problem, but one which may reach into many States where no grasshoppers are found now.

[Here the gavel fell.]

Mr. SINCLAIR. I yield myself 1 additional minute.

Of course, there are other items in the bill that are very, very important to the people of this country. I hope as we read the bill they will be discussed, but I do want to say that I feel very earnestly the need of the early passage of this bill so far as the grasshopper section is concerned [Applause.]

Mr. Chairman, I now yield 5 minutes to Governor CHRISTIANSON, of Minnesota.

Mr. CHRISTIANSON. Mr. Chairman, I want to reiterate and emphasize what the gentleman from North Dakota has just said about the $2,000,000 appropriation for grasshopper control. It is a very necessary appropriation and one vital to agriculture throughout the region from Minnesota to the Rocky Mountains. For 2 years there has been tragic devastation in that western country. County after county has been visited by a plague of locusts, laying low whatever vegetation survived the drought and the hot south winds. The invading army has been pressing steadily eastward. This year it may establish its outposts on the Mississippi, and thereafter, if it is not checked, no one knows how far the devastation may extend.

The gentleman has referred to the scientists' warning that some day there may be an Armageddon where man and insect will meet in decisive combat. However chimerical that warning may seem, no one who has seen the Rocky Mountain locusts at work will dismiss it as idle. One thing is sure: If the conflict comes, there is no creature better fitted to serve in the front line of the advance of the insect world than the brown locust of the western plains, fecund, voracious, and highly mobile.

This is not the first time this threat has moved ominously over the prairies. For 5 years in the seventies of the last century the locusts did their work of destruction. Finally men and women gathered in their houses of prayer to ask deliverance, summoned thereto by Gov. John S. Pillsbury, of Minnesota. The pious and the skeptical will never agree as to whether Providence or blind chance intervened. It is a historic fact that on the very next day a widespread sleet storm visited that western country and destroyed the young grasshoppers just coming out of the ground. But for that intervention of fate or heaven, the history of the Middle West, and of the Nation itself, might have been much different from what it has been.

There should be no disposition today to rest our fate on a recurring miracle. Providence helps those who help themselves. Science has provided the strategy and the munitions for the war against this enemy. We should be undeserving of deliverance if we did not use them. The effectiveness of any campaign depends on striking early. It is none to soon to form the battle lines. If this bill is passed promptly, there is time enough. If it should make the leisurely progress that most bills make, the ammunition will reach the front after the battle has been lost. I made the suggestion some days ago to a member of the committee that the appropriation for the grasshopper campaign should be carried in an emergency bill passed under suspension. It was explained to me that the present measure will receive prompt attention in another body and be enacted before an emergency bill could be passed. I sincerely hope that that will happen. I serve notice, however, that if there is any delay I shall take the responsibility of introducing a separate bill. The situation is critical. We must meet it vigorously and with dispatch, and the mere detail of legislative procedure cannot be allowed to stand in the way.

Mr. SINCLAIR. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. TABER].

Mr. TABER. Mr. Chairman, last spring there was passed by this House a bill which created the so-called "Tennessee Valley Authority", and there was carried in the fourth deficiency bill, as part of the $3,300,000,000, $50,000,000 to be used by this Authority. The work which Congress laid out for the Authority was very largely the completion and development and modernization of the dams and power plants which are a part of the Muscle Shoals property.

Now, what has been done? Frankly, the building of the dams and the power plants and many of the things that relate to agriculture have become of secondary importance. Comparatively very little attention has been given to the thing for which the Tennessee Valley Authority was created.

There has been a huge experiment in sociology. There has been an attempt on the part of this Authority to teach the natives how to live, how to brush their teeth, how to do their cooking, and all that sort of thing. A model city has been erected 6 miles away from the dam, away from the power plant, and a large number of houses have been constructed that will never be occupied, because there will be no work for the people who are supposed to live in these houses.

There have been three board members appointed, who have spent their time, not completing the construction of the power plant and putting it into operation for the so-called "benefit" of the people of Tennessee, Alabama, Mississippi, and the surrounding territory, but going around the country addressing civic organizations—perhaps in San Francisco, perhaps in Portland, Maine, perhaps in Boston, or perhaps in New York—and telling them of the great experiment in sociology in the Tennessee Valley.

Mr. TAYLOR of Tennessee. Will the gentleman yield?

Mr. TABER. Yes.

Mr. TAYLOR of Tennessee. While I understand the Tennessee Authority is disposed to look upon any suggestion from Members of Congress with more or less suspicion and disfavor, and while anything I may say in their defense may be considered gratuitous and presumptuous, and while, as the gentleman has said, it may be they have devoted a great deal of attention to sociology, still I would say to the gentleman that considerable progress has been made on the dam.

Mr. TABER. It has not been nearly as important as the sociological experiment. They have a lot of high-salaried employees experimenting in planning, landscaping, and sociological work. As I understand it, their office force and field-investigating force are larger than the force actually employed on the dam construction proposition.

They have a large field force going over east Tennessee prying into the habits and the home life of the people, exploring caves for prehistoric matters, and studying insect life and other performances at the expense of the taxpayer.

I wanted to take these few minutes here this morning to call the attention of the people of the country to the manner in which this is being done and to express the hope that Congress before it closes its session will take some action that will put a stop to the extraneous matters that this

Authority is going into, and put it back to doing the things that Congress intended when it passed the bill. [Applause.]

Mr. SANDLIN. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. SNYDER].

Mr. SNYDER. Mr. Chairman, I think we are all aware of the fact that a nation is only prosperous in proportion as its farmers are prosperous. There are three avenues in my State that either make us prosperous or poverty-stricken—our farm products, our mineral products, and our forest products. Years ago our farm products were small as compared with today. The mineral products are fast being taken from under our soil. The forest products have largely been removed. Therefore I want to take a few minutes to give expression to one measure that Congress passed last session that to me will go down in history as being the greatest citizen- and nation-building measure Congress has passed within 50 years. That is none other than the reforestation program.

It was about this time a year ago that we found on the streets in the United States more than 1,000,000 of high-school and college graduates walking the streets, without anything to do, looking for work day after day.

These young men, no longer contented to stay at home, took to the highways across the Nation, going from town to town to find work.

We did for these young men what we ought to do in any educational program—we educated them to think. We taught them in the high school and college that if they would do certain things, that when they should graduate and go out onto the street and into the business world we would have jobs for them.

At the close of 1928, 1929, 1930, 1931, and 1932, we graduated them until they numbered more than a million, and they went upon the streets and highways, and they there found that our social and economic fabric was no longer functioning and they had nothing to do; with the result that when the reforestation program was put into effect 300,000 of these young men, single, between the ages of 17 and 27, were lined up and put into these splendid camps; these camps that are both citizenship and national building in every way.

These boys and men, hundreds of thousands of them, had grown into an attitude of mind which embittered them against their Government because the Government did not have a social and economic fabric that was functioning.

You and I will read in the pages of history 25 years from now that when this measure went into effect, and these boys went into these camps that a greater change in the Nation's attitude of mind took place in 1 week than had taken place in the last half century.

Mr. THURSTON. Will the gentleman yield?

Mr. SNYDER. I yield.

Mr. THURSTON. Will the gentleman suggest how we can solve this problem?

Mr. SNYDER. I should think in this manner. It was my pleasure to accompany Dr. Fechner to my district where there are three of these camps. That is in Somerset, Pa. It was interesting to learn of the several features. Dr. Fechner told me that the first month of the first 6 months that these boys were in camp more than 20,000 boys received medical attention because they came from homes and sections of the city and country where they did not have sufficient nourishment and that of the 20,000 the first 6 months that received medical attention less than 2,000 received medical attention the last month of the first 6 months.

Talk about pay! At $2 a call, the average charge of the average doctor, it would amount to a saving of $36,000.

Mr. DONDERO. Mr. Chairman, will the gentleman yield?

Mr. SNYDER. Yes.

Mr. DONDERO. Can the gentleman give the House any information as to the situation now throughout the country in respect to these young men? I think the gentleman gave the age at 17 to 27. Should not that be 18 to 25?

Mr. SNYDER. I took 17 to 27 as the age of the million of single men who were walking the streets.

Mr. DONDERO. Can the gentleman give any information as to the condition now, and what effect that has had upon the country?

Mr. SNYDER. Yes; I shall be glad to, as best I can. There are 1,406 of these reforestation camps in the country. It is interesting to note that when they gave these boys an opportunity to go home at the end of 6 months and exercise their own free will as to whether or not they would come back, it was the desire of 85 percent of them to come back into the camps. A certain percentage found that they had employment back home and they stayed there.

The other effect that I call attention to is this: These boys were getting $30 a month and all of their keep—that is, food, shelter, and clothing. They had $5 to spend, and sent the other $25 back home, with this result, and this is most important in this citizenship-building program. They themselves not only gained an average of 14 pounds per boy, and cut the sickness down from 20,000 to 2,000 in 6 months, but they sent home the $25. The average home from which these boys came numbered 4.2 people, who lived on the $25. Inasmuch as they were relief homes, the $25 went into the homes and took them off the dole relief.

The result was that, including the fathers and mothers and other members of the family, 1,200,000 men, women, and children obtained a new attitude of mind not only toward the country but toward life, because they no longer were on the dole relief. The $25 going home to that family made the father and mother proud of the fact that their boy was earning money and sending it to them, and it put something in the breast of that boy that had never been there before, namely, that he had done something for his father and mother. That attitude of mind on the part of the fathers and mothers and other members of the family and the boys and girls has done more toward stabilizing a proper attitude of mind in reference to our democracy than any other one factor that I can think of. I regret that we did not make the reforestation program five times as great last year as we did, for we then would have been able to put 1,500,000 boys into these camps instead of the number that we did.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. SANDLIN. Mr. Chairman, I yield 10 minutes to the gentleman from New Jersey [Mr. KENNEY].

Mr. KENNEY. Mr. Chairman, war clouds are hovering over this Capitol and are hanging heavy upon our people and the country. I do not refer to a war that is to come, but to that great World War which brought so much havoc in its train and such awful consequences to the people of this Nation.

Now, when we are appropriating money to meet the demands of our Budget, it is well, I believe, to cast a glance at the items of that Budget. There is an item there which was referred to the other day, interest on war bonds that this Nation is paying, amounting to approximately $1,000,000,000 a year.

We can very readily rid our country of this war-inherited yoke, and, in doing so, need not violate any principle of present-day banking. We can, at the same time, alleviate the taxpayers' burdensome struggle to meet the principal and interest of State- and municipal-bond issues.

We have undertaken to finance banks, and through them agriculture and industry, besides furnishing financial aid to railroads and direct relief to the farmer and home owner, and we are about to finance our foreign trade.

We have established the Reconstruction Finance Corporation, Federal land banks, Federal intermediate credit banks, banks for cooperatives, Federal Farm Mortgage Corporation, Commodity Credit Corporation, Home Owners' Loan Corporation, and we are about to organize the export-import bank.

Now, I say it is high time that we begin to finance our Governments. We can do so without departing from the usual methods of banking, and by taking such a step can save to our taxpayers a heavy toll which we are paying to

the banks unnecessarily. Such action would not unduly encroach upon the business of the banks. There would still remain to the banks all of their privileges, prerogatives, and powers, and all of the ordinary banking business of the Nation.

I, therefore, propose that Congress provide for the formation of a new agency of the Federal Government, to be called by some such name as the "Government Finance Bank." I would have the United States subscribe to the stock of this new bank up to $500,000,000 and give the bank the power to issue its bonds to the extent of $3,000,000,000 or more, to be guaranteed as to principal and interest by the United States. This bank would have the right to exchange its bonds for other Government bonds. I would have it eventually exchange its bonds, to a limited extent at least, for the bonds of our municipalities, which would permit the bank to go into the market and purchase municipal issues at the market price of the municipals, which are selling today as low as 50 cents on the dollar in a great many cases. The power would also be extended to the bank to sell back to any municipality the bonds which the bank purchased, all bonds so purchased at a price not less than the amount paid by the bank. By this process the taxpayer would be somewhat relieved and his municipality would be saved the humiliation of bankruptcy. I would also give to the bank the power to buy and sell back to the States all State issues and the right to subscribe to new State issues. Such a bank would serve as a cushion for State issues and prevent prices from being beaten down to the extent that States are required to pay 4.75 and 5 percent on their issues when they ought to be able to get their money at 3 or 3½ percent. I would have this new bank given the power and right to subscribe to bonds of the United States, and I would extend to the bank the currency privileges now extended to the banks of the country.

In the emergency banking legislation of last year, we accorded the right to the banks to issue against United States Government bonds currency to the extent of 100 percent, and in a few days a bill will come before us providing for the extension of that privilege which banks now have.

The United States could offer a new issue of bonds equivalent to the amount of war bonds outstanding. This issue would be taken up by the new bank and the proceeds of the new issue would be used to take up the war bonds. In that way the United States could refund its war bonds. The new bank would have the banking privilege of issuing 100-percent currency against the new issue which would be available at the call of the United States to pay off the indebtedness of the existing war bonds. Such a financial program would violate no principle of banking as now established in this country. It would bring about the same result as that offered by the gentleman from Texas [Mr. PATMAN], although it would be a different way of accomplishing the same result. And after all, in my experience, in the doing of a thing it is often not so much what you do that counts, but how you do it. If you set up a bank to be operated along such lines you will lift the weight off this country of $1,000,000,000 a year, because we can provide in legislating for the new bank that the surplus of this new bank will go back to the United States to offset the interest on the new issue of bonds.

There is another matter that I would call attention to, for it is a way of taking off the shoulders of the taxpayers another billion dollars a year. We have controversial matters arising here in this House and in the Senate, and the most controversial legislation we will have to deal with this session will appear here in a few days. We will needlessly be compelled to take a stand for or against the veteran. None are really against the veteran, but some there are, some who believe that under our present order of things we cannot with safety to the country, through the ordinary channels, raise the money to provide for our veterans in the manner that they deserve. I for one believe they are entitled to far more than they are now receiving. Back home we have a great general who is blind, who gets $90 a month, who is suffering, and we cannot help him adequately. Besides, I know of a hospital where there are 16 veterans in a room—16 men, but a total of only 2 legs. Oh, our liberality should not be withheld from such as these.

But when we appropriate for them, where do we go? Anyway, we impose an income tax and place it upon the backs of 2 percent of our people. Only 2 percent of the people, according to statistics, pay income taxes. The very rich, with tax-exempt bonds, contribute nothing to our veterans. The man of very moderate means contributes nothing. Many men of comfortable means contribute nothing, for the vagaries of the income tax are many.

All of our people, I am confident, are only too willing to contribute to the welfare of our veterans and their dependents. Their well-being should not be the subject of so much controversy when there is a way to end all controversy. Everyone, I am sure, feels, and is ready and anxious to perform, the duty each one of us owes to our disabled and afflicted veterans, our living dead, and the dependents of those who offered up their lives that we might live and enjoy our heritage according to the traditions we have cherished since the very inception of this Republic. Give all an opportunity to contribute, not by compulsory taxes, but by voluntary contribution. The duty is upon all to contribute and that duty is greater at this time than it was when this country was seeking its very existence. Then we had raised a Continental Army, and we had scant funds with which to clothe and feed the suffering soldiers. But they were not disabled, afflicted soldiers. They were able-bodied fighting men. What happened? What did we do for those soldiers that we are not doing for our war-afflicted veteran soldiers?

The people were appealed to through the plan I would now have you adopt. They were called upon, everyone, to contribute to the life of the Army. And the people responded to the needs of their country. The necessary money was raised by means of a lottery conducted with the approval of Washington. That is the way history tells us that the Continental Army received its needed food and clothing and its sustenance to carry on the war at a crucial period and in an emergency. George Washington, as a result, had at his command a rejuvenated and reinvigorated army, and he it was who purchased the first lottery ticket.

Mr. FOCHT. Will the gentleman yield?

Mr. KENNY. I regret that I cannot yield; my time is very limited.

My friends, the efficacy of a lottery for the relief of our veterans is a matter which, unquestionably, is deserving of the study of every Member of Congress. I am sure you have not looked into it sufficiently. The lottery is the most historic, and is the aristocrat, of all emergency measures. You have clothed the President with almost every other conceivable emergency power and you should invest him with power to say whether or not we shall have a national lottery in this country now, an honestly operated lottery, conducted by an agency of the Federal Government. You may confer that power through a bill I have introduced providing for such a lottery. No Government lottery has ever been found to be dishonest or detrimental to the welfare, contentment, and happiness of the people, and I urge an immediate study of this question by the Members of the House. Our veterans are entitled to this consideration. Besides, we owe it to the taxpayers to relieve the tax burden. It is possible to lift the war clouds, so dark above us, by the means I have described and if this is done it will be easier and happier for all.

In order to encourage that study I ask unanimous consent, Mr. Chairman, to have the Clerk read a resolution which, because of objection, I have been carrying in my pocket for the last 10 legislative days.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey [Mr. KENNEY]?

There was no objection.

The Clerk read as follows:

Resolution endorsing the passage of a bill for a national lottery to be conducted by the Veterans' Administration

Resolved, That the mayor and Council of the Borough of Moonachie, endorse the passage of a bill introduced by Representative KENNEY, of New Jersey, in the National House of Rep-

resentatives providing for a national lottery to be conducted by the Veterans' Administration and providing for modification of the Criminal Code to permit the use of the mails in connection therewith.

This bill is designed to ease tax burdens and restore war veteran compensation.

It will provide for the raising of not more than $1,000,000,000 a year and permit the use of the mails and distribution of the advertising and announcements of the results of the lottery.

A precedent for this proposed lottery is the use of a lottery by New York City in 1790, when the city of New York successfully raised money by this means to pay for improvements to its city hall, which had been made to accommodate meetings of the United States Congress.

Resolved, That a copy of this resolution be sent to the President of the United States and the Vice President, the Speaker of the National House of Representatives, and to Representative KENNEY, of New Jersey.

Passed by the mayor and Council of the Borough of Moonachie at a meeting held on the 14th day of February 1934, and approved by the mayor.

Signed approved.

LOUIS A. ROSSI,
Mayor.

Attest:

BARNEY J. MIRACKY,
Borough Clerk.

Mr. SINCLAIR. Mr. Chairman, I yield 5 minutes to the gentleman from Oregon [Mr. MOTT].

THE HOUSE FIGHT FOR THE VETERAN BEGINS

Mr. MOTT. Mr. Chairman, I want to take this opportunity to make some observations on the amazing procedure that transpired in this House a few minutes ago. I mean the reference to the Appropriations Committee of the Senate veteran amendments to the independent offices supply bill. I wish first to comment very briefly upon what I conceive to be the issue raised by the Senate amendments to this bill, which was reported into the House today, and then I want to voice my most emphatic protest against the manner in which the issue raised by the Senate amendments has been disposed of by the Speaker of the House.

The Senate on Monday and Tuesday adopted a series of amendments to the independent offices supply bill. Those amendments in the aggregate, as every gentleman here is aware, take the cruelty and injustice out of the economy act insofar as the service-connected disabled veterans of the World War are concerned. Those Senate amendments, if concurred in by the House, will not only effectively repeal the provisions of the economy act as to service-connected disabled World War veterans, but they will reinstate the pension status of the Spanish War veterans and restore their pensions to the extent of 90 percent of the amount they received prior to the passage of the economy act.

There is an issue that is fairly and squarely drawn, that is unambiguous, and that is understood by everybody. That issue should have been decided here upon the floor of this House, and by the Membership of the House, which is the only legislative agency that has any moral right to decide it. It should have been decided in the usual, orderly, and customary manner, by a motion to concur in the Senate amendments, or by sending them to a conference.

THE MAJORITY LEADERS ATTEMPT TO PREVENT A VOTE

Instead of that what happened? That little group of Members who comprise the entire Democratic leadership, I dare say not more than a dozen men altogether, decided last night that the 435 Members of the House of Representatives should not be permitted to vote upon concurrence in the Senate amendments and that they should not be permitted even to send the amendments to conference. They decided this secretly, without a caucus, and without consulting, even informally, the rank and file of their own party membership.

In order to prevent a vote on the Senate amendments they resurrected an ancient rule which, I understand, has not been used for more than 20 years—a rule which permits the Speaker to refer Senate amendments to a House bill to a standing committee of the House. The oldest Member here cannot remember when that forgotten rule has ever been used before. But the Speaker used it—used it to throttle the House on an issue that was directly before the House for decision, an issue that everyone was ready to vote on and expected to vote on. And mark this, no one knew that he was to be denied that right. None knew that secretly he had already been denied that right until it was actually announced from the Speaker's chair a few minutes ago that the issue had been settled and that the Senate amendments had been referred, without leave of anyone, to the Committee on Appropriations.

THE VETERAN ISSUE

And what was the issue that the Members of this House have thus been denied the right even to consider? It involves no less a thing than the welfare and the destiny of every disabled World War veteran and every Spanish-American war veteran.

You are all familiar, I know, with these Senate amendments. I am going to discuss them briefly, not so much for the purpose of informing you of their provisions but for the purpose of showing you the clear issue that it was the duty and responsibility of this House to face and decide and the issue which the majority leadership of this House has disposed of without giving the Membership of this House any opportunity to meet.

So far as the Spanish-American War veterans are concerned, the Senate amendments to the House bill reinstate the pension status of these veterans; the amendments put them back in the precise position they occupied under the law as it existed prior to the passage of the Economy Act, and restored their pensions to the extent of 90 percent of what they had been receiving prior to March 20, 1933. I ask whether any issue can be clearer than that, and whether the House is not competent to decide it on the usual motion to concur?

As to veterans actually disabled in line of duty in the World War, the Senate amendments restore that class of disabled veterans to their full rights as they existed prior to the passage of the economy act. As to the so-called "presumptive" cases, the Senate amendments put them back upon the statute books and reinstates their right to compensation in those cases, and those only, where the service connection of their disability had been already established by law prior to the passage of the economy act.

There are some other minor amendments, but in the main the amendments are just as I have stated them to you. Every actual abuse that has ever been complained of in the original veterans' laws has been eliminated by these amendments. Every sensible, legitimate objection has been removed.

There was an issue clearly drawn, and which this House had a right to decide for itself, instead of having the amendments referred to the Committee on Appropriations. For what purpose were they referred to that committee without the consent of the House? For the purpose of killing them, or mutilating them, or both? So far as I am concerned I am satisfied that was exactly the purpose of this reference, and I shall never be of any different opinion until the Appropriations Committee, within a reasonably speedy time, reports those amendments back to this House just as it received them.

I have said that everybody in this House is prepared to meet the issue of restoring compensation to service-connected disabled veterans and Spanish War veterans, and prepared to meet it fairly and squarely. To those of us who voted against the Economy Act last March, the issue presents nothing new, nothing that we have not hoped for and worked for ever since that time. To those of you who voted for it, believing that the passage of the Economy Act was right, the Senate amendments present nothing new. You are certainly qualified to vote now, and do it honestly. There is another group of Members in this House in addition to the two groups I have mentioned.

The CHAIRMAN. The time of the gentleman from Oregon has expired.

Mr. SINCLAIR. Mr. Chairman, I yield 2 additional minutes to the gentleman from Oregon.

Mr. MOTT. In regard to this last group of Members, almost every one of them has already gone on record publicly since last March, both in this Chamber and outside of it, as saying that he voted for the Economy Act under a misapprehension, or that he voted for the Economy Act believing in the representations made by the President that he would administer it justly and humanely, or that he voted upon it too hastily. Almost without exception this large group of Members have publicly expressed their desire to be given an opportunity to correct the great wrong that they did to the veterans by voting for the Economy Act. They have declared they wanted to restore compensation to the war-disabled veterans and to the Spanish War veterans. I say they have been denied this chance by the Democratic leadership of this House; I say that action in this regard was deliberate and that it was shot through and through with politics. I believe it was taken for the purpose of preventing the Membership of this House from doing what a majority of the membership had pledged itself to do. I believe further that it was taken to prevent embarrassment to the President in the matter of deciding whether or not he should veto the bill carrying the Senate amendments if they were concurred in by the House.

THE REMEDY

There is a remedy, however. The four-point Legion bill has already been introduced in the House. It has been here nearly a month, yet we have had no action whatever from the committee. We can correct the wrong that has been done the veteran today by immediately circulating a petition to discharge the committee from the consideration of that bill and then bring the original four-point bill out on the floor of the House as quickly as it can be done and decide it upon its merits. We should also discharge the committee and bring out upon the floor the Spanish War veterans' pension bill. If this is done, the House yet has an opportunity of meeting its responsibility. If these bills should reach the floor at this session, I am satisfied there is no doubt as to what action the House will take in the matter of restoring compensation to World War veterans having service-connected disabilities, as well as restoring the pensions to the veterans of the Spanish War. [Applause.]

[Here the gavel fell.]

Mr. SANDLIN. Mr. Chairman, I yield 10 minutes to the gentleman from Kentucky [Mr. BROWN].

Mr. BROWN of Kentucky. Mr. Chairman, I desire to call the attention of the Membership of the House to a problem now existing in the Burley tobacco belt, especially of the State of Kentucky, which threatens the economic life of the farmers of that section and, through that, of the entire citizenship of especially the central portions of Kentucky.

The main money crop of the State of Kentucky is Burley tobacco, and to meet the problems confronting the Burley growers the Agricultural Administration sought through a contract entered into with the various tobacco companies of the United States to assure the farmers a fair return for their 1933 crop.

In conjunction with this contract for a reasonable tobacco average price the Agricultural Department worked out a tobacco reduction program which would seek to balance production with consumption and which contract would grant the benefits of this program to the farmers who agreed to cooperate by signing a crop-reduction contract.

I am in hearty accord with this movement to curtail the production of tobacco, but the companies have taken advantage of their part of the contract and have literally executed a wholesale steal of at least a part of the farmers' 1933 Burley crop.

I wish to call the attention of the House to the actions and practices of the great tobacco companies for the past 10 years and to insert in the RECORD at this time a table which shows the diminishing returns to the growers since 1923 and the mounting profits of the tobacco companies since that same year and which shows that the ratio of diminishing returns to the farmers is practically the same as the ratio of the increasing returns to the companies.

Relation between gross returns to farmers for tobacco retained for domestic manufacture and profits of 34 leading manufacturers

Year	Gross receipts of farmers for tobacco retained for domestic manufacture	Profits of 34 leading domestic manufacturers	Total of farmers' receipts and manufacturers' profits	Percentage distribution	
				Gross receipts of farmers	Profits of manufacturers
	Million dollars	*Million dollars*	*Million dollars*	*Percent*	*Percent*
1923	174	76	250	70	30
1924	154	82	236	65	35
1925	141	100	241	59	41
1926	138	104	242	57	43
1927	149	115	264	56	44
1928	161	121	282	57	43
1929	174	134	308	56	44
1930	136	145	281	48	52
1931	96	147	243	40	60
1932	68	146	214	32	68

In other words, in 1923 the farmer received 70 percent of the total amount of growers' receipts and manufacturers' profits, and the companies received 30 percent; but in 1932 the manufacturers took 68 percent and gave the farmers 32 percent. Putting it another way, in 1923 the farmers got for their crop $174,000,000, and the manufacturers got $76,000,000 as profits; but in 1932, with the decreased cost of production of tobacco products caused by the depression, these same manufacturers depressed the amount paid to the farmer until they bought his 1932 crop for $68,000,000, but managed, at the same time, on a falling market to take out as profits the sum of $146,000,000. These profits did not include the amounts paid in bonuses to their presidents, the amounts paid to political pools for the purpose of controlling State governments or other forms of government, nor did it include the excessive salaries paid to first, second, and third vice presidents.

I want at this time to list for your consideration the salaries of the officials of two of the major tobacco companies. This salary and bonus schedule is taken from a story in the New York Times of February 27, 1934, showing the salaries of prominent officials of some of the great corporations of this country. I think it will give you some idea as to one of the leakages which prevent the farmer from getting a fair price for his crop and which will demonstrate the reckless abandon with which the tobacco companies must spend their money in order to prevent too much of an excess profit.

In the year 1931, the president of the American Tobacco Co., Mr. George Washington Hill—and when it comes to hogging the farmers' money, this man has the genius of George Washington—received as a salary $160,000, but not being content with this, he took as a bonus $891,630, making a total compensation of $1,051,630. During this year 1931, the farmers received an average price of somewhere around 10 to 12 cents for their tobacco. A farmer in a good year can raise 5,000 pounds of tobacco, and if he were paid an average of 10 cents for his tobacco he would get $500. Of this amount he must pay half for the use of the land to the landowner and receive for his labor $250. On this basis, it would take 4,206 tenant farmers to raise enough tobacco to pay the salary of the president of the American Tobacco Co. In other words, 4,206 Kentucky farmers must work all year in order to make the equivalent of the salary of the president of the American Tobacco Co. They must subsist upon a wage scale that closely approaches serfdom in order that he may take more than he can possibly spend. In the old South, under slave conditions, if a man owned the labor of 50 slaves, he was considered very rich, but the president of the American Tobacco Co. exacts from the farmers of Kentucky the equivalent of the labor of 4,206 farmers. But this is not all. There are at least one half dozen vice presidents who earn from $100,000 up to six and seven hundred thousand dollars per year in salary and bonus.

Mr. DONDERO. And the salaries increased in 1933 over 1932, did they not?

Mr. BROWN of Kentucky. Probably some of them did. A moment ago I quoted the profit of these companies. I shall put this information in my extension of remarks.

If you will examine the following list you will see one of the reasons why the farmer is starving at the same time that the excess profits of the company mount higher and higher.

[New York Times, Feb. 27, 1934]

Salaries and bonuses paid tobacco company officials for past few years

Name of official	Year	Salary	Bonus
AMERICAN TOBACCO CO.			
Geo. Washington Hill, president	1928	$75,000	$280,000
	1929	144,500	461,113
	1930	168,000	842,567

	1930	36,000	147,715
E. H. Thurston, vice president	1930	36,000	147,715

It is worthy of the attention of the House that at the same time that the companies have been seeking pigeonholes in which to hide their excess profits, such as by voting extra bonuses to high officials and by paying out exorbitant sums in advertising, they have constantly decreased the wages which they have paid to their labor and the number of employees used in the industry. In the year 1923 the tobacco industries employed 146,337 people and paid them $120,462,233 in wages. The number of employees constantly decreased, until in 1931, which is the last year for which figures are available, there were employed in tobacco industries, 99,767 people, and they received in wages $69,411,167, or, in other words, the decrease in the amount paid to labor and the number of laborers followed practically the same ratio as the decrease in the amount paid to the farmers and, inversely, the same ratio as the increase which the companies took out of the business. The trouble with the tobacco business is that there has been too much "take-out" on the part of the companies. Labor is getting but little over half as much as it received in 1923, while the profit of the companies has practically doubled.

An investigation of the amount paid out in advertising shows that the four largest companies paid out in the year 1931 the sum of $31,058,000 for advertising, which was almost half as much as the 1932 crop brought to the growers.

So great has become the profit of the companies and so highly specialized has become their system of obtaining privilege to loot the growers that they have learned to a high degree the art of political manipulation necessary to control the agencies of government. From facts and figures above quoted we see how their profits have grown from a little less than one third of what the farmer received to three times as much as the total amount paid to the farmer and how, during the same period, the cost of labor to them has been practically cut in half. They have methods and means of propagandizing the Nation and selling the people on the idea that it is the huge Government tax which causes the small payment to the farmer. As a matter of fact, if all Government tax on tobacco products were taken off, the farmer would not get one cent more for his crop, but the amount now taken in taxes would be added to the staggering income of the companies. Their lobbyists in State legislatures and in the National Government constantly are urging reduction of the tax on tobacco products and constantly ward off attempts to force higher payments to the growers.

In the year 1933 the tobacco farmers of Kentucky produced one of the best crops in the history of the State, but they have had to stand by and see this crop literally stolen from them in spite of the efforts of the governmental agencies to protect and help them. The first step in this stupendous "steal" was the propagandizing of the Nation on the idea that there was a surplus of Burley which could not be handled by the companies. Now, in the flue-cured district of the southeastern coast there was produced this year over twice as much flue-cured tobacco as last year, and yet by Government aid through the processing tax the price was increased from 3 to 5 cents over the 1932 price until the farmers of this region received for their crop approximately $117,000,000 as against $43,000,000 for the 1932 crop. This, of course, means prosperity for the farmers of the flue-cured region, and I congratulate the Agricultural Department on having brought this prosperity to the farmers of this region, but prosperity to the eastern portion of the Tobacco Belt helps the farmers of Kentucky about as much as rich blood in the right arm helps a paralyzed left arm. In other words, if our farmers lose their 1933 crop, they get little satisfaction out of knowing that the farmers of North and South Carolina and Georgia received a good price for theirs. If, with a crop twice as great in the flue-cured areas, arrangements could be made to handle the crop at a profit to the farmer, certainly some steps can be taken to produce the same result in the Burley Belt of Kentucky.

The first step in the companies' program was unwittingly aided by the experts in the Agricultural Department who make up the estimates of yearly production. For the past 3 years the estimates of the Agricultural Department have exceeded the actual production. Prior to that time, for 3 years, the averages were under actual production. It is easy to see that if the December crop reports show a surplus of production over consumption, this estimate will depress the price of tobacco. I need not argue that point before any intelligent group. In 1932 the estimate of production over consumption was a surplus of 10 percent, but in spite of this 10 percent possible surplus, the crop brought a fair average price. Now, in 1933, it is everywhere apparent that the December estimate is again 10 percent high. The estimate of the production of Burley tobacco is placed by the Government experts at 414,000,000 pounds. Representatives of the companies everywhere spread the report that there is a surplus of 125,000,000 pounds. On February 4, 1934, the following statement appeared in the Lexington Herald, which is a newspaper of the blue-grass region very much interested in the tobacco farmers:

> Government estimates place the 1933 crop at 414,000,000 pounds. From present indications, however, the crop will not run that high, probably not exceeding 375,000,000.

If the crop does not exceed 375,000,000 pounds, then the Government experts have again made a mistake of 10 percent on the side of the tobacco companies. Now, suppose that the experts had made a mistake of 10 percent on the side of the farmer, estimating 335,000,000 instead of 414,000,000. There would then have been no appreciable surplus and the influence of this mistake on the side of the farmers would have meant millions of dollars to them. I know that this mistake has not been willful on the part of the Agricultural Department, but it would be well if they would check their source of information and see whether or not some portion of it were not actuated by a desire to represent a surplus greater than actually existed. It is easy to see that it is to the interests of the companies to create sources of influence and information for the Agricultural Department which would cause statements of overproduction to be

issued upon which the companies can wage their propaganda campaigns.

Now, let us see how well the companies are abiding by the contract heretofore referred to in which they agreed to pay an average of 12 cents per pound for Burley tobacco. I have conferred with many farmers from my State, and their opinion is unanimous that the companies are bidding lower on the high-priced tobaccos than ever in the history of the tobacco markets, and that on the low-priced tobaccos they are making no bids at all, but are leaving the lower grades for the speculators and the pin-hookers. The parity price of tobacco is fixed at 16.3 cents, which was supposed to have been the fair exchange price based upon the market value between the years from August 1919 to July 1929. Last year the companies paid for the higher grades of tobacco anywhere from 30 cents to 40 cents per pound. This year, the same grades are bringing approximately 20 percent less, but the price of 16.3 cents was fixed as the general average of all of the 22 to 24 grades of tobacco which were purchased by the companies, and now, under this contract, the companies come along and bid only on the higher grades, leaving the lower grades for pin-hookers and speculators to buy. I have here a list of Burley-tobacco crops sold from Grant County, Ky., over the floors of warehouses in Lexington, Carrollton, Cynthiana, Shelbyville, and Covington, tobacco grown in 1933, including pounds sold and price received for same after floor expenses and hauling charges had been paid, including some of the highest-grade crops grown in Grant County, and representing an average for the whole county. This list includes 124 crops, and the average for these crops is $5.78 per 100 pounds. The same crops last year averaged from $10 to $11 per 100 pounds. Of these crops, 49 averaged as low as $3.30, and the other 75 brought an average of $6.62.

I refer again to my home-town paper, the Lexington Herald, of February 4, 1934, in which it is stated that from 66 to 70 percent of the 1933 crop has already been sold, and by this date that percentage has already mounted until undoubtedly more than three fourths of the crop is in the hands of the buyers. This means that 75 percent of the farmers' crop was purchased at considerably less than the price agreed on in the contract entered into by the Government and the tobacco companies. But this contract does not state that each farmer's crop must bring an average of 12 cents, having in mind the various grades of tobacco, but it allows the companies to steal the first 75 percent of the crop from farmers, and then, if they can find a way to bring the whole average of the season up by bidding up the last 25 percent, they have complied with the terms of their contract. Now, let us see how they go about bringing up the price by bidding up the last 25 percent. I was informed this morning that the crops in Kentucky for last week averaged $14 per hundred pounds, which is well above the price agreed to but which does not help the 75 percent of the farmers of Kentucky who were fleeced out of their crop by the low prices paid in December and January. During these 2 months the low-grade tobaccos were bid in by pin-hookers and speculators. I am reliably informed that on one day a certain warehouseman in the blue grass region bought 60,000 pounds at $1 per hundred pounds. Of this $1 he charged the farmer 75 cents for selling the crop, leaving the farmer the exorbitant amount of 25 cents for 100 pounds of tobacco. Good land will yield 1,000 pounds of tobacco per acre and, on this basis, would bring the farmer $2.50 per acre. A good tobacco tenant can raise 6 acres of Burley tobacco and at the end of the year would find himself the proud possessor of $15 for a year's work. This is his compensation for preparing his plant bed, for raising the plants, for a canvas to cover the bed, for teams to plow his land, for labor for setting and cutting, for the long days that he must toil in the summer sun in hoeing, worming, and suckering his tobacco, and I forgot to mention that, as a tenant, he must pay to his landlord one half of this stupendous sum, so that after all he has a yield of $7.50 for his year's work.

It has been the practice, and I do not doubt that it is now done by some of the companies, to have their own pin-hookers and speculators buy the crops as low as they can, and then, after the season closes or toward the close of the season, sell them at a price on the floor to the companies at a considerable profit to themselves and also to the companies.

Now, in order to bring up the price that they have paid for the 1933 crop to the amount agreed to in the agricultural contracts, suppose that the companies had authorized their speculator representatives to buy the lower grades of tobacco and had assured them that at the end of the season they would be given a reasonable marginal profit on these purchases, and that they now, in order to bring up their season's average to that which they have agreed to in the contract with the Agricultural Adjustment Administration, pay for this tobacco an amount necessary to accomplish the fulfillment of their contract. It is equivalent to buying the tobacco from themselves, for the profit never gets into the farmers' hands.

It is the wide-spread belief of the farmers of the bluegrass region that the first half of their 1933 crop has been stolen by the tobacco companies, and the amounts paid to them certainly justify them in this belief.

Crop-production agreements may help the farmer next year, but it will not get for him compensation for the 1933 crop, 75 percent of which has been taken from him at much below the fair exchange price established by the Government. No action by the Agricultural Department, based upon a season's average and a processing tax for the difference between the season's average and the fair exchange value, can help the 75 percent of the farmers whose crops were bought at from 6 to 10 cents per pound. It may do a little for them, but it is not fair to pay to the farmer, whose crop was bought at the end of the season far above the fair exchange value, an amount equal to that paid to the farmer whose crop was taken from him during the months of December and January.

I have no criticism to make of the eminent Secretary of Agriculture or of his assistants, who have labored to help the farmer. I know that their purpose and intentions have been good, but I also know that thus far they have been outwitted by the tobacco companies, and I know, too, that there are thousands of tobacco farmers in Kentucky who ought to have received a profit on their 1933 crop, and who must face the year 1934 with a bleak outlook because of the "steal" perpetrated on them by the payment of the abnormally low prices for the first 75 percent of the 1933 crop and the apparent evasion by the tobacco companies of their contract, when they bought only the high grades of tobacco and left the low grades to the pin-hookers and speculators. There is a way by which this wrong can be righted. The power is now in the hands of the Agricultural Department to make weekly estimates of the average price paid to the farmers who sold during each week of the present tobacco season, and then to levy a processing tax, which will be taken out of the profits of the companies, and the farmer will be paid the difference between the price which he received for his crop and the fair exchange price established by the experts in the Department of Agriculture. I understand that at the present time this figure is a little less than 16.3 cents. In other words, during each week the Department should make up estimates of the average price paid to the farmer, and if this price is, for example, 6 cents per pound, and the fair exchange price is 16 cents per pound, the Department would then take from the profits of the companies 10 cents per pound for every farmer selling his crop during said week. It may be argued that it would be difficult to make estimates for each week, but the same sources of information that make possible a yearly estimate are available for a weekly estimate, and if our purpose is to aid the farmer, we should not let those who sold during any particular part of the season be robbed while some others who happened to have been lucky got in on a higher price and received a better price for the same grades of tobacco.

I have introduced a bill and have asked for hearings before the Agricultural Committee, to authorize the Agricultural Department to make weekly estimates of the present

Burley season and to pay to the farmers who sold during each week the difference between the average price received by them and the fair exchange price as established by the Department of Agriculture experts. For many weeks during the tobacco season this will mean from 5 to 10 cents per pound for the farmer's crop. This means the difference between bankruptcy and profit for about 75 percent of the farmers of Kentucky. It will not cost the consumers one extra penny but will be taken from the profits of the great companies and given to the farmers who have been fleeced of their crop. Out of the excess profits of the companies this amount could be paid and still leave them plenty of money to pay bonuses to their presidents and vice presidents. The Agricultural Department now has the power to do just what this bill provides, but having the power to do and doing are two different things; and if they are not willing, when proper information is placed before them, to take this step, it is within the province and the obligation of the Congress to see that the tobacco farmers of the Burley Belt are given their place in the sun in the new deal.

This course will work no injustice on the buying public, no hardship on the manufacturing company, no great difficulty to the Agricultural Department, and it represents life itself to the farmers of the Burley Belt.

Mr. CULKIN. Will the gentleman yield?

Mr. BROWN of Kentucky. I yield to the gentleman from New York.

Mr. CULKIN. Should I infer from the gentleman's remarks that the A.A.A. has not helped the tobacco grower?

Mr. BROWN of Kentucky. No; the gentleman should not infer that from my remarks, but may I say to the gentleman that under the program thus far the tobacco companies have evaded their contracts and have taken about 75 percent of the farmers' crops at much less than the contract price that they agreed to with the A.A.A. [Applause.]

[Here the gavel fell.]

Mr. SINCLAIR. Mr. Chairman, I yield 10 minutes to the gentleman from Minnesota [Mr. ARENS].

Mr. ARENS. Mr. Chairman, I am going to add a few words to the speeches of the gentlemen from Wisconsin, Mr. BOILEAU and Mr. REILLY, in regard to dairying. Considerable criticism has been heaped on the Department of Agriculture because the operations in regard to the handling of milk have not been successful. The steps taken by the Department of Agriculture during the late summer have had some effect in improving the prices of dairy products. Butter fat at the beginning of the Government program was 17½ cents and was raised to 24 cents on account of the efforts of the A.A.A. to stabilize the price of butter and on account of the program of buying the surplus.

Mr. CULKIN. Will the gentleman yield?

Mr. ARENS. I yield to the gentleman from New York.

Mr. CULKIN. Will the gentleman state the reason the price of butter at the time mentioned by him in his discussion went down from 24 cents to 17 cents?

Mr. ARENS. The gentleman is referring to the break in December?

Mr. CULKIN. Yes.

Mr. ARENS. I suppose it was because the A.A.A. discontinued its program.

Mr. CULKIN. That is, it discontinued its program of purchasing butter. It agreed to purchase $30,000,000 worth of butter and discontinued purchasing after it had spent thirteen or fourteen million dollars and let the market tumble. The burden is really on the Department.

Mr. ARENS. That is a fact. The same criticism was made in fixing the price of fluid milk in cities and discontinuing the program later on. But I am ready to defend the A.A.A. somewhat in this respect.

In order to introduce myself and to show you that I know something about dairying, may I give my qualifications. For 31 years I have milked cows on my own farm. In late years I have had to take over the management of another farm. The original farm is within 40 miles of the Twin Cities, but the butter fat produced is churned at a cooperative creamery and sold as butter. The farm that I have taken over is within 25 miles of the Twin Cities and the milk from that farm, I am selling to the Twin Cities' Milk Producers Association, which furnishes 85 percent of the milk in the Twin Cities. I have been a director of the cooperative creamery in my home district for 31 years. I am a director and vice president of the Land O' Lakes Creamery Association, which markets the butter for 480 creameries. This association has marketed over 100,000,000 pounds of butter per year in the last 10 years in every large city this side of the Rocky Mountains. I have visited these big cities and I know something about the markets. Furthermore, I may say that I represent a territory that produces more butter than any district in the United States. Out of a total amount of butter fat produced in the United States of 1,667,000,000 pounds in 1932, the State of Minnesota produced 284,000,000 pounds, the State of Iowa 219,000,000 pounds, and the State of Wisconsin 176,000,000 pounds.

Mr. BOILEAU. Will the gentleman yield?

Mr. ARENS. I yield to the gentleman from Wisconsin.

Mr. BOILEAU. That is just butter?

Mr. ARENS. Butter.

Mr. BOILEAU. That does not take into account all dairy products?

Mr. ARENS. Only butter.

Mr. BOILEAU. Wisconsin is the principal cheese-producing State.

Mr. ARENS. Minnesota, Iowa, and Wisconsin produce about one half of all the butter marketed in the ordinary butter markets of the country.

In regard to cheese, out of a total production of 375,000,000 pounds in the United States in 1932, Wisconsin alone produced two thirds of it, or 243,000,000.

Mr. CULKIN. Will the gentleman again yield?

Mr. ARENS. Yes.

Mr. CULKIN. Has the A.A.A. done anything to help the price of cheese?

Mr. ARENS. The cheese market was affected the same as the butter market during the late summer.

Mr. CULKIN. And, as a matter of fact, the administration has not done anything to help the price of cheese?

Mr. ARENS. The reason the A.A.A. discontinued its buying was this: Through their buying of butter the price of butter was advanced. They started to buy butter on the 17th of August and bought for nearly 3 months. The price of butter started to advance, and when butter advanced to 24 cents, the farmers started to increase production. This was the first time in the history of the United States that there was an increase in the production of butter during August and September. When the A.A.A. started to buy butter in an effort to move the surplus, the farmers started to produce more than they ever had before, and at the end of 2 months there was a larger surplus of butter than at the beginning of the sale, and therefore the A.A.A. saw that, in spite of its buying, the surplus was increasing, and they discontinued such buying.

Mr. DONDERO. Will the gentleman yield?

Mr. ARENS. I shall be glad to yield to the gentleman.

Mr. DONDERO. The statement was made here today on the floor of the House that of all the milk produced, only 15 percent is used as fluid milk and the rest goes into butter, cheese, and other by-products. Is that correct?

Mr. ARENS. I think the gentleman was somewhat misinformed. One third is used as fluid milk and two thirds of it is churned into butter or manufactured into cheese.

The Government did not continue to fix arbitrarily the price of fluid milk, which seems to be the argument and the reason why they accuse the A.A.A. of not working in behalf of the farmer—if they arbitrarily fix the price of fluid milk and not fix the price of butter fat, the result will be disastrous and I can very easily explain why this is true.

Mr. BLANCHARD. Will the gentleman yield?

Mr. ARENS. I am afraid my 10 minutes will be gone before I really get started.

Mr. BLANCHARD. May I ask the gentleman just one question?

Mr. ARENS. I shall be glad to yield to the gentleman.

Mr. BLANCHARD. If the Government is going to fix a price, whether to the producer or the resale price, they ought to enforce it, should they not?

Mr. ARENS. They should enforce it. When the Government fixed the price of fluid milk in the milk sheds of the eastern cities and fixed it fairly high—I will not say too high, but fairly high—and left the price of butter fat alone, disaster was unavoidable.

My organization for the last 10 years has sold a lot of butter in New Orleans, two cars a week, on the average. When the Government stepped into New Orleans and fixed the price of milk unusually high, the farmers immediately started to increase their production and, among other things, they imported 2,600 cows within 2 months. The result was a surplus. They had to start churning butter and we in Minnesota lost our New Orleans market.

In Boston, my organization alone markets about 15,000,000 pounds of butter a year. In Boston the A.A.A. fixed the price of milk at $3.02, during the time we speak of, when the price of butter fat was below 20 cents. What was the result in Boston? Why, they paid $3.02 for the fluid milk that is used for consumption on the table and what was above that they called surplus milk. With a price of $3.02 the farmers around Boston are going to increase their production to such an extent that they will have a surplus of milk and this very fact would break the Boston market, because those farmers that produce surplus milk would not churn that milk into butter and sell it on the open market for 18 or 20 cents, when for the milk used for table purposes they would receive $3.02 per hundred pounds, which is equal to 80 cents a pound for milk with 3½ percent butter fat, which is standard milk.

Mr. CULKIN. I dislike to take up too much of the gentleman's time, but will the gentleman again yield for a question?

Mr. ARENS. I am pleased to yield to the gentleman.

Mr. CULKIN. The gentleman then asserts that in order to raise the price of butter it is necessary to depress the price of fluid milk?

Mr. ARENS. No; not at all.

Mr. CULKIN. I understood the gentleman to say that.

Mr. ARENS. I wish the gentleman would let me continue my argument, and I think the gentleman will see exactly what I am trying to explain.

The very fact that the price was fixed high would induce farmers, rather than to churn this fluid milk into butter and sell it at 18 or 20 cents, to try and find another outlet for their milk. I know Boston is not any different from any other city, and neither are the farmers around Boston, and rather than take 18 cents for butter they would sell the milk to some dealer at a lower price than the high price fixed by the Government for market milk. The result would be a price war, and there was a price war in some cities. Some distributors will try to get some of this cheap milk. They then can and will sell milk by the quart for less than the Government fixed price. The Federal Government was asked to step in on several occasions to protect the price which they had fixed for the consumer to pay, but they could not do it. They found that the bill we had passed did not give the Department authority to fix the retail price of milk. It gave them the authority to bring the price of milk to the farmer up to a pre-war parity, but did not give them any authority to fix the retail price. Therefore, the farmers themselves would break the market.

[Here the gavel fell.]

Mr. SINCLAIR. Mr. Chairman, I yield the gentleman from Minnesota 5 additional minutes.

Mr. ARENS. Another reason why there must be a parity price between butter and fluid milk is the following: The Land O' Lakes Co. is equipped to ship a carload of milk or a carload of cream to any place on 1 day's notice. We are shipping it wherever we can sell it. My organization tries to get all it can for the farmers. If the farmers are compelled to churn milk into butter and take 18 or 20 cents a pound, we are going to break into your market unless there is a parity of price between butter and milk.

Mr. FISH. Will the gentleman yield?

Mr. ARENS. I yield.

Mr. FISH. The gentleman says his organization is equipped to ship a carload of butter or a carload of cream into any city at any time?

Mr. ARENS. If you do not eliminate us by sanitary restrictions.

Mr. FISH. Are you doing it?

Mr. ARENS. No; you have placed an embargo on western milk. I believe the farmer should get the cost of production, and that includes butter fat that goes into butter. You should preserve the parity between butter fat and butter and milk.

I do not mean that the farmers out West would have to receive for their milk what you receive in the East. If he receives 30 cents for butter fat, that would give $1.05 at my creamery for milk churned into butter. It costs 25 cents to get the milk into the Twin Cities, that would be $1.30, and it would cost 20 cents more for inspection and for cooling tanks and for cans to ship it. That would make $1.50. But when we sell cream to the creamery we retain the skimmed milk. The Government has shown us that generally skimmed milk is worth 20 cents a hundred. That would bring the price of milk delivered in the Twin Cities to $1.70, which is the price fixed by the Government for fluid milk.

If we wanted to sell to the East we would have to get the farms inspected, we would have to pasteurize, we would have to get glass tanks to ship it in; the freight, which is extremely high on sweet milk, would have to be added.

Furthermore, we are producing feed and shipping the surplus feed to the people in the East. You are buying this feed at a higher price. All these things should be considered. I should say that if we receive $1.65 or $1.70 a hundred you in the East ought to get $2.40.

I was in favor of the Agricultural Adjustment Act, but wanted it amended so that in place of the pre-war parity price as in the bill the price to be obtained would be the cost of production. It is eminently fair. The people condemning here on the floor the Agriculture Department at the present time are as much to blame for the legislation and its operation as the Department. You passed it through the committee and you came in with a rule that prevented our amending it, so you are as much to blame.

Mr. BLANCHARD. Will the gentleman yield?

Mr. ARENS. I will yield to the gentleman.

Mr. BLANCHARD. Does the gentleman believe in the cost of production regardless of the amount that the farmer produces on his farm?

Mr. ARENS. The Government will not fix the cost of production and should not unless provision is made to control production or at least stop overproduction.

Mr. KNUTSON. Will the gentleman yield?

Mr. ARENS. I yield.

Mr. KNUTSON. Answering the gentleman's question, would not the cost be fixed for a large area rather than for a small community?

Mr. ARENS. My opinion is that when it comes to fixing the cost of production of butter fat, the Government should fix the price of butter and additional cost of inspection, sanitation, and transportation, and all other reasonable expenses; this should be added to the price of butter and by this method arrive at the price to be fixed for market milk.

Mr. KNUTSON. Would it not be more scientific to base the price of milk upon the cost of butter than to base the price of butter upon the cost of milk?

Mr. ARENS. That is the only way, because the surplus always fixes the prices, and the people living along these milk areas maintain that milk churned into butter is the surplus, and it is the surplus that fixes the price of the total product. Therefore they have to fix the price of the surplus. We do not consider it a surplus, but in their use of the language they so consider it, and they are correct

insofar as the price of butter will determine the price of the whole milk in the milk sheds.

Mr. KNUTSON. I heard the gentleman say a moment ago that $1.70 for the Minneapolis shed would be a fair price.

Mr. ARENS. No; I did not say that. I said that that was the price, and that 30 cents for butter fat and $1.70 in the Twin Cities would be on about a par. There would not be much difference.

Mr. KNUTSON. That would not be bad—30 cents for butter fat.

Mr. ARENS. No. I am showing these gentlemen from the East how reasonable it would be to fix the price of butter fat and take that as a base to fix the price of market milk.

Mr. McFADDEN. Mr. Chairman, will the gentleman yield?

Mr. ARENS. Yes.

Mr. McFADDEN. I am interested in what the gentleman is saying. I own and operate a farm in the New York milk shed, in northern Pennsylvania, my home. I belong to the Dairymen's League, which is a large cooperative corporation, and I am getting for milk that tests practically 5 percent at the rate of $1.35 a hundred, and I live right under the eaves of the finest market there is in the United States, New York City. All of the milk goes there.

Mr. KNUTSON. One dollar and thirty-five cents?

Mr. McFADDEN. One dollar and thirty-five cents is the price fixed for the dairyman's milk in that shed, for the past month. That is away below the cost of production.

Mr. ARENS. At what percentage of butter fat?

Mr. McFADDEN. My test runs, and I have the report this morning, 4.55. I happen to live in a section where there is no grade A plant. I am producing grade A milk and have to sell it at grade B prices. I have just checked the cost of feed this year as compared with last year, and the cost is 40 percent above that which we paid last year. That sort of situation is destroying the dairy interests in my particular section of Pennsylvania. The farmers are up against it, and will not be able to continue if that plan proceeds.

Mr. ARENS. If the gentleman from Pennsylvania produces 5-percent milk he should move into Minnesota in a good section where there is a good cooperative creamery. He would receive more and feed his cattle much more cheaply.

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

Mr. SINCLAIR. Mr. Chairman, I yield the gentleman 5 minutes more.

Mr. DONDERO. Mr. Chairman, will the gentleman yield?

Mr. ARENS. Yes.

Mr. DONDERO. The gentleman has made a statement that the price he has stated is the cost of production to the dairyman and the farmer. Does the gentleman think that is going to remedy the situation, if the farmer and the dairyman just get the cost of production without enough more to give them a chance to live and pay their taxes?

Mr. ARENS. The gentleman from Michigan understands that when we say cost of production, it means a reasonable income on his investment, a small profit, wages, taxes, insurance, and all other expenses that enter into this operation. That is what we consider cost of production.

Mr. WOODRUFF. Mr. Chairman, will the gentleman yield?

Mr. ARENS. Yes.

Mr. WOODRUFF. Should not the cost of production, and does it not in the case the gentleman speaks of, include a reasonable price for the labor that the farmer himself puts into it?

Mr. ARENS. Why, in the figured cost of production I would consider interest upon the investment and a reasonable return, a reasonable wage scale for the man doing the work. All those things would be considered in figuring the cost of production.

Mr. WOODRUFF. And that is quite proper.

Mr. ARENS. Yes; any business man would do that, and the farmer is a business man.

Mr. BOILEAU. Mr. Chairman, will the gentleman yield?

Mr. ARENS. Yes.

Mr. BOILEAU. As I understand it, the gentleman has been in conference with the heads of the A.A.A. and understands what they are doing now and what they propose to do in the program to relieve the dairy industry. May I ask whether or not the gentleman approves of the present policy of the A.A.A. and what they propose to do to give relief to the dairy industry?

Mr. ARENS. I believe that the A.A.A. is on the right track. I censure them because they have not consulted enough in the past; they have dilly-dallied along too much, and even with their present program they are going to go before the farmers of the United States and see whether they approve of such a program, and if they do, we are not going to get relief for another year.

If they are going to call meetings in the dairy sections and ask the opinion of farmers, you gentlemen know what that will mean. All you gentlemen know that when you go around and ask opinions of everybody, you get so many different opinions that when you get through you are more up in the air than you were at the beginning. I am opposed to the dilatory tactics of the A.A.A. It is true the A.A.A. has not consulted with the dairymen as much as they should and they have not consulted with Congress as much as they should. There is a misunderstanding all along the line, and on account of that we have lost a lot of time. If they are going to promulgate a program now and go out to the farmers and have it confirmed first before it is put into action, I am afraid the dairymen will be broke.

Mr. CULKIN. Will the gentleman yield?

Mr. ARENS. Well, I did not come up here to start a class in dairying. I am hardly able to.

Mr. CULKIN. We are sitting at the gentleman's knees.

Mr. ARENS. I thank the gentleman.

Mr. CULKIN. The gentleman complained of the law and the manner in which it was written. Is he now in favor of writing into the A.A.A. with reference to dairy products a provision that it is mandatory on the A.A.A., in fixing the price of dairy products, to take into consideration first the cost of production, plus a reasonable profit, in the particular locality?

Mr. ARENS. I surely am in favor of that provision. I was very anxious to vote for that amendment if I had an opportunity to do so.

Mr. CULKIN. And the gentleman is still ready to do so?

Mr. ARENS. I am still ready to do so. The cost of production is the only sensible way of fixing the price of any article. The Government should step out at once and fix a reasonable price for all dairy products, with butter as the yardstick. The price should not be too high at the present time in order not to curtail consumption, but the aim should be cost of production as soon as possible. It is conceded that there shall be no processing tax on beef. The dairy people should be given this same consideration. The surplus should be and will be eliminated if the A.A.A. takes the dairymen's share of the $200,000,000 appropriated—eighty million—and buys all cattle afflicted with tuberculosis and Bang's disease. This should be done at once, those fit for food to be put in cans and stored or given to the needy. Out of 14,000,000 cattle tested for tuberculosis, 260,000 were found to be afflicted. By this ratio not over 750,000 cattle would be condemned out of the 26,000,000 dairy cattle in the United States. If two million were eliminated through the Bang's disease, it would reduce the number of cows by 12 percent, which is sufficient to reduce the surplus of dairy products and could be accomplished with $80,000,000. To reimburse the Government for this sum of money, a processing tax should be collected later on when the price of butter reached 30 cents. One cent per pound could be deducted, and this amount should be increased to 2 cents when the price reaches 35 cents, and so on until the Government is repaid. [Applause.]

I thank you.

[Here the gavel fell.]

Mr. SANDLIN. Mr. Chairman, I yield 15 minutes to the gentleman from Illinois [Mr. SABATH].

Mr. SABATH. Mr. Chairman, notwithstanding the efforts of the Republicans, they have not been able to change the sound view of their colleague the gentleman from Minnesota [Mr. ARENS], who has just preceded me and who is courageous enough to give credit to this administration for the good it has accomplished in the last few months for the farmers and especially for the dairy interests.

The fact that the price of cream, milk, and butter has not increased to the extent that was desired by the dairy people is due to the dairymen themselves, as they increased production to such an extent that they really made further price increases impossible. So I commend the gentleman for the honest way in which he presented the issue to the American people, notwithstanding the effort of his Republican colleagues to mislead the country into believing that this administration has not accomplished a great deal up to this time for the farmer.

Of course, we know that for 12 years under the Republican administration, there was pursued an avowed policy of destruction, and it is absolutely impossible in 1 year for the Democratic administration to right all the wrongs, rebuild the country, and bring back the wholesome prosperity which the country enjoyed under the previous Democratic administration, and, obviously, the task is of far greater magnitude. However, I have not arisen, Mr. Chairman, to discuss the achievements of the Democratic administration, but rise for the purpose of paying my compliments to some of my other Republican colleagues, who, a little while ago, criticized the fact that the independent offices appropriation bill has been sent back to the Committee on Appropriations.

If I had brought in a special rule, they would have criticized us for doing so; and when we proceed under the regular rules of the House they complain that we have not brought in a special rule and made all of these amendments in order. So whatever we do it is impossible to please them. They must have an imaginary basis for campaign issues. What we are trying to do is to please the country, to give the country a real, honest administration that will be of aid and benefit to the masses; yes, to the entire Nation.

Mr. Chairman, and gentlemen of the House, last week on the Republican side all we heard from would-be Republican leaders was the shout of "murder, murder, murder", trying to make people believe that the President and the Postmaster General were responsible for the death of four Army airmen, who unfortunately lost their lives while flying during the most unfavorable weather of the last 25 years; and this notwithstanding that Major General Foulois, Chief of the Army Air Corps, in a written statement reports that the loss of the four flyers is not unusual in such bad flying weather, that it really was not above the average, and that the Army flyers have done wonderfully well, taking everything into consideration.

Despite that fact, gentlemen on the Republican side have been trying to make a partisan issue of it, not because they want to protect the flyers or to attack the War Department, but for the purpose of throwing out a smoke screen to protect the conniving, corrupt, vicious ring that has shamefully robbed the Nation in the last 10 years of millions and millions by fraud and collusion attaching to contracts for carrying the air mails. For several years I have been calling attention to the collusion and corruption in letting these contracts. Consequently, I am pleased that the Senate committee, under the leadership of Senator BLACK, has rendered such valuable service to the Nation in bringing to light all of these vicious practices, this collusion and corruption.

Mr. BLANCHARD. Will the gentleman yield for a question.

Mr. SABATH. Yes; I yield to the gentleman from Wisconsin.

Mr. BLANCHARD. Is it the gentleman's contention that all of these contracts were surrounded with collusion and fraud?

Mr. SABATH. From the information I have and the investigation I have made, I am satisfied that all these contracts that have been voided or canceled were obtained by collusion and fraud. That they were tainted with unmistakable fraud has been my belief for the last 2 years, and it was for that reason that I insisted upon this investigation and secured the passage of my resolution that started the investigation by the House Post Office Committee.

Now, who are these men the Republicans are trying to protect or defend? Who are these corporations? Who are their leaders? I think the country ought to know who they are. We know that the aircraft industry is controlled from Wall Street. The Morgans, Du Ponts, Harriman, the Vanderbilts, and other interests are in control of most of the aviation companies.

As is their custom, they do not operate these companies themselves, no, they use others for that purpose, but retain control. They hire the most available and influential young men of presumed high standing—scions of erstwhile Republican satellites—and hide behind them, using their names in their manipulations. They utilize their personality, their standing and influence to satisfy their greedy and avaricious financial appetites. Mr. Chairman, instead of criticizing these weak-principled hirelings, they have my sympathy, and though we cannot condone or sanction this practice, I feel that the high officials of these aircraft corporations should be and must be held responsible; yes, we ought to proceed legally and fearlessly against those higher-ups who offer tempting inducements, and whose orders bring about the wrongdoing on the part of their hirelings and agents.

Mr. McCLINTIC. Will the gentleman yield?

Mr. SABATH. I yield.

Mr. McCLINTIC. Has the gentleman formed any opinion as to what should be done with those officials of companies who are setting aside large salaries, oftentimes more than $100,000 a year, when they have defaulted in making payments to the stockholders?

Mr. SABATH. Well, the gentleman has heard me speak on that subject many times when I have condemned men who voted themselves an annual salary of from $100,000 to $500,000 and in addition a large bonus, and who then proceed to reduce the wages of their employees. The gentleman knows what I would do to them and to those who are responsible for perpetrating this collusion and fraud against the Government. I would not only stop with the cancelation of the contracts, but I would insist upon and demand criminal prosecution against each and every one of them, no matter how high or influential he may be. [Applause.]

Mr. McFADDEN. Mr. Chairman, will the gentleman yield?

Mr. SABATH. I yield.

Mr. McFADDEN. The gentleman knows that I have been pointing out for the past 5 years on the floor of the House the delinquencies of these very people. The gentleman knows that in the last administration I tried every way possible to get the situation corrected, and they would not correct it. The gentleman knows now that I am doing everything I can to have his administration act on specific cases which I have pointed out from the floor of this House and which, if I have the time, I shall pursue further at a very early date.

Mr. SABATH. Mr. Chairman, I did not yield for a speech; I yielded for a question only, I may say to the gentleman from Pennsylvania.

Mr. McFADDEN. Why does not the Democratic administration take action?

Mr. SABATH. I cannot answer for the administration. It is true the gentleman from Pennsylvania has pointed out for years some of the wrongdoings of the administration of his party. I tried to correct some of the abuses, and he knows I have been trying to correct them during the entire time. I should like to see my administration, the gentleman's President as well as mine, proceed against these wrongdoers. I have the utmost confidence in our President

and know that when he has accumulated all the evidence he will unerringly proceed.

Unfortunately for the men who lost their lives, but fortunately for the country, he realized the existing conditions and is trying to eliminate the conditions that were brought about solely by the administration of the gentleman's own party. Just now President Roosevelt is trying with all his might to rehabilitate the 9,000,000 men still out of employment, to make it possible for the unemployed to secure work so they again can provide adequately for their families. He is trying to eliminate as speedily as possible the necessity for the Government to expend millions upon millions of dollars to feed the hungry and the destitute, but willing, deserving Americans; to correct that situation brought about by Republican misrule. When we shall have accomplished this, when we shall have put these men back to work, and when we shall have started the wheels of commerce turning again, the President, I can assure the gentleman from Pennsylvania, will go forward and order the prosecution and conviction of every dishonest manipulator and corrupt official.

Mr. Chairman, the gentleman from New York [Mr. FISH] stated a few days ago on this floor that the loss to the Government last year under these air-mail contracts could only be $7,000,000. I repeat that the reduction in the appropriation is $12,000,000, and I feel that even a larger amount will be saved when new contracts are let.

Mr. Chairman, ladies, and gentlemen of the House, with me it is not only a question whether the Government has been mulcted of $7,000,000, $10,000,000, or $12,000,000 the last year, though these are vast sums, but I am certain that in the last 12 years if collusion had not been practiced the savings would have reached close to $100,000,000, and so today the important consideration is that dishonesty should be eliminated and honesty and decency enthroned. I think it is high time and of the greatest import to the Nation that we should put a stop to the activities of these high-powered salesmen, to these smooth, slick lobbyists who have, during the last 12 years under Republican administrations, infested the Capitol and entrenched themselves through improper influence in nearly every department, and who are responsible for the leading astray of many promising young men in the Government service. I repeat, it is high time that every Government employee involved with any of these lobbyists and contract-seeking corporations should be dismissed and the corporations, on whose pay rolls they are or may have been, forever banned from obtaining any Government business. Think of the income-tax refunds! It is pleasing to me that only a handful of the 113 Republicans of this House have arisen on the floor to defend these air-mail contracts.

It is complained that the cancelation of these contracts is a great injustice to this legitimate industry, in which millions have been invested. It is true that very little real money has been invested by these gentlemen and aircraft corporations, as is shown by the disclosure that United Aircraft Co. issued 880,000 shares to acquire the Pratt & Whitney stock, which represented a total cash investment of only $1,100, for its original stock of only 5,500 shares, later expanded into 400,000 shares by declaring stock dividends without further cash investment, and for the purposes of this merger only. Nor would United Aircraft have given in exchange for Boeing stock—representing a cash investment of only $750—its own stock to the extent of $50,000,000 or more. All United Aircraft had to do to acquire these two properties was to use the printing press.

Mr. Chairman, it is these companies, organized in this manner, that are being defended. During all of last week, under the leadership of the gentleman from New York [Mr. FISH], six or eight Republican Members tried to hide the wrongdoing and disclosures involving these companies behind the unfortunate deaths of the four brave Army air-mail flyers. Mr. Chairman, no one regrets their deaths more than I. My sympathy goes out unrestrained to the families and friends of these courageous and brave men who lost their lives, not due to their operating inefficiency, but, in all likelihood, due to the defective planes unloaded by these very aircraft companies who have mulcted the Government of additional millions by supplying defective planes at excessively high prices to the Army and the Navy. The charge that we have not a sufficient number of properly equipped planes, expressed by some of those Members who deplore the cancelation of some of these contracts, is not justified. We have over 1,500 planes, 150 of which are supposed to be equipped with the most modern devices required for safe flying. Only yesterday we read of the loss of an aviator in one of these planes, and all indications are that it was due to a defective engine, but I have not heard one of my Republican colleagues criticize the manufacturers of that engine. All we hear is what a great injustice has been done to these corporations in the cancelation of their contracts. Aye, the cry is ever property rights transcend personal rights, even to death.

Mr. Chairman, it is indeed strange that these Republican Members, though Members of the House when the great misfortune befell the 54 young men who lost their lives in the collapse of the dirigible *Akron*, failed to raise their voices in criticism. Not a word of regret was heard as to this great disaster or as to the loss of lives, and this despite the fact that reliable evidence disclosed that the misfortune was due to the faulty construction of the ship. Oh, yes; the gentleman from New York [Mr. FISH] has stated that the evidence disclosed that a young Communist had fooled around with some of the bolts in the ship. From the day that the *Akron* was completed, the Navy knew and the country knew that it would have been absolutely impossible for any man to file off enough bolts to cause the buckling of the ship as it did. I charge now that it was due to defective construction, and the *Akron* should never have been accepted; but again we have the gentleman on the Republican side defending defective construction.

The gentleman from New York [Mr. FISH] stated that during the previous Democratic administration an investigation was made of many of the aviation companies. Yes; the Republicans charged collusion and inefficiency, and President Wilson immediately ordered an investigation, which was headed by no less a personage than Chief Justice Hughes, but the evidence and trial disclosed that Republican officials were responsible for the delays and, if my memory serves me right, a Republican from Dayton named Deeds and his Republican associates, who are now in control of some of these aviation companies whose contracts have been canceled, caused the willful delays so that the companies in which they were interested would secure the award of all contracts for aircraft.

Mr. Chairman, let me say in conclusion to my dear and smiling colleague from New York [Mr. FISH] that these companies he has been endeavoring to protect or excuse are not worthy of or entitled to his defense and, in view of the confidence I had reposed in him, I cherished the hope and expectation that instead of attacking the honest efforts of the Postmaster General he would earnestly denounce all those responsible for the vicious collusion and fraud practiced against the Government. [Applause.]

Mr. Chairman, I feel that the action and misdirected criticism of the gentleman from New York [Mr. FISH] and that of his colleagues will be condemned not only by the Army Air Corps but by all fair-minded people of our Nation, irrespective of political affiliations.

Mr. SINCLAIR. Mr. Chairman, I yield 15 minutes to the gentleman from New York [Mr. FISH].

Mr. FISH. Mr. Chairman, I assure the gentleman from Illinois [Mr. SABATH] that there will be no personal issue between us. He is entitled to his views and I expect to maintain my views both on the floor of the House and elsewhere; and I propose in this limited time to take up and answer every statement he has made and leave the decision to the fair and honest judgment of the entire Membership of the House.

I shall begin by answering the last statement made by the gentleman in which he wanted to know where I was and why I did not protest the faulty construction of the *Akron*

under a Republican administration. The fact is that I was one of the few Members of the House who protested on several occasions what I considered and conceived to be the faulty construction of the *Akron*. Due to the fact that several years ago I was head of a committee investigating the activities of the Communists in the United States, it came to my attention that a Communist, an ex-officer of the Austrian Army, had secured employment upon the *Akron* during its construction. Two agents of the Department of Justice were sent to investigate the alleged activities and sabotage on the *Akron*. The report made by these two highly intelligent members of the Department of Justice, at the risk of their lives, was not made public for several years. They claimed that this Communist—and they attended Communist meetings with him—admitted to them that he had shorn off rivets and replaced them in the *Akron*, the ship referred to by the gentleman from Illinois, the one that cracked up in a storm with the loss of so many lives. I am not prepared to say that that was the only reason for the destruction of the *Akron*. One other Member of the House also called attention to that report, the gentleman from Michigan [Mr. WOODRUFF].

Mr. WOODRUFF. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield.

Mr. WOODRUFF. Mr. Chairman, I am very glad to say that I happened to be one of the members of the Naval Affairs Committee appointed by the chairman of that committee to inspect the report of the representatives of the Department of Justice. What the gentleman from New York has stated with regard to the activities of this particular communistic individual is true.

Mr. SABATH. Was anything done?

Mr. FISH. I cannot yield now; I have not time. I propose to answer all of the charges just made by the gentleman from Illinois, and it will take more than the time allotted to me.

Mr. SABATH. I believe the gentleman.

Mr. FISH. As a matter of fact, I had intended to speak a little on veterans' legislation and to inquire into the reasons for resurrecting an old and disused rule in order to prevent the customary consideration of the Senate amendments to the independent offices bill, but I think I shall confine myself to answering the statements made by the gentleman from Illinois, and I can assure him they are very easy to answer.

Mr. Chairman, this is not the first time he has taken the floor and denounced there air-mail contracts as being made in collusion and fraud and the contractors as being robbers and thieves.

I shall endeavor to speak from a purely nonpartisan angle and categorically answer the charges of fraud, of robbery, and of collusion in these air-mail contracts.

The gentleman claims that the Government is being robbed. He claims that these contracts were made in fraud and collusion, but does not submit one iota of evidence in support of his contentions. It is time that we take out the partisanship and try to ascertain the truth. I want to emphasize that if there is any fraud we on this side want the fraud exposed and the people who are responsible of defrauding the Government prosecuted and sent to jail. [Applause.] As far as I am concerned, I would rather rout out any crook or any crookedness in my party than in the Democratic Party. So if there are any guilty Republicans, I say to you, go after them, and not one of us will defend them or try to keep them out of jail.

The country is entitled to the facts. If there is fraud in these contracts they should be canceled, but up to this very moment not one iota of fraud has been exposed. Postmaster General Farley sent a wire to Colonel Lindbergh, in response to his telegram to the President, as follows: "You do not know the facts." He told Colonel Lindbergh, the greatest authority on aviation in the world, "You do not know the facts." In other words, you do not know what you are talking about. Yet Postmaster General Farley has not submitted one iota of evidence of fraud, and the country is still waiting for this evidence. Mr. Farley admits that he did not write the letter which he signed on February 14 last notifying Senator BLACK as chairman of the subcommittee of the Senate, of his intention to cancel all domestic air mail contracts upon the ground that they were illegal. This is one of most extraordinary and amazing statements ever made by any high official of the Government, and it is the statement made by the Postmaster General who canceled these contracts. He said he did not even write the letter. He said the letter which he signed was prepared by the Solicitor of the Department, Mr. Crowley, and Mr. Ristine, and the Attorney General of the United States.

The gentleman from Illinois denounced in a vague way a number of prominent people and he claims that they are Republicans, and therefore they must be frauds and robbers. Among the few that he mentioned was Averill Harriman, formerly president of the Aviation Corporation, a close friend of the President and an able and honest official of the Government. He is holding one of the very highest positions in the N.R.A. at the present time. The gentleman from Illinois says that this man was a robber. He is one of the few that was mentioned by name in the speech he just made. The gentleman stated that Mr. Harriman defrauded the Government. This is the kind of loose talk and unfair statements that have been made about these air-mail contracts from the very beginning and I hope the press will not misquote me in what I am about to say. Let us assume, for sake of argument, that these contracts were lousy with fraud—I want you to note that I am not saying they were lousy with fraud, but if they had been, there would have been a hearing, and the officials of these air-line companies would have been called in to present their side of the case. The reason not one of the 14 presidents of these companies was given any kind of a hearing or trial was because there was no fraud, and the Postmaster General knew there was no fraud. The administration did not have a single thing on them. Mr. Chairman, this is nothing more or less than a political reprisal and a high-handed and dictatorial action, unwarranted by facts, by law, or political practice.

May I say a word in answer to the statement that these companies were robbing the Government? One of the Democratic leaders said to me yesterday in the House, that the air-mail companies which had received these subsidies had not rendered any service to the Government or to the country. Mind you, their subsidies were only about $14,000,000 annually, out of which $7,000,000 was returned in air-mail postage. The very purpose of the subsidies at the time they were given was to build up and develop air transportation in America and the subsidies helped to build up the greatest air transportation in the world. Even if the $7,000,000 had not gone to develop the best air-mail transportation system in the world, which it did, it was well spent for national defense alone, because these air-mail pilots are available in case of emergency or in case of war to immediately take over and operate Army airplanes.

What is the answer to these charges of fraud and glittering generalities? First, there is no proof of fraud whatever. No hearing was granted, and we all admit that even a murderer or kidnaper is entitled to a hearing and trial, but in the case of the air mail contracts there was not the slightest hearing of any kind. Second, they say that the air mail company officials robbed the Government. As I stated before, I do not own stock in these companies. I do not know any of the officials of the companies, and I do not do any business with any of the companies. However, I have taken occasion in the last few days to look up the record and get information in regard to the biggest of these companies, the Transcontinental & Western Air Line, running from New York to Los Angeles. What do I find?

Mr. SABATH. Are these the companies that engaged Mr. Young and Mr. Smoot to transact some business for them?

Mr. FISH. No; I am not yielding to the gentleman. I can tell the gentleman that Colonel Lindbergh is their technical

adviser and that the record of the company will stand any investigation, and that is exactly what it most desires. The Transcontinental & Western Air Co. is one of the largest lines. Last year it received a subsidy of $2,747,326 and paid back in air mail, according to the figures given me this morning, $3,566,262, or $800,000 beyond their subsidy, in air mail postage to the Government of the United States. I suppose this is one of the companies that the gentleman from Illinois claims is robbing the Government. Furthermore, this company received from the Government since they were organized on October 30, 1930, $7,769,661. It returned to the Government in air mail postage $7,742,630, or approximately the same amount, a difference of only $27,000. Last year alone they returned $800,000 in excess of their subsidy.

[Here the gavel fell.]

Mr. SINCLAIR. Mr. Chairman, I yield the gentleman 10 additional minutes.

Mr. FISH. I want to refer to the salaries paid by this company. I believe the president gets $18,000. One other man gets $12,000 and the next highest paid men in this big company are the pilots, who receive between six and seven thousand dollars.

This company is not in the category of those companies which pay big salaries and a bonus referred to by the able gentleman from Kentucky [Mr. BROWN] a few minutes ago. The officials of this company are paid moderate salaries and receive no bonus. Certainly this is not robbing the Government. I have not had time to study all of these air mail companies, but this particular company has never paid a dividend.

While I am not sure of my facts, I believe of all the 14 companies whose contracts have been canceled, practically none of them is paying dividends and most of them have lost money. The company I have referred to, the Transcontinental & Western, has lost $1,500,000 in operation, and yet you would believe from the statements made by the gentleman from Illinois [Mr. SABATH] that this company and other companies were robbing the Government. The fact is they have lost money, they have paid no dividends for the last 4 years, and their officials are not overpaid.

This is why I rose to answer the gentleman and give the facts. It is only upon the facts that we can determine what should be done. This is not a political football to be kicked around. I believe the Postmaster General or whoever is back of this has committed a serious blunder and a blunder, very often is worse than a crime, and in this case, of course, it is a crime. He manufactured an emergency, and it is a crime because six young Army flyers have gone to their death as a result of an emergency that never existed.

I am sorry I have not time to go into the details of this case, because if you go into the details and present the facts, you will see there is no foundation whatever for these charges of fraud. If there is any fraud, bring it out. That is the duty of the Government, that is the duty of the administration, and we challenge you to bring out the facts, and if anybody has committed fraud, then he should be punished, but until an honest and impartial hearing is permitted to the high officials of the air mail companies, the burden of proof rests on the Government.

Now, under what law did the Postmaster General, or whoever is responsible for the cancelation of these contracts, act? Mind you, the Postmaster General now says he did not write the letter himself. Under what law did the Postmaster General, or whoever is responsible for the cancelation, act? They went way back 60 years to the law of June 8, 1872, when no one ever thought of air mail, and they canceled the contracts under this old law that they dug up, on the basis of fraud, which they did not prove, and the law also provided that the contractors could not rebid for a period of 5 years.

Mr. DOBBINS. Will the gentleman yield?

Mr. FISH. I cannot yield, as I have not the time.

We in this House only last year wrote into the Independent Offices Appropriation Act, on June 16, 1933, a mandate which should cover this very case and was meant to cover this very case, but was ignored by the administration. It has just been dug up and published in the public press. I have had it for a few days, waiting for an opportunity to explain it to the House. This is the law which you yourselves enacted less than a year ago.

Section 5 of the Independent Offices Appropriation Act, approved by President Roosevelt June 16, 1933, reads as follows:

> Whenever it shall appear to the President, in respect of any contract entered into by the United States prior to the date of enactment of this act for the transportation of persons and/or things, that the full performance of such contract is not required in the public interest, and that modification or cancelation of such contract will result in substantial savings to the United States, the President is hereby, upon giving 60 days' notice and opportunity for public hearing to the parties of such contracts, authorized, in his discretion, on or before April 30, 1935, to modify or cancel such contracts.
>
> Whenever the President shall modify or cancel any such contract, he shall determine just compensation therefor; and if the amount thereof, so determined by the President, is unsatisfactory to the individual, firm, or corporation, it shall be entitled to sue the United States to recover such further sum.

As has been pointed out before, when one of these companies, this very Transcontinental & Western Co. that I have been referring to, appealed to the courts and tried to sue in the Federal court and before a Democratic judge in the city of New York, Postmaster General Farley raised the legal objection that the Government could not be sued, and thus precluded this legitimate firm from even going into the courts and suing the Government and bringing out the facts where they could be considered in a judicial manner.

Mr. HARLAN. Will the gentleman yield for a question there?

Mr. FISH. Yes.

Mr. HARLAN. Was it not a fact that instead of suing the Government in the case in New York, they attempted to obtain an injunction against the Postmaster General, which is different from the remedy provided in the statute, as I understand it?

Mr. FISH. No one has the right to sue the Government without the authority of the Government, and that is the objection raised by the lawyers for the Postmaster General.

Mr. HARLAN. They were not proceeding under the statute, but were proceeding by attempting to obtain an injunction.

Mr. FISH. They were trying to sue the Government.

Mr. DOBBINS. Will the gentleman yield?

Mr. FISH. I would rather proceed.

Mr. DOBBINS. I yielded freely to the gentleman when I was speaking on this matter.

Mr. FISH. I will yield, if the gentleman insists.

Mr. DOBBINS. I do not insist, I simply request it.

Mr. FISH. I yield.

Mr. DOBBINS. Does not the gentleman know that the Postmaster General is sued in the courts of the land a number of times every year in actions seeking to compel him to undo certain things that it is alleged he has done in an arbitrary fashion, such as the issuance of fraud orders by the Postmaster General?

Mr. FISH. Frankly, I do not know the practice about such things with respect to the Post Office Department.

Mr. DOBBINS. And that the question raised in New York was a question of personal jurisdiction over the Postmaster General because they brought the suit in a court distant from his place of residence?

Mr. FISH. I cannot go into the details about that. As I understood the case, it was simply that he interposed the objection that the Government could not be sued. I may be wrong, and if so it was on some other ground that the suit could not be brought. The fact is undeniable that the Postmaster General refused to permit the suit to be brought, and it serves no purpose to quibble about the procedure.

I now want to proceed with the reading of the rest of this law.

> Whenever the President shall modify or cancel any such contracts he shall determine just compensation therefor; and if the amount thereof, so determined by the President, is unsatisfactory

to the individual, firm, or corporation, it shall be entitled to sue the United States to recover such further sum as, added to said portion so received, will make up such amount as will be just compensation therefor in the manner provided for by paragraph 20 of section 41 and section 250 of title 28 of the United States Code: *Provided*, That where any such contract makes provision for settlement in the event of modification or cancelation the amount of such compensation as determined hereunder shall not exceed such amount as is authorized by said contract.

Any appropriation out of which payments upon the said contract were authorized to be made is hereby made available for the payment of such just compensation.

That is the law enacted by Congress. It was practically a mandate to the officials of the Government, but instead of that they went back and dug up the act of 1872. The law I have just read provided for both a hearing and a right to sue for adequate compensation.

In conclusion I want to deny that there is the least attempt by me or any member of my party to cover up any fraud or graft or public plunder of any kind. If any of these men are guilty of fraud, produce the facts. All we are asking is that the Postmaster General, who says that Lindbergh does not know what he is talking about, produce the evidence of fraud and show wherein any of these companies are guilty of collusion and fraud, and there will be no objection on the part of a single Republican to the cancelation of the air mail contracts. The American people are entitled to the facts, and join in the inquiry of the mother of Lieutenant Lowry, who was killed, in asking, "Why did the Government do it?"

I have spoken of one company because I happen to have the evidence applicable to that company. From what I understand the other companies are in the same category—none of them has made any money. They are all building up and developing aviation and have returned a certain amount in air mail postage. They are preparing for national defense and are an important factor in national defense and rendering a much-needed and important service to our country.

Mr. AYRES of Kansas. Will the gentleman yield?

Mr. FISH. I yield.

Mr. AYRES of Kansas. The gentleman says that none of these companies is making any money, and yet they are objecting to their contracts being canceled. If they are not making any money why are they objecting?

Mr. FISH. That is easy to answer. Some of these companies have millions of dollars invested in their property. They want to protect their property and their investors and they hope later on to make some money. [Applause.]

Mr. SANDLIN. Mr. Chairman, I yield 20 minutes to the gentleman from Mississippi [Mr. BUSBY].

THE ECONOMIC EFFECT OF PAYING THE ADJUSTED-SERVICE CERTIFICATES IN NEW CURRENCY

Mr. BUSBY. Mr. Chairman, on February 20 a petition was completed, signed by 145 Members, the effect of which was to discharge the Committee on Ways and Means from further consideration of the bill H.R. 1, of this Congress, which bill provides—

For control and expansion of currency to meet the payment to veterans of the face value of their adjusted-service certificates.

This bill was introduced by Mr. PATMAN, of Texas.

Since that time I have heard distinguished Members of this House say that they did not think this was the time when these obligations to veterans should be paid. I have heard that same expression for the last 4 or 5 years. I have no doubt that when these certificates mature some other arrangement will be made, if they are not paid before that time, to put payment of them off to a future date.

I am going to discuss before I conclude the question whether or not it would be a desirable thing, in view of the distressing condition in which we find ourselves economically, to make immediate cash payment of these adjusted-service certificates to the ex-service men.

But before I reach that I want to discuss another matter which relates to it. In all civilized nations at the present day, a circulating medium of exchange called "money" is as essential to the production and distribution of wealth in all its forms as railroads and automobiles are to transportation. Were all the railroads, rivers, canals, and automobiles of the country to suspend operations for a single season it is not difficult to surmise the amount of disaster and distress that would ensue.

The public might as well try to conduct the affairs of life without railroads and means of transportation, or the farmer try to cultivate the soil without implements as for a nation to attempt to develop its producing forces or carry on successfully the operations of trade without an adequate amount of money in the channels of circulation. The medium of exchange is exactly in proportion to the amount of business transacted. That is little understood by the business men, and sometimes it is not understood by us Members of Congress. The power of the media of exchange is in proportion to the amount of trade and commerce that is affected.

In our country today there is wealth and plenty on every hand, yet the people find themselves distressed, exhausted, and poor. And what is the cause for all this? Has nature frowned upon the husbandman and refused to respond to his toil? Has the earth declined to yield up her precious stores? Has the hand of the artisan or mechanic lost its cunning, or the arm of the laborer its strength? Not at all. The granaries of the West are bursting with the products of the soil; the valuable staples of the South are as ready as ever to respond to the touch of labor; the material wealth of the earth lies exposed on every hand; the wheels of the workshop and factory are as faithful as ever; the mechanic and laborer are not only able and willing but anxious to work. The cause of the whole trouble lies concealed in the simple word "money." The media of exchange machine is broken down; the welfare and happiness of the people are being crushed by the rules of the financial game.

I want to go back to 1929 and review the facts and bring to your minds the picture that is fresh in the memory of each of you.

MEDIA-OF-EXCHANGE MACHINE

In 1929 there were business transactions totaling 1,500 billions of dollars in this country. There were $5,000,000,000 of currency and $55,000,000,000 of bank deposits, totaling $60,000,000,000. This currency and bank deposits were being used at the rate of at least 25 times per year, or once each 15 days. Twenty-five times sixty would give you 1,500, and that is the effective service being done by the media-of-exchange machine; 1,500 billion dollars of media-of-exchange work in 1929. Let us come down to 1933. Our bank deposits had been reduced to less than $34,000,000,000, and our currency was something like $6,000,000,000, making a total set-up of currency and bank credits of $40,000,000,000, our media-of-exchange machine in 1933. But the velocity of our media of exchange had drifted from 25 down to 13, so that the turnover of those $40,000,000,000 was not 25 but only 13, and 13 times 40 gives you 520. In other words, the media-of-exchange machine was doing business to the amount of $520,000,000,000 in 1933, as against 1,500 billion in 1929. The media-of-exchange machine, consisting largely of bank credits, had slowed down to where it was not performing more than one third as effectively as it was in 1929. What is the result? I am going to read to you from the statement of Mr. Goldenweiser, who is the expert on research, or the economist with the Federal Reserve set-up, made in the hearings on the Goldsborough bill in 1932. At page 569 of the hearings, he says:

The thing I want to show you in it, is that the deposits in these banks stayed fairly steady in 1928 and 1929. They increased in 1930, notwithstanding the depression. They did not begin to diminish till the latter part of 1931, while the turnover began to go down very clearly at the peak in 1929—went down from 55 or 54 times a year to 20 times a year. And while at this level they still had the same amount of deposits, their actual buying activity, the amount of business they did, had been cut more than in two. This is the item of velocity which enters into the situation and the one over which there is much less direct control than there is over volume.

Mr. BUSBY. It is my recollection that for New York City the velocity of deposits was tremendously out of proportion in 1929 to the velocity of deposits in the rest of the country.

Mr. GOLDENWEISER. Yes, sir. You are quite correct about that. Here is a chart for New York, where it is up as high as 110 in 1929 and is now down to 33. In the country as a whole, outside

of New York, it went up to 25 and is now down to 13. It is perfectly true that the great growth in velocity was in the speculative market. It is also true that there has been a cutting in two of the velocity outside the speculative market.

The velocity had dropped in New York City from 110 to 33.

AMOUNT AND VELOCITY DETERMINE EFFECTIVENESS

In other words, there are two items that go to make up the efficiency of our money—our bank credits and our currency. One is volume and the other is velocity. You take the volume and multiply it by the velocity, and you get the working effect of the media of exchange machine, and it tells you how much business is being transacted. You had sixty billions in 1929 and multiply that 60 by 25 and it gives you 1,500—$1,000,000,000 doing work 1,500 times. You take 40 and multiply that by 13, and it will give you 520—$1,000,000,000 doing business 520 times.

WORK OF MEDIA OF EXCHANGE MEASURES BUSINESS

Take the business in this country in 1929 and compare it with 1933 and you will find there were three times as much business in 1929 as in 1933. It is as absolutely impossible to transact business, carry on trade, without a media of exchange as it is to carry on the affairs of this country without railroads, canals, rivers, automobiles, and transportation. So that brings us down to the question of what is the matter today.

BROKEN-DOWN MEDIA-OF-EXCHANGE MACHINE

Our media-of-exchange machine has not been restored; bank credits are not available for business. If bank credits, which is only one item in the media-of-exchange machine, falters, what must the Government do? Sit by?

FOUR PARTS TO MEDIA-OF-EXCHANGE MACHINE

We have in our media-of-exchange machine, first, barter and trade. There is very little actual swapping. Then we have general credits, which is deferred payment, and then we have bank money or bank credit, which we use by check, and that does nine tenths of the business. And last, we have also a small amount of cash or currency issued by the Government. With a broken-down media-of-exchange machine, what is the Government going to do? If the banks do not and cannot function, what will the Government do? Just wait?

PAYMENT IN MONEY OF ADJUSTED-SERVICE CERTIFICATES

The question comes, What effect would there be on this country if the $2,200,000,000 were paid to the ex-service men on their adjusted-service certificates? It is asked, How would you raise the money? How are you raising the bonds that are being distributed now at the rate of a billion dollars a month to the people of this country?

BONDS AND CURRENCY EQUALLY BASED ON CREDIT OF NATION

You are raising them upon the credit of the Nation, on the faith that we have in the country, and its future taxing power. Currency is no different from bonds, except that currency is legal tender. It bears no interest. It builds up the broken-down media-of-exchange machine. Bonds deflate. Every time the Government sells a billion dollars of bonds it deflates the credit and currency available to business to the extent of a billion dollars.

PRINTING-PRESS BONDS AND PRINTING-PRESS MONEY

It is true we have been putting it back into circulation; but $2,200,000,000 in actual currency printed on the credit of this Government, just like the bonds are printed on the credit of the Government, on the same printing presses that the bonds are printed on, put out to these individuals, would go to every nook and corner of the country, wherever a soldier holds a certificate. It would go to them, and they would possess buying and paying power, and at least they would get to use it once before it drifted back into the bank, to be held by them so they can buy more Government bonds.

Mr. KVALE. Mr. Chairman, will the gentleman yield?

Mr. BUSBY. Yes.

Mr. KVALE. And the money thus issued would be added to the bank deposits eventually, which are now guaranteed in the smaller accounts?

Mr. BUSBY. That is true. Of course, I understand that this money could be deposited back into the banks, and if the banks were so minded it would stay there and they could hold that money until the Government sold them some more bonds and thereby fished it out of the bank to finance the expenditures of the Government on its program. But if the Government quits selling the banks bonds and puts out some of this currency and rebuilds the broken-down media-of-exchange machine, as it ought to do, then business will pick up, and it will not do so until then.

Mr. PATMAN. Will the gentleman yield?

Mr. BUSBY. I yield.

Mr. PATMAN. I desire to commend the gentleman for his wonderful presentation in favor of H.R. 1, and wish to invite the gentleman's attention to the fact that on tomorrow the Chairman of the Committee on Banking and Currency will endeavor to secure the passage of a bill that will permit Government bonds to be used for the next 2 or 3 years to secure the issuance of new money—Federal Reserve notes. Does the gentleman not think that is contrary to what he has just stated; that we should require those banks to loan their money to industry rather than to give them a good, safe market in Government bonds?

Mr. BUSBY. Perhaps the gentleman is entirely correct; but it would take too long to go into all the details of that, and I do not desire to undertake a discussion of it at this particular time.

Mr. RANDOLPH. Will the gentleman yield?

Mr. BUSBY. I yield.

Mr. RANDOLPH. The gentleman agrees that the administration, in attempting to put money into all parts of the country by its present program, has been partly successful?

Mr. BUSBY. I admit you can mortgage a farm and spend the mortgage money all over that farm. That is what we have been doing as a national policy; and under the circumstances as they existed in March 1933 it seems to have been the proper thing for us to do.

Mr. RANDOLPH. But the gentleman would like to go further and say that the payment of the adjusted-service compensation certificates would even be more effective than anything we have done?

Mr. BUSBY. I think it would, for this reason: We would not have to issue bonds under this bill and sell those bonds and take up a billion dollars of funds from the banks that ought to accommodate business for each billion of bonds put out before we were privileged to spend it. To issue this currency on the credit of the Government, we would not please the banker element in this country. They would begin to howl about inflation in Germany. Now, the man who has not read enough and does not understand the situation well enough to know that Germany's inflationary policy was deliberate, in order to free herself of internal and a portion of external debt, really ought not discuss the subject.

Mr. GRAY. Will the gentleman yield?

Mr. BUSBY. I yield.

Mr. GRAY. Would it not be possible to provide for the payment of the soldiers' bonus by issuing this money upon the gold standard?

Mr. BUSBY. Well, I am discussing this bill. I would not like to go into that phase of the question.

Mr. KVALE. Will the gentleman yield?

Mr. BUSBY. I yield.

Mr. KVALE. If those of us who believes as the gentleman does, in a controlled inflation, were as dishonest in our arguments as the opposition who cry about Germany, could we not show some of these people some of the unpaid checks on the closed banks that have been the result of that policy?

Mr. BUSBY. The gentleman is quite correct, but the gentleman understands the policy has had little consideration, particularly for the depositor, in any one of the 10,000 closed banks, with the same anxiety that they show toward Germany's collapse because of her inflationary policy. We have tried to work the bank depositor out in an indirect sort of a way by making loans to the conservator while the depositors' interests have dwindled, because there was not sufficient power in the conservator to sell the assets and repay in full.

GOVERNMENT SHOULD RESTORE THE MEDIA-OF-EXCHANGE MACHINE

Now, I would like to call attention to one or two other things. I say again that we cannot transact business in this country without a media-of-exchange machine; that the power of that machine depends on its volume and the velocity with which it moves; that it is the business of the National Government to see that that machine is efficient.

GOVERNMENT HAS NEVER MET ITS RESPONSIBILITY

This United States Government has never assumed its responsibility of supplying a medium of exchange for the business of this country.

BANKS OPERATE ONLY FOR PRIVATE PROFIT

It has left nine tenths of that duty to the banks which have gone into business for private profit. Those banks are concerned, and ought to be concerned, almost solely with making a profit for the men who set up the institutions. They never agreed with the Government that they would furnish a media-of-exchange machine, and they cannot do it in falling-price times.

NO PERSON CAN WITH LOGICAL ARGUMENT DEFEAT THE SOUNDNESS OF PAYING SOLDIERS' CERTIFICATES NOW WITH MONEY

I say to you there is no one here or in the Treasury who can come here and show us in a logical way that it is more unsound to issue this currency needed to pay the adjusted-service certificates, which would build up our media-of-exchange possibilities, than it is to continue issuing bonds, interest-bearing, tax-exempt securities, with a large added interest against this Government, to be met in the future by the taxpayers of this country. If we keep on deflating, if we continue to issue bonds and never have any medium of exchange or currency, we cannot ever expect to get out of the depression in which we find ourselves. Government spending now is the steam we are running on.

THE CHANGED ATTITUDE TOWARD THE SOLDIER

I remember when the war was on, when the ex-service man was being called to the front. Any business man would walk up and put his arm around the most humble of those boys in soldier uniform and pat him on the back and tell him all kinds of nice things. He would wish the soldier Godspeed, promise him the earth and the fullness thereof on his return after he had won the war and saved the world for democracy. What I do not like is when they came back home they could not find any of those fellows who wished them Godspeed, who were so in evidence when they were going away. We find those same fellows, but they are too busy counting their dollars and figuring profits. The soldier comes back and applies for his old job, and very likely he does not get it; and here, 10 or 15 years later, instead of patriots, we hear these same dollar changers calling them "bums" and all other unkind things.

POOR TREATMENT HAS BEEN ACCORDED THE EX-SERVICE MEN

I resent that kind of treatment that has been accorded the ex-service man. He has rarely, if ever, gotten any substantial legislation in this House or in Congress, except such as has been passed over the veto of a President and given to him by this body and the body at the other end of the Capitol. [Applause.] That is the way he got his adjusted-service certificate. That is the way he has gotten almost everything else. I am in this fight to fight. I never won a fight that I did not get into. I am not afraid of exercising my own responsibility. Let others exercise theirs, and let us do what we ought to do in good conscience and under our oaths, and let the consequences take care of themselves. [Applause.]

Mr. CARPENTER of Kansas. Will the gentleman yield?

Mr. BUSBY. I yield.

Mr. CARPENTER of Kansas. What does the gentleman say about the argument made by those opposed to the payment of the bonus, that they would be glad to support it if our Treasury could stand it?

Mr. BUSBY. It has not anything in the world to do with the Treasury. It will be the first step taken in a great while to loosen up the possibilities of the Treasury, if we will issue this currency, and pay it to settle the debt the country owes. You might as well say the Treasury cannot stand another billion of printing-press bonds and still another billion and another billion and still more billions of the same kind of printing-press bonds. The people are getting the money now while the banks get the interest-bearing deflating bonds, but the bonds and interest will come home to the people later. They will wish some of it had been money later instead of bonds—interest bearing and tax exempt.

Bond issues will not give the Treasury power; they bear us down with a burden of national debt.

Mr. PATMAN. Will the devaluation of the gold dollar amount to anything; will it help this country in any way unless we use that broadened gold base for the issuance of money?

Mr. BUSBY. With more than $7,000,000,000 of gold since the revaluation of the dollar, the Government could issue over $15,000,000,000 in currency and still have more than 40-percent gold base—and we have less than six billions in currency. We could issue $11,000,000,000 more of currency and still maintain over a 40-percent gold reserve. There is no sound reason under the sun why this $2,200,000,000 new money should not be issued to pay these service certificates—besides we need to do it to rebuild the broken-down media-of-exchange machine and reflate the currency back to what it should be.

Mr. SINCLAIR. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. BACON].

Mr. BACON. Mr. Chairman, I wish to take a few minutes to discuss the appropriation bill now under consideration, and I want to call to the attention of the committee the stupendous sum that is being spent this year for agriculture through the Department of Agriculture.

This bill carries a little over $59,000,000 for the Department of Agriculture, but in addition is a reappropriation of the sum of $831,000,000 plus for the A.A.A.; over $2,000,000 for the Federal Credit Association; over $6,000,000 permanent appropriations; special funds totaling over $2,000,000; over $500,000,000 given to the Department of Agriculture by the Public Works Administration for the usual functions of the Department; over $86,000,000 given to the Department of Agriculture by the C.C.C. in connection with forestry work which comes under that Department; and over $15,000,000 given to this Department by the C.W.A., again to supplement the ordinary appropriations. The total spent for agriculture this year is over $1,508,000,000.

These figures were all taken from the report of the committee. Of course, I am just as desirous of helping agriculture as anybody in this House, but I think this committee and the country should know the total being spent through this one Department this year.

We talk about balancing the Budget. I do not see how we can balance the Budget if we keep up this tremendous expenditure. I do not believe the stupendous sum of $1,508,000,000 plus can be spent through and for this one Department without extraordinary waste.

Mr. DONDERO. How does that compare with the Budget of last year for the same Department?

Mr. BACON. I have not those figures. Mr. Chairman, I ask unanimous consent to extend my remarks so I may answer the question raised by the gentleman from Michigan. I feel confident that we are spending over one half a billion more this year than last year.

Mr. McFARLANE. Mr. Chairman, reserving the right to object, will the gentleman yield for a question?

Mr. BACON. I yield.

Mr. McFARLANE. I wish the gentleman would also insert in the RECORD the amounts we have been doling out to the banks, corporations, and large financial institutions of Wall Street, and that crowd from the New England States that has been taking billions of dollars out of the Treasury. It seems to me the gentleman does not understand that the agricultural sections of the United States must have buying power if we are to trade with the industrial sections.

Mr. BACON. That is not a question; that is a speech.

The CHAIRMAN (Mr. BROWN of Kentucky). Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BACON. In answer to the question of the gentleman from Texas, the so-called "gifts" of the Reconstruction Finance Corporation to the banks have been in the form of loans, and a great many hundreds of millions of dollars of these loans have already been repaid. I think probably all of the loans will be repaid eventually. These huge sums allocated for agriculture will not be repaid. They are not in the form of loans, but are outright expenditures, call them subsidies if you will. As far as loans to New York City banks are concerned, I am informed that no such loans have been made. The gentleman from Texas speaks of "large financial institutions of Wall Street." I have no direct knowledge of the subject, but I am informed that not one of them has asked or received a loan from R.F.C. or any other agency of the Government. I represent a country district, not a New York City district. I believe that a few country banks in my district have received loans from the R.F.C. These loans are well secured and will be repaid. I agree with the gentleman of Texas that the buying power of agriculture must be restored. I am simply calling to the attention of the Committee that over $1,508,000,000 is a stupendous sum to aid one industry.

Mr. SANDLIN. Mr. Chairman, I yield 1 minute to the gentleman from Texas [Mr. TERRELL].

Mr. TERRELL of Texas. Mr. Chairman, I ask unanimous consent to revise and extend my remarks and to insert therein a copy of the House joint resolution I introduced last week.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. TERRELL of Texas. Mr. Chairman, on the 24th instant I introduced in the House a joint resolution to amend the Constitution so as to provide for the approval by the people of any declaration of war, unless the country is being actually invaded, and prohibiting profiteering and providing for the drafting of wealth in times of war and prohibiting the issuance of interest-bearing bonds.

I think the introduction of this resolution now is very timely, since rumors and threats of war in foreign countries are of daily occurrence, and especially since the House has recently passed a naval appropriation bill carrying more than a half billion dollars, including the amount transferred from the P.W.A. funds to the Navy Department. This is in addition to the annual Navy appropriation bill.

There is no necessity, in my judgment, for building up the Navy to treaty strength, except to demonstrate to other countries that we can build as large navies as they can and to dare them to increase their navies.

No nation is going to invade this country and fight us on our own shores, and we should not invade any other country; and that is why I want the people to vote in favor of war before Congress can declare war, and then there will be no war unless this country is being invaded.

Should any foreign country declare war against us and start to invade us, the people will rise up en masse to defend the country, and no draft law will be necessary.

The people of this country who fight the wars and pay the costs of wars should be allowed to vote to authorize wars before war shall be declared by Congress.

Of course, I recognize that Congress can pass any law when the country is in war, whether it is legal or not, but the adoption of this amendment will obviate the necessity of violating the Constitution. This amendment still leaves in Congress the right to declare war if this country is being invaded but gives the people the right to declare war before we shall invade a foreign country. It prohibits profiteering and drafts the wealth to prosecute the wars, which is sound public policy. It is a war-time measure.

If the Judiciary Committee will give me a hearing on this amendment, I will offer a peace-time paragraph clearly defining section 8 of article 1, the general-welfare clause, to read as follows:

> Congress shall have no power to levy taxes and make appropriations except for the purposes named in the 17 specific grants of power contained in section 8 of article 1 of the Constitution.

It was thought that the tenth amendment, reading as follows—

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people—

would limit the powers of Congress to the delegated functions, but Congress persists in its right to pass any act which it believes to be for the general welfare of the individual States and the individual citizens of the States, and it requires the clarifying amendment I have suggested to cure this situation.

I may be called a pacifist in opposing a large navy and because I want the people to vote in favor of war before war is declared. If so, I plead guilty to the charge, because I am absolutely opposed to engaging in any war unless this country is being invaded.

If this country had accepted the advice of two great southern statesmen, Alexander H. Stephens and Sam Houston, we might have avoided the great Civil War which drenched the country in the best blood of the North and South. If we had taken the advice of the Great Commoner, William Jennings Bryan, we could have escaped the terrors of the World War, that holocaust which killed and maimed millions of innocent people and financially wrecked the civilized world.

If the entrance into the World War had been left to a vote of the people, our soldier boys would never have crossed the ocean to engage in a foreign war to be shot down and die in foreign lands, or to be brought home maimed and crippled for life to receive the unfair treatment they are now being accorded. This is why I am in favor of restoring the compensation of the World War veterans and the Spanish-American veterans, and in favor of paying the soldiers' adjusted compensation.

It may be contended that we could not have avoided the war against Germany, because she sunk a ship carrying American citizens. This is no excuse, for our citizens had no business in the war zone, where mines were planted and submarines roamed the seas.

Secretary Bryan warned Americans to keep out of the war zone and let the other countries fight this war, but his advice was not heeded by the administration and the profiteers, so he was compelled to resign as Secretary of State in order to retain his self-respect.

Germany was fighting for her life and American profiteers were selling munitions of war to her enemies, which are contraband of war, and under the rules of war Germany had a right to destroy all war material carried to her enemies, even though some of the persons on the ship may not be citizens of the countries which were engaged in war against her.

It must be remembered that England captured ships carrying our cotton and other products to neutral countries in order to keep these products from reaching Germany. It is true she paid for them, but England would not allow us to sell to Germany before we entered the war, so we did not enjoy the freedom of the seas any time during the war, and did not declare war against England. I am pro-English and did not want Germany to win the war, but I want the truth told about the war.

President Wilson was elected in 1916 because he had kept the country out of war, and in the next month after he was inaugurated we were plunged into war across the ocean—for what purpose, future history will reveal.

When war passions are over and a new generation comes upon the scene of action, and a true history of this war is written in the light of facts heretofore hidden from the public, it will be shown that the real cause of the war was not the murder of some little prince or potentate in an obscure country of Europe but that it had its root and origin in the war of 1870, when Louis Napoleon of France was overthrown and the Provinces of Alsace and Lorraine were added to the German territory and France was required to pay an indemnity of $1,000,000,000 in gold.

As an underlying and primary cause of England and the United States getting into this war, it must be noted that

Germany, through her scientific, economic, and industrial development, was fast challenging the supremacy of England on the seven seas, and if anybody thinks that England is not good at diplomacy, he has another think coming, and now was the time, of all times, for her to strike a death blow at her rival who challenged her supremacy on the seas, so the die was cast, and England entered the war.

How about the United States! The war profiteers were selling millions of dollars' worth of goods to the Allies, and the big bankers began lending millions of dollars in cold cash to England and France and to the other allies to prosecute the war.

It soon developed that the Allies might be defeated by Germany and the big bankers and munition makers might lose the billions they had bet on the Allies, and something must be done to save the American bankers and munition makers.

So propaganda was at once spread over the country through the big subsidized papers to incite the people to war, and the claim was made that we had a right to the seas on which to carry our commerce, and it would be cowardice to take our ships out of the war zone, where we had a right to go, and soon Congress was worked up to a white heat in favor of war, and those who did not favor war were branded as cowards and traitors, and some were put in prison because they continued to oppose the war as unjust and unnecessary.

I believed at that time that the war was unnecessary, and I still believe it, for I have never seen any evidence that Germany would have invaded this country, if she defeated the Allies, and I am convinced that we were brought into the war to save the billions of dollars loaned to the Allies, and we spent billions to prosecute the war, and loaned other billions to our allies, and sacrificed thousands of lives and maimed other thousands—the flower of our young manhood—and got nothing in return but a burdensome debt that is bankrupting the country and the hatred of the countries that we helped. This is the inevitable result of war, and I shall always oppose war unless our country is invaded.

In regard to foreign debts which the gentleman from Pennsylvania [Mr. McFADDEN] discussed a few days ago very ably, I will say that his plan of trading them for a few islands in the sea is probably better than nothing. It is like Hambone when he said, "Shucks, I'd rather have half of something than all of nothing." While I would not object to having a few islands for coaling stations and naval bases, they are scarcely worth half of anything.

Since we cannot collect these foreign debts without war, which would cost more than the debts, I believe that these debts should be exchanged for trade concessions that would give us a market for our surplus products.

I thought during last session that the President would ask Congress to authorize him to make trade agreements with these debtor countries, authorizing him to remit a certain percent of the debts in lieu of certain purchases of our products. I would be willing to scale those debts as much as 25 percent for trade concessions. For example, whenever they purchase $100,000 worth of goods from us, their debt would be reduced $25,000. By this method we might revive our foreign trade and regain the friendship of those countries.

If this authority had been given the President at the special session, we would now be ready to approve or disapprove the agreements, and could proceed along definite lines.

In regard to foreign possessions, I believe that all our island possessions are a liability and not an asset. The Philippine Islands, Cuba, Puerto Rico, and other islands acquired at the close of the Spanish-American War increase our chances of becoming involved in foreign wars. Cuba has been given her independence; and if it were not for American sugar interests, we would not have any trouble in that island, but wherever the American dollar goes the Government is asked to protect that dollar. In fact, American diplomacy in the past has been aptly styled "dollar diplomacy", because the investor spends $1 and the Government spends $2 to get it back.

We should never have acquired the Philippine Islands; and if I had my way, they would be freed tomorrow, without any strings to them.

Japan wants those islands; and if she attempts to seize them, which she would do if she was not afraid of war with this country, it would force us into war in the Orient, where we would be at a great disadvantage, being so far from our base of operations and so near Japan. We should free the Philippines at the earliest possible date and thereby greatly lessen dangers of war.

Admiral Richard E. Byrd claims to have discovered an iceberg called "Little America" somewhere in the Antarctic Ocean, and England claims this iceberg by right of previous discovery, and England has never lost a battle in diplomacy, and she is certain to secure this iceberg if the question of ownership is submitted to arbitration, and we will probably have to go to war to establish our rights to this iceberg, as we have been more successful with England in war than in diplomacy.

I favor letting this iceberg alone and risk the chances of its floating towards the Equator, where it will melt, and we will have nothing to fight about.

Let us paraphrase the language of Charles C. Pinkney, "Millions for defense but not one cent for tribute", and make it read "Millions for defense but not one cent for aggression."

Let us not forget Washington's Farewell Address and the maxims contained in Thomas Jefferson's famous 15-minute inaugural address, "Peace, commerce, and honest friendship with all nations; entangling alliances with none."

This policy will keep us out of future wars, while the big navies and fighting airplanes may get us into war. [Applause.]

(The House joint resolution referred to by Mr. TERRELL of Texas follows:)

House Joint Resolution 283

Joint resolution proposing an amendment to the Constitution of the United States providing for approval by the people of declarations of war when the United States is not invaded, and prohibiting profiteering and providing for the drafting of wealth in time of war

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three fourths of the several States:

"ARTICLE —

"SECTION 1. Congress shall not have power to declare war against any foreign country or countries, except when the United States is actually being invaded by such country or countries, unless such declaration of war is approved by a vote of the qualified electors in the different States, at an election called for that purpose.

"SEC. 2. Before Congress shall declare war against any country, unless the United States is actually being invaded, Congress shall enact a resolution to be approved by the President, requesting the governor of each State to call an election at a date to be fixed in the resolution, giving the qualified electors of each State an opportunity to express themselves on the subject of war, and all ballots shall have printed or written on them the words 'For war' against _____; 'Against war' against _____. The returns of the
(Insert name of country) (Insert name of country)
election shall be sent by the returning officers to the governors of each State and tabulated by the governor and sent to the Secretary of State of the United States. If a majority of all the votes cast are in favor of war, then Congress shall have the power to declare war.

"SEC. 3. In case war is declared by Congress, the wealth of the country shall be drafted through such tax laws as Congress may enact to prosecute the war, and such war taxes may be supplemented by the issuance of Treasury notes without interest, redeemable at the option of the Government. No interest-bearing bonds shall be issued to prosecute the war.

"SEC. 4. No profit shall be made out of the Government by any person or corporation from the sale of munitions or other implements of war, but all munitions or other necessary war materials shall be sold at actual cost, and the Congress shall enact necessary legislation to ascertain actual cost of all munitions and other war supplies sold to the Government."

Mr. THURSTON. Mr. Chairman, I yield 10 minutes to the gentleman from Minnesota [Mr. KVALE].

Mr. KVALE. Mr. Chairman, for some time I have been tempted to address this body on a subject which to me seems of vast importance. The announcement of the new administration policy to supplant that of the C.W.A., which was carried in all the papers late yesterday and again today, crystallized this temptation, with the result that I want to inflict some of my views upon this group this afternoon.

Preliminary to that and as a sort of text, I ask unanimous consent, Mr. Chairman, to have the Clerk read in my time an editorial from the Philadelphia Record of February 23 last.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

The Clerk read as follows:

[From the Philadelphia Record, Feb. 23, 1934]

LET'S FIGHT THE DEPRESSION AS WE FOUGHT THE WAR

"Knock him out!"

The crowd roars. Thrilled one moment, anxious the next, it watches the fight. One combatant is groggy; the other overcautious.

Not a time for pulling punches. Not a time for hesitation.

It's the moment for the big push, the final blow. With the foe weakest, it's the time to clinch victory.

That "will to win" is the spirit abroad today in President Roosevelt's finish fight against the depression.

And it is sharply reflected in this sudden revolt of Congress—first on the bonus, now on the Economy Act.

Alarmed by the conservative trend of recent administration policies, Congress senses the popular demand for following through—and not pulling back with victory in sight.

This trend is deeply significant, for two reasons:

First, it stems far beyond political influences, going deep into the roots of our economic order—to homes with larders and coal bins bare, to men with pocketbooks empty. It is the reflection of the public need and public demand for increased purchasing power.

Second, there is the question of consistency. Philosophers may regard consistency as "the hobgoblin of small minds." But thinking citizens, who see the Government call upon private industry to increase wages and cut hours, cannot comprehend the picture of the Government itself following the opposite course—through the Economy Act.

The Economy Act, indeed, has been the major false note of administration policy from the start. And its economies have been false economies.

The Roosevelt administration has made great strides. Our outlook today is the most hopeful since 1929.

But the President himself has warned that the fight isn't over. The enemy is groggy—but not out.

That's why Congress is restive. That's why support for the bonus and pay-cut restoration transcends party lines.

That's why the Record hopes Mr. Roosevelt will reverse the trend of some of his recent policies.

Instead of abandoning C.W.A., now is the time to augment it.

Instead of disbanding the P.W.A. field organizations, now is the time to expand their work. Instead of saving at the expense of Federal workers and veterans, their plight emphasizes that creation of new buying power is more necessary than ever before.

Most of the benefits to date, most of the gains to business and industry, are directly traceable to the influence of C.W.A. and other programs aimed to revive buying power.

Why pull punches with victory in sight? Why discard C.W.A. just when its effects are beginning to count?

Let us not forget that when C.W.A. is through, more than 10,000,000 men will be unemployed. About 25 percent of the nation's workers.

Can we call that recovery?

Even if carloadings do shoot upward? Even if retail trade continues to rise? Even if stocks boom and the bond market is steadier?

When 25 percent of our families lack buying power it can mean only one thing—that our economic machine will, at best, run 25 percent below its efficient speed.

And that this enormous enforced idleness will constantly act as a brake, until it slows down the machine again as it did 4 years ago.

Until these 10,000,000 families have buying power, shopkeepers cannot sell to them, industry cannot manufacture for them, and men cannot be hired to make the goods which those people ought to be permitted to consume.

So, with all the cheering signs on the horizon, it is no time to let up on the fight. It is certainly no time to flood the Nation with 4,000,000 jobless men.

Rather, it is the time to fight harder than ever, time for the big push, when all our resources and energies should be bent to making depression take the count.

That is why Congress has taken the bit in its teeth to vote the bonus and restoration of the Federal pay cuts.

To help create the buying power which is our one winning punch.

Mr. KVALE. Mr. Chairman, on January 19, 1934, I received an informative letter from N. W. Ellsberg, commissioner of highways of Minnesota, that aroused my interest. I intend to print part of it in my extension of remarks. He described the work that had been done under the Public Works and its offspring the Civil Works programs as the result of grants of money out of last year's funds. I should rather say, of funds available this current fiscal year. Minnesota's share of the fund was some $10,000,000. It has resulted in the employment of more than 13,000 men and it resulted in other benefits. I believe all of you are familiar with the picture.

Studying the Budget message, and from other sources, I was aware that the Public Works funds for the next fiscal year might be pinched down to $500,000,000—that is, for the coming fiscal year. While this in itself is a tremendous sum, I am sure the Members realize that it is small in comparison with what was set up for the current fiscal year and which it was implied at the time this program was inaugurated, would be carried on during a 2- or 3-year period.

I want you to remember that last year, even with the huge outlay for all public works, we saw that $400,000,000 was specifically earmarked for highway purposes—and I believe Minnesota's situation will be found to be duplicated in most of the States. Legislation is pending providing for the matching of funds, and I want to stress the fact that it will not mean a thing to my State, for the reason that reduced license fees and the natural decrease in the consumption of gasoline have shrunk our fund to the point where we do not have the money available more than to meet the fixed charges and the actual bare necessities of operating our State office.

Let us look at the entire picture and try to realize what it will mean to the whole recovery program if this basic, this essential, this vital public-works feature of the recovery program, which we all realize is a manifold program that includes the A.A.A. and the other arms that together are reaching down to pluck us from disaster, is pinched off now so prematurely. Read the editorial I have laid before you. Try to absorb its convincing message. I feel that continuation of the Public Works program can safely be considered the all-important key to the entire recovery structure. I cannot understand the nature or the character of the advice or the motives of the advisors who have now apparently shunted the President from the path he set out upon.

If this program was right last year, it is right this year. If there was need last year, that need is now accentuated. If our policy was justified last year, it cries to the skies for approval today.

I fear the consequences of the entire program, and I believe that the administration is wrongly advised, if they believe we are sufficiently on the road to recovery to take this terrible risk.

I have reason to think that it is going to be the administration's policy to let the thing lie in the lap of the gods. If there are not enough protests from the elected Membership of the House and of the Senate, we will find the Appropriations Committee coming in one of these bright days with a Public Works bill carrying a maximum of $500,000,000 to be made available for these purposes, which virtually means that the entire program is abruptly and cruelly abandoned. I should like to explain this in further detail, but I have not the time; and for that reason, Mr. Chairman, I ask unanimous consent to extend my remarks upon this subject so that some added thoughts will appear in the RECORD to complete the picture as I see it.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. KVALE. I ask unanimous consent, Mr. Chairman, to include as a part of my remarks an article which I believe has come to the desk of every Member—and they may judge for themselves as to its merit—entitled "Is Security

Worth $20,000,000,000 ", by Edward A. Filene, which appeared in the Forum and Century for March 1934. His name is rather well known to us all.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. KVALE. Now, Mr. Chairman, let me stress the fact that I talked this matter over with the Commissioner of the Bureau of Public Roads. He has charts, statistics, and data that will satisfy the most studious Member of this body of the necessity for continuing this highway employment work. I have talked it over with the Administrator of Public Works, who is the Secretary of the Interior. He is powerless to do anything in the matter, his task being merely to advise, recommend, and to administer the terrific duty assigned to him as Administrator of the fund and the operations thereunder. I have taken the matter up with the White House in a plea to expand this program and continue it in operation for the good of the entire country, regardless of politics, geography, or other like considerations.

I have talked to Senators in the other body who have been interested in these proposals, and among all whom I have named I found an understanding of the situation but a paralyzing inertia, and my sole purpose in taking the floor today is to plead with my colleagues to help dislodge this subject from its helpless situation. In a little while a bill will come before us. The administration still has this entire subject matter before it; the policy is still in the formative stage as far as any public pronouncement is concerned. If we do not bestir ourselves, we may find that a relatively small and pitifully inadequate sum is recommended. Then amendment will be far more difficult than now. Let us not wait until a small Public Works program is offered, perhaps under legislative conditions that preclude debate, when we find ourselves helpless to debate or act. Let us file our protests and demands now, I plead with you. If the country had the facts in our possession, it would know that we must continue our present activities and follow the President's brave and bold policy as carried out during the present fiscal year.

Mr. Chairman, I yield back the balance of my time. [Applause.]

Mr. Chairman, under leave to extend my remarks, I amplify my original statement by adding certain extracts from the letter from Mr. Elsberg, for the reason that conditions in my own State will undoubtedly be duplicated in many other States, and my colleagues and their constituents can properly be advised of what is about to happen to them unless there is authorized some continuation of the present arrangement. I might add, by way of remainder, that the fund which he describes was our proportionate share of the $400,000,000 which was specifically ear-marked in the bill last year for allocation to the several States for highway purposes, and which was an outright grant.

This year, in contrast, there is planned a maximum, as near as we can discover, of $500,000,000, about a sixth, roughly, of what was available last year. Not a cent is proposed to be set aside definitely for highway work. More than $200,000,000 is out of the picture before it is painted, in order to complete projects inaugurated this year. Thus, we have about a tenth of what we had last year—0.1 roughly, $300,000,000 as against $3,000,000,000.

That is the administration plan, as nearly as can be discovered. All is vague and uncertain. No one knows or will definitely state what is in the minds of the advisers. I hope the analysis is incorrect, but I feel it is correct or I should not be making this earnest appeal. I truly believe it rests with us. If we make the demand, and make it now, the funds, I hope, may be forthcoming to continue a courageous policy that had done much to guide our straying and wandering feet back upon the proper roadway to recovery and security. If we totter now, we risk the downward plunge, with the added pity of having wasted the vast funds already spent for this very purpose.

This is Minnesota's picture as Commissioner Elsberg sees it:

STATE OF MINNESOTA,
DEPARTMENT OF HIGHWAYS,
St. Paul, Minn., January 19, 1934.

Re Federal-aid allotment, State of Minnesota.
Hon. PAUL JOHN KVALE,
House of Representatives, Washington, D.C.

DEAR MR. KVALE: I know that you have first-hand information relative to the conditions existing in our State, but wish to call your attention to the need of continuing the road-construction program, which, I am sure you will agree with me, provides the most practical means of taking care of our unemployed.

Last year this State was fortunate in receiving an outright grant of $10,656,000 from the Government for road-construction purposes, and while this money was not available until late in the season, I feel quite confident that we made real progress in lining up work to take advantage of the Government's offer. Due to the late start, and considering the impossibility of carrying on any large amount of work during the winter months, we still have some of these funds available for work which will be started next spring. However, all such funds now remaining to our credit will be exhausted by the middle of the summer, which means that if we are not able to secure another appropriation of a like amount there will be approximately 13,000 men turned back to relief agencies for support.

The employment situation in Minnesota has improved considerably, due to the work being put under way by the various governmental agencies, but it must be remembered that the men so employed were entirely outside of those engaged in road construction. A survey made about a year ago by the State Industrial Commission showed that 630,000 persons, which would represent approximately 150,000 families, in this State were without means of support. Since the time this survey was made we have had a very serious drought condition in the western and central parts of the State, and to this list now must be added the farmers and their families who are on county relief on account of these adverse conditions.

From the latest available information I find that 154,000 persons have been registered with the United States reemployment agencies, and the set-up here for the Civil Works Administration provides for the employment of approximately 80,000, which only takes care of about 50 percent of the registered unemployed. Outside of the Civil Works Administration we have in our construction and maintenance operations employed 13,000 men, and considering the fact that even though these men in the common labor class are paid on the basis of 55 cents per hour for a 30-hour week, their earning capacity was limited to $16.50 per week. This does not permit them to lay any money aside for the time that they would be out of work. With this end in view it can readily be seen that should it be necessary to close down road construction operations the middle of next summer, which will be the case unless we are able to secure an allotment at least as large as that received in 1933, these 13,000 men and their families will become charges of the local relief agencies.

No doubt by this time your attention has been called to the Hayden bill, which I understand was to be introduced shortly after the 1st of January. One of the requirements of this bill is that the States meet one half of their allotment for the years 1935 and 1936. Our estimated apportionment out of the allotment would be $3,500,000, and in order to avail ourselves of it we would have to, during each of these 2 years, provide $1,750,000 out of State funds.

As far as Minnesota is concerned enactment of the Hayden bill into a law would be of no advantage to us, for due to reduction in the motor vehicle tax by the last session of the legislature and the natural reduction in gasoline consumption, due to conditions existing, we will only have enough funds to take care of set obligations. We anticipate that we will receive approximately $12,000,000 for the year 1934, $5,000,000 of which must be used for our sinking fund and other fixed charges, $5,000,000 for maintenance operations, and $1,300,000 for payment of right-of-way which was secured in the year 1933 in order to carry on the Federal work under the 1933 allotment, for, as you know, none of this money can be used in the acquisition of right-of-way. In order for us to advance our program and get as much work under way as possible, it was necessary for us to go out and buy this right-of-way, depending on our 1934 funds to take care of it.

Outside of these main items we have other set obligations which leaves us practically no money available for construction purposes with State funds, and no possibility of our meeting Federal funds under the requirements of the Hayden bill. I feel quite confident you will agree with me that road construction lends itself to the relief of our unemployed labor, and provides a permanent benefit to the State and its citizens.

It is possible that if we are fortunate in securing a good crop this season conditions here will improve; but, personally, I am rather doubtful that any upward movement will be made until next fall. This makes it imperative, due to our own financial conditions, that Minnesota receive another grant of Federal aid, at least equal to that received in 1933, so as to permit us to continue road construction during the entire working season, thereby keeping 13,000 to 14,000 men off of local relief rolls and at the same time obtaining, as before stated, improvements which will be of lasting benefit to our State.

Yours very truly,

DEPARTMENT OF HIGHWAYS,
N. W. ELSBERG,
Commissioner of Highways.

Now, a concluding word. Just this morning, in commenting on the administration's newly-announced policy regarding substiution for the C.W.A. program—which precipitated these remarks—a noted writer, Robert S. Allen, had this to say:

The effect on both the C.W.A. and direct relief is obvious. Both will be pared to the bone.

In taking this momentous step—a sharp reversal of his previous liberal relief policy—the President was motivated by four factors:

First, and one subject to serious challenge, that economic conditions can be expected to improve sufficiently in the coming months to absorb a large proportion of unemployed now on C.W.A. and direct relief rolls.

Second, and no less challengable, that there is enough distinction between unemployed and needy unemployed to warrant an appreciable shutting down of aid.

Third, a plan to put relief to needy in rural areas on a different basis from that to needy in urban districts, thus making further savings.

Fourth, a plan to take stranded populations, that is, workers such as miners living in single industry communities where the industry has ceased to exist, and transplant them to subsistence farms, or other areas, so they may once again become self-supporting.

I concur in his misgivings. And I happen to be deeply concerned because my own people are trying with what courage they can summon to resist the deadening and awful results of drought. I know Allen is right when he questions the judgment and information that is responsible for restricting this work at this time.

But it only serves to drive home what I have been striving today to impress upon my colleagues, and that is, that if there has been any merit whatever in our recovery program to date, if there has been any consistency in it, if there has been any harmony in the combined effort to pull out of the darkness and into the light—and I believe with all my heart that there has been, despite delays and disappointments and betrayals—then we must continue along that road, believing it to be the right road, and working consistently and confidently toward the goal we have all been seeking. And that message can be brought in better and more forceful words than mine by having printed, with the earnest exhortation for careful reading, an article which I have been granted consent to add as part of my remarks. It follows:

[From the Forum and Century, March 1934]

IS SECURITY WORTH $20,000,000,000?

By Edward A. Filene

The editor of the Forum asked me how I felt about the "chorus of dismay" which greeted the President's message on the Budget.

I liked it. It made this drama of recovery almost perfect. It was just the touch that was needed to make us all aware of the real difference between the new order and the old, especially the financial difference.

It was not a chorus of criticism. There was no general rising to state that this and that figure was obviously too large, and that the project contemplated could be completed for a much lower sum. There was no hint of the pork barrel. It was just a chorus of dismay that we as a nation should seize upon this, of all times, to take on such a staggering load of debt.

The keynote of the chorus was, "$10,000,000,000!"

But the ten billion, staggering as the sum may be, referred to only 1 year's Budget. The total cost of recovery, under the President's program, has been estimated by some as approximately double that amount.

"A $7,000,000,000 deficit for the coming fiscal year!"

"A great additional deficit in 1935!"

"A total national debt of more than thirty billion—greater than our debt at the close of the World War, including all that we borrowed from our own people to lend to our Allies!"

"So the new deal has come to this!"

Thus went the lines of the dismal chant. But it was not a Wall Street chant. It was not a mere bankers' chant. It was the chant of the old order—a grand recessional—and every American who had been inclined to welcome the new order without saying good-bye to the old must have been impressed.

Growing up, after all, is pretty serious business, and it is quite as serious for a civilization as it is for an individual. If we could only take our childhood along with us!—but we can't. Many of us, however, had expected to go on into the new deal without giving up our childish notions of finance. Now, it seems, we must choose whether to grow up or not; for the new deal most assuredly has come to this.

II

The new order must be financed. The necessity can no longer be dodged. The question before the house is, Is the enterprise worth the necessary investment?

To make the issue clear, let us admit that the new deal may cost $20,000,000,000. That's a lot of money, and we surely should know, before we pay it out, exactly what it is in which we are investing. Let us compare it, then, with some of our previous investments.

Take the World War, for instance. It has cost America something more than $40,000,000,000, and we are still paying and will be paying for it for many decades to come. How much did we make out of it? How much did we hope to make out of it? Even if the World War had gone more smoothly than it did, what was the likelihood of its paying dividends?

It may be answered that we never went into the World War with any such thought in our minds. I know it. Collectively we had sense enough to know that war could not produce any wealth, and that it must, in fact, leave us collectively poorer than we had been before—unless by some chance we could speed our machinery of production so that we could produce, as we went along, as much as the war, plus our normal consumption, would consume. Nevertheless, while we were quite sure that the war would leave us collectively poorer, each of us individually expected to draw interest on whatever money we contributed toward financing the war. And that expectation was perfectly consistent with our whole childish theory of finance.

It is all beside the point to blame our erstwhile financial leaders for holding such theories. They were our theories; and these financial leaders were our financial leaders because they did hold them. If they had believed in a different theory of finance, we would not have entrusted our money to their care, and they would never have become our financial leaders. It was their theory and ours that loans are rendered secure not by the way in which the money loaned is used but by some guaranty which the borrower is asked to give.

In their eyes and in ours these war loans were the safest possible loans, because they were guaranteed by the I O U's of established governments. That such a war must result in disestablishing many such governments was, in their eyes and in ours, totally irrelevant.

It happened that our own Government was able to ride the storm, and our own Liberty bonds remained good—to those who held them. It might be well to remember, however, just how this happened. It was not alone because of our greater total wealth and our lesser participation in the war, but because, while the war was on, our American industries were coordinated under the war boards, according to a program which provided for universal employment at higher wages than American workers had ever received before.

Had we paid lower wages, as so many European nations did, we must have had less buying, less business prosperity, and less ability to meet the costs of the war. It must not be forgotten, however, that the only way in which our Government has been able to keep those Liberty bonds good has been through taxing all of us to pay interest to some of us who were able to keep the bonds. Collectively considered, there isn't much profit in that.

Comparing the President's Budget figures with the war figures can surely get us nowhere unless we consider the nature of the different enterprises. Assuming that recovery may cost America half as much as the war cost us, it must be conceded that recovery is, on the whole, rather more profitable than war. There is no particular point, then, in groaning at the mere size of the figures. The only relevant questions are: (1) Will the President's recovery program lead to recovery? (2) If so, is recovery worth such a large investment of capital? (3) Is there a better program to be considered as an alternative?

III

It is not the purpose of this article to prove that the President's program will lead to recovery. With the great majority of American business men I am convinced that it will; and if anyone is not yet convinced, it is probably because he has his mind on some special detail of the program and is unable to visualize the program as a whole. At any rate, I am now dealing, not with a criticism of the program but with the dismay of those who are dismayed at the thought of our spending $20,000,000,000 in these times for anything.

The program, it will be conceded, is for the purpose of creating prosperity, mainly through arranging that the masses everywhere be profitably employed, in industry, agriculture, or professional life, with a sufficient income to enable them to buy and to enjoy the wealth which we are now so abundantly able to produce.

How much is such an enterprise worth? There is only one possible answer when the question once comes home to us like that.

It is worth whatever it costs—that is all—provided ,of course, that the funds shall not be wasted. The administration, however, so far from insisting that each detail of its program be carried through unquestioningly, has repeatedly asked for constructive criticism. No one would be more pleased, we may be sure, than the President, if anyone can show him how recovery can be achieved with less expenditure. But that is not the theme of the chorus of dismay. That chorus has simply been chanting that we are poor and needy and already overburdened with debts; and that now the administration would have us assume still bigger obligations, still more burdens when taxes are already unendurable, and when we had hoped that the cost of government might come down.

That the operating costs of the existing Government have come down appreciably makes little impression upon us in such moods as this.

This extra cost, however, is obviously for recovery, and the fact must eventually come home to us. Shall we borrow money for recovery, or shall we not, when it is perfectly plain that we cannot recover unless we do? And if we do borrow money for recovery, shall we borrow enough to capitalize recovery? Or would it not be better, considering how shocking these figures are, to borrow some amount which won't be quite so shocking?

In other words, if we must build a bridge, and it would cost a staggering amount to build one clear across the river, wouldn't it be more reasonable and less radical to build one half way across? And shall we build one that will hold our weight or one that will hold, say, a reasonable part of the weight which we are bound to put upon it?

If we cannot raise the necessary amount, of course, we must abandon the project. There are alternatives. The new deal is not the only way of meeting our economic difficulties. Russia, Italy, and Germany have all found different ways. If any Americans prefer these alternatives to the President's recovery program, their objections to capitalizing his program can easily be understood. The chorus of dismay, however, was not composed of communists, fascists, and worshipers of Adolph Hitler.

Of course, when anyone suggests that America was in danger of violent social revolution, it is customary to say that such a thing, which generally occurred in other countries under similar conditions, was utterly unthinkable here. Yes; it may have been unthinkable by Americans in 1932. But it would not have been unthinkable in 1933 or 1934, unless some great national program had been advanced to end unemployment and to create prosperity. Incidentally, the course which America has already taken was unthinkable by Americans at the time that they elected President Roosevelt. Conditions then seemed intolerable to a great majority; nevertheless, 16,000,000 Americans still voted against any radical change. By March 4, however, the idea of not changing had become unthinkable. Our banks were all closed. Fifteen million Americans were unemployed. Our economic structure had collapsed. Something had to be done, and done in a hurry.

IV

There is, to be sure, one possible alternative now which did not exist a year ago. For a certain degree of prosperity has already returned; and we might conceivably let things slide until we go to smash again. In the meantime, something might happen which would tend to bring back temporary prosperity without our having to organize for permanent recovery.

It would be well to remember, however, that waiting for something to happen is rather costly, too. America waited for 3 years, not very long ago; and although the costs did not show up in the Budget, we must admit that the wait was expensive.

During those years, for instance, there were from five to fifteen million Americans out of work—which by no means represents the total of unemployment, because so many other millions were working part time and were, therefore, half or three quarters unemployed. But suppose we strike the average at 10,000,000—how much does a nation lose by having 10,000,000 unemployed for 3 years?

That would be hard to answer exactly, because it would depend so much upon what they would be doing if they were not unemployed. If they would be working by hand, of course, they would produce only a fraction of what they would produce if they were to work with modern power machinery under modern management. Some statisticians, in fact, would merely find their average wage when employed, multiply that by 10,000,000, and call the sum the daily loss. If the average wage was $4 a day, then the whole loss for 3 years of 300 working days each would amount to only $36,000,000,000.

But such figures represent a mere fraction of the loss. They take no account, for one thing, of what it cost to support these 10,000,000 unemployed and their families during those 3 years; and certainly the $4 paid in wages, if the figure was as low as that, did not represent the total value of their production. Our real loss, it seems to me, was the difference between nothing and the sum that these workers might have produced if organized under good modern American management, plus whatever they paid from their own savings during their unemployment, plus what was paid by public and private charity for their support, and plus certain other sums which must remain incalculable.

Untold thousands, for instance, were ruined, physically, mentally, or spiritually, by this ordeal. Other thousands were enlisted in gangdom, and learned to prey upon society, for what amount of booty we can never tell. Worst of all, perhaps, was the loss to coming generations because of the undernourishment and ill care of no one knows how many children, in spite of the heroic work of our relief and charitable organizations.

If we confine ourselves merely to the one item of what these unemployed did not produce, and which they could have produced had they been reasonably employed, the value of their production would surely have averaged $10 a day per worker, and the sum for 3 years is $90,000,000,000.

Collectively we lost that. Collectively we could have saved it—not, of course, by putting it in the bank, but by consuming it—that is, by putting it into our lives—if we had only had some national plan which provided for consumption by the masses of the things which the masses wanted and which, with modern machinery and under modern management, the masses were able to produce.

But we had no such plan; and we had, therefore, what we called "overproduction" instead. And our remedy for this overproduction was to wait for better times, incidentally losing $100,000,000 every day we waited.

To a considerable number of Americans this did not seem quite logical; but there was nothing apparently which they could do about it. Henry Ford might advise the public to spend and not to save; and if there were sufficient buying, many of us could see, there would be plenty of employment. But the movement, to be effective, had to be collective; and those who had money to spend, and wanted to spend it, were afraid to do so individually.

V

Now, however, everything is different. Now there is a national plan. Now there is a whole Nation agreeing to a Nation-wide recovery program, to the end that the masses shall be employed and at wages sufficient to enable themselves to buy enough, and thus to create a sufficient demand for goods, so that they will not lose their jobs.

Personally, I am certain that the new deal must go a bit further than most Americans seem to think necessary just yet. It seems to me that business, when it once fully grasps the nature of this deal, will insist that the workers receive not only adequate wages but definite assurance that they will not lose their jobs, to the end that these wages shall be freely spent. I am convinced, also, that business will generally insist not only on unemployment insurance but sickness and accident insurance, and adequate pensions or annuities for those too old or too young to work. For this problem which we have been calling "overproduction" is a mighty serious problem, and there are only two things which business can attempt to do about it.

We must either shut down production, as we recently did, with results which were not entirely satisfactory, or we must jack up consumption, by increasing mass buying power, which is the elemental principle of the new deal.

Those who have had a long acquaintance with American business men, I grant, assure me that they will never go so far as I have indicated—insisting that the masses shall have not only plenty of spending money but such economic security that they will be sure to spend it. But I, too, have had a long acquaintance with American business men. What's more, I have had a recent acquaintance with them; and if their attitude changes as much during the next year as it has in the one just past—well, you won't recognize them.

And when they once study these Budget figures in the light of the experience which they have so recently had, that chorus of dismay will turn into one of pleased surprise. For permanent prosperity is now the goal—and permanent prosperity to 125,000,000 people is surely worth an investment of $20,000,000,000—or about what it costs, in nonproduction, to keep 15,000,000 unemployed for four and a half months.

Mr. THURSTON. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, in the past few years a new system of marketing livestock has been developed in the Mississippi Valley. For a generation it was the custom of livestock producers and shippers to send their products to the great central livestock markets of that region; but because of the oppressive and unfair charges that have been made against the patrons of these markets, concentration yards have been established in many places throughout this section of the country in order to avoid the payment of these unwarranted charges.

I may say to the Members that when you ship a carload of cattle, hogs, or sheep, to one of these great livestock markets, you find a charge made against you for fire insurance, and for promoting the sale of meat; and if feed is purchased, an additional charge amounting to from 200 to 400 percent above the cost is made for the grain or the hay that is fed to your livestock. These practices have brought about a change in livestock marketing. I am sure that the livestock producers and shippers of this great region are desirous of maintaining the great central markets, hoping that competition will prevail so that they will have the opportunity to obtain the highest current price for their livestock.

Recently, at a hearing before the Agricultural Subcommittee of the Committee on Appropriations, this subject was dealt with at some length and, Mr. Chairman, I ask unanimous consent to revise and extend my remarks by including 2 pages of the hearings before that committee and 2 tables showing the average price of feed on farms and the excessive prices paid for corn and hay at five of the principal central markets in the United States. A comparison of the prices shown in the two tables, after a reasonable labor charge is allowed, substantiates this complaint.

A considerable portion of the livestock sold upon these markets is shipped by truck, and the probability of fire loss

is negligible, and it is unlikely that any substantial portion of the stock shipped by rail is endangered by fire. It would be interesting to know how much is collected for insurance and the amount paid as insurance premiums.

A few years ago those in charge of the operations of these markets stoutly objected to regulation by the Federal Government. Now they are urging the Government to ban or prohibit the selling of livestock at the concentration points, as they claim that their preserves are being threatened.

The concerns who operate these markets hold the solution of their complaints in their own hands. If they will abandon switching charges, sell grain at fair prices, charge commissions for sale of livestock upon value instead of head, eliminate fire insurance, meet publicity and other irritating charges, restore competition, these markets will enjoy the patronage of former years.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

The matter is as follows:

CHARGES MADE TO SHIPPERS

Mr. THURSTON. Does your Bureau authorize the commission houses to make a charge against the shipper for fire insurance, or to make a charge for fire insurance against the shipper who sends into the market livestock that under no circumstances could be burned?

Dr. MOHLER. Do you mean while the livestock is en route?

Mr. THURSTON. No. I mean where a shipper would have hogs hauled in by truck to the stockyards, and where the commission merchant lists as an expense an item of fire insurance that he would charge to the owner of the livestock. Have you gone into that, or do you permit such charges as that?

Dr. MOHLER. That is the practice.

Mr. THURSTON. What is the justification for it?

Dr. MOHLER. Because there have been a number of fires in the stockyards where animals were burned up or were lost by mixing. It is a very moderate charge. The maximum is 15 cents per carload at Omaha and only 7 cents per carload in Chicago, and at the Kansas City stockyards. At the latter markets the packers and traders pay an additional amount to bring the rate up to 15 cents per car. The rate on hogs by truck is on a headage basis, prorated in such a way that it averages about the same as on rail shipments. This insurance not only protects the owners from fire losses but also from mixing on account of fire while in the yards.

Mr. THURSTON. It would exceed the amount of the premium, however.

Dr. MOHLER. That is probably true. It is like a blanket insurance policy that the builder puts on his workmen. One of his workmen may break his leg, and he would receive compensation, although he may not have paid anything for it. We have our share of complaints about many things, but we have had only one complaint about the matter you refer to, and that is where a man paid 7 cents on a truckload of livestock. He complained and said he thought he was paying some sort of life insurance.

Mr. THURSTON. There is a charge made, or a fee assessed, for the cost of some propaganda in reference to the use of meat.

Dr. MOHLER. Yes, sir.

Mr. THURSTON. Do you authorize that?

Dr. MOHLER. No, sir; except with the consent of the man who is paying for it.

Mr. THURSTON. But he has never been asked whether he wants it, or not.

Dr. MOHLER. He does not have to pay it unless he wants to.

Mr. THURSTON. He has to write a letter in order to obtain a refund. Do you think that practice is justified?

Dr. MOHLER. It is entirely voluntary. If he objects to it, he does not have to pay it.

Mr. THURSTON. If you sell wheat or other grain, they do not put a charge in there for giving publicity to the use of wheat and other grain, do they?

Dr. MOHLER. No, sir. It is entirely voluntary on the part of the shipper; and if anybody objects, he does not have to pay it.

Mr. THURSTON. Do you not think it is an awfully small practice on the part of the Government to authorize those stockyard selling agencies to make those charges?

Dr. MOHLER. Do you know where that plan originated? The request for it came first from the livestock people themselves. It came from the Kansas Livestock Association, the American National Livestock Association, the National Wool Growers' Association, the National Swine Growers' Association, and various State stock growers' associations. The National Livestock and Meat Board was formed, which now consists of Charles Carey, as chairman; your friend Mr. Sykes, of Iowa; Joe Mercer, of Kansas; and 10 others representing producers, 2 representing packers, 3 representing marketing agencies, and 2 representing retailers.

Mr. THURSTON. Was it not done by the buying, packing, and shipping concerns?

Dr. MOHLER. I do not think it was the buyers and packers. In fact, the latter did not agree to the plan at the beginning, and the commission men hesitated to accept the burden of collecting the fees.

Mr. THURSTON. Has there been any showing made to your Bureau that any result has come from that?

Dr. MOHLER. The National Livestock and Meat Board is constantly assisting in extending to producers, consumers, and the trade, the findings in production, processing, and cooking procedure. Meat-cutting demonstrations, advertising campaigns, distributing recipe books, exhibits, radio programs are some of the means by which they aid in disseminating information about the value of meat in the diet. It has been especially useful in reaching the meat retailers, which form, of course, an important link between better production methods and more satisfactory selection and cooking of meat by consumers. It has sponsored the cause of cooperative meat research in the United States in many ways. What the Board asks is that the producers agree to pay one half the cost through that commission charge you mention, to be collected by the commission firms and turned over to the Meat Board, and that the packers pay the other half. At the beginning the stockman paid 10 cents per car, and the packers paid 10 cents. It was then increased to 15 cents a car each, and now each pays 25 cents a car. If the stockmen objects, then, so far as he is concerned, it cannot be collected any longer.

Mr. THURSTON. Why should the burden be placed on him to make the objection in order to get it back?

Dr. MOHLER. Because it originated with the stockmen themselves as represented by their organizations, and they are sharing indirectly in the benefits of this national program of meat promotion.

Mr. THURSTON. If you would send out a questionnaire to the men shipping livestock, in my judgment, you would find that 9 out of 10 do not want to pay that charge.

Dr. MOHLER. That may be.

Mr. THURSTON. Do you fix or supervise the prices charged for grain at these central markets?

Dr. MOHLER. Yes, sir; but that can be done legally only after a hearing has shown the facts.

Mr. THURSTON. I personally know of many cases where livestock shippers have been obliged to pay from 200 to 400 percent above the corn and grain prices charged in the same city; and I wonder if you could set out a table showing the average price charged for corn per bushel and hay per ton, at Chicago, Omaha, and some other central markets in the upper Mississippi Valley, and also showing what is the average charge for grain and hay in those markets. I should want a table opposite that showing the selling price of those commodities on the same dates in the same places. In other words, I want a statement showing what the farmer is selling those commodities for at the same time on the open market in Chicago and other central markets, and what the stockyards are charging for those commodities on the same dates. I should like to have that for 3 or 4 places covering the last 4 or 5 years.

Dr. MOHLER. Yes, sir; I will do that. You will find something along that line in last year's hearings. Last summer the price of corn was down as low as 50 cents per bushel in some of the stockyards. We did that by simply indicating that their prices were too high. We have no legal authority to fix the prices until we have held hearings; we cannot do it without hearings through any legal method. Since corn began to go up, they immediately went back to 90 cents, $1, and $1.10 per bushel. Of course, the farmer knows what corn is worth on the farm, and he also knows what a large increase he pays for it at the yards.

(The information referred to above is as follows:)

Average price of feed on farms

[1] Kind of hay not specified.

Mr. THURSTON. Mr. Chairman, I yield back the remainder of my time to the majority side.

Mr. SANDLIN. Mr. Chairman, I yield 5 minutes to the gentlewoman from Kansas [Mrs. McCARTHY].

Mrs. McCARTHY. Mr. Chairman, on page 31 in this appropriation bill appears an appropriation for dry-land agriculture. I am particularly interested in this item, as I have two of these agricultural experiment stations in my district, and I want to give you some idea of the kind of work they are doing.

The only possible objections that I can think of for not giving these appropriations at this time for dry-land agriculture are three. Some people may think there are too many of these agricultural experiment stations. They may think that some of these stations duplicate services rendered by others, or they may think that at this time, when we are trying to reduce the agricultural surplus, perhaps experiments and projects of this nature may tend to increase production.

May I say that none of these objections are founded on fact. In the first place, if you will look at a map, there might appear to be a great many stations in a small area, but the truth is that each one of these small stations serves millions of acres. For example, the Colby, Kans., station in my district serves an area of approximately 4,000,000 acres in 9 counties in northwest Kansas. In addition the same type of soil extends into Colorado and into Nebraska, so that this same silt loam is typical of the whole area, and there is more good farm land of the dry-land type in this area than in the area of any of the other experimental stations.

May I take up the question of duplication of service? It is true there is another station in my district not more than 130 miles away, but what are the conditions? We have found that many of the seeds that produce the best result at the station at Hays are not adaptable for use at the Colby station. We also found there is a difference in climatic conditions. The altitude at Colby is higher. Frost comes earlier at Colby, and some of the sorghums and grains that prosper at Hays do not thrive in the climate at Colby. Then there is the opposite condition, that some of the grains that are best for Colby do not thrive at Hays.

May I take up the question of corn at Colby? They have made wonderful experiments and progress in developing different types of corn, but the area around Hays station is not considered a corn country.

These stations are doing the type of work for which the Department of Agriculture was organized. Many of these projects are just in the process of development. It would be disastrous to discontinue or interrupt the work at this time, before the projects have been completed. These stations are responsible for the improved methods of farming used in that area. You probably know that at one time Kansas was included in what was known as the great American Desert, whereas now it is in the heart of the Wheat Belt of the Nation.

These improved methods I refer to include summer fallowing, rotation of crops, conservation of moisture, use of various kinds of fertilizer, and methods of preventing soil erosion.

Then instead of increasing production, the thing that is most important is that these farmers have learned that they can get greater production out of fewer acres and in this way reduce the cost of production. In other words, if the farmer takes these less adaptable, marginal lands out of production, then he does not drag his drills, his plows, and his combine over this additional acreage. This cuts down his expenditure, and then by summer fallowing and these improved methods he gets the same total yield that he formerly had from the entire farm. If we would sum up the greatest benefit, this would be it.

So there is no conflict between the present program of reducing agricultural surpluses and the kind of work that is being done in teaching intensive farming.

Mr. Chairman, the Federal Budget recently submitted to Congress contained no provision for the continuance after July 1 of the Division of Dry Land Agriculture of the United States Department of Agriculture. The omission of this item, which totals approximately $250,000, means that the extremely valuable experimental work conducted at 18 Federal dry-land farming projects throughout the Great Plains will be interrupted and perhaps abandoned after having been in continuous operation for as long as 30 years.

IMPORTANCE OF DRY-LAND FARMING PROJECTS THROUGH THE GREAT PLAINS REGION

At the beginning of dry land agricultural experiments the Great Plains region, now one of the most productive areas in the United States, was called the Great American Desert. Only a few years previous to the establishment of this experimental program, it was said that wheat would never be

grown west of the Mississippi River in any great quantity. Because of the peculiar weather and soil conditions of the Great Plains area the first efforts at wheat farming often met with disaster through lack of proper methods of conserving moisture and lack of knowledge of proper cultivation methods to prevent blowing.

The results of the tillage, rotation, fertilizer, and soil-moisture studies undertaken by the dry-land farming projects, the comprehensive nature of which required many years of investigation before definite conclusions could be reached, are largely responsible for the westward shift of wheat production, and it is because of the outstanding work of these stations that the Great Plains area has become the economically logical area for the production of wheat and various other crops produced in this area. The value of this work is increasingly evident to farmers, and the continuance of it is important to lend conclusiveness to the results obtained to date and to shed light upon the ever-increasing problems which continuously arise as the result of progressive changes in farming practices and the introduction of new and improved crops and machinery.

It is vitally important to note that the dry-land-farming projects have worked to correct the practice of extensive farming and promote intensive farming. In other words, it has been common in the Great Plains area, where a great amount of land is available, to farm as many acres as possible, giving little attention to yield, whereas the results of dry-land projects have definitely shown that the returns to the farmer would be greater if fewer acres were farmed but farmed with the most improved methods, obtaining thereby an economic advantage of increased yields per unit. Judicious application of the facts readily obtainable from these studies in better-farming methods have tended to improve the conditions of the farmer in general by permitting him to abandon his less productive marginal lands and to gain a more satisfactory livelihood from the better-adapted acreage.

One of the great evils of undirected development of the wheat industry in the Great Plains is the one-crop system. The dry-land-farming projects have done a great deal to correct the situation, and now have under progress many experiments which undoubtedly will result in further substitution of other crops in the wheat farmers' planting schedule. The value of rotation of crops has been ably demonstrated and has won the approval of a majority of the Great Plains farmers through the work carried on at these stations.

One of the most recent outstanding accomplishments was the development of the combine-type grain sorghum first developed in 1927. This crop can be planted and harvested with wheat machinery and has become very popular with wheat growers, as it offers an additional grain crop which enjoys a cash market and is ideal for feeding to livestock in the field. The recently expanded plantings of this new crop have done considerable to replace acres that would otherwise have gone into wheat to increase the surplus. As it is a new crop, the possibilities of it have not yet been fully realized and the development of proper rotations, most efficient methods of cultivation, and use of the proper varieties are only now being studied, and a discontinuance of the dry-land-farming projects will mean that the full benefits may be withheld from the farmer.

DISCONTINUANCE MEANS ABANDONMENT OF LARGE INVESTMENTS

Conducting this valuable work to its present point and at a point where promising future value has required an investment of considerable size, all of this would be a total and serious loss to Great Plains agriculture if the experiments are discontinued. Especially foolish and expensive would be the abandonment of this work, which, at the present time, is tending to demonstrate to farmers that it is economically more feasible to use superior methods on the best lands and to take the lesser adapted lands either out of production or to place them into other noncompetitive crops irrespective of allotment program. The development of crops for lands taken out of wheat is a most important problem at the present time, when we are trying to attain a balanced agriculture. It would seem to be a fantastically foolish move to destroy the most inexpensive and probably one of the most effective mechanisms we now possess for bringing about balance in agriculture. Farmers are even now complaining that the land they have taken out of wheat under the domestic-allotment plan is beginning to blow and cause damage to their reduced acreage.

During the depression years, before acreage production had become a possibility, the dry-land stations developed cheaper methods of production. The decrease in the cost of a bushel of wheat by 10 cents or more is equally as important as an increase in price of equal amount, and being a measurable factor and one that is in the power of the producer to use at will, the importance of research toward more efficient production cannot be overestimated.

Work of this nature becomes increasingly valuable with the accumulation of years of data and observation. One of the world's most outstanding examples of this fact is the tillage and rotation work of the Rothemsted Station which has been in existence in England for nearly 100 years. No Englishman would consider for a moment the abandonment of such historic work which annually becomes more valuable to agriculture because of its continuity.

In addition to their own work the dry-land-farming stations have been a most valuable point of contact for the farmer with the many lines of agricultural research carried on by the Department of Agriculture. Farmers have become acquainted with the experiments carried on and with the men in charge of the projects; and in addition to following closely the year-to-year results, they obtain a contact with the activities of the Department of Agriculture, which in itself will be worth the appropriation for the entire dry-land work.

In closing I wish to state that no single measure, aside from such major ones as the Agricultural Adjustment Act, has created such wide-spread comment among farmers as the discontinuance of this appropriation. I have received hundreds of letters from farmers of the Sixth District in Kansas, protesting any reduction in the scope of this work, and I have yet to receive a letter from any farmer approving of the discontinuance.

[Here the gavel fell.]

Mrs. McCARTHY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD and to include a statement on this subject previously made.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Kansas?

There was no objection.

Mr. SANDLIN. Mr. Chairman, I yield myself such time as I may use and ask unanimous consent to extend my remarks in the RECORD by including some tables prepared by the committee and data prepared by the bureau chiefs of the Department of Agriculture.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. SANDLIN. Mr. Chairman, I want to thank the other members of the subcommittee for their help in writing this bill and for their very courteous treatment of me in the preparation of the bill, as well as its consideration on the floor of the House. I also want to thank the very efficient clerk of the Subcommittee on Agriculture, Mr. Arthur Orr, whose aid in the preparation of these bills we are all familiar with. Mr. Orr has been here for some time and, as all the members of the committee know, the aid of such an efficient clerk is invaluable and without such aid it would be very difficult indeed, to prepare the bills in the time available.

The Department of Agriculture, for which this bill carries appropriations, constitutes undoubtedly the greatest research undertaking of all time.

It is not inappropriate that this should be so. If this Nation is to maintain its position as a leading world power, and if it wishes to enjoy the national security for which economic self-sufficiency is recognized as the outer defense, it must not neglect the great basic industry upon which the prosperity of every nation is dependent—that of agriculture.

Of agriculture, it was said by Rousseau that it is "the first and most respectable of all the arts"; by Edward Gibbon that it "is the foundation of manufactures"; and by Dr. Johnson that it is "the first and noblest science." William Blake, in King Edward the Third, characterized commerce as "the child of agriculture"; and Daniel Webster declared that "farmers are the foundations of civilization."

No one will dispute that in these modern times no nation can be truly great which depends solely upon agriculture. However, while an agricultural civilization of substantial character can exist independent of industry, there can be no industry without agriculture. First build up the agricultural community, and an industrial civilization may then be erected upon its foundations.

The eminence of this Nation in the family of world powers may be directly attributed to the fact that during the first century of its existence its energies were devoted primarily to the development of a broad foundation of agricultural supremacy, upon which it has during the past 50 years erected an enduring industrial superstructure.

Seventy-two years ago Congress, by the act approved May 15, 1862, created the Department of Agriculture and provided that its general design and duties—

> Shall be to acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture, in the most general and comprehensive sense of that word, and to procure, propagate, and distribute among the people new and valuable seeds and plants.

By the act approved February 25, 1863, Congress appropriated for the first year's expenses of operating the newly created Department of Agriculture the aggregate sum of $115,000. Of this sum $3,000 was for the salary of the head of the Department, then designated as the Commissioner of Agriculture; $2,000 was for the salary of the chief clerk; $20,000 was for investigations to test the practicability of cultivating and preparing flax and hemp as a substitute for cotton; and the remainder, $90,000, was in the form of a lump-sum appropriation for the following purposes:

> For the collection and compiling of agricultural statistics; for promoting agricultural and rural economy; and the procurement, propagation, and distribution of cuttings and seeds of new and useful varieties; and for the introduction and protection of insectiverous birds; and for the purpose of establishing a laboratory with the necessary apparatus for practical and scientific experiments in agricultural chemistry; and for paying the clerks and employees and contingent expenses necessary in said Department, $90,000; and $3,000 of which appropriation shall be for encouraging the culture of cotton and tobacco.

The foregoing recital, which has consumed less than 2 minutes of time, comprises the entire agricultural appropriation bill for the first year of the Department's existence. Within that brief paragraph it is not difficult to detect the embryonic forms of four of the important bureaus now existing in the Department, namely, the Bureau of Agricultural Economics, the Bureau of Plant Industry, the Bureau of Biological Survey, and the Bureau of Chemistry and Soils.

The sum total of $115,000 appropriated for the operation of the Department that year may be compared to the amount recommended in the accompanying bill, together with permanent appropriations, for those activities which are regarded as being primarily for the benefit of agriculture, of $35,049,149. The latter sum excludes the appropriations for road funds, for the Agricultural Adjustment Administration, and for the several activities in the bill which are of general public benefit and, therefore, not appropriate to use in the comparison. An enumeration of the activities for the general public benefit and the amounts appropriated for each may be found in table A, on page 2, of the report accompanying this bill.

In the span of 72 years, during which the appropriations for regular activities of the Department increased from $115,000 to $35,000,000, it may be noted that the population of the country increased from 31,000,000 to 123,000,000; the rural population increased from 26,000,000 to 54,000,000; the value of our foreign commerce, both imports and exports, rose from $687,000,000 to $6,904,000,000; the value of farm products increased from $1,958,000,000 to $11,385,000,000; the total national wealth from $16,160,000,000 to $320,804,000,000; and the ordinary expenses of the Government from $75,939,976—being the total of the appropriations for all purposes for the peace-time fiscal year 1860—to $3,811,216,261, estimated by the Budget as the ordinary expenditures for 1935.

It will thus be seen that the growth of the Department of Agriculture has been in keeping with the growth of the Nation.

The original Department, with its initial appropriation of only $115,000 and with probably less than 100 employees on its rolls, would be an insignificant and almost obscure item in the present establishment.

From its modest and humble origin the Department has expanded until today it covers every conceivable phase of agricultural activity. Its research program is universal in its scope, both as to subject matter and as to geographical extent. Upon the broad foundation of the Department's fundamental investigations, the Congress, through the endowment of land-grant colleges and of the experiment stations in connection with those colleges, has created a far-flung organization for agricultural research. There is, throughout the entire agricultural realm, probably no region with soil and climatic conditions differing materially from those of other areas where intelligent and well-coordinated research is not being carried on with a view of making directly applicable to the agriculture of each region the discoveries and improvements which the Department has made in the field of agricultural science.

In addition to the 51 central experiment stations in the States and Territories established and maintained under the provisions of the Hatch, Adams, and Purnell Acts, as amended, there are more than 300 field stations, which are branches of the main stations, engaged in those phases of the various investigations which are local in character and which are peculiar to the region served by the branch station.

The broad scope of these research undertakings is indicated by the fact that there are now under way approximately 7,000 separate and distinct investigations. These researches are carried on under the strict supervision of the Office of Experiment Stations in order that there may be no overlapping of work or duplication of effort.

The results of these investigations, when completed, are made available to the farmers interested in the respective problems and they constitute the broad and secure foundation upon which the supremacy of American agriculture has been built.

Without the technical knowledge acquired by the Department of Agriculture through its gigantic research program and made available to the farmers of the country through the far-flung Extension Service American agriculture could not survive the present world depression.

If the American farmer were to be put back to the basis of agricultural knowledge of 25 years ago and required to compete with the rest of the world operating on the basis of present-day knowledge, he would sink to the lowest known level of serfdom. In like manner, if agricultural research were brought today to an abrupt close in this country, with no corresponding cessation of such research in foreign countries, in the course of 25 years American agriculture would suffer total collapse and American industry would topple into ruin along with it.

What substantial and incontrovertible evidence exists that the millions of dollars expended annually in this country for agricultural research are paying dividends? The Bureau of Chemistry and Soils alone reports annual savings to the agricultural industry as a result of its investigations since 1920 of more than $95,000,000. The Bureau of Plant Industry is able to show definite annual savings of approximately $230,000,000. The Bureau of Animal Industry reports annual savings to the farmers, as a direct result of only a few of its projects, of more than $175,000,000.

It will thus be seen that, for these three bureaus alone, the annual dividends to the American farmer from their investigations and researches, as reflected by direct savings which can be definitely estimated, is more than $400,000,000. The bill now before the House carries total appropriations of a

little less than $60,000,000, of which only $35,000,000 is for activities directly and more exclusively for the benefit of agriculture.

In addition to the definite savings of more than $400,000,000 heretofore shown, these three bureaus have effected large savings through their other investigations, the amount of which cannot be definitely measured. Savings resulting from the work of the other bureaus of the Department could be adduced if time and space permitted. In view of the showing made by the three bureaus mentioned, it would not be extravagant to say that the Department of Agriculture is worth to the Nation from a half billion to a billion dollars a year.

Mr. Chairman, at this point I wish to put in the RECORD a statement prepared by the Bureau of Agricultural Economics, which, I am sure, will be of interest to the Membership of the House. Many Members are perhaps not acquainted with how the money appropriated for the Department of Agriculture is spent. The statements prepared by the different bureau chiefs and those working with them will give a picture which I think will be of much interest to the Members.

The statement is as follows:

THE BUREAU OF AGRICULTURAL ECONOMICS

The chief functions of this Bureau are to collect the basic facts underlying the agricultural situation and to interpret them so farmers can understand the forces affecting supply-and-demand conditions, to render certain services, such as inspection and market news, which can best be rendered by a public agency, and to administer a number of laws which Congress has passed to aid in the marketing of farm products. The activities of the Bureau, therefore, fall into three main groups, namely, service, regulatory, and research. A brief description of some of the important activities in each of those main groups follows:

SERVICE ACTIVITIES

The service activities of the Bureau are chiefly informational. Their purpose is to supply farmers and the public generally with information which would not be available to the public unless collected by a public agency. Following are listed the principal activities of this kind with a brief statement for each:

Crop and livestock estimating service: This is one of the oldest activities of the Government pertaining to agriculture. As far back as 1856 it was recognized that statistics should be available with respect to the acreage, production, and yield of crops, and that such data could best be compiled by the Government. The Bureau has developed this service to the point where estimates of the acreage, yield, and production of the principal crops and classes of livestock can be made with a high degree of accuracy. The Bureau's estimates are recognized everywhere as the most reliable information of the kind obtainable. Without such information compiled by an impartial public agency, the marketing of agricultural products would have to be carried on in an atmosphere of speculation, rumor, and exaggeration as to prospective supplies—a condition which would operate to the disadvantage of producers, distributors, and the public generally. Without the information compiled by the crop-estimating service with respect to acreage, yield, and production of wheat, cotton, corn, hogs, rice, and tobacco, it would have been impossible for the Agricultural Adjustment Administration to carry out its domestic-allotment program for these commodities without first having compiled such information.

Cotton grade and staple estimates: For a great many years, the crop-estimating service has furnished information as to the acreage, yield, and production of cotton. This gave us good information as to the size of the crop, but we did not have comprehensive information regarding the quality of the crop in terms of grade and staple. That information was so essential in quality-improvement programs and in appraising the market situation in advance of and during the marketing season in the light of the supplies available that Congress, by the act of March 3, 1927, directed the Department to collect such information. Through this act we now have reliable information, not only as to the quality of the crop according to grade and staple but of the carry-over as well.

Tobacco stocks and standards: The purpose of this activity is the same as that for grade and staple estimates of cotton. By the act of January 14, 1929, the Bureau publishes quarterly reports showing stocks of tobacco on hand in such detail as to give information as to the quality of the tobacco in such stocks.

Market news: In 1915 the Bureau started a market news service in a small way on fruits and vegetables. This was done to give farmers reliable information on market prices and conditions. Prior to that time the farmer, particularly with respect to the more perishable commodities, had no information as to the markets except that supplied him by the dealers or by market papers which depended largely upon dealers for their subscriptions and advertising. The value of a service of this kind has been so thoroughly demonstrated that Congress steadily enlarged it until now it covers fruits and vegetables, livestock and meats, dairy and poultry products, tobacco, and a number of other farm products. More than a hundred radio stations are used, without cost to the Government, to furnish farmers and the public with daily information as to the supplies on hand and prices prevailing in the principal markets. In addition to the distribution of such information by radio and newspapers, thousands of farmers, shippers, distributors, and railroads insist upon having mimeographed reports showing market information in more detail than can be disseminated by radio or newspapers. This service has largely destroyed the opportunity for unscrupulous dealers to obtain consignments or make purchases on the basis of fictitious market information. Farmers now can find out what prices are in the principal markets through the reports issued by the Bureau. They do not have to depend upon the trade for that information.

Inspection: The Bureau has developed an extensive inspection service which is entirely voluntary and not mandatory upon anyone. Inspections are made only upon application. For example, more than 260,000 car lots of fruits and vegetables were inspected last year, inspections being made both at point of shipment and destination. These inspection certificates are used as a basis for settling disputes between buyers and sellers as to grade and for providing information regarding the grade or condition of individual lots at the time of sale or offer for sale. The service has been developed to include meats, tobacco, butter, cheese, eggs, hay, rice, and several other farm products. This service is about 65 percent self-supporting on the basis of fees charged for individual inspections.

REGULATORY WORK

A substantial part of the work of the Bureau consists in the administration of laws which Congress has passed to aid in the marketing of farm products. Most of these laws are more of a service than of a regulatory nature.

Following is a brief statement of the purpose of each:

Cotton Futures Act: This law fixes the grades of cotton which may be delivered in settlement of futures contracts; requires that cotton tendered in settlement of such contracts be classed by official classers (this Bureau maintains boards of cotton examiners for that purpose); provides for the payment of cotton delivered on futures contracts which is not of the basis grade according to differences which are an average of the commercial differences prevailing in 10 spot markets. The quotation of these differences is supervised by the Bureau. Under this act the Bureau also conducts a cotton quotation service similar to the regular market news service in order to inform cotton farmers of prices and general market conditions.

Cotton Standards Act: This act authorizes the Secretary of Agriculture to establish official standards for cotton and requires that when cotton is sold by grade only the official standards may be used. Cotton may be sold by private type, however. Under this law we have developed official standards for cotton which are in general use throughout the cotton industry of this country, and by agreements with exchanges in foreign countries they are now recognized throughout the world.

This act and the Cotton Futures Act have made it possible to merchandise cotton on the basis of one set of standards instead of numerous standards established by various trade organizations, and have provided machinery for anyone to ascertain the grade or staple of cotton before sale.

Grain Standards Act: Under this law official standards for the principal grains are established, and the law provides that no grain shall be sold in interstate commerce by grade except on the basis of such official standards.

This act has removed the confusion arising from a multiplicity of standards established by various States, grain exchanges, or boards of trade. It has placed the inspection of grain on a uniform basis.

Warehouse Act: Congress passed this act to assist in the financing of farm products. The licensing of warehouses is not mandatory. When a warehouseman elects to become licensed, however, his warehouse must be suitable for storing the products in question, and he must be financially responsible and otherwise comply with our regulations and be subject to the penalties of the act. In the administration of this law the Bureau has developed a Federal warehouse receipt, which is recognized as prime collateral by both Government and private lending agencies. In the present emergency the demand for Federal warehouse receipts is constantly increasing. At the present time we have warehouses licensed with capacity to store more than 5,600,000 bales of cotton and more than 80,000,000 bushels of grain. Altogether 15 products are eligible for storage in federally licensed warehouses. The supervision provided by the Bureau to warehouses licensed under this act is such that in the last 10 years losses to storers of farm products in such warehouses have been negligible, and the protection afforded by the Bureau's supervision has resulted in lower insurance charges and substantially lower interest rates.

Perishable Agricultural Commodities Act: This act was passed to protect farmers, shippers, and handlers of fruits and vegetables from certain unfair practices which prevailed in that industry.

This act has had a wholesome influence upon this industry. About 2,500 complaints were handled last year. Through this act the Bureau has been able to exercise a degree of control over unscrupulous dealers which, after years of effort, the industry found it could not do itself.

Produce Agency Act: This is a criminal statute and was passed for the purpose of protecting farmers from being defrauded by unscrupulous commission merchants. It makes it a misdemeanor for a commission merchant to destroy without reasonable cause products assigned to him, to make false statements regarding the quality or condition or disposition of such products and to fail to account promptly to his principal. This act has afforded protection to farmers and is a strong deterrent against commission merchants failing to account correctly. A number of prose-

cutions have been instituted and convictions obtained involving fines and imprisonment.

Standard container acts: The Bureau administers two container acts which standardize baskets and hampers used in the marketing of fruits and vegetables. The purpose of this law is to protect the public by outlawing short-measure containers, to reduce the cost of manufacturing containers by eliminating numerous and unnecessary odd sizes and shapes. Last year more than 10,000 containers were tested. Under these laws the fruit and vegetable markets are no longer cluttered with a multiplicity of odd sizes and shapes of containers, which contributed to all sorts of confusion. For example, the number of sizes of berry boxes was reduced from 18 to 3, hampers from 42 to 9, round-stave baskets from 20 to 9, etc.

RESEARCH

Price analyses and outlook: In its research activities the Bureau touches practically all economic phases of agriculture. At the center of the Bureau's research is the program of price analysis, the purpose of which is to analyze the trends of supply, demand, and prices of agricultural commodities and the factors that affect those trends. This research service is the basis for the broad outlook service covering the national and world situation with reference to practically all important commodities, and it is used very extensively by the educational forces, the Agricultural Adjustment Administration, and by farmers themselves in making adjustments in their production and marketing programs. In other words, the Bureau undertakes to analyze the statistics of the agricultural situation so as to interpret their meaning in terms of past and probable trends.

Farm management and land utilization: In our farm-management research the problem of efficiency in agricultural production is approached from the point of view of the individual farm. The influence of size of farm, kind of power used, the combination of crops produced, practices in the production of these crops, and costs associated with the different types of management are carefully analyzed with a view to determining the basis of maximum efficiency. Much emphasis is being placed upon types of farming that have been developed in various parts of the country to determine the degree to which farming in various areas can maintain itself under given price and cost levels. Closely associated with this work is the research in land utilization. In this field we study the areas of relatively low agricultural income with a view to determining the degree to which it is possible to reorganize the type of farming and thus increase farm incomes, the possibility of reorganizing local public services, such as schools and roads, with a view to reducing the burden upon such communities, and also to determine the degree to which certain lands are so handicapped by natural or economic conditions that they cannot continue in successful competition with other lands and therefore should be returned to the public domain.

Foreign agricultural service: Through the limited number of offices which the Bureau maintains abroad, an effort is made to determine the extent to which foreign competition in the production of various commodities will increase or decrease. A study now practically completed indicates that the possibility of cotton expansion in Egypt is distinctly limited. Studies of potential cotton competition in South America, India, and Russia are being projected. An effort is also made in the foreign agricultural service to keep in touch with supply and demand conditions currently in foreign countries with a view to assisting American farmers in finding the most profitable outlets for their products. Certain inspection and market news services have also been extended to foreign countries in order to facilitate the movement of perishable commodities in European markets. An extension study of trade barriers and restrictions hampering foreign trade in agricultural products has been made in response to Senate Resolution 280 and published as Senate Document No. 70 of this Congress.

Land values, farm taxation, farm insurance, farm credit: In our land-value studies we determine the trend of land values for the country as a whole and by States, and also analyze the factors which have influenced the course of land values. This information is valuable to lending agencies in the making of farm-mortgage loans and also to farmers in determining upon suitable times and price levels at which to purchase farm lands. Our studies in farm taxation have brought out the extent to which taxes on farm real-estate property have increased by States and the relatively heavy tax burden on farm lands. They have also, in a few instances, pointed out how the tax burden on farm lands may be reduced through various economies in local public expenditures, through more equitable assessment of farm lands, and through new sources of public revenue. Our research in the field of farm insurance has been particularly helpful to the 2,000 cooperative farmers' mutual fire-insurance companies, which have a membership of three and one half million farmers and carry insurance on farm properties valued at around ten and one half billion dollars. Problems of organization and management of such companies have been analyzed by us and the results have been extensively used by the insurance companies throughout the country.

Mr. Chairman, at this point I wish to place in the RECORD a statement from the Bureau of Chemistry and Soils, estimating the annual returns and savings from fundamental research.

BUREAU OF CHEMISTRY AND SOILS

Estimated annual returns and savings from fundamental research

Subject	Realized value estimated by industry	Realized value estimated by Bureau	Estimated potential value if applied
Sugarcane: Developed method of reducing loss of sugar in harvested sugarcane before grinding [1]	$700,000		
Dairy waste (milk sugar): Devised means of utilizing milk sugar from waste whey, largest waste in dairy industry [1]			$1,000,000
Sugar beets: Devised method for reducing storage losses, resulting in increased sugar recovery	200,000		
Sweetpotato starch: Devised method for producing high-quality starch from cull sweetpotatoes to displace imported potato starch. Two factories now being erected			3,000,000
Sugarcane and sorghum sirups, farm-made: Developed methods for obtaining more uniform quality which resulted last season in 25 to 50 percent better prices to farmers in sections where used		$400,000	
Maple products: Developed new maple products; improved production methods and color grades for maple sirup		150,000	
Rancidity: Discovered means of delaying rancidity, making possible large savings. Public-service patent granted			10,000,000
Eggs: Developed method for retaining fresh egg quality by sealing with carbon dioxide and oil under a vacuum. Value to poultrymen. Public-service patent granted			4,000,000
Apple pomace: Developed method for salvaging wax from apple pomace, a material of special value for the production of lacquers, waterproof paper, and stencils			100,000
Waste citrus fruits: Developed methods for production of citric acid, calcium citrate, citrus oils, pectin, etc. Four factories now using these methods	1,500,000		
Citrus fruit: Developed maturity standards which have increased return to California growers about 35 cents per box	2,000,000		
Oranges: Developed ethylene gas treatment for oranges which growers estimate to be worth 50 cents per box. Growers estimate return to producers in Florida annually $4,000,000. Public-service patent granted [1]	4,000,000		
Pears: Developed method for softening pears in canning; estimated saving to growers and packers			100,000
Hides and skins: Developed better methods of curing hides and skins			50,000
Bulletin in handling hides: Issued (cooperatively with B.A.I. and B.A.E.) over 225,000 bulletins on how to produce better hides and skins. Bulletin adopted as trade textbook [1]			1,000,000
Hide "reddening": Shown to come from salts infected with reddening bacteria. Loss amounts to thousands of dollars annually			50,000
Sumac tanning: Developed procedures for a better domestic sumac crop, thereby increasing returns to producers several thousand dollars annually		10,000	
Chestnut-stump extracts: Discovered chestnut stumps to be richest part of the tree in tannin, thus providing farmers an added source of income, and means to reduce clearing cost of chestnut lands by use of a waste			200,000
Farm tanning: Developed procedure for salvaging wasted hides and skins by tanning farm leather			2,250,000
Hemlock-bark tannin: Developed method of converting annual waste of 350,000 tons hemlock bark in Oregon and Washington into tanning extract			3,000,000
Leather, preservation of: Developed methods for waterproofing, preserving, and treating leather. Savings to users of leather amounts to several millions of dollars annually		2,000,000	
Leather red rot: Showed "red rot" or decay of bookbinding, upholstery, and other leathers due to absorption of sulphur acids from the air. Developed methods for preventing			2,000,000
Paper specifications: In cooperation with Joint Committee on Printing of Congress, Government Printing Office, and other Government organizations developed specifications for paper that it is estimated have saved the Government $250,000 [1]	250,000		
Paper sizing: Proved that a small excess of alum in sizing is detrimental to paper. Estimated worth to legal and business records $500,000 annually			500,000
Paper, blue-print: Developed for Government use, high-grade blue-print papers, thus leading to production in this country of such paper			100,000
Paper, currency: In cooperation with Treasury and Commerce Departments improved quality, recommended smaller bills and simple means for reducing counterfeiting. In 1932 the Government saved approximately $500,000 from making bills smaller in size [1]	500,000		

[1] In cooperation with other bureaus.

BUREAU OF CHEMISTRY AND SOILS—continued

Estimated annual returns and savings from fundamental research—Continued

Subject	Realized value estimated by industry	Realized value estimated by Bureau	Estimated potential value if applied
Postal cards: Developed for Post Office Department lighter weight stiffer post card, saving the Government large sums	$40,000		
Fabrics: Developed method for the waterproofing and fireproofing of fabrics, thereby increasing demand for cotton goods			$1,000,000
Cottonseed oil: Determined causes of deterioration of oils in storage and methods of preventing. Estimated savings to the cotton oil industry $350,000 annually			350,000
Cottonseed: Developed chemical methods for use in grading of cottonseed. Estimated saving to the farmers and oil mills $700,000 annually [1]			700,000
Proteins of cottonseed: Determined the value of proteins of cottonseed and established its economical commercial utilization in rations for farm animals. Determined how the toxicity of raw cottonseed can be eliminated in the production of cottonseed meal, whereby the value of the meal can be increased			5,000,000
Vitamins: Determined that certain fish oils, heretofore largely wasted, can be substituted for imported cod-liver oil as a source of vitamins in poultry and cattle feeding, with the result that over $3,000,000 worth of sardine oil alone was sold to farmers at a saving of over $750,000 during the period 1932-33 [1]	750,000		
Farm fires: Developed methods for the prevention of farm fires, the application of which has reduced the farmers' "fire tax" from $115,000,000 in 1932 to approximately $100,000,000 in 1933—a reduction of more than $15,000,000. The per capita "fire tax" in 1932 was more than $19 for every farmer in the country		$15,000,000	
Spontaneous heating and ignition of hay: Developed methods to prevent spontaneous heating and ignition of hay, the utilization of which will save American farmers $20,000,000 annually and reduce an additional loss of $32,000,000 annually due to deterioration and spoilage			52,000,000
Fast cotton dyes: Developed technical methods for the production of fast and brilliant dyes for cotton, reducing cost to the consumer, and expanding the market for cotton goods (3 projects):			
(a)	750,000		
(b)		500,000	
(c)			250,000
Furfural: Developed process for obtaining from corncobs, oat hulls, and other farm wastes, the valuable solvent furfural, used in the purification of rosin for the production of lacquers and varnishes and as a basic material in the manufacture of synthetic rosins		100,000	
Sugarcane bagasse: Developed process for manufacturing rayon cellulose from sugarcane bagasse. Now being worked out commercially in Hawaii. Has prospective value to sugarcane producers in Louisiana, Hawaii, and Puerto Rico			100,000
Calcium gluconate from corn: Developed methods for manufacturing calcium gluconate, a product of immense value in the treatment of human and animal disease		200,000	
Insecticides from plants: Developed the new insecticide rotenone which is coming into use in place of arsenicals. This research created a new industry in America, over 50 companies now marketing derris root (from which rotenone is obtained) or proprietary insecticides containing it. This development aids farmers in marketing vegetables without arsenical residue and insures the public against arsenic poisoning [1]		1,000,000	
Insecticides, synthetic: Synthesized organic compounds now giving promising results in tests against various insects. Developed fluorine compounds as substitutes for lead arsenate for fruit spraying [1]		100,000	
Spray-residue removal: Developed methods for the removal of spray residues of lead, arsenic, and fluorine from apples. Without proper cleaning the exportation or interstate movement of the commercial apple crop of 100,000,000 bushels (value=$65,000,000) would not be permitted [1]		1,000,000	
Fumigants: Originated the use as fumigants for destroying insects in stored grain, raisins, dried fruits, nuts, tobacco, wool, furs, etc., of many materials such as ethylene dichloride, ethylene oxide, carbon dioxide admixed with toxic agents, methyl formate, and ethyl formate [1]		100,000	
Grain-handling and milling operations: Studied causes and developed methods for prevention of dust explosions in grain-handling and milling operations. The application of these measures has resulted in reduction of losses from over $4,000,000 in 1921 to approximately $1,000,000 in 1932		3,000,000	

[1] In cooperation with other bureaus.

BUREAU OF CHEMISTRY AND SOILS—continued

Estimated annual returns and savings from fundamental research—Continued

Subject	Realized value estimated by industry	Realized value estimated by Bureau	Estimated potential value if applied
Threshing-machine explosions: Developed measures for preventing dust explosions and fires in grain-threshing machines. Application of these methods has reduced insurance rates from $11 to $1.50 per hundred. Potential saving of grain, machinery, and insurance premiums amounts to more than $700,000 annually			$700,000
Cotton-gin fires: Studied causes and developed methods for the prevention of fires in cotton gins. Application of these methods will result in an estimated potential saving of cotton, machinery, and insurance premiums of more than $600,000 annually			600,000
Safety codes: Developed safety codes for prevention of dust explosions in grain handling and other associated dust-producing industries. Practical application of these codes has resulted in an estimated saving of property of more than $3,000,000 in 1 year. In addition the workmen have been protected and there has been a recognized saving of human life		$3,000,000	
Rosin: Originated and developed rosin standards adopted by Congress as "U.S. Rosin Standards." Estimated value to pine-tree farmers of the South $150,000 annually	$150,000		
Turpentine stills: Developed improved still settings			200,000
Pine gum: Developed methods of improved production of gum			150,000
Steam turpentine still: Developed a new type of still with increased capacity and productivity. Estimated annual value to each producer using this equipment, $2,500 annually			100,000
Turpentine production: Developed means of controlling turpentine distillation, preventing losses			100,000
Turpentine purification: Developed a better barrel glue and introduced a practical dehydrator for turpentine			250,000
Catalysts in nitrogen fertilizer investigations: Developed an ammonia catalyst. Developed a water gas-hydrogen catalyst. Developed high-pressure catalytic equipment and processes [1]		10,000,000	15,000,000
Biochemical and organic investigations: [2]			
Investigated cyanamide and recommended methods for its proper use		100,000	200,000
Developed methods for the more efficient utilization of the nitrogen fixed by soil organisms and leguminous plants			3,000,000
Physics and chemical fertilizer investigations: Developed scientific fundamental information on the properties of gaseous mixtures under conditions of their employment in the manufacture of fertilizer ingredients. Developed processes and high-pressure equipment for the same [2]		5,000,000	10,000,000
Phosphate fertilizer investigations:			
Developed new method for converting phosphate rock into fertilizers by removing the fluorine			6,000,000
Developed the electric-furnace method of smelting phosphate rock		1,000,000	2,500,000
Developed the blast-furnace method of smelting phosphate rock		1,000,000	2,500,000
Transformation of nitrogen compounds:			
Developed a method for synthesizing urea		100,000	2,500,000
Developed a method for processing peat by treatment with ammonia			1,500,000
Potash fertilizer investigations:			
Contributed to the discovery and utilization of the country's natural brine deposits for potash	5,250,000		
Developed processes for the recovery of potassium sulphate from polyhalite			3,000,000
Developed method for converting potassium chloride into sulphate or phosphate			300,000
Developed methods for the simultaneous production of potash and phosphoric acid from potash silicates and phosphate-rock deposits in the Rocky Mountain area			7,250,000
Developed method for acid extraction of potash from potash silicates			800,000
Developed methods for recovering potash from industrial wastes	350,000		2,000,000
Concentrated fertilizer investigations:			
Demonstrated the efficiency of ammoniated superphosphates		4,000,000	8,000,000
Developed methods for improving mechanical conditions of fertilizers. Devised methods of increasing the efficiency of fertilizers. Contributed to development of improved methods for fertilizer application		[3] 8,000,000	[3] 9,000,000

[1] In cooperation with other bureaus.

BUREAU OF CHEMISTRY AND SOILS—continued

Estimated annual returns and savings from fundamental research—Continued

Subject	Realized value estimated by industry	Realized value estimated by Bureau	Estimated potential value if applied
Concentrated fertilizer investigations—Contd. Initiated work which has led to the gradual elimination of filler from mixed fertilizers. Developed analysis formulas for concentrated fertilizers of satisfactory quality		[3] $8,000,000	[3] $15,000,000
Orchard soil investigations: Have shown that on certain soil types trees are short-lived and produce poor-quality fruit, making it possible to avoid these unsatisfactory soils in development of orchards		50,000	3,000,000
Soil surveys as a basis of fertilizer practice: Soil surveys have indicated that certain soil types do not respond to the usual forms of phosphorus. Location of these areas makes it possible to avoid costly mistakes in fertilizer practices		25,000	500,000
Surveys of peat lands: Survey and mapping of peat lands in laying the foundation for the development of a domestic peat industry that may completely displace importations from Europe, amounting to a million dollars annually		25,000	1,000,000
Cooperative soil surveys: Cooperative detailed and reconnaissance surveys are necessary and basic to the development of reclamation projects, subsistence homestead undertaking, and other Federal activities, and the application of this basic information is resulting in the savings of millions of dollars annually		500,000	5,000,000
Legume nodule bacteria: A collection of pure cultures, developed and maintained, furnishes stock cultures to various States to be propagated and distributed to farmers, to county agents, and to investigators in foreign countries		10,000	
Commercial inoculants. The inspection of commercial inoculants results in the elimination of many worthless brands. This serves not only to safeguard the farmer's investment, but is also an insurance against loss of time and effort		100,000	100,000
New inoculants: A collection of pure culture nodule bacteria for various legumes has been developed and is maintained to meet the needs of new plant importations that are being constantly introduced for the benefit of American agriculture		1,000	500,000
Annual inoculation: Research has shown that canning peas inoculated annually produce a more uniform and satisfactory product. Observations indicate that the practice might be extended to other commercially important legumes, with profit		10,000	100,000
Fertilizer investigations on prominent soil types with cotton: Through determining the most efficient fertilizer mixtures for specific soil types in the southeastern Cotton Belt; determining relative value of inorganic, organic, and synthetic compounds, potash and phosphate materials for economic cotton production		5,000,000	
Soil-fertility and fertilizer investigations in the southeastern Truck Crop and Citrus belt: By solution of nutritional deficiency problem in citrus and truck crops and of the most economic use of fertilizer materials to increase quality of vegetables and fruits produced [2]		3,000,000	
Potato soil and fertilizer work: Recommendations on fertilizers for potatoes for attaining high quality and profitable returns on prominent soil types in Maine, New York, New Jersey, Pennsylvania, Michigan, and Ohio, and through using a more concentrated fertilizer		2,650,000	
Mechanical placement of fertilizer: Through recommendations as to the proper methods of placing fertilizers in relation to the seed, to utilize efficiently the content of plant food without injury, through fertilizer-distributing machinery		1,250,000	
Soil-fertility and fertilizer investigations with sugar-beet soils: Through recommendations of fertilizer practices to eliminate losses due to soil deficiencies and disease and the improvement of the sugar content, in the sugar-beet regions of the Middle West		2,000,000	
Soil fertility and fertilizer investigations with sugarcane soils: Through study of the soil types best adapted to the newer sugarcane varieties and recommendations as to improve sugar content and yield of cane, in the Sugarcane Belt of the South		725,000	
Biochemical soil studies: Application of principles developed in laboratory practice to the practical field methods relating to fertilizers, the nitrogen of soil, and soil organic matter, and green manuring			100,000

[2] Refers to page in booklet, Results of 10 Years of Research, 1920–30.
[3] Estimated annual savings to American farmers.

BUREAU OF CHEMISTRY AND SOILS—continued

Estimated annual returns and savings from fundamental research—Continued

Subject	Realized value estimated by industry	Realiaed value ertimated by Bureau	Estimaed potential value if applied
Cotton root-rot investigations: Through demonstration of the rational use of fertilizer and the practice of modified tillage in conjunction with crop rotation, soil conservation, and other fertility and soil-maintaining and restoring measures in the regions of the Southwest affected with cotton root rot		$2,500,000	
Soil reaction and oxidation reduction studies: Through studies of soil acidity and liming, together with the economies and savings resulting from the proper use of land, planning crop rotations, fertilizing, liming to reduce acidity, sulphuring to increase acidity, adapting soil to special crops, etc			$1,100,000
Soil-fertility greenhouse work: To discoveries in the greenhouse of special treatment; nitrogen, potash, phosphate sources, effect of uncommon elements on plant growth, investigations of fertilizer materials and soil amendments, elimination of toxic quantities of soil salts, and laboratory control of the field work			50,000
Miscellaneous soil-fertility studies: Through advice to farmers throughout the United States and its possessions on soil and fertilizer matters, such as efficiency of fertilizers, composting, artificial and natural manures, liming, home mixing of fertilizers, etc		100,000	
Soil-fertility and fertilizer investigations with pecan soils. Recommendations of soil fertility and fertilizer requirements for the principal soil types used for pecan growing in the Pecan Belt in the Southeastern and Southwestern States, showing the influence of these on the pecan trees, growth of nut, size and quality of nut, with advice on the control of nutritional diseases by the application of rare fertilizer elements		300,000	
Soil-fertility investigations at the dairying and soil-fertility experiment station at Pontiac, S.C.: Developing successful cropping systems for the production of horticultural crops and for the maintenance of a dairying industry in the Sandhill region of the Southern States			100,000
Soil-erosion experiment farms: Methods of erosion control under moisture conservation, applied under a wide variety of conditions, including terraces, soil-saving dams, cropping practices, etc			40,000,000
Total	$16,440,000	79,006,000	228,650,000

I also have a statement from the Bureau of Animal Industry, which is a picture of the work of this Bureau and the results of such work.

FACTUAL SAVINGS RESULTING FROM BUREAU OF ANIMAL INDUSTRY ACTIVITIES

Contagious pleuropneumonia: The eradication of this European plague from the United States in 1892 by the Bureau of Animal Industry resulted in stopping the previous losses to our cattle industry of more than $2,000,000 per year. In the 42 years which have since elapsed without any recurrence of this plague, the savings would naturally total over $84,000,000.

Tick fever: When the Bureau, cooperating with infested States, began this work in 1906, the losses to the cattle-raising industry amounted to $40,000,000 annually. As the infested area gradually grew smaller each year, these losses were likewise gradually reduced. To date 89 percent of the originally infested area has been freed of ticks, which shows a saving of $35,600,000 during the past year. This benefit will accrue annually in the years to come if reinfestation is not permitted to occur.

Hog cholera: In 1914, the first year the Bureau began to cooperate with the States in controlling hog cholera, the loss from this disease was 6,304,320 pigs, valued at $67,697,461. In 1924, 10 years later, 2,772,000 pigs died of the disease, valued at $27,027,000. Last year the losses amounted to less than $20,000,000. Compared with the 1914 losses, a saving of about $48,000,000 was effected in 1933. With the gradual decrease of cholera since 1914, the saving to the swine industry during the 19 intervening years totals over $400,000,000.

Foot-and-mouth disease: This plague is a foreign disease which has not been allowed to become permanently implanted in the United States, as every outbreak in this country has been promptly eradicated.

Losses from outbreak:

1902	$15,430,000
1908	15,475,000
1914–15	102,000,000
1924–25 (California)	31,083,000
1924–25 (Texas)	15,452,000
1929	5,405,812
1932	3,345,198

The losses in certain foreign countries with far less livestock population than this country have been estimated at upward of $15,000,000 annually.

In this country our outbreaks have resulted in an average loss of $26,884,430 for each outbreak. It would be quite conservative, therefore, to state that our livestock industry has been saved that latter amount annually as a result of our success in eradicating all past outbreaks of foot-and-mouth disease from the United States.

Tuberculosis: In 1917, when the cooperative bovine tuberculosis eradication work was inaugurated, the loss from this disease in cattle alone amounted to over $25,000,000 annually. Since 1917 this disease has been reduced in cattle by 66 percent, resulting in an annual saving of $17,000,000.

Concurrently with the eradication of tuberculosis in cattle, there has been a reduction of this disease in swine which has produced a corresponding saving.

The savings from the public-health feature of tuberculosis eradication in animals cannot be stated in dollars and cents, but it is the opinion of all recognized medical authorities that the decrease in bovine tuberculosis in this country has resulted in a marked reduction in the cases of human tuberculosis, particularly that form which attacks the bones, joints, and glands of children.

Meat inspection: The cost to the Government of this service is less than 8 cents for each animal slaughtered or 1 cent for each 22 pounds of dressed meat and lard produced. It is realized that it is quite impossible to evaluate the worth of this service in terms of dollars and cents, as it can be measured only in terms of public health and health of livestock. The least that may be said in this connection is the cost of the meat-inspection service is more than offset by the benefits which accrue therefrom.

Roundworms in swine: Figuring the losses from kidney worm, which on statistical survey at one slaughterhouse amounted to $80,000 in 1 year, and figuring the extensive condemnation for parasitic livers due to ascarids and other parasites, and the extensive savings which have been reported wherever the swine-sanitation system has been adopted or where the treatments developed and recommended by this Bureau have been used, a saving of $6,000,000 annually is a conservative estimate.

Roundworms in sheep: Considering the entire United States, more than 10 percent of all sheep show clinical evidence of roundworms. The damage, ranging from unthrifty animals of low wool production and marketed as culls to sheep killed by stomach worms and other parasites, will average a dollar a head. Since control measures are very widely practiced in the United States and since these control measures are those developed or standardized by the Bureau, a saving of $3,000,000 a year is reported as a result of this work.

Liver flukes in sheep and cattle: Under conditions prevailing before the depression, statistics indicated that the loss in livers condemned for flukes under Federal or local inspection totaled around $1,000,000 annually, with the prevailing high price of liver then very much in demand for the control of pernicious anemia. Under present conditions this loss is at least a half million dollars, and there is well over a half million dollars' worth of loss in wool, unthrifty sheep, and deaths from liver flukes. In parts of the United States, such as the Gulf coast of Texas, liver flukes have driven sheepmen out of the region. The control measures which have been recommended were used in California to clean up liver fluke in sheep to the point of practical eradication and are being used to a large extent in Washington, Oregon, Utah, Idaho, and Montana. The estimated annual saving of a million dollars is conservative.

Parasites of horses: The experience of practitioners in Iowa and Illinois and elsewhere indicates that distinctly more than 10 percent of all horses and mules are suffering from parasites to the point where their usefulness is impaired, if not actually nullified. Estimating this damage conservatively at $1 a head and figuring that the treatments developed in the Bureau are being used on much more than 10 percent of the horse population of the United States, an annual saving of $1,800,000 is conservative.

Parasites of poultry: Probably 50 percent of the birds in the United States suffer from some sort of parasitism, and, figuring that 10 percent of them are treated and handled in accordance with the procedure developed in the Bureau and estimating the benefit at only 5 cents a head, there is an actual saving of $2,250,000 per annum.

Then I have a similar statement from the Bureau of Plant Industry, which I am sure will be interesting.

ESTIMATED ANNUAL SAVINGS RESULTING FROM ACCOMPLISHMENTS OF THE BUREAU OF PLANT INDUSTRY

1. The breeding of the Marglobe tomato, resistant to wilt and nailhead rust, saved the tomato industry of southern Florida worth $2,000,000 annually, in addition to large savings in other areas	$2,000,000
2. The rediscovery of the Young dewberry has started a new industry in several regions with an annual value of more than $1,000,000	1,000,000
3. Development of better methods of handling, storing, and shipping fruits and vegetables	8,000,000
4. Establishment of the rice industry in California entirely dependent on varieties and methods developed by the Bureau	$3,000,000
5. An increase in the acreage of soybeans from less than 50,000 in 1907 to nearly 4,000,000 acres in 1932 made possible by varieties introduced by the Bureau	30,000,000
6. Research on cultural methods for winter wheat in demonstrating the need for timely soil preparation	20,000,000
7. Without material increase in the cost of production, larger acre yields of corn from the use of better varieties recommended by the Bureau	5,000,000
8. The introduction of durum wheat into the United States	30,000,000
9. The breeding and introduction into use of varieties of spring wheat has resulted in an annual increase in production worth $40,000,000 and improved quality worth not less than $5,000,000	45,000,000
10. The establishment of date culture in the Southwest producing a superior quality product	500,000
11. Research on cultural methods and varieties of alfalfa in demonstrating the need for inoculation, liming, and adapted varieties	5,000,000
12. The breeding of yellows-resistant cabbage, and methods for control of black leg and black rot of cabbage	2,000,000
13. Saving the lettuce industry of the Southwest by breeding a brown blight-resistant lettuce	4,000,000
14. Development of methods of controlling pecan diseases	1,500,000
15. A peanut variety bred by the Bureau is worth $300,000 to growers in Georgia alone	300,000
16. Methods of controlling celery and cucumber mosaics reduced losses in the Central States	100,000
17. Control of the stem end rot of watermelons	175,000
18. Research on the crown gall of apples resulted in changed practice saving nurserymen alone	100,000
19. The value of the sweetpotato crop to its producers has been increased by the findings of the Bureau's research on storage diseases	5,000,000
20. Potato-disease control through production and certifying disease-free seed has been worth $17,500,000 to Maine, New Hampshire, Vermont, New York, and Pennsylvania, in addition to its value elsewhere	17,500,000
21. Savings from orchard-spraying practice developed by the Bureau and State stations	30,000,000
22. The development and introduction of sugarcanes resistant to mosaic prevented practical abandonment of sugarcane culture in the South. Crediting to this research only the increased yield above the low level actually reached, the savings may be estimated conservatively as	20,000,000
The 22 specific items listed total	229,875,000
To which should be added not less than $75,000,000 for savings no less real as to fact but more difficult of precise estimate	75,000,000
The grand total for the Bureau thus becomes more than $300,000,000 annually, or nearly 100 times the amount of the appropriation requested	304,875,000

The Bureau of Home Economics, presided over by Dr. Stanley, has supplied a brief statement of its work, which I am sure will be of value.

The Bureau of Home Economics was established in the United States Department of Agriculture in 1923, on the recommendation of Secretary H. C. Wallace, to strengthen and extend certain lines of scientific work already under way in the Department of Agriculture. As early as 1887 Congress had created the State experiment stations to study the composition and digestibility of different kinds of food for domestic animals. It was not until 1893 that the Secretary of Agriculture recommended that questions relating to the use of agricultural products as food for man should also be considered. President Cleveland in his message to Congress of that year emphasized the importance of this work by the following statement supporting a small appropriation for such a study:

"When we consider that fully one half of all the money earned by the wage earners of the civilized world is expended by them for food, the importance and utility of such an investigation is apparent."

This Bureau completed 10 years of work last July. During this period the earlier work on dietary studies, collection of data on food composition, and study of digestibility of food has been continued and new studies added in textiles and clothing and in the economic aspects of homemaking. The appropriation for this Bureau has at no time been large, but a small and efficient staff has been built up, of well-trained women, each a specialist

and commanding respect in her own field. Many of the studies of this Bureau have been undertaken in cooperation with some other Government agency, either within or without the Department of Agriculture, or with some of the State experiment stations. In this sense the Bureau has been a coordinating agency and has helped prevent duplication of effort in this field, which has probably saved a yearly sum more than its appropriation. It is impossible to estimate what its contributions have been in terms of savings from wiser family expenditures, better family feeding, more palatable meals, better family health.

Figures on food composition have been collected, the results tabulated, and the information made available to all those interested in any way in the food problem. The importance of this to health is realized when one knows that certain regions grow food rich in desirable elements. Others have been known to produce food so lacking in minerals as to produce ill health if used for too long a period of time. A central coordinating agency like the Bureau, in collecting these data, helps direct the studies made by the State experiment stations so as to give a better-rounded picture of the composition of our food.

In order to facilitate marketing and grading of food products, studies have been undertaken of quality grades and the influence of methods of growing foods on quality. The textile fibers have also been studied to show the influence of quality on the wear of fabrics produced from them. Study has been made of available fabrics and desirable uses pointed out to both manufacturers and consumers.

The Bureau maintains an office of information which not only prepares technical reports of wide usefulness but has translated many of these into popular form for general use. The Bureau has worked always on the theory that the final test of the value of scientific information is in use, and has made every effort to get results of research into usable form just as rapidly as possible, therefore, much of the detailed technical information has been worked over into very simple, readable circulars, articles, and press releases. Back of all these, however, lies in every case technical material of value.

During the period of the economic emergency this Bureau received a continual stream of requests for assistance on family budget problems, food choice at different income levels, how to protect children on a restricted food supply, etc., etc. These letters came from individual homes, relief agencies, teachers, public-health clinics, community-service groups of all kinds. Fortunately, the Bureau has been able to meet these demands because of the well-trained staff and the information available from its basic research program.

One of the major efforts of the Bureau during the emergency period was to teach the public how to protect itself when forced to live on restricted diets. Balanced diets were worked out at different levels of cost, weekly market lists of the necessaries were published with menus and recipes showing how to combine in palatable meals. Along with these was published information as to the nutritive value of each and all the common foods. Between three and four million copies of low-cost food material have been distributed during the past 4 years.

The Bureau has shown itself equally helpful during the recovery period. The efficiency of its organization and the value of its studies have been demonstrated by the essential information it has furnished the recovery agencies of the Government. The A.A.A. has come to it for information on consumer demand for agricultural products. Data on food composition, standards of nutrition, and food-consumption habits at different income levels have been used as a basis for planning an agricultural-production program. Living standards, house plans, house-equipment information have been provided to subsistence homesteads and the Tennessee Valley Authority. The study in which this Bureau has cooperated on submarginal farms will serve as a guide in helping determine what areas are able to support an adequate living standard. The Bureau has worked during the past year with the Bureau of Labor Statistics in determining the cost of living with Government workers here in Washington; it has worked with a group of bureaus under the Central Statistical Board, preparing lists of commodities for price reporting and setting up specifications for these. It has worked with the Consumers Counsel of the A.A.A. and the Consumers' Advisory Board of the National Recovery Administration in studying the codes from the consumers' point of view and furnishing data on standards for consumer goods. As a matter of fact, at this time when the consumer and the welfare of the consumer are being considered as never before, this Bureau is able to give invaluable service and the type of help for which no other Government unit is equipped.

The foregoing statements, from a limited number of the bureaus, have been inserted merely by way of illustration of the invaluable services rendered by all the bureaus and offices of the Department. Space will not permit the inclusion of like statements from the others, and their omission is not to be taken as indicating their work is inferior in importance and value to that performed by those for which statements have been submitted.

The amount recommended for the Department of Agriculture is $142,802,631 below the amount appropriated for 1934 and $2,820,545 under the Budget estimate for 1935. However, the 1934 figure includes a direct appropriation of $100,000,000 for the Agricultural Adjustment Administration. The bill as reported includes no comparable amount for that service for 1935, since it is to be provided for in 1935 out of processing taxes. Details of this decrease will be found in table B of the report.

Mr. SINCLAIR. Will the gentleman yield?

Mr. SANDLIN. Yes; I yield.

Mr. SINCLAIR. Will the gentleman state what is the amount of the permanent funds appropriated for the Department of Agriculture?

Mr. SANDLIN. That is shown in the table and in the report, which are a part of my remarks.

Mr. SINCLAIR. What is the amount of the funds purely administrative and research work in the Department of Agriculture?

Mr. SANDLIN. If the gentleman will let me conclude the paragraph I am reading, it will give that information.

The permanent annual appropriations are those which have been provided by various and sundry acts of Congress and which recur each year without further action by Congress. They are not included in the accompanying bill but are set out in a table at the end of this report, solely as a matter of information. This table shows that there will be expended in 1935, out of the permanent appropriations, a total of $833,745,418, of which $831,022,428 is to be supplied out of the processing taxes under the Agricultural Adjustment Administration.

Exclusive of the amounts for the Agricultural Adjustment Administration, the remaining total for the Department of Agriculture for 1935, including both the regular annual and the permanent appropriations, is broken down in the following table for the purpose of indicating what percentage of the total is for direct payments to States and road-construction funds, what portion is for the ordinary activities of the Department, and, of the latter, how much is for those activities which are of general public benefit and, finally, how much is for the direct benefit of agriculture.

This table shows that of the total set-up for expenditure in 1935, 38.09 percent, or $26,616,005, is for road funds and for payments to States, including payments to States on account of experiment stations, extension service, cooperative forestry activities, payments to States out of forestry receipts and Federal-aid highways and construction of roads on public lands. The remaining ordinary activities comprise 61.91 percent of the whole, of which approximately one half, or 30.54 percent, is for work which is of general public benefit, leaving but 31.37 percent of the whole, or $21,913,053, to be expended for the more direct benefit of agriculture.

TABLE A

Item		Amount	Percent
Payments to States, road funds, and forestry receipts and special funds (including payments to States on account of experiment stations, Extension Service, cooperative forest activities, from forestry receipts and Federal-aid highways and forest roads)		$26,616,005	38.09
Ordinary activities:			
Of benefit to general public:			
Weather Bureau	$3,032,292		
Meat inspection	4,828,823		
Tuberculosis eradication	4,042,179		
Forest Service	[1] 7,015,514		
Biological Survey	1,054,084		
Food and Drug Administration, exclusive of $191,517 for enforcement of insecticide act	1,366,196		
Total		21,339,088	30.54
Of more direct benefit to agriculture (being the remaining services)		21,913,053	31.37
Total		69,868,146	100.00

[1] Does not include $1,172,513 allotted to States for forest fire cooperation, $56,296 for cooperative forest planting stock distribution, and $2,741,100 (including $688,500 for payments to States) from forestry receipts and special funds.

The following table sets forth, summarily, the amounts recommended in the accompanying bill, as compared with the 1934 appropriations and the Budget estimates for 1935:

TABLE B

Group	Appropriations for 1934	Budget estimates for 1935	Amount recommended in House bill for 1935	Increase (+) or decrease (−), House bill compared with 1934 appropriation	Increase (+) or decrease (−), House bill compared with 1935 Budget estimates
1. Ordinary activities:					
(a) Of primary benefit to agriculture:					
Annual appropriations	$26,181,868	[1] $21,463,787	[2] $21,878,563	−$4,303,305	+$414,776
Permanent appropriations		34,490	34,490	+34,490	
Total, item (a)	26,181,868	21,498,277	21,913,053	−4,268,815	+414,776
(b) Of general public benefit:					
Annual appropriations	24,490,238	18,196,285	18,339,088	−6,151,150	+142,803
Permanent appropriations	2,550,000	3,000,000	3,000,000	+450,000	
Total, item (b)	27,040,238	21,196,285	21,339,088	−5,701,150	+142,803
Total, ordinary activities	53,222,106	42,694,562	43,252,141	−9,969,965	+557,579
2. Payments to States (exclusive of road and forestry receipt funds):					
Annual appropriations	10,079,585	9,688,809	9,688,809	−390,776	
Permanent appropriations	4,666,096	4,676,096	4,676,096	+10,000	
Total, payments to States, as above	14,745,681	14,364,905	14,364,905	−380,776	
3. Forestry receipts and special funds (permanent appropriations)	3,087,020	2,751,100	2,751,100	−335,920	
4. Road funds (annual appropriations)	39,457,400	12,878,124	9,500,000	−29,957,400	−3,378,124
Total, items 1–4, above:					
Annual appropriations	100,209,091	62,227,005	59,406,460	−40,802,631	−2,820,545
Permanent appropriations	10,303,116	10,461,686	10,461,686	+158,570	
Total, Department of Agriculture, exclusive of Agricultural Adjustment Administration	110,512,207	72,688,691	69,868,146	−40,644,061	−2,820,545
5. Agricultural Adjustment Administration:					
Salaries and expenses (direct appropriation)	100,000,000			−100,000,000	
Advances (paid from processing taxes)	855,379,811	831,022,428	831,022,428	−24,357,383	
Total, Agricultural Adjustment Administration	955,379,811	831,022,428	831,022,428	−124,357,383	
Grand total, Department of Agriculture	1,065,892,018	903,711,119	900,890,574	−165,001,444	−2,820,545

[1] Includes $2,354,893 for grasshopper control.

[2] Includes $2,000,000 for grasshopper control.

CURTAILMENT OF 1934 APPROPRIATIONS THROUGH LEGISLATIVE AND ADMINISTRATIVE ACTION

An accurate consideration of the Budget estimates for 1935 and of the committee's recommendations thereon requires that they be compared, not with the amounts appropriated by Congress for 1934 but with the amounts which, under legislative reductions and budgetary reservations, will actually be expended in 1934.

Omitting the Federal-aid highways, forest roads and trails, the nonrecurring item of $100,000,000 for the Agricultural Adjustment Administration, and the new item for grasshopper control, the totals for the Department are:

Appropriated by Congress for 1934	$60,751,691
Cash withdrawal limitations for 1934, fixed by legislative reductions and budgetary reservations	49,828,704
Budget estimates for 1935	46,993,983
Amount recommended in bill for 1935	47,906,460

It will thus be seen that, for the appropriations above considered, the amount provided by Congress for 1934 was reduced in the manner indicated in the sum of $10,922,987; the Budget for 1935 is $2,834,716 below the cash withdrawal limitation for 1934; and the amount recommended by the committee in the accompanying bill is $912,472 in excess of the Budget estimates. Offsetting the latter increase, the committee has made reductions below the Budget estimates in the items excluded from the above calculations as follows: Federal-aid highways, $3,000,000; forest roads and trails, $378,124; grasshopper control, $354,893. So that, for the entire bill, there is a net reduction below the Budget estimates of $2,820,545.

The Budget reductions are offset to a degree by allotments from emergency funds for certain of the items in the bill. The amounts of these allotments and the activities for which they have been made are shown in detail further on in this report.

The amounts appropriated by Congress for each activity for 1934, the amounts of the cash withdrawal limitations, the amounts recommended by the Budget for 1935, and the amounts included in the accompanying bill are set forth in the following table:

TABLE C.—*Statement, by specific appropriations, of the amounts appropriated for 1934, the amount of the cash withdrawal for 1934 allowed by administrative action against each appropriation, the Budget estimate for 1935, and the amount recommended in the appropriation bill for 1935*

Bureau or office and appropriation item	1934 appropriation	1934 cash withdrawal	1935 Budget estimate	Amount recommended in bill for 1935
OFFICE OF THE SECRETARY				
Salaries, Office of the Secretary	$731,347	$615,022	$548,560	$548,560
Compensation, mechanical shops and power plant	120,960	112,166		
Miscellaneous expenses, Department of Agriculture	267,254	267,254	115,048	115,048
Rent of buildings in the District of Columbia	45,000	45,000	63,000	63,000
Total, Office of the Secretary	1,164,561	1,039,442	726,608	726,608
OFFICE OF INFORMATION				
Salaries and expenses	376,287	306,500	323,641	323,641
Printing and binding	850,000	610,466	610,466	610,466
Total, Office of Information	1,226,287	916,966	934,107	934,107
LIBRARY, DEPARTMENT OF AGRICULTURE				
Salaries and expenses	100,223	87,551	87,812	87,812
OFFICE OF EXPERIMENT STATIONS				
Payments to States, Alaska, and Puerto Rico for agricultural experiment stations:				
Hatch Act	720,000	720,000	720,000	720,000
Adams Act	720,000	720,000	720,000	720,000
Purnell Act	2,880,000	2,880,000	2,880,000	2,880,000
Hawaii Station Act	26,000	26,000	28,000	28,000
Alaska Station Act	15,000	15,000	15,000	15,000
Puerto Rico Station Act	20,000	20,000	25,000	25,000

TABLE C.—*Statement, by specific appropriations, of the amounts appropriated for 1934, etc.*—Continued

Bureau or office and appropriation item	1934 appropriation	1934 cash withdrawal	1935 Budget estimate	Amount recommended in bill for 1935
OFFICE OF EXPERIMENT STATIONS—continued				
Salaries and expenses:				
Supervision of and relations with agricultural experiment stations	$148,831	$130,070	$137,125	$137,125
Insular agricultural experiment stations:				
Hawaii station	36,270	31,800	31,162	31,162

[12] Includes supplemental estimates totaling $4,873,433 as follows: $1,097,000 for payments to States, for agricultural experiment stations; $1,018,000 for payments to States for agricultural extension work; $75,000 for foreign plant introduction, Bureau of Plant Industry; and $328,540 for control of predatory animals, Bureau of Biological Survey, and $2,354,893 for grasshopper control.

I may state that the committee held hearings for 4 weeks, and the hearings comprise about 1,300 pages. I believe they will be very interesting to any Member who may take the time to read them. They can certainly find in the hearings something on nearly every subject that is handled by the Department of Agriculture.

The tables show in detail the appropriations that are made, and the break-down of such appropriations is such that I do not think any Member will have any difficulty in getting all the information he may desire with reference to any item in which he may be interested.

WORK AND ACCOMPLISHMENTS OF THE DRY-LAND STATIONS AND THEIR PLACE IN FUTURE PLAINS AGRICULTURE

Mr. SINCLAIR. Mr. Chairman, under the leave to extend my remarks in the RECORD, I want to call attention to the importance of dry-land stations and the work being done by them. This work is conducted in the Great Plains area, embracing 450,000 square miles of tillable land in 10 States, and in which is grown two thirds of the wheat production of this Nation.

Study of the problems of dry-land agriculture was first begun in a systematic way by the Department in 1905 to meet the urgent needs of settlers who were taking up the land. Most of them were from humid areas and knew nothing of farming under dry-land conditions. Failure and tragedy were common and recurrent as wave after wave of settlement advanced and receded. Misinformation on climate and methods of farming was the rule, and no one understood the principles underlying the handling of the soils and growing of the crops. The States were financially unable to conduct the necessary experiments and to establish the required experiment stations. Furthermore, it appeared that the Government which had opened up the land for settlement had some responsibility in the premises.

In order to meet the situation existing in this early day a series of stations was established, some in cooperation with States, a few independently, covering the plains from north to south and east to west, where studies would be made of rotations and tillage methods, how to handle the soil in order to conserve and utilize moisture, what crops and what varieties of crops to grow, how best to utilize the pastures, where it was safe to farm and where not, and other problems of importance in establishing a stabilized system of agriculture in the region.

Fruits and vegetables were required by the settlers and these were given attention. The best varieties were sought out and others developed by breeding. As a later development, experiments with trees and shrubs were begun, and demonstration shelter belts were planted to protect the homes and farm orchards and gardens from the winds and storms.

As a result of the experiments conducted at the dry-land stations, a large body of facts has been assembled that are used and are useful in many ways. They are of vital assistance to the farmer; they are used by Government officials in classifying land; and they will certainly be of further use if land purchases are undertaken in the region, or if any widespread changes in the utilization of the land are inaugurated.

Some of the specific accomplishments of the dry-land stations follow:

CLIMATE

From a study of the climatic data assembled during the last 25 years it has been possible to secure information on the amount and distribution of precipitation, frost dates and the average frost-free period, temperatures and wind velocities for each month, and evaporation and humidity during the growing season. These factors have determined the types and varieties of crops to be used, planting and harvest dates, tillage practice, and farm operations in general.

ROTATION AND TILLAGE

Through the accumulated data on the crop-rotation and tillage investigations many old-time theories have been discredited or replaced by accurate experimental data and new farm practices have been evolved.

The rotation and tillage experiments have demonstrated the value of the 4 years' rotation in many sections of the Northern Plains, including and progressing in the order of fallow, winter wheat, corn, and oats or barley. This rotation embodies the several factors recognized as necessary in this region for a well-balanced system of diversified agriculture and has been adopted with variations by many dry farmers. Fallow, the essential moisture-storage and weed-eradication treatment, is followed by wheat, the principal crop of this region. Corn, on spring plowing or listing, follows wheat and is a grain and fodder crop adapted to harvesting or pasturing. Corn is also a partial weed-control and moisture-conservation crop and leaves the land in good condition for the crops that follow. Oats or barley produced economically on disked corn land provide small grains for feed and, when cut at the proper stage, some of the crops may be used for grain hays. Oats and barley, together with corn, entail the production of livestock on the farm, which, with the winter wheat, constitute the principal sources of income.

An outstanding accomplishment of the station at Archer, Wyo., has been the development of a method of cultivation that controls soil blowing and enables winter wheat to survive the winter and spring at the high altitude of southeastern Wyoming. This method does not use the plow. All cultivation is done with a duck-foot or field cultivator and the wheat is seeded with a furrow drill.

The average returns from the tillage experiments at Huntley have shown that there is practically no difference in yield between crops grown on spring-plowed and fall-plowed land. The maximum yields of small grains or flax in any season have generally been obtained on summer-fallowed land, although in some cases the most economical yields of these crops have been produced on disked cornland. From the standpoint of yields obtained as well as economy of soil preparation, listing the land for small grains has generally excelled plowing. Plowing to depths greater than 8 inches has not returned increased yields, but has increased the cost of production. The returns from small grains cropped successively on the same ground have seldom justified the expense of plowing between crops as compared to the more economical method of sowing the seed into disked stubble land.

Date of seeding work at several stations over the past 18 years on the sorghums, cotton, and other crops is slowly but very surely influencing farmers to plant at dates that insure higher yields.

From the nature of these experiments with rotation and tillage methods and other soil studies, they must be continuous, and many of them have been under way without any break for 25 years or more. Their comprehensive nature has required many years of investigation before conclusions could be formulated. Although many of the results obtained in these experiments are widely applied and have been of immense benefit to farmers the results in some of them are just beginning to be successfully used by leading farmers in the region, and their value should be increasingly evident as they are more widely applied. As yet many phases of these investigations are incomplete.

SOIL MOISTURE

Soil moisture is closely associated with climatic factors and crop production. Through the study of about 300,000 soil samples, taken from plots at several stations, given various tillage treatments and seeded to different crops, it has been possible to obtain comparative data on the storage and depletion of soil moisture as a result of cultural and cropping practices over a period of years. This information is not only valuable in accounting in part for yield variation but aids in determining the most reliable methods to be followed in crop production.

SUMMER FALLOW

In experiments at stations generally it has been demonstrated that summer fallow plowed early and kept free from weeds the remainder of the season, produced much higher yields than that plowed in July after the weeds have removed practically all of the moisture. Plowless fallow in Montana, using the duckfoot cultivator and the one-way disk, produced yields practically equal to plowed fallow, and from an economic standpoint it has a considerable place on much of the fallow acreage of the State.

It has been established by experiments at representative stations that an average increase of 3 bushels of wheat per acre is obtained from each inch of water stored by fallow above the quantity stored in other plots in the spring.

Yield of spring wheat on fallow plowed by June 1 has averaged 22 bushels to the acre, whereas that plowed after that date but before July 1 has averaged only 16 bushels.

The stations at Belle Fourche and Ardmore have demonstrated the importance of using methods of production that are adapted to conditions. The growth of small grains continuously or by methods that do not accumulate a store of water in the soil before seeding is too hazardous to warrant its practice. Such crops grown on a properly conducted fallow are productive and sure enough to support a permanent agriculture.

Investigations conducted since 1914 at Mandan have shown that while the highest yields of wheat and other small grains are produced on fallow it is not the most profitable method. It might be used to advantage when it seems desirable to reduce the total production of wheat and to increase its quality. A combination of corn for feed and small grain grown on disked corn ground is a practice well fitted to a large section represented by the station and is the foundation of a better balanced agriculture than can be based on the use of fallow.

BREEDING OF FIELD CROPS

The Akron station provided facilities for cooperative work through which a variety of oats, Brunker, was developed that for an average of 8 years yielded 22 percent more than the variety of oats, Kherson, in standard use.

Wheatland and Beaver milo, both originated by the cereal office in cooperative work at the Woodward station, are now planted over tens of thousands of acres of the sorghum belt. Western black-hull kafir, distribution of which was started from this and other stations only in the past few years, is recognized as the best general-purpose kafir over most of the sorghum region proper.

Facilities provided by the field station at Woodward, Okla., are responsible for the breeding of a grain sorghum that is satisfactorily productive and that can be handled with wheat machinery, making possible a substitution of that feed crop for wheat and thus promoting a better-balanced agriculture.

Testing and breeding sorghum crops for chinch-bug resistance, under way at the Lawton station, have given promising results.

MANURE AND GREEN MANURING

Plots to which barnyard manure or green-manure crops have been added have seldom produced yields of small grains or ear corn equal to the yields that have been obtained from ordinary summer fallow. When noticeable at all, the effects of added fertility have usually been reflected in increased yields of straw and stover, although in a 2-year rotation of corn and flax the yearly addition of barnyard manure has seemed to have a depressing effect on the yield of flaxseed.

GRAZING AND PASTURING

The investigations in grazing conducted at Mandan, N.Dak., since 1915 in cooperation with the North Dakota Agricultural Experiment Station are the most fundamental of any investigations on the utilization of native sod and cultivated sod crops that have ever been conducted on the prairies or plains. They have determined the normal gain per steer that may be obtained during a pasture season. They have determined the gain per acre that may be obtained from pastures grazed at different rates or handled in different ways. They have shown that the carrying and producing capacity of native sod can be increased about 20 percent by dividing the pasture into three parts and grazing them in rotation. Investigations are under way to determine how cultivated sod crops can best be utilized to replace or supplement native sod. Indications are that most effective use of the land can be made by utilizing such crops as crested wheatgrass, bromegrass, and alfalfa for early pastures supplementary to native sod for later pasture. The pastures are furnishing steers for research investigations by the North Dakota Experiment Station on the questions of fill, hardening, and shrinkage to determine the significance of heavy gains at one season of the year and failure to gain at another season.

These grazing experiments at Mandan, N.Dak., show that 7 acres per steer under a system of continuous grazing will furnish enough feed for a 5 months' grazing period and allow the steer to put on a gain of 300 pounds. By following a system of deferred and rotation grazing, the acreage can be reduced to 5 acres per steer, with a gain of 275 pounds per head.

Careful botanical studies of the vegetation and changes in it as a result of grazing make it possible to apply the results to other sections where the vegetative cover is greater or less as a result of differences in soil or water supply.

Crested wheatgrass not only produced good yields of hay but is also outstanding as a pasture grass. It starts growth early in the spring and is ready for pasture before other grasses or sweetclover. After late summer rains it greens up and furnishes considerable pasture while the other cultivated and native grasses remained dry and brown. Pasture tests during the past few years have shown it to have four times the carrying capacity of the native ranges of the Judith Basin. It is not a difficult grass to get started in central Montana. During both of the past 2 years almost perfect stands were obtained when the grass was seeded alone on fallow.

Hog-pasturing investigations in Montana have shown that it is possible in most years to raise pigs from weaning age to nearly market condition by pasturing them on a series of annual crops and supplying them with a suitable supplementary grain ration. The annual crops used and the order in which they have been grazed are winter rye, field peas, Sudan grass, soybeans, sorgo, and corn. This series of crops has generally furnished continuous pasturage from early in May to the middle of September.

In Montana alfalfa produced a good yield of hay and was far better than sweetclover as a pasture for hogs.

FORAGE CROPS

Investigations centered at the Mandan station were largely responsible for the development and introduction into use of crested wheatgrass, a Russian immigrant, that is one of the most important contributions ever made to the list of sod crops available for use in cold, dry regions. It has never been killed out by cold or drought, and is more productive under adverse conditions than any other sod crop. It has good seed habits and is easily established, which insures its general use. In many sections it is the only grass available for resodding land that has been broken up but which it is not profitable to continue in cultivation.

The value of early sorgos and Sudan grass for drought- and grasshopper-resistant forage crops has been demonstrated, and these crops have been introduced into use.

It has been shown that when there is emergency need of forage crops, oats, Dakota Kurak millet, and Dakota amber sorgo can be planted in North Dakota as late as July 15 and still produce nearly as much forage as the best hay mixtures.

The dry-land stations introduced Sudan grass into the Plains, which is a valuable hay crop and also is of great value as a summer and fall pasture crop.

FEEDING

It has been determined at the Akron station that hog millet is equal to yellow corn in fattening value for hogs when finely ground and fed with a balanced supplement and simple minerals.

FRUITS AND NUTS

Varieties of grapes distributed over the Plains a number of years ago from the Woodard station show adaptability of varieties to different sections of the Plains. There seems to be a gradual change of varietal adaptability from south to north and from east to west. There is a wide range of adaptability due to different soils also. The main fact that many very good varieties of grapes are adapted to practically all of the southern plains has been established almost wholly by the work of this station.

Tests of grapes have shown distinct regional adaptation of different varieties. They have shown that some varieties standard in other sections are not adapted to dry-land conditions, and that other varieties produce quality grapes only under semidesert conditions.

There has been a great demand for a nut tree for the Southern Plains, and work has been concentrated on obtaining wood of the better varieties of black walnuts from all over the eastern United States and grafting it on trees of native black walnuts. Results are very encouraging. Wood grafted on old trees starts bearing the second year.

A pecan of good quality, which ripens fully even as far north as southern Kansas, has been discovered and is being propagated for distribution.

Woodard has introduced improved varieties of persimmons and shown the possibilities of grafting them on native trees.

Variety tests have been and are being made at Mandan, Woodward, and other stations of all tree fruits and small fruits that might be adapted to the region, paying particular attention to new varieties that are put out by State and Canadian experiment stations and to foreign importations secured by the Division of Foreign Plant Introduction. This is determining the best material for the region that is available. Extensive breeding work is being done with apples, crabs, plums, cherries, juneberries, currants, and gooseberries to produce better hardy varieties. More than 30,000 crosses have been made, and more than 5,000 hybrid plants and trees are now being tested for hardiness and brought to bearing.

New and improved varieties are being tested by 75 cooperating farmers in the Northern Great Plains. New varieties of plums and apples have shown superior qualities that warrant their immediate distribution for general growth and trial.

ARBORICULTURE

Through test plantings on the station and plantings on the farms of nearly 3,000 cooperators in Montana, Wyoming, North Dakota, and South Dakota great progress has been made in determining the varieties of trees to grow, the spacing at which to plant them, and how to care for them for shelter belts under the trying conditions of the northern

Great Plains, where trees grow naturally only in the most favored and sheltered locations.

The Chinese elm was introduced and has proved to be one of the most valuable additions to the list of adapted species. The value of American elm and green ash above willows and poplars which were in most general use has been clearly shown. The adaptability, hardiness, and suitability of white spruce from the Black Hills and of ponderosa pine for shelter belts in even the most difficult situations has been shown.

It was common practice to prune trees of all their lower limbs and to mulch plantings with straw or manure. It has been shown that pruning destroys the value of a planting for shelter, interferes with its ability to prevent the competition of sod and weeds, and actually reduces growth.

Mulched trees do not do as well as those that are given no care at all. The best treatment for a shelter belt or tree planting is clean cultivation and no pruning.

The cooperative plantings scattered over the Plains, in which about 5,000,000 trees have been planted, are demonstrations that encourage others to plant shelter belts. The improved conditions afforded by a shelter belt also encourages the planting of fruits and gardens and greatly increase the chances of their success.

Each cooperative planting is an experiment that is visited every 5 years to study the reactions of the varieties and methods used to the local conditions of soil and climate. Solution of the many problems involved over so wide an area naturally requires much time, but the method in use is productive of results more rapidly and decisively than any that has been tried before.

Experiments at Archer have shown that the snow caught by a shelter belt may increase the yields of hay on adjoining fields enough to more than offset the loss of land occupied by the shelter belt.

GARDENS

Breeding work at the Mandan, N.Dak., station has developed a tomato adapted to the short season and to dry weather. Sweet-corn varieties have been tested and the best ones further adapted to conditions by increasing their earliness and improving their quality and productiveness. Continued seed selection from the earliest watermelons and muskmelons is producing melons that will ripen in the short growing season of the northern Great Plains.

The possibilities of the farm garden, when handled on a systematic plan and in accordance with practices suited to the conditions that obtain, have been measured and the dissemination of the information has been responsible for a great increase in home-garden production in the Plains.

Present depressed economic conditions direct attention to the value of the farm garden and farm orchard as aids in making the dry-land farm more of a self-sustaining unit and more satisfying home.

The advantages and greater chance of success of a garden located in a favored spot, such as a sheltered coulee or protected by a shelter belt, has been shown.

CONCLUSION

There is no doubt but that the dry-land stations have repaid many times over in benefits to agriculture the money spent on them by the Federal Government. Not only should they be maintained as at present, but ample opportunity and assistance should be afforded them to increase the scope of their activities.

Mr. SINCLAIR. Mr. Chairman, I yield the remainder of my time to the gentleman from Pennsylvania [Mr. McFADDEN].

The CHAIRMAN. The gentleman from Pennsylvania is recognized for 5 minutes.

Mr. McFADDEN. Mr. Chairman, I want to call the attention of the House to a bill I introduced on March 9, 1933, House Resolution 19, which is pending before the Rules Committee, proposing that the House authorize the appointment of a select committee of seven men to examine into the present radio situation.

I have repeatedly asked the Chairman of the Rules Committee for a hearing on the bill but I have had no response. The country is thoroughly aroused upon this subject, and wants full action at once.

Likewise, on the 14th of February of this year I introduced a resolution following some remarks which I made on the floor of this House on January 31 last in regard to discrimination, censorship, and interference of radio. Radio broadcasting calls for a new deal—a fair new deal. This bill is a fair bill; it deals squarely with the question of politics, religion, and education by radio. The gentleman from Texas, Mr. RAYBURN, Chairman of the Committee on Interstate and Foreign Commerce, following the message of the President, has introduced a bill proposing to establish a new bureau called the "Bureau of Communications". This bill proposes to take from the Interstate Commerce Commission supervision of the radio and put it under the jurisdiction of the new Commission, which will supervise telegraph, telephone, and radio.

At the other end of the Capitol, Senator DILL has introduced a bill, S. 2910, quite similar.

I now call attention to the present censorship, directly and indirectly, in radio broadcasting. The two bills that have been introduced at the instance of the President to conform to his message do not deal clearly with the question of censorship. If the Rayburn-Dill bills are to become law, the subjects covered in my bill, H.R. 7986, should be included therein. The two major chain broadcasting systems have a self-established censorship policy, which includes politics, education, and religion. In this they are attempting to tell the American people what they shall hear and what they shall not hear. The attention of the membership of the House is directed to the fact that these two bills propose that this new commission, when it is organized, shall make a study of all phases of broadcasting and report at the next session of Congress. I say this subject must be dealt with fully now to prevent further entrenchment of selfish interests.

In remarks I made on the floor of the House on the 31st of January I called attention to the political censorship of radio. During the present year very important elections are to take place; the full membership of the House is to be elected and one third of the Senate. If radio during this summer is to be controlled partisanly, it means something to the membership of this House and the country. Likewise the question of international relations will be discussed all during this year, and if this present censorship referred to is to keep off the air broadcasts that are in opposition to their views it means partisanship aplenty.

One phase of censorship which has been set up by the chain broadcasting associations, which control 80 percent, directly and indirectly, of the broadcasting of the United States, is to assume to censor all religious talks that may take place over the radio. The N.B.C. have vested the censorship in the so-called "Federal Council of the Churches of Christ in America" under the guise of its religious contribution to the radio audience, whereas it is used as a smoke screen to prevent other programs of wide public interest to be given because the latter may be considered to be inimical to its own selfish interests. This policy applies not only to religious programs but to political and educational programs as well. And they are permitting James J. Farley, Postmaster General and chairman of the Democratic Committee, to censor political broadcasts, and the Columbia System are cooperating in the political censorship.

I submit that the so-called "Federal Council of the Churches of Christ in America" do not represent all the God-fearing people in the United States, nor does the Democratic Party possess all the God-fearing people. And the American people have certain vested rights as to what they shall hear over the radio. It is a well-known fact that the so-called "Federal Council of the Churches of Christ in America" are working in cooperation with many other organizations in pacifistic movements in the United States, going so far as to voice their cooperation in matters

pending before Congress, such as their opposition to the recent Vinson naval bill; likewise, their opposition will be voiced against the Army appropriation bill; and at the present time they are cooperating in the program to have this country join the League of Nations and adherence to the World Court. In fact, this censorship is being used to involve the United States in international affairs.

I hope in answer to a request made of the chairman of the radio committee of the House (which is the Merchant Marine, Fisheries, and Radio Committee) that they are going to give some consideration and a hearing on my bill.

I want the Membership of the House to understand that my bill is necessary, pending the putting into operation fully of the President's plan as represented by the Rayburn-Dill bill establishing a new commission of communications, and I am now requesting the chairmen of all three committees that they give consideration to the subject covered in my bill no. 7986, which is as follows:

A bill to amend the Radio Act of 1927, approved February 23, 1927, as amended (44 Stat. 1162)

Be it enacted, etc., That the Radio Act of 1927, approved February 23, 1927, as amended (44 Stat. 1162), is amended by the addition of two new sections to follow section 28 of said act (44 Stat. 1172), said new sections to read as follows:

"No person, persons, company, association, or corporation owning and operating a radio broadcasting station, and receiving and broadcasting radio programs for hire, shall discriminate in the use of such station in favor of a program of speech sponsored by any person who is a legally qualified candidate for any public office, and/or by any religious, charitable, or educational company, corporation, association, or society or any other like association or society, and against or to the exclusion of another person who is a legally qualified candidate for any public office, or of another religious, charitable, or educational company, corporation, association, or society chartered or licensed under the laws of the United States, because and for the reason that such person, religious, charitable, or educational company, corporation, association, or society holds and promulgates and advocates views contrary to those expressed in programs that have been broadcast. The owner, lessee, or operator of any broadcasting station contracting for or accepting and broadcasting radio programs for one legally qualified candidate for a public office, and for one class of religious, charitable, or educational company, corporation, association, or society, and refusing to contract for or to accept and broadcast for hire radio programs of speech offered for broadcast by another legally qualified candidate for a public office, or by any other religious, charitable, or educational company, corporation, association, or society within the provisions of this section, because or for the reason that such legally qualified candidate, or such religious, charitable, or educational company, corporation, association, or society holds or promulgates a contrary or different view from that which is expressed by the person or parties broadcasting programs, shall be deemed guilty of an unlawful discrimination. All persons, companies, corporations, or associations owning and operating a radio station who shall be guilty of a misdemeanor shall be punished by a fine of not less than $500 nor more than $5,000, and in addition thereto may be required to forfeit the license for operating such broadcasting station.

"No person, persons, company, association, society, or corporation shall by threats, or by coercion, or by misrepresentation, or any other like manner interfere with or prevent, or attempt to interfere with or prevent, the broadcasting of any radio program by any owner, lessee, or operator of any radio broadcasting station; or interfere with or attempt to interfere with, or to prevent any owner, lessee, or operator of any radio broadcasting station from entering into a contract with another person, persons, company, association, society, or corporation, to accept, receive, and broadcast programs of speech and music by radio. No person, persons, company, association, society, or corporation shall induce or attempt to induce any person, persons, company, association, society, or corporation to withdraw business or financial support or social intercourse from any radio broadcasting station, or the owner, lessee, or operator of any radio broadcasting station in the use and operation of such radio station or in the broadcasting of any and all programs offered to be broadcast, or which may be broadcast at any such station. Any person, persons, association, society, or corporation violating this section shall be guilty of a misdemeanor, punishable by a fine of not less than $500 nor more than $5,000, or in the case of an individual or the responsible officials of an association or corporation, by imprisonment for a term of not less than 60 days nor more than 2 years, or by both such fine and imprisonment."

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired. All time has expired. The Clerk will read the bill for amendment under the 5-minute rule.

The Clerk read as follows:

For the Secretary of Agriculture, Assistant Secretary, and for other personal services in the District of Columbia, and elsewhere, $548,560: *Provided*, That in expending appropriations or portions of appropriations contained in this act for the payment for personal services in the District of Columbia in accordance with the Classification Act of 1923, as amended, with the exception of the Assistant Secretary, the average of the salaries of the total number of persons under any grade in any bureau, office, or other appropriation unit shall not at any time exceed the average of the compensation rates specified for the grade by such act as amended: *Provided further*, That this restriction shall not apply (1) to grades 1, 2, 3, and 4 of the clerical-mechanical service, or (2) to require the reduction in salary of any person whose compensation was fixed as of July 1, 1924, in accordance with the rules of section 6 of such act, (3) to require the reduction in salary of any person who is transferred from one position to another position in the same or different grade, in the same or different bureau, office, or other appropriation unit (4) to prevent the payment of a salary under any grade at a rate higher than the maximum rate of the grade when such higher rate is permitted by the Classification Act of 1923 as amended, and is specifically authorized by other law, or (5) to reduce the compensation of any person in a grade in which only one position is allocated: *Provided further*, That the Secretary of Agriculture is authorized to contract for stenographic reporting services, and the appropriations made in this act shall be available for such purposes: *Provided further*, That the Secretary of Agriculture is authorized to expend from appropriations available for the purchase of lands not to exceed $1 for each option to purchase any particular tract or tracts of land: *Provided further*, That not to exceed $20,000 of the appropriations available for salaries and expenses of officers and employees of the Department of Agriculture permanently stationed in foreign countries may be used for payment of allowances for living quarters, including heat, fuel, and light, as authorized by the act approved June 26, 1930 (U.S.C., Supp. VI, title 5, sec. 118a), but not to exceed $720 may be so used for any one person: *Provided further*, That no part of the funds appropriated by this act shall be used for the payment of any officer or employee of the Department of Agriculture who, as such officer or employee, or on behalf of the Department or any division, commission, or bureau thereof, issues, or causes to be issued, any prediction, oral or written, or forecast with respect to future prices of cotton or the trend of same.

Mr. FOCHT. Mr. Chairman, I move to strike out the last word. I know it might be wondered at by some of the gentlemen from the plains of the West and the great rich agricultural districts of the Northwest, to hear a Pennsylvanian asking for time to discuss the dairy question, or even revert to it; but when you realize that Pennsylvania is seventh in the list of quantity and value of agricultural products in this country you should not be surprised. At the several meetings that I attended in the House Office Building of committees debating and discussing this dairy question, I was amazed to find such a diversity of opinion in regard to it, particularly in view of the fact that 9 months ago we voted in favor of a bill that was supposed to put into the hands of the Agricultural Department power to regulate, to stimulate, help, and relieve, and bring out of the distress and woe that they have been experiencing the last few years, the farmers of this country. I have listened to the talks about the cheese and the butter that is made in the Northwest, and how proud gentlemen are that we can export that even to Denmark and other parts of the world; but, after all, instead of being in such great alarm, instead of inveighing against the Agricultural Department, or depending too much on it, can we not think here in terms of the conditions that prevail today. It is a market that the farmer wants, and not interference or meddling by the Agricultural Department. Give the farmers of the valleys of Pennsylvania and New York a market, and get out in front of all this stimulated activity and these vast sums that are being expended, and furnish a purchasing power and the farmer will take care of himself. It may be that what is wrong in New York and the other great cities of the East is that the people there are not consuming milk enough. I am inclined to think that that has something to do with it.

I believe that the Agricultural Department is the most important of all the Departments of the Government. Agriculture in America is the queen of all occupations. More money is invested in it than in any other, and in the last analysis it is what sustains human life. It is what we must depend upon, and that must be prosperous if the rest of us are to be prosperous. But we must not think of only one side. If the farmer is to be prosperous, there must be a consuming power, and I appeal here for cohesion on the part of the various committees. In any department, whether it be the Department of Agriculture or any other, if you have lodged power there, you should demand that that

department exercise it, and particularly the Department of Agriculture, and then we will not have this struggle going on amongst the farmers of my State and every other State, when, under ordinary circumstances, depending upon themselves, they are prosperous and happy.

We have heard some wonderful speeches here today, and I wish to compliment the Membership on both sides of the House. We have evidence that there is something more than partisanship in America. I said some time ago on this floor that I could pick out of this Congress here today, after an absence of 10 years, 25 or 30 men who could run America much better than it is being run now, in all branches, with the training they will have in another 10 years. But you do not want to run it on the theory advocated by a young man right here who made a speech a while ago—a wonderful address, splendid diction, but the most illogical and un-American speech I ever heard anywhere, excepting under the red flag in the Plaza at Philadelphia.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MARTIN of Massachusetts. Mr. Chairman, I ask unanimous consent to extend the time of the gentleman for 5 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FOCHT. I believe in patriotism, and I delight in the manner in which this House has asserted itself. We heard yesterday a wonderful debate. Gentlemen here are able to extract out of a subject all there is in it and lay it before the American people. Anyone that criticizes this Congress either does not come here and listen to these debates or does not read the CONGRESSIONAL RECORD. It is the only document issued in America that appears without a typographical or grammatical error. Hunt through it and you will find none. It is edited by three of the greatest English scholars in America, and you will find more in there than in most any of the textbooks of the country.

But I want to revert to the idea that something sinister is creeping into our body politic. Do not let it do it. I like to see a Democrat stand there with the old spirit of those men that I read of this summer in, say, the history of Texas, for instance; men who would fight their war because they believed in it. And as for the men who fought the Civil War, I know that they were still Americans, and not one of them, not a man of the Confederate Army or member from the South or any other part of the country two generations ago would have tolerance with any such thing as communism in this country.

The only hope of this country is incentive for achievement. This idea of Russianizing this country and taking away even a man's name is out of the question. That crowd over there, my friends, is descendant from the plebians of the Roman Empire, nameless men. You know where our crowd came from. Let me tell you an aggressive minority can always conquer a passive majority. Let us not forget what Mirabeau said when he stormed the French Assembly and cried out, as the revolution swept the boulevards of Paris, "There they go; there they go." They got away from them. "Another exhibition of what ignorance and inexperience will do." So let us stand by the traditions and our fathers. Let us stand by experience and by the priceless education which flows from our high schools and universities. Let it be reflected here in real solidarity of patriotic purpose, standing on the principles and fundamentals of our fathers, and no more error like that from the brilliant young man who spoke this afternoon, talking about sovietizing America. We will never do that. We will do what I told a Communist who appeared before our committee, when he was talking about communism for America. I said, "Did you ever hear of the Molly McGuires?" He said, "No." I said, "You had better read about them, because that is the kind of people who tried to break down law and liberty in Pennsylvania, and when we had finished with them we had a string of them hanging along the roadside, 37 of them." That is what will happen to those who may attempt to destroy the heritage that was given us by our glorious fathers, north, east, south, and west, the American Republic.

[From the Rural New Yorker, June 24, 1933]

HITS THE NAIL SQUARELY

Now and then something really alive gets into the CONGRESSIONAL RECORD, as may be seen by the following remarks by Representative BENJAMIN K. FOCHT, of the Eighteenth Pennsylvania District:

"Then the other great element of our body politic is the farmer, and you can use all the hypodermics there without success until we can unfold some method by which the farmer who raises his crop can reach the market and get an adequate price for this product, a price above his cost of production. It does not matter how much his gross is unless he has a net.

"Why this problem cannot be solved I do not know. With all the brains we have here, and the various and numerous varieties of farm boards, and with the untold millions of dollars that have been spent in my lifetime trying to stimulate agriculture, it does seem strange to me there has not been some way devised to find a profitable market. The farmer will reach a market if you will only give him the chance, and we ought to have the brains and ability, in addition to this, to lift the burden of taxation from the farmer and give him an equal break in taxation, and then, for goodness sake, let him alone. He can run his own business if you will just let him do it. I know that they can do this up in my country, and all the farmers of the West came from the East, and the farmer can everywhere take care of his own business if you do not overburden him with taxes and inquisitions."

These remarks brought applause in the House, and the great majority of farmers feel the same way. Mr. FOCHT hit the nail squarely—not a dodging or on-the-fence blow.

[Applause.]

Mr. GLOVER. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I do this for the purpose of calling your attention to the last provision that has just been read, in the bill which is one of the safe provisions that this bill carries. The provision is:

Provided further, That no part of the funds appropriated by this act shall be used for the payment of any officer or employee of the Department of Agriculture who, as such officer or employee or on behalf of the Department or any division, commission, or bureau thereof, issues or causes to be issued any prediction, oral or written, or forecast, with respect to future prices of cotton or the trend of same.

We have had no abuses coming from this Department for the past few years, and it may be that this provision carried in the bill has been very helpful. We know very well the abuses that have come from leaks in that Department several years ago with reference to future conditions of the growing cotton crops of the South. A report will get out with reference to a rain in a certain section, and the cotton exchange would get that report and begin to prognosticate what effect the rain would have on cotton. This little yo-yo which the children have to play with, the little rubber string that plays it up and down—they must have gotten that idea from the cotton exchanges that would take anything on earth to make the cotton fluctuate and bob up and down in price. It has cost the South millions of dollars; and as long as this provision is carried in the bill, it is certainly a safety provision and a reminder, because anyone working there knows that whenever any leak of any kind comes from the Department, where it will materially affect the commodity which people are producing, that he no longer can draw any part of his pay. I hope we shall have no more leaks from that Department. I am glad to say we have had none of that lately, but we want to safeguard against that forever, and I congratulate the committee in carrying that provision in this bill, and I hope it will be carried in every other bill so that we can guard against any information being given out that would hurt the farmer.

I should like to say, further, there is no industry that has been in distress like this commodity of cotton for the past few years. Whenever you destroy the purchasing power of agriculture, which represents 30,000,000 people, you have practically destroyed the balance of it. If you make the southern cotton farmer, the wheat farmer, and the producer of agriculture prosperous in the United States, it will carry everything else. The railroads will operate, mills and factories will operate, and everything else will be prosperous. But until you make him prosperous—the greatest consuming power we have, the man who always buys when he has the

money to buy with—you will not have a prosperous country such as we once had.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. GLOVER. Mr. Chairman, I ask unanimous consent to proceed for 1 additional minute.

Mr. MILLARD. Reserving the right to object, is it expected to finish this bill tonight? By scientific reading we might be able to finish it.

The CHAIRMAN. Is there objection?

Mr. MILLARD. I will withdraw the reservation.

Mr. GLOVER. The gentleman has taken up more time than I would have consumed to finish my remarks. The gentleman is certainly very anxious to finish the bill and so am I.

I had started to say that we cannot take a great commodity like that which this provision protects and have it range in price from 40 cents a pound down to 5 cents and ever have a prosperous Nation. Cotton is the greatest crop produced in the United States, and we ought to take care of it.

The Clerk read as follows:

Dry-land agriculture: For the investigation and improvement of methods of crop production under subhumid, semiarid, or dry-land conditions, $191,968: *Provided*, That no part of this appropriation shall be used for the establishment of any new field station.

Mr. SANDLIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SANDLIN: Page 31, line 21, strike out "$192,968" and insert in lieu thereof "$197,945."

Mr. SANDLIN. Mr. Chairman, this adds an amount of $5,977 which was inadvertently left out. It takes care of two dry-land stations and puts them in the same status as the rest of such stations.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana.

The amendment was agreed to.

Mr. SANDLIN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BROWN of Kentucky, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee, having had under consideration the bill H.R. 8134, the Department of Agriculture appropriation bill for the fiscal year 1935, had come to no resolution thereon.

REEDSVILLE FACTORY PROJECT

Mr. PETTENGILL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. PETTENGILL. Mr. Speaker, in my remarks yesterday on the Reedsville furniture factory, I referred to correspondence that I had had with the Comptroller General of the United States. My time was so short that I could not cover this correspondence in full. In justice to the Comptroller General's office and to show that this matter is receiving their attention I attach copy of letter received from them yesterday.

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., February 27, 1934.

Hon. SAMUEL B. PETTENGILL,
House of Representatives.

MY DEAR MR. PETTENGILL: I have your letter of February 19, 1934, with further reference to your inquiry in letter of January 19, 1934, whether a factory building is a public work. In reply, I have to advise that the report requested from the Federal Emergency Administrator of Public Works mentioned in letter to you of February 1, 1934, has not as yet been received, and in the meantime this Office is withholding action on the warrant submitted for countersigning to effectuate an allotment of Public Works funds for the construction of said factory.

I shall be glad to advise you further when the report shall have been received and final action is taken by this Office in the matter.

Sincerely yours,

R. N. ELLIOTT,
Acting Comptroller General of the United States.

HON. GEORGE HUDDLESTON

Mr. ALLGOOD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. ALLGOOD. Mr. Speaker, vision to foresee the needs of the future and originality in framing laws to deal with future conditions are of the highest importance in a Member of Congress. His value is to be tested, not by the number of measures presented, but by their importance, originality, and the understanding of the principles of government upon which they are founded.

During his service in Congress, Mr. HUDDLESTON has proposed more original legislation of a general nature, which has been subsequently enacted into law, than probably any other Member of Congress. Some among these measures are the following:

BILLS INTRODUCED

August 15, 1916, again January 6, 1917, January 13, 1917, and May 24, 1917, bills to create a Federal commission to develop electric energy at Niagara Falls, to be sold to consumers at cost: Voted and agitated for this legislation until his efforts were defeated by the grant of the Niagara power to members of the Power Trust. These were the first bills ever offered in Congress for any similar purpose. Upon these bills the Muscle Shoals legislation was patterned.

July 20, 1921, again on April 30, 1924, again December 8, 1931, again January 3, 1934, bills to require the labeling of articles shipped in interstate commerce, so as to inform consumers of their grade, quality, usefulness, and so forth: These bills are the precursors of the so-called "Tugwell-Copeland bill", but have none of the latter's bureaucratic and extreme provisions.

May 19, 1922, again February 13, 1926, bills to require labeling products of prison and child labor, so as to advise consumers of the origin: The Cooper Prison Goods law was based on these bills.

February 7, 1924, amendment to the Federal Constitution: To provide for the taxation of income from Federal securities and other tax-free bonds.

TO REGULATE MOTOR CARRIERS

February 19, 1929, again December 16, 1929, again January 8, 1932, again March 23, 1933, bills to regulate interstate motor carriers in the interest of shippers and the general public: Principle of bills advocated by President Roosevelt in his Salt Lake speech. Legislation upon this subject is now being considered by the committee, and probably will be passed very shortly.

THE HOME LOAN ACT

January 15, 1930, again December 8, 1931, bills providing for a Federal Home Loan System: The present Home Loan Act was based on these bills. It is estimated by the officials that over 500,000 homes will be saved from foreclosure by the operation of this act.

FEDERAL RELIEF—WELFARE DEPARTMENT

December 2, 1930, again December 8, 1931, bills providing for relief for the unemployed and destitute: Spoke and agitated for this legislation, standing alone and single-handed, with no voice in Congress raised in his support. Out of these bills came the existing Emergency Relief Act, under which millions of worthy citizens have been saved from perishing from cold and hunger. Every family which has been given relief by the welfare department owes it to this agitation and effort. In his speech on December 4, 1930, he said in part:

The argument against a proposal for direct relief is that it will undermine thrift and industry. Granted that it will, the consequences will not be half as serious as a failure to relieve widespread destitution. Direct relief will be less injurious to the morale of the people than for our Government to stand helpless and aloof in the presence of wholesale suffering.

Again, in his speech on February 11, 1931, he said:

From the beginnings of organized society, men have had regard for the sufferings of their fellow creatures. Governments back to the beginning have always had regard for the starving and miserable among their citizens. Never in all history can it be said, unless it may now be said of the American Government, that a

government has been oblivious of such suffering. * * * We are now confronted by the spectacle of men in authority, who supported grants from the Treasury to feed famishing Europeans, but who now refuse food to starving Americans.

In his speech, in behalf of his relief bill, on December 9, 1931, Mr. HUDDLESTON said:

Our country is at war, an awful war, a war as appalling, and involving as much suffering, as any war this country has ever engaged in. This war is not against a foreign foe, but against a domestic enemy. That enemy is starvation, ruin, and despair. These brave soldiers in this war have borne themselves with fidelity and patriotism, and with a devotion which might well compare with the heroism of any soldier who ever fell upon his country's battlefield * * *.

And now I come back to where I started. It is sound from the standpoint of humanitarianism; it is a sound principle of government to guide our action in a time of desperate emergency that no honest American should be allowed to starve. [Applause.]

PUBLIC WORKS FOR RELIEF—P.W.A. AND C.W.A.

January 25, 1931, again December 8, 1931, again May 23, 1932, bills to provide for public works during the depression: Out of these bills grew the existing Public Works Act, under which $3,300,000,000 is being expended throughout the Nation in public-works construction, C.W.A. work, and other forms of relief work. Every man given a job by the C.W.A. owes it to the passage of this law.

The above is only a partial list. It includes only measures of Nation-wide application and of the highest importance, and which represent measures originated by Mr. HUDDLESTON. It does not include numerous other measures which did not ripen into legislation. Also it does not include veterans' and labor legislation, in which fields he has been very active.

BILLS RELATING TO LOCAL JEFFERSON COUNTY MATTERS INTRODUCED IN CONGRESS BY MR. HUDDLESTON

Congressman HUDDLESTON has been active and capable in an extraordinary degree in looking after the local interests of his district. The following are some of the measures of local interest that he has handled:

December 4, 1915, to construct a naval armor plant in Birmingham: The form in which this legislation was passed authorized the President to select the site for the plant. President Wilson selected Charleston, W.Va., as the site, and the plant, costing several millions, was constructed there.

January 7, 1916, to survey Valley Creek with the view to providing navigable water to Bessemer: Passed; survey made; War Department made adverse report.

March 17, 1916, to reprint soil survey of Jefferson County: Bill passed by the House but failed in the Senate.

April 9, 1917, for the purchase by the United States, for use as a park, all land in Jefferson County within 2 miles of slack water above Lock 17 on Warrior River.

February 4, 1918, to provide for the improvement of Warrior River so as to afford a navigable depth of 8 feet.

July 19, 1919, to investigate causes for decrease in the production of coal.

December 20, 1923, to construct a public building at Fairfield, Ala.: Again introduced January 7, 1926; again introduced May 28, 1930; approved by interdepartmental board but delayed for lack of site; now pending before Public Works Administration.

January 17, 1924, to add an additional story on Federal building at Birmingham. Again introduced January 7, 1926; again December 21, 1926; legislation passed, and work was done.

February 29, 1924, to construct an addition to the post-office building at Bessemer: Legislation passed, and work done.

February 28, 1926, to lend tents and supplies of War Department to city of Birmingham for use at Confederate Reunion: Passed.

December 3, 1928, to provide for sale of old post-office building, Birmingham: Passed; Government realized $750,000 from sale.

The above relates to local legislation. It does not include work on bills of general public nature. Also it does not include the dozens of private relief, pension, and so forth, bills which Mr. HUDDLESTON had introduced and had passed.

Also the above does not include work on local legislation before committees, boards, and so forth, such as handling through the Committee on Interstate and Foreign Commerce the bill under which the 10 State bridges were constructed; nor the Inland Waterways Corporation bill under which the Warrior Barge Line was developed and the Ensley Southern Railroad purchased; nor such matters as efforts to obtain an Army camp for Birmingham, to secure location of the nitrate plant on Warrior River, to secure veterans' hospital, to secure office of Department of Commerce for Birmingham, and so forth.

EXTRACTS FROM MR. HUDDLESTON'S ANNOUNCEMENT FOR CONGRESS STANDS ON HIS RECORD

I stand squarely on my record as your Congressman. Promises are of little account—the best proof of what an officer will do is what he has done. During my nearly 20 years of service, you have had ample opportunity to learn what kind of man I am and what you may expect of me in future.

The fair-minded man will agree that I have been consistent. I have had ideals; I have had convictions; I have had political principles—I have had the courage to stand to my guns through thick and thin, despite criticism, ridicule, and abuse.

My principles remain now as always; I have not changed. Some who once criticized me as radical now call me conservative. The change is in them and not in me.

A FOLLOWER OF JEFFERSON

I have been a true follower of Jefferson. I have held to the highest ideals of humanitarianism and of liberty. I have dared to uphold the freedom of speech and of conscience under all circumstances. I have insisted on the fullest possible equality of opportunity for all, and for the right of every man to enjoy the legitimate fruits of his thrift and industry with the fullest freedom of action so long as he did not use it to oppress others. I have insisted upon the right of wage earners to organize for their mutual welfare and protection from injustice.

A LOYAL PARTY MAN

I have always honored my party obligations. When the Democratic Party has called me, I have instantly responded. In supporting the party nominees in 1928 I did my duty as I saw it, and have no apology to make now. Neither then nor now have I held any malice against those who, for reasons of conscience, took the other side. My only criticism was for the selfish politicians and demagogues who, having no convictions of their own, played politics with the sacred feelings of the people.

* * * * * * *

I have spared no effort or pains in my desire to be of service to my people. No constituent in all these 20 years can say that he ever asked a service within my power which I did not cheerfully perform. No letter, however humble the writer, has gone unanswered. No request, however trivial, but has been promptly granted.

PROUD OF PART IN NEW DEAL

I am proud of the part which I have had in the new deal. I have seen measures which, standing alone and single-handed, I was the first to propose accepted as policies of our Government. During the last session of Congress it was my privilege to take an active part in framing and passing the Securities Act and the Emergency Railroad Transportation Act. Also, three important measures which I had first conceived and originated became prominent planks of the administration's program and were adopted by Congress. These three measures were: (1) My home building bill, introduced January 15, 1930, and again on December 8, 1931, out of which came the Home Loan Act; (2) my public works bill, introduced on February 25, 1931, and again on December 8, 1931, and May 23, 1932, embodying the principles of the Public Works Act of June 16, 1933; (3) my bill for Federal relief for destitution, introduced December 2, 1930, and again on December 8, 1931, from which came the law under which relief for destitute citizens is now being given.

It is a source of great comfort to me to remember that although when I first spoke for my relief bill I was reviled as a Socialist and a radical, with not a single voice in the House raised to support me, it has now become the settled policy of the Nation, and millions of my fellow citizens have been saved from perishing by its operation.

A TIME FOR PATRIOTIC SERVICE

The times are serious, and men of sincerity and patriotism are needed now as never before. The new deal must not be interpreted as merely affording an opportunity for selfish ambition, nor for demagogues and agitators to play politics upon the sufferings of the people. To the contrary, the time calls for sacrifice and for devotion—not mere change for its own sake, but change for a fuller life for all, for greater economic security, for equality of right and opportunity, for the purification of our system and cutting out the cankers and the abuses which have infected it. These are what a brave and thoughtful people hope for and will work for. These are what I will stand for.

Our country has chosen a great Democrat to lead us out of the depression. Of Mr. Roosevelt's wisdom and sincerity there can be no question. It is the duty of every citizen to help him to carry out his program. This it is my purpose to do in every way that I consistently can.

LETTER FROM MAJORITY LEADER BYRNS

OFFICE OF THE MAJORITY LEADER,
HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D.C., June 24, 1933.

Hon. GEORGE HUDDLESTON,
House of Representattves, Washington, D.C.

MY DEAR GEORGE: In the CONGRESSIONAL RECORD of June 22, you will find my extension of remarks outlining the accomplishments of the special session of Congress in which you played such a necessary and important part. I hope you will find time to read it.

May I take this opportunity to express to you my deep appreciation and gratitude for kindly consideration to me personally during the trying days of the session. Your service and your loyalty to the party made possible the splendid record written by our Democratic Congress at this session.

With best wishes, I am,
Sincerely your friend,

JO. BYRNS.

LETTER FROM CHAIRMAN FARLEY OF DEMOCRATIC NATIONAL COMMITTEE

DEMOCRATIC NATIONAL COMMITTEE,
Washington, D.C., June 16, 1933.

Hon. GEORGE HUDDLESTON,
House Office Building, Washington, D.C.

MY DEAR CONGRESSMAN: I want you to know that I greatly appreciate the support you gave the administration program during the session just closed. I feel certain the people of the country generally realize that more beneficial legislation was passed at this session of Congress than ever before in the Nation's history.

For the part you played in these remarkable accomplishments I want you to know that I am personally grateful.

With best wishes, I am,
Sincerely,

JAMES A. FARLEY, *Chairman.*

NEW YORK BARGE CANAL IS ONE CANAL

Mr. BEITER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. BEITER. Mr. Speaker, from the viewpoint of Buffalo and other canal communities on the western section of the New York Barge Canal, it is better that the project of improvement, with Federal aid, shall be abandoned rather than that an improvement be authorized that will disrupt long-established channels of transport and destroy large investments incidental thereto.

If the eastern end of the State of New York holds this to be a selfish attitude, I am willing to admit that it is. But I hardly think that it is wise to rob Peter to pay Paul. And that is exactly what will happen if Federal aid is extended for the improvement of the Oswego-Albany section of the canal or for any other single section.

Eastern insistence on an improvement of the barge canal which takes cognizance only of the benefits to be derived therefrom by eastern interests and which has no concern for the damage such improvement will do to the western end of the State is just as selfish as my own protest against being made victims of eastern ambitions can possibly be.

In what I have to say concerning the improvement of the entire barge canal I think I can approach the subject conscious of every obligation and duty that rests upon me as a Member of Congress, and I hope the other Members of the House will take the views I shall present with the same sincerity with which they are presented.

A lack of experience would dictate that I should not try to approach this subject in any manner except one of fairness and justice. I do represent a district of New York State whose citizens are intensely interested in the Erie Canal by reason of the fact that they feel that if the improvement of the canal system from Oswego to the Hudson, with the aid of the Federal Government, is made as outlined in the program that has been advanced by the Federal Government in relation to the $27,500,000 grant of N.R.A. funds, it would dismember the New York canal system and an irreparable injury will be inflicted upon my district and its people.

I believe that my fears as to what the effect of the adoption of this program will be upon the interests of my district are not imaginary fears. They are not fears based upon private interests. They are fears based upon a conscientious belief that if the program as advanced is adopted in the present recommendation an injustice will be done not only to the citizens in my district but to the citizenship and their property interests in a great portion of the central part of the State of New York. For if the Oswego section alone were to be improved, traffic naturally would be diverted from the Erie Canal, which has had more to do with the upbuilding of the State commercially than all the other canals in the system.

It was contended before the Atlantic Deeper Waterways Association conference at Philadelphia in December of this past year that there were many important American projects which would contribute to the development of American commerce and industry. Among the many projects discussed at this conference was the great New York State Barge Canal, carrying the waters of the Great Lakes by way of the Hudson River to the Atlantic Ocean. The conference recommended, along with others, that the canal should be deepened and enlarged to meet the needs of modern trade; so deepened and enlarged it would meet all the requirements of a St. Lawrence waterway and would serve the people of the Northwest to better advantage. It would not be icebound 4 or 5 months of the year, as the St. Lawrence is, thus limiting its facilities for steady traffic from the hinterland to the sea. Moreover, it may be stated that the inspiration for this proposal to dismember the system appears to have come from those who advocate the St. Lawrence seaway plan.

I represent a district with elevator interests in Buffalo having a capacity of between 42,000,000 and 43,000,000 bushels. Roughly speaking, all engineers will tell you that means about $2 a bushel, so we generally say that is an interest of about $100,000,000 of invested capital.

The harbor of Buffalo is unique almost in the entire country in that everything in the harbor pays taxes except the Erie Canal Terminal.

Now, my argument is an argument between those who do not pay taxes and those who do. The Port Authority of New York is a great institution with able men representing it, of course.

The only taxes they pay is a contribution to the city of New York equivalent to the taxes on the property that they purchased, and I want to say that in every city in this country today one of the pertinent questions is that between tax-exempts and those who have to pay the necessary expenses of our Government.

I said that $100,000,000 was invested in elevators in Buffalo. We have the flour mills there that for 3 years past were the biggest producers in the United States, even ahead of Minneapolis. Now, then, we have other important industries and investments. The chemical interests have been coming to the Niagara frontier for years—that is, the electrochemical industries because of the large supply of electric energy and electrometallurgical production.

Now, today we are threatened in our city. I want to know what is going to happen to practically $400,000,000 of tax-paying property.

And more important than that—far more important—is this problem: Where are the men going who work on our water front? About 25,000 men are employed on the water front. I have analyzed that group, and I can show you that they are supporting from 100,000 to 125,000 people in our city.

The first proposition is a theory that motor ships can be developed to carry high-class freight through the inland waterways of this country. Now, the actual development of motor ships, of course, has not been impressive from a tonnage or economic standpoint.

Now, then, I come to a question of Government-owned terminals, which is a very different thing. Buffalo has had its tax-paying harbor. The Albany Port Authority is not a tax-paying proposition, and the enormous elevators located at Albany do not pay taxes. At Oswego they made the mistake—if they had not done it, Buffalo capital would have gone in there several years ago and put up one or two elevators—but they made the mistake years ago of asking the State, and not private capital, to put up an elevator, and

now no private capital wants to go in there in opposition or competition to that Government-owned facility. Recent testimony given at the hearings of the Rivers and Harbors Committee shows that Government-owned facility did not handle a pound of wheat this last season.

It may be interesting to Members of Congress to know that the Chief of Army Engineers has prepared a table showing the average annual cost to the United States per ton of commerce handled at the principal coast and Great Lakes harbors of the United States, and in that table are included the cities of Buffalo and Oswego. I desire to take this opportunity to present to the Members of the House the comparative commercial statistics and annual costs.

Total commerce, calendar years 1890–1931, inclusive:		
Buffalo	tons	642,338,731
Oswego	do	25,253,664
Average annual commerce, years 1890–1931, inclusive:		
Buffalo	tons	15,293,779
Oswego	do	601,278
Average annual costs—(4÷42 years):		
Buffalo		$197,738.54
Oswego		$117,006.48
Average annual cost per ton of commerce:		
Buffalo		$1.293
Oswego		$19.460

In this connection it may also be interesting to note that of all the principal harbors including the Atlantic coast, Gulf coast, and Pacific coast, Oswego ranks the second highest in the average annual cost per ton of commerce. The honors (?) for the highest costs going to Wilmington, N.C., with an annual cost of $31.761.

Mr. CULKIN, in his remarks in the RECORD of February 26 speaks very ostentatiously of the city of Oswego, elaborating on the population, terming it an industrial city, boasting of the banks with their deposits, elaborating on the size of the elevators (State owned). He informs us they have three railroads which may be used for the shipment of grain when the canals are closed.

For the information of the House, I will make a comparison of the two cities, and then let you be the judges as to the advisability of passing legislation continuing Buffalo as the western terminus of the New York State Barge Canal or whether you will approve legislation dividing the barge canal into units for the benefit of the eastern section of the State. The canal should be considered as a whole, and a plan for improvement of the canal as a whole is as economically sound as it is politically fair.

I know my colleague from Oswego is just as honest and conscientious as he can be, but he has not presented a fair argument with reference to the Oswego-Albany route. The gentleman has presented but his side of the case. I shall endeavor to present both sides in a fair and just manner. The gentleman refers to the population. Let us compare the figures as taken from the State enumerations of 1915 and 1925 and the United States enumerations of 1920 and 1930.

	1915	1920	1925	1930
Buffalo	454,630	506,775	538,016	573,076
Oswego	25,426	23,626	22,369	22,652

It will be noted that during the past 15 years Buffalo has had an increase in population of 20.668 plus percent while Oswego has had a loss of 10.908 plus percent during the same period.

I quote from a report of an investigation made for the Oswego Harbor and Dock Commission by Fay Spofford and Thorndike, consulting engineers of Boston:

> Among the present industries of Oswego, flour milling, formerly the premier industry of the city, is no longer found.
>
> The plant of the Diamond Match Co. has been in operation since 1893, and a box-shook manufactory of the Standard Oil Co., established in 1884, was in operation up to November 1925.
>
> Among miscellaneous industries is an establishment for the preparation of chicken and dairy feed.

The fact that such astounding data have been compiled should be an important factor in future policy of the Federal Government with reference to the future expenditures at the Port of Oswego.

Now, let us briefly but carefully examine the statistical review of Buffalo, located at the western terminus of the New York State Barge Canal system.

BUFFALO, THE QUEEN CITY OF THE LAKES—HISTORY

Buffalo was not in existence at the time of the American Revolution. In 1795 a few houses were located on the city's present site. In 1804 these numbered 20. By 1812 the population was considerably increased, and the village became a center of interest because of the war on the frontier. In December 1813 it was attacked and captured by the British and Indians and every house was destroyed. The village was quickly rebuilt. By May 1814 there were 23 houses, taverns, stores, and shops. In the 1820 census there were 2,095 inhabitants.

Buffalo had a natural reason for growth. It was at the foot of navigation on the Great Lakes. The first steamboat on the Lakes sailed from Buffalo in 1818. In 1825 the opening of the Erie Canal made Buffalo an important transshipping point from New York to the West. From that time on its shipping increased until now it is the fourth port in the United States and one of the largest on the Lakes for the value of its tonnage. The largest breakwater in the country protects the harbor.

Much grain comes down the Lakes and must be unloaded at Buffalo. The first steam grain elevator was erected by Joseph Dart in 1843. This business has so increased that now it is estimated that one fifth of the grain produced in the United States passes through Buffalo and, with its 29 huge elevators, it is the greatest grain-storage city in the world.

Since the grain came to Buffalo, milling started early. By 1870 some of the leading milling companies in the country were in Buffalo, but in the last 5 years a great increase has been noted—from 6,000,000 barrels to more than 12,000,000 barrels a year. Buffalo has produced more flour than Minneapolis since 1930, and Buffalo is now the milling city of the world.

The first railroads in the United States were built in the 1830's. Buffalo had its first rail communication in 1833. The coming of the New York Central, Erie, Lackawanna, and others from the East and South, and the extension to the West by the Lake Shore, Michigan Central, and others, made Buffalo an important railroad center. Rail transportation has developed so much here that Buffalo is now the second largest railroad center in the United States. As a result, it is one of the largest coal-distributing centers in the country.

In 1832 the second city directory was published (the first having been published in 1828), recording that the city had about 10,000 inhabitants and 40 manufacturing establishments. This period marked the beginnings of Buffalo's industrial development, which now is probably the most diversified of any city in the United States. Seventy percent of every line of manufacturing in the United States is to be found among Buffalo industries. Great increases came in the decade after the Civil War and in recent years, especially since the World War. Among the products of these industries there must be noted pig iron, in which the Buffalo district is one of the largest centers in the country; linseed oil, much of which is manufactured by the largest linseed-crushing plant in the United States; dyes, for which the largest plant in the United States is in Buffalo; rayon, with one of the largest plants; wall board, which started here in 1906, and where nearly three quarters of the country's total supply is produced; stockyards, in which Buffalo stands among the first six in the country, with the largest sheep market; in recent years the automobile; and now the airplane. In hotels Buffalo is the home of the first of the Statler system, and convention activities are highly developed because of the hotel and railroad accommodations and the city's proximity to Niagara Falls. More than 200 conventions come here annually.

Hydroelectric power became a topic of interest in the 1890's, and by 1895 Buffalo began to use power from Niagara

Falls. The nearness of Niagara Falls, with the largest hydroelectric-power development in the world, has brought Buffalo an ideal power system.

Financial institutions: Number of banks in the city, national, 3; State banks and trust companies, 7, branches, 70; other banks, 1; private, none.

Total banking figures for city: Capital, $25,275,000; surplus, $79,777,000; deposits, $469,237,000; total resources, $583,049,000 (Sept. 1, 1933). Savings-bank deposits total $204,440,427 (June 30, 1933). Assets of building and loan associations, $28,456,143.55. Postal receipts, $4,021,683.59 (calendar year 1932).

The Members of the House may desire the figures available with reference to the financial institutions in the city of Oswego for comparative purposes. There are but two national banks located within the city with a total capital of $250,000; the total deposits of both banks are $2,571,410; total surplus, $318,150; total resources of both institutions, $3,323,560 (Jan. 1, 1933).

Chief industries: Manufacturing and Lakes commerce, 1,391 manufacturing establishments, employing 68,854 workers, paying wages of $100,577,592 annually, and having products valued at $720,200,989 annually (United States Census of Manufactures). Principal manufactured products: Autos and parts, flour and other grain products, iron and steel, foundry and machine-shop products, chemicals, airplanes, bakery products, and printing and publishing products.

Newspapers: Six dailies (including foreign language).

Hotels: Twenty-one, with total of 6,768 rooms. Newest hotel opened in 1923.

Railroads (12): New York Central; Pennsylvania; Erie; Grand Trunk; Lehigh Valley; D., L. & W.; Wabash; Michigan Central; West Shore; Canadian Pacific; Buffalo, Rochester & Pittsburgh (branch of Baltimore & Ohio); Toronto, Hamilton & Buffalo.

Airports: 4, including 2 municipal, 1 of which is a marine airport.

MISCELLANEOUS FACTS ABOUT THE QUEEN CITY OF THE LAKES

Buffalo is the ninth largest manufacturing city and the second largest inland port of the United States, and 1 of the 10 largest ports of the world.

Buffalo's foundry industry is the largest in New York State.

Buffalo is the largest linseed-producing center of the country, with the largest aniline-color plant of its kind in the United States.

Nearly one third of all the automobile bodies and parts manufactured in New York State are made in Buffalo.

Buffalo does one fifth of all the slaughtering and meat packing of the State.

Buffalo manufactures from 90 to 95 percent of all steel castings in New York State.

The Buffalo district is one of the largest pig-iron producers in the world, having more than a score of blast furnaces with an annual capacity of nearly 3,000,000 tons.

It is in the center of that region where more than 80 percent of the amount of net income is paid.

It is in the center of that region where 87 percent of value of all manufactured products is produced.

Seventy percent of the people of the United States and 80 percent of Canada's inhabitants live within 12 hours' railroad travel of Buffalo.

There are 14 freight stations in the city.

Buffalo has 37.4 miles of water frontage, of which more than two thirds has been improved.

Buffalo is 1 of the 3 leading aircraft-manufacturing center of the United States.

Capital invested in manufacturing plants within the city limits of Buffalo is nearly $600,000,000.

Erie County, with Buffalo as the county seat, is first in value of farm property and first in value of farm products in New York State.

Of all the different lines of manufacture recognized by the United States Census Bureau, Buffalo has more than 200, or 70 percent. The Niagara frontier has 80 percent.

For the past 10 years the average number of building permits per year has been 7,000, with $24,141,000 valuation per year.

Buffalo is the center of that region which buys 80 percent of all merchandise sold in the United States.

It is in the center of that region where 70 percent of all families live.

It is in the center of that region where 80 percent of all automobiles are sold.

Buffalo has some of the largest grain elevators in the world, with storage capacity of 49,000,000 bushels.

The largest breakwater in the world protects Buffalo Harbor.

Buffalo has the largest municipal pumping plant under one roof in the world.

The stockyards of Buffalo stand as one of the half dozen largest in the world.

The first steam elevator was erected in Buffalo in 1843. It was the invention of Joseph Dart, of this city.

At Buffalo is the greatest development of hydroelectric power in the world.

The wall-board industry was started in Buffalo in 1906. Buffalo produces 75 percent of the world's wall board and great quantities of plaster board. Asbestos board is Buffalo's newest wall board.

Buffalo is one of the great railroad centers of the world. More than 200 passenger trains and 500 freight trains arrive and depart daily. Within the city limits are more than 700 miles of railroad track. The city is served by 12 main lines of railroad.

Oswego has three railroads.

Buffalo is known as "a city of diverse industries", producing in quantities 70 percent of the different lines of goods recognized by the United States Census Bureau, more than 200 different lines being represented.

The Lackawanna branch of the Bethlehem Steel Co. has the largest and most complete individual plant in the world. The company has its own breakwater, a mile long, and a harbor of its own. The sum of $48,000,000 has been spent recently to enlarge the plant.

The Buffalo district is one of the most extensive producers of pig iron in the world, having over 20 large blast furnaces, with a combined annual capacity of between 2,000,000 and 3,000,000 tons.

Buffalo ranks as 1 of the world's 10 great ports. In a year nearly 10,000 vessels arrive and leave, carrying more than 22,000,000 tons of freight, which exceeds the amount of freight received at and carried away from Liverpool.

The production of steel at the plant of the Lackawanna branch of the Bethlehem Steel Co. necessitates a consumption of 150,000,000 gallons of water per day. This is equivalent to the pumping capacity of the Francis G. Ward station of Buffalo, which is rated as the largest municipal pumping plant under one roof in the world.

Buffalo has 29 grain elevators, with a capacity of more than 49,000,000 bushels of grain.

Buffalo's tremendous commerce is guaranteed by its strategic position on Lake Erie, Niagara River, and the western terminus of the New York State Barge Canal system.

Aviation center: Buffalo has two of the most important airplane plants in the country, the Curtiss and Consolidated, besides several other large manufacturers. Buffalo's airport is said by Army Air Service officers and others to be the finest in the United States. It covers 555 acres and is most complete, with adequate buildings, drainage, lights, and so forth. It is municipally owned and operated. The city also has a marine airport.

People employed: More than 25,000 people are directly employed by Buffalo water-front facilities, not including manufacturing plants located on water front. The number of persons depending directly on these activities is fully 100,000. Any change in present commercial routes will affect these people. The number of people directly employed by Buffalo's water-front facilities exceeds Oswego's entire city population by over 2,000 persons.

Assessed values: The assessed valuation of the water front inside the city was more than $115,000,000 in 1930,

and the total investment is in excess of $200,000,000. Of over $900,000,000 of assessed value inside Buffalo, it can easily be shown that about $400,000,000 depends on water transport. The present agitation for waterway changes will lead to reductions in these assessments and injure the city's credit.

Power boats: The hearings recently held before the Rivers and Harbors Committee revealed that the proposed Oswego-to-Hudson improvement would be used almost exclusively by power boats, of which there are not more than a dozen now operating on the whole system, leaving out the self-propelled oil boats which use the Erie chiefly and the Three Rivers-to-Oswego branch infrequently.

Towed barges: Fully 80 percent of the traffic moving over the canal is handled in canal barges. These are more economical in operation than expensive ships and can carry far greater cargoes in strings of towed boats. It is impractical to use these barges through the Canadian Welland, due to the expense, character of operation, and lack of harbor refuge along the east shore of Lake Ontario.

Character of cargoes: It was admitted that the motorships, because of expense of construction and operation, cannot carry bulk cargoes and low-grade freight. Better than 80 percent of the traffic on the barge-canal system is interstate in character. Return cargoes are important. Admittedly, most of the commerce which has moved, and most of the traffic which will move through the proposed improved canal, makes no contribution in any form to the State of New York and little or none to the Federal Government.

Welland Canal charges: Movement of barges through the Welland Canal is limited. The expense runs from $15 to $35 for moving through the Welland, the revenue accruing to the Canadian Government.

Proposed diversion of traffic: The favorable savings indicated by the representatives of the New York Port Authority were predicated on the diversion of all traffic from the Buffalo gateway to the Oswego gateway and the use of power boats in connection therewith. This is an absurd conclusion. Testimony shows that the preponderance of bulk-cargo freight must continue to move in canal barges and that the only possible savings in connection with bulk cargo in barges lies in the improvement of the Erie Canal from the Hudson to Buffalo.

Buffalo pays taxes: Buffalo Harbor pays taxes. There are no tax-exempt facilities except the State canal terminal. The testimony before the Rivers and Harbors Committee did not include any representative taxpayers either to the State or Federal Government. Even the operator of power boats testified he owned no boats. The Buffalo Chamber of Commerce represented taxpayers only, owners of the elevators, warehouses, boats, and other water-front and transport facilities of Buffalo Harbor.

Proposed change not competitive with Montreal route: The original proposal for improvement of State barge canal system was predicated upon the facilities now provided in the St. Lawrence to Montreal. A draft of 14 feet was considered sufficient to meet Montreal competition. Actually, the proposed change in the Oswego will not match the Canadian canal which also has no overhead bridges, and longer locks.

If the St. Lawrence Shipway Treaty is approved and the work done, the New York route will be noncompetitive except as large tows of barges and the opportunity for return loads provide cheaper transit. This can be done by the Buffalo route only.

Government-owned terminals: Montreal and Prescott, Canada, have government-owned elevators. The tendency in Canada is to use government money to attract traffic by preferences, cheap terminal charges, low rail rates, and favorable grading of products. To offset these, New York State or the Federal Government must provide similar facilities and competitive rates, assuming that traffic is induced to enter Lake Ontario. At present, there is a grain elevator at Oswego, owned by the State, a large grain elevator at Albany, owned by the port authority, and some facilities at New York owned by the State or the port authority. All of these are tax exempt. Private capital cannot compete with Canada in traffic and terminal matters in this manner. In estimating the costs of the proposed diversion of traffic outlined by the New York Port Authority representatives, the expense of building great terminal facilities by the sale of tax-exempt bonds with properties that will not pay taxes and will destroy competing private investments must be considered.

Removal of industry from Buffalo: Assuming that the proposed diversion of traffic occurs, there will be a tendency for certain factories and mills on the Buffalo water front to move. Their new location will depend on tariffs and other trade regulations and restrictions. Apparently, one or more flour mills will go to Port Colborne or other points on the Welland, where they can enjoy the choice of several routes. None of the private investments will relocate in New York State. A few may locate on New York Harbor in New Jersey. Undoubtedly, some will go to Montreal.

A foreign route: Assuming that the proposed diversion of traffic occurs, the Federal Government will have developed a Canadian route. No commerce can proceed that way except by consent of the Canadian Government. If the British Commonwealth of Nations is at war, we cannot ship food or supplies through the Welland. The Erie is an all-American route. Its preservation on a parity with all other channels is a war necessity.

In all fairness the Federal Government cannot undertake to improve a part without definitely committing itself to an improvement of the whole. That commitment it should make now.

INVENTORY AND SURVEY

Mr. TOBEY. Mr. Speaker, I ask unanimous consent to extend my remarks by including therein an address I made at Peoria, Ill., February 22 last.

The SPEAKER. Is there objection to the request of the gentleman from New Hampshire?

There was no objection.

Mr. TOBEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address before the Creve Coeur Club of Peoria, Ill., on the occasion of its thirty-sixth annual dinner in tribute to the memory of George Washington, held in Peoria, Ill., February 22, 1934:

I am sure that I voice the sentiments of each of you when I apply to this gathering these words of Webster uttered at the one hundredth anniversary of the birth of Washington, in 1832:

"We are met to testify our regard for him whose name is intimately blended with whatever belongs most essentially to the prosperity, the liberty, the free institutions, and the renown of our country. That name was of power to rally a nation in the hour of thick-thronging public disasters and calamities; that name shone amid the storm of war, a beacon light to cheer and guide the country's friends; it flamed, too, like a meteor to repel her foes. That name in the days of peace was a loadstone, attracting to itself a whole people's confidence, a whole people's love, and the whole world's respect. That name, descending with all time, spreading over the whole earth, and uttered in all languages belonging to the tribes and races of men, will forever be pronounced with affectionate gratitude by everyone in whose breast there shall arise an aspiration for human rights and human liberty."

The more one studies into the life of Washington, the more evident it becomes that he was in truth a man of destiny.

When he took his oath of office as the first President of the Nation, he might well have said in all modesty, but truth, "For this cause came I unto this hour."

His every action seemed above personal consideration. His breadth of vision was unusual. In him were manifold virtues and characteristics which were the secret of his power and strength. Loyalty to conscience, great courage, love of nature, and the good earth as exemplified in his passion for Mount Vernon and its fields and forests; his hospitality so freely there dispersed; his poise, so manifest on every occasion; and underlying all these virtues his constant dependence on the Divine Power.

It is given to few men to have the foresight with which he was gifted. As one reads his life and the subsequent history of the Union, it seems as if this quality must have been vouchsafed him by a higher power.

Who can stand beside those columns at Mount Vernon and overlook the Potomac without having come over him a feeling almost of reverence for the master of that house? Wander through its rooms and the paths of its fields, stand beside that tomb wherein

all that was mortal of him rests—no American citizen can have these experiences without being moved in contemplation of what he was and for what he is today, still first in the hearts of his countrymen.

NATION'S PROBLEMS

When men gather together in these days, it is in more sober and thoughtful spirit than that of a few years ago, for the epochal events of recent years have affected each of our lives. Many are carrying heavy burdens as they struggle to adjust themselves and their affairs to the drastically changed conditions. What is true in the life of the individual is true in the life of the Nation, which in my opinion has never been called upon to grapple with more far-reaching questions and problems. You and I are living in an era pregnant with momentous problems. We are confronted today with questions which call for wisdom, understanding, foresight, and tolerance to an unusual degree.

I hold that the last 4 years constitute the most tragic era in the history of America, and I am not unmindful of the dark hours of the rebellion of the reconstruction period or of the World War.

Every great experience in life brings its attendant lessons, and there are some that are being impressed upon us through the events of recent years. I would mention two.

LESSON OF INTERDEPENDENCE

The first is the lesson of interdependence. We have seen its truth illustrated in economics as we have learned that when some men do not work, other men cannot pay. In business we have learned that no line is self-sufficient, but rather is very largely dependent upon one or several other lines for its success.

As a partial illustration, the impairment of earnings of our railroad lines and automobile companies adversely affected the steel business; and if this had continued, it would have threatened the assets which underlie our insurance policies, our saving banks, and the income of trust funds, a large proportion of which are invested in the bonds of such companies.

The logic of events is bringing home to us that none of us lives to himself alone; and to a greater degree than ever before we are realizing that we are, in the last analysis, our brother's keeper.

A realizing sense of this great truth of interdependence is sorely needed by the various sections of our country, which all too often array their particular interests against those of another section. This is a mistaken policy, one fraught with danger to our national life.

The great statesman whose memory we honor tonight was constantly appealing to his countrymen to think in terms of the Union and not as sections or States. He realized their interdependence. To him the Union was paramount.

They play with danger who, in order to carry out their selfish interests, array one section of our Nation against another, appealing to prejudice. The integrity of the Union must be maintained as our sacred trust.

Could Washington speak to us tonight, I feel sure that such would be his message.

LESSON OF IMPERMANENCE

The second great lesson that I bring to your attention is that of the impermanence of things of human origin. Inorganic things may remain the same down through the ages, but with respect to things made by man, things of human origin, such as forms of government, systems of business, systems of finance, the impermanence of such has been demonstrated markedly in recent years.

On every hand has been asked the question, "When will it all end and normal times return?" The obvious answer, true, as well, is that no man knoweth. But if by normal times is meant the order that obtained a few years back, we are safe in asserting that it will never return. We face a new era, and there must needs be adjustments to it. "The old order changeth."

BUSINESS NEEDS NEW ORDER

Business ethics and methods need a new order. We had become obsessed with the power that comes through money. An orgy of speculation carried prices of standard securities far beyond the bounds of reason. Consolidations were effected, not with the prime motive of greater efficiency, but rather to make inordinate profits for promoters. Many leaders in finance entirely lost a sense of responsibility. The handling of other people's money was not in the spirit of a fiduciary but all too often in channels and by methods that transgressed sound business practice and even the principles of common honesty and integrity.

There has been revealed to us a record of financial transactions which set the banking laws at variance and which is a reproach to the name and spirit of sound financial practice. Not only this but the revelations of such practices have spread the germs of prejudice and hate in that element in our country which seeks to discredit our Government and which agitates against its institutions.

Let me here interpolate and quote from the words of one of our sturdy leaders of another era, Grover Cleveland, who said:

"Communism is a hateful thing and a menace to peace and organized government; but the communism of combined wealth and capital, the outgrowth of overweening selfishness and cupidity, which insidiously undermines the justice and integrity of free institutions, is not less dangerous than the communism of oppressed poverty and toil."

In government, taxes increased steadily as legislators, State and Nation, seeing wealth increasing, recklessly expanded appropriations.

A NATIONAL DISGRACE

The withdrawal of educational advantages from thousands of school children, because of inability to pay teachers, due to unsound State and municipal financial programs, constitutes a national disgrace.

In human relations we lowered our standards, and all too often home life has been crucified by loose living and infidelity.

There are signs that the Nation is becoming aroused.

We are now investigating the financial legerdemain by which millions of investors have lost their money. We have enacted legislation to compel responsibility and accuracy in the description of securities to be offered for sale. We are investigating the collusion and artifices which have been employed in the securing of large Government contracts and which eliminated the competitive bidding called for in the statutes.

HOME LIFE REDISCOVERED

A worthwhile result of the experiences of recent years has been the rediscovery of many troubled men that in home life and the love of wife and children are to be found the secrets of real happiness.

But the sad feature of it all is that it took a national cataclysm in business and finance to arouse us from our inertia into a state of dissatisfaction.

Dissatisfied, then, with these revelations of our national weaknesses, we have a work to do. Our job, as I see it, is to make certain that from the pains of labor and travail which have gripped the Nation there shall come forth more just conditions which will make for sane and wholesome living conditions and strengthen the foundations of the Government.

In an effort to bring these things to pass, the Government has set up a program, often referred to as the new deal. It is far-reaching, unusual, much of it untried. It apparently violates many of the economic teachings that we were taught years ago.

BACKGROUND OF NEW DEAL

To get the perspective of this program one must go back to March 4 of last year. The banks of the country were closed, gloom abounded on every hand, fear and apprehension gripped the hearts of the people. The vitality of the Nation was at a low point. As in the case of an individual who is sorely stricken, heroic measures were necessary to maintain life.

Events moved rapidly; Congress was convened in special session; a program of emergency legislation was offered granting the Executive tremendous powers. This program was quickly passed. These measures were justified, in my opinion, by the exigencies of that hour. Supreme emergencies may require the concentration of power, even the unprecedented if necessary.

THINK AND ACT ANEW

Today our case is certainly new, and it may be the part of wisdom to, in some measure at least, think and act anew. Regardless of party, we recognize that much good has been accomplished through this program.

Hope has succeeded despair in the hearts of millions; there are many indices of business improvement, as witness the resumption of dividend payments by many companies and increases in wages; the sweatshop and child labor are being outlawed. Unemployment has been materially reduced.

Gentlemen, I am a Republican, but transcending that, I bear with you a greater title, the most glorious any man can bear, when I say "I am an American citizen." As such, in these vital times, before I give voice to critic peep or cynic bark, I have a duty—the duty to appraise the reasons that motivate my criticisms.

NEW DEAL'S WEAKNESSES

If after honest and careful consideration I am convinced that these novel and untried measures are fraught with serious danger to the Nation and its future, then I have a right, yes, a duty, to protest.

Therefore, while recognizing some definite benefits from the new program, I am convinced of several outstanding weaknesses which have become apparent in its application and administration, and which justify our apprehension.

I am convinced that the N.R.A. is imposing handicaps and hardships on many small industries, and furthermore, that some of its codes in their application work to the advantage of the big business units and handicap the lesser.

I realize the potential dangers in spending a million in C.W.A. activities where a real return in labor efficiency is not required in return for that wage. I know of inconsistencies where wage schedules under C.W.A. work exceed those granted workers under various industrial codes, with consequent dissatisfaction and unrest.

A.A.A. VALUE DOUBTFUL

I am inclined to doubt that much value will accrue to agriculture through the voluntary reduction features of the A.A.A. The experiences of the past year have demonstrated that reduction of acreage does not necessarily assure a proportionate decrease in production.

As another feature of a planned economy I refer to a new sugar bill, H.R. 7907, now before our House Committee on Agriculture. There is Nation-wide interest in this bill, and the hearings thereon have been crowded.

The bill, if enacted into law, will restrict domestic production of beet and cane sugar and prohibit further expansion of the industry in the United States. It aims to increase imports of sugar from Cuba and our insular possessions.

In my opinion this legislation will operate to aid the sugar interests in Cuba, at the expense of the industry in the United States.

We are applying the doctrine of a planned economy to agriculture. It has an appeal in theory, but I am frankly skeptical of its success in practice. I do not believe that through legislation we can permanently set aside basic economic laws.

APPREHENSIVE OF DEBTS

I am apprehensive with some of you as to how we are going to meet the tremendous debts created under these unusual experiments, for I was brought up to understand that for every commitment there eventually comes a settling day.

I voted against canceling the clause calling for payment in gold of Government obligations then outstanding, for I felt then and feel now that repudiation is repudiation, whether the act of an individual or a nation.

To sum up—serious errors have been made, but in times such as we have been passing through, with tremendous pressure from all sides, fair men will realize that some mistakes could not be avoided.

Some find it easy to apply invectives, to make violent attacks against the unusual measures we have been asked to adopt, to give the party in power what Sherman called war, or to sit in the seat of the scornful, but these things are not constructive. Such an attitude is no kin to statesmanship. It is playing any politician's game.

KEEP BEST OF PROGRAM

That part of the new deal or program which proves itself helpful will and should be retained.

We have localized tremendous responsibilities in one man, the President of the Nation. We must trust him to see this thing through. Captious criticism is not in order.

A VOICE FROM FLANDERS FIELD

Over on the western front during the World War they brought a wounded soldier behind the lines and found, pinned to his shirt, a paper with these words written thereon:

"Ye that have faith to look with fearless eye beyond the tragedy of a world at strife,
"And know that out of death and night shall rise the dawn of ampler life,
"Rejoice, whatever anguish fills the heart, that God has given you the priceless dower
"To live in these great times and have some part in freedom's crowning hour,
"That ye may tell your sons, who see the light high in the Heavens, their heritage to take,
"'I saw the power of darkness put to flight; I saw the morning break.'"

He had a vision—a hope for better things—and he died in that hope. But were he alive today how greatly would he be disillusioned, for he would have lived to see his high ideals, his home, and country betrayed by the greed of man. The powers of darkness carried on long after he had gone, and the record of such in business and finance and government has shamed the Nation. Even worse, many who hoped and worked to the end that the assinine thing called war might be displaced by the rule of reason, logic, and judicial procedure find the nations of the world, including our own United States, still blindly increasing armaments in anticipation of more wholesale murder, openly stating that the next war is not far distant. And what are you and I actually doing about it? No; the powers of darkness have not been put to flight, and the dawn of the new day has not yet appeared in the east. But there is a measure of encouragement in that there seems to be a new social philosophy abroad in the land.

I said that it was a new social philosophy, but it is nearly 2,000 years old, for the Galilean expressed something akin to it when He said, "A man's life consisteth not in the abundance of things that he possesseth", and when He asked the searching question, "What shall it profit a man if he gain the whole world and lose his own soul?"

VITAL NEED OF NATION.

The vital need of the Nation today is not inflation, nor the increasing of the purchasing power, nor the worth-while effort to balance the Budget, nor in securing the payment of the foreign debts.

Worthy as some of these objects are, the vital need of the Nation—yes, of the world today—is the application to our industrial, national, and international affairs of the spiritual powers all too long dormant within us.

You say that is too idealistic?

Let me cite the opinion of two of the country's foremost scientists:

Edison said, shortly before his passing: "The greatest discoveries will be along spiritual lines. This is the field where miracles are going to occur. Spiritual power is the greatest of undeveloped powers and has the greatest future."

Steinmetz said: "I think the greatest discovery will be along spiritual lines. Here is a force the greatest in the development of men and history, yet we have never seriously studied it."

CAUSES OF DEPRESSION

It is my firm belief that the causes for the depression of the last 5 years were not entirely economic. I hold that a major factor was a lack of common honesty and integrity in our business and national life. We need today a new birth of moral and spiritual ideals in our people.

To quote an old schoolmate: "Do not expect too much from legislation. There are already 1,000,000 laws on the statute books of our Nation and its subdivisions of government. The ancient Hebrews had but 10; Christ gave us one which, if it were really practiced, would solve all of our ills: 'Seek ye first the kingdom of God and His righteousness.'"

Therein lies the hope of a weary world.

On us then is the responsibility to use our influence toward this objective. But you say, "My influence is small. I am handicapped by business or by environment." Let me remind you that in all time it has never been given to man to get the perspective of the value of his influence.

OUR CHALLENGE

If we hold to the principles which actuated Washington and the great leaders of our past we shall in a real measure have a part in shaping and molding the destiny of the Nation.

In conclusion, I ask each of you to forget for a moment those things which too often circumscribe our outlook. Forget our being of diverse faiths, of varying lines of business; forget the gradations of wealth or position which too often separate us.

Then see ourselves for what we are in fact—a cross-section of our generation holding the lines between those of the past and those that come after us; custodians for a little while of the Nation and its destiny; trustees, having in trust a great heritage for those who follow.

Therein lies our great responsibility!

So, gathered together in this fellowship, compassed about with a great cloud of witnesses who have gone before, let us here highly resolve to keep faith with the ideas and ideals of our great leader whom we honor tonight, and apply our influence to reestablishing in the land that righteousness which exalteth a nation.

God help us keep the faith!

COMMITTEE ON PUBLIC LANDS

Mr. BYRNS. Mr. Speaker, I ask unanimous consent, at the request of the gentleman from Louisiana [Mr. DEROUEN], Chairman of the Public Lands Committee, that that committee may sit during the sessions of the House today and for the rest of this week.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MESSAGE FROM THE PRESIDENT—ABOLITION FEDERAL EMPLOYMENT STABILIZATION BOARD (H.DOC. NO. 270)

The SPEAKER laid before the House the following message from the President of the United States, which was read, and, together with the accompanying papers, referred to the Committee on Expenditures in the Executive Departments and ordered printed:

To the Congress:

Pursuant to the provisions of section 1, title III, of the act of March 20, 1933 (ch. 3, 48 Stat. 8, 16), I am transmitting herewith an Executive order which (1) revokes so much of section 1 of Executive Order No. 6166 of June 10, 1933, heretofore transmitted to the Congress, as provided for the abolition of the Federal Employment Stabilization Board and the transfer of its records to the Federal Emergency Administration of Public Works, (2) abolishes the Federal Employment Stabilization Board, (3) establishes in the Department of Commerce an office to be known as the "Federal Employment Stabilization Office", and (4) transfers to such office the functions, personnel, records, and property of the Federal Employment Stabilization Board.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 1, 1934.*

MESSAGE FROM THE PRESIDENT—GUARANTY OF PRINCIPAL OF HOME-LOAN BONDS (S.DOC. NO. 148)

The SPEAKER laid before the House the following message from the President of the United States, which was read, and, together with the accompanying papers, referred to the Committee on Banking and Currency and ordered printed:

To the Congress:

On January 10 I recommended to the Congress the passage of legislation guaranteeing the principal as well as the interest of the $2,000,000,000 of bonds authorized for the refinancing of agricultural indebtedness.

I now recommend that the Home Owners' Loan Act be similarly amended. The purpose of such legislation, as in the case of farm financing, will be to assure the continued

progress on a self-sustaining basis of the making of loans for the purpose of refinancing home mortgages without interruption. There is the same reason for acknowledging publicly what already amounts to a moral obligation in respect to these bonds as there was in the case of bonds authorized to be issued through the Farm Credit Administration.

By making provision for an exchange of the new type of bonds guaranteed as to principal as well as interest for those already issued, those mortgagees who have shown their willingness to cooperate with the Government's program by accepting the original bonds will be placed on an equal footing with mortgagees who will hereafter obtain the fully guaranteed obligations proposed by this legislation.

Out of the funds which may be made available as a result of the proposed guaranty of principal of these bonds the Home Owners' Loan Corporation should be enabled to extend further assistance for the modernization of homes as well as for the making of repairs. Authority should also be given to the Home Owners' Loan Corporation to purchase bonds of the Federal home loan banks, thus enabling the Corporation to make funds available to those banks and to building and loan associations which are in need of financing in order to encourage private building.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 1, 1934.*

SENATE BILL REFERRED

A bill of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 2731. An act for the relief of the State of California; to the Committee on the Judiciary.

ENROLLED BILLS SIGNED

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 93. An act to authorize the Secretary of War to sell to the Plattsburgh National Bank & Trust Co. a tract of land comprising part of the Plattsburgh Barracks Military Reservation, N.Y.;

H.R. 715. An act to award the Distinguished Service Cross to former holders of the certificate of merit, and for other purposes;

H.R. 6219. An act to repeal certain specific acts of Congress and an amendment thereto enacted to regulate the manufacture, sale, or possession of intoxicating liquors in the Indian Territory, now a part of the State of Oklahoma;

H.R. 7205. An act to provide for the care and transportation of seamen from shipwrecked fishing and whaling vessels.

H.R. 7554. An act to extend the times for commencing and completing the construction of a bridge across the Missouri River at or near Farnam Street, Omaha, Nebr.;

H.R. 7705. An act to extend the times for commencing and completing the construction of a bridge across the Mississippi River between New Orleans and Gretna, La.; and

H.J.Res. 278. Joint resolution to amend Public Act No. 81 of the Seventy-third Congress relating to the sale of timber on Indian land.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. LANHAM (at the request of Mr. JOHNSON of Texas) on account of illness in his family.

RECESS

Mr. BYRNS. Mr. Speaker, I move that the House stand in recess until 7:30 o'clock this evening.

The motion was agreed to; accordingly (at 5 o'clock and 7 minutes p.m.), pursuant to the order heretofore made, the House stood in recess until 7:30 p.m.

EVENING SESSION

The recess having expired, the House was called to order by the Speaker at 7:30 o'clock p.m.

THE PRIVATE CALENDAR

GEORGE CHARLES WALTHER

The Clerk called the first resolution on the Private Calendar, House Joint Resolution 61, granting compensation to George Charles Walther.

There being no objection, the Clerk read the House joint resolution, as follows:

House Joint Resolution 61

Whereas George Charles Walther was shot near Underwood, Wash., on or about September 1, 1923, by a United States prohibition enforcement officer pursuing the owner of a still located in the vicinity; and

Whereas as a result of such shooting, occurring in line of duty, the said George Charles Walther has been permanently paralyzed and rendered a hopeless cripple and a bedridden invalid for life; and

Whereas the said George Charles Walther was removed by the Government from Underwood, Wash., to a hospital in Portland, Oreg., and there left by United States Government officials without provision having been made for his care; and

Whereas the said George Charles Walther is without means or ability to care for himself: Therefore be it

Resolved, etc., That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $100 a month to George Charles Walther, during his lifetime, as full compensation for total and permanent disability resulting from a gunshot wound inflicted upon him in 1923 by a Federal prohibition enforcement officer. Such payment shall be made through the United States Employees' Compensation Commission and shall date from the approval of this act.

Mr. BLANTON. Mr. Speaker, I move to strike out the last word.

The author of this bill is our good friend and colleague, the gentleman from Oregon, General MARTIN. He had the the honor and distinction of training the Ninetieth Division and our country had the honor of having him to lead that wonderful division in Germany for about a year. Some of the bravest men in this Nation served under him, and they had one of the bravest leaders from our country in the World War to lead them. [Applause.] General MARTIN is a real fighter. He is a fighter in war, and he is a fighter in peace when fight is necessary. You just raise any issue here on this floor that affects any interest of the United States Army and you have him to fight. I have crossed swords with him several times. Sometimes I have come out of the conflict pretty well bested, but I have learned to like him. He is an able, industrious, conscientious, and efficient legislator.

If Oregon does its duty by the State and the Nation they will elevate Major General MARTIN to the governorship there this year, and I am sure that in that contest he carries with him the affection of his colleagues here and their well wishes. [Applause.] And, General, some of my friends served under you, and they all like you. If I am out in Oregon at about that time, I am going to vote for you.

The House joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

NEILL GROCERY CO.

Mr. RAMSAY. Mr. Speaker, I ask unanimous consent to return to Calendar No. 116, bill H.R. 6300, for the relief of the Neill Grocery Co., and to consider in lieu thereof Senate bill 2201.

The SPEAKER. The gentleman asks unanimous consent to return to Calendar No. 116. Is there objection?

There was no objection.

The SPEAKER. Without objection, the Clerk will report the Senate bill.

There was no objection.

The Clerk reported the Senate bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay out of any money in the Treasury not otherwise appropriated, to the Neill Grocery Co., Wheeling, W.Va., the sum of $2,531.97. Such sum represents the amount of a fine and court costs paid on such date by such company, pursuant to a conviction for violating certain provisions of the Lever Act of August 10, 1917, as amended, prior to the declaration by the Supreme Court of the United States of the invalidity of such provisions.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

EDWARD B. WHEELER AND THE STATE INVESTMENT CO.

The Clerk called the next bill, S. 1724, authorizing the reimbursement of Edward B. Wheeler and the State Investment Co. for the loss of certain lands in the Mora Grant, N.Mex.

Mr. BLANTON. Mr. Speaker, reserving the right to object, this bill would compensate these claimants at the rate of $2.25 an acre. The Department does not approve of it. The following statement is made by the Land Commissioner:

> I see no reason whatever why the bill should be enacted extending such right to them.

Mr. CHAVEZ. Will the gentleman reserve his objection?

Mr. BLANTON. I reserve my objection.

Mr. CHAVEZ. Mr. Speaker, this is a very meritorious bill. It is a fact that the Department has heretofore raised an objection to the bill, but the claim arose out of the following facts: The Mora land grant and the Mexican land grants are within the State of New Mexico. For several years the boundary line on the west portion of the grant was uncertain. The claimants under this bill claimed a certain portion of the land, and also the United States Government.

The United States Government sued the claimants, trying to quiet title to a section of land 3 miles wide and some 30 miles long on the extreme western boundary of the land grant, claiming that this portion of the land grant was public domain. They went to the United States District Court of New Mexico about the matter and the district court set aside the claim of the Government, holding that the land belonged to the claimants. In the meantime and while the Government was claiming this particular land, it issued patents to some 12,000 acres of the land that later the District Court of the State of New Mexico and the Supreme Court of the United States said belonged to the claimants. The claimants agreed with the Government that it would not molest while the suit was pending those who had in good faith obtained patents from the Government, but did not at any time tell the Government that they did not desire to be compensated for what they had actually lost.

Mr. BLANTON. Following that and in that connection here is what the Land Commissioner of the United States Government says:

> Any losses, therefore, that may have been sustained by the grant claimants were due to their laches in failing to take proper action against Government patentees and to their express agreement, entered into first with the First Assistant Secretary and later with the United States attorney for the district of New Mexico. The court merely confirmed their solemn agreement and made it a part of its decree. The grant claimants are, under existing law, without right to demand or receive reimbursement, and I see no reason whatever why the bill should be enacted extending such right to them.

That is from the Land Commissioner. Following this the Secretary of the Interior sent the report to Congress, and the Secretary of the Interior says:

> After a review of the proposed measure, I agree with the Commissioner.

That is, he agrees that there is no reason whatever for allowing this bill to pass. Under the circumstances I cannot see why it should be passed.

This is my neighbor here.

The author of this bill is my friend, and I would like to grant him a favor. I would like to be neighborly with him. I do not like to stop his bill, but the departments of this Government say there is no merit in it. I am afraid, Mr. Speaker, I shall be forced, reluctantly, to object.

Mr. CHAVEZ. I hope the gentleman will reserve his objection?

Mr. BLANTON. I reserve the objection, Mr. Speaker.

Mr. HOPE. Will the gentleman from New Mexico yield to me?

Mr. CHAVEZ. Yes.

Mr. HOPE. Apparently, this stipulation, which the Government claims was a waiver by the claimant of any right which it might have to this 12,000 acres of land, was entered into and nothing whatever was said concerning the matter of whether or not there should be any compensation paid this company in the event the tract of land was decreed to be the property of the claimant. Can the gentleman explain why any reference to that phase of the matter was omitted in the stipulation? It seems to me that is quite significant.

Mr. CHAVEZ. Yes; it is significant and before answering the gentleman's question, I want to say to my friend from Texas that I know he not only wants to be neighborly and a good friend, but I also know he wants to be fair and just. The gentleman feels it is his duty to protect the Government in any land it may own in the State of New Mexico or elsewhere, but in this case the Supreme Court of the United States has said that the Government does not own this land. This land belongs to the claimants enumerated in the bill.

The stipulation that was entered into in the court room was in absolute good faith. They stipulated they would not molest these folks who obtained a patent from the Government to land for which the Government did not have any right to issue a patent. It was land that belonged to the claimant, and if we want to be fair, if we want to be just, we must not take the land of someone else and give it to Tom, Dick, and Harry and say, "You cannot be compensated because you entered into agreement that you would not molest these folks."

This is a fair bill. This is a portion of land 3 miles wide and 30 miles long that belongs to my constituents. Some of the investment companies have directors throughout the country. It is not fair that the Government should issue patents to land that belongs to them and say that because they entered into a stipulation that they would not molest these folks the Government should not compensate them.

Mr. BLANTON. Were they not guilty of laches?

Mr. CHAVEZ. They were not guilty of laches, because during all this time they were claiming the land. If they had not been claiming it the Government would not have filed a suit to quiet title.

Mr. BLANTON. My friend knows that in the State of Texas adverse possession of land for 10 years gives absolute title.

Mr. CHAVEZ. My claimants not only did that, but they also paid taxes to the State of New Mexico for the land which the gentleman says now belongs to the United States Government.

Mr. BLANTON. But your claimants said they would not molest the patentees of the Government and now they are coming in and wanting the Government to reimburse them at $2.25 an acre for the land.

Mr. CHAVEZ. And in some instances it is probably worth $100 an acre. It is timberland.

Mr. BLANTON. Mr. Speaker, I have presented the facts to my colleagues. As I have said, this is my friend and neighbor. We live down there close together. I go over into his State and visit sometimes. Sometimes the gentleman is not there when I visit up in his mountains. I am not going to get in his way because I do not know what will happen to me in those mountains. [Laughter.] However, you know the facts and if you want to stop this bill you can do it. [Laughter and applause.]

There being no objection, the Clerk read the Senate bill, as follows:

> *Be it enacted, etc.*, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Edward B. Wheeler, of Las Vegas, N.Mex., and the State Investment Co., of New Mexico, who were declared by the Supreme Court of the United States (*United States* v. *State Investment Co.* (1924), 264 U.S. 206) to be the owners, respectively, of certain lands in the tract known as the Mora Grant, located in San Miguel and Mora Counties, N.Mex., an amount to be computed by the Secretary on the basis of $2.25 per acre for every acre of lands embraced within the claim of any bona fide entryman on such lands holding under patent

from the United States or under any entry allowed by the Department of the Interior, the recovery of which lands by the said Edward B. Wheeler and the State Investment Co. is barred by the stipulation entered into between such parties and the United States on January 23, 1918. Such payment shall operate as a full settlement of all claims of such Edward B. Wheeler and the State Investment Co. against the United States or the owners of such lands for damages for the loss of such lands.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

WILLIAM K. LOVETT

The Clerk read the next bill on the calendar, H.R. 191, for the relief of William K. Lovett.

Mr. BLANCHARD. Reserving the right to object, I want to offer an amendment.

Mr. ZIONCHECK. Reserving the right to object, is the gentleman from Wisconsin familiar with the facts of this case?

Mr. BLANCHARD. Yes.

Mr. ZIONCHECK. Does the gentleman know what the salvage value of the vessel was which this man attempted to rescue?

Mr. BLANCHARD. I think the amount of damage, $2,050, is not excessive; but I do not want to speak from the standard of an expert.

Mr. ZIONCHECK. I think the gentleman misapprehended my question. I asked what is the salvage value of the vessel that they attempted to rescue?

Mr. BLANCHARD. I do not know.

Mr. ZIONCHECK. Was there any value?

Mr. BLANCHARD. Yes.

Mr. ZIONCHECK. To the amount of $500?

Mr. BLANCHARD. Five hundred dollars or more.

Mr. ZIONCHECK. Then, if they had rescued the vessel, they would have put in a bill for $500. I think $500 should be deducted from this claim.

Mr. BLANCHARD. I think the amount involved is not excessive. The damage sustained was $1,850. If the claim is justifiable, they are entitled to interest. I cannot see why you should reduce the amount by the value of the salvage.

Mr. ZIONCHECK. If they had rescued the vessel they would have put in a bill for $500 or $600. So I think if the salvage of the vessel was $500, I think $500 should be deducted.

But, Mr. Speaker, I hate to do this in the absence of the proponent of the bill, and the only reason that I withdraw my objection is because the proponent of the bill is not present.

Mr. TRUAX. Reserving the right to object, here is a bill to pay a claim 21 years old. What has been the history of the bill heretofore?

Mr. BLANCHARD. I can only answer from what I see in the RECORD. A similar bill was passed in the House in June 1932. I assume that the bill has passed one of the two Houses prior to that time. We have claims here on the calendar that go back to 1898. We often have claims that go back over a period of years.

Mr. TRUAX. I will withdraw my reservation of objection.

The SPEAKER. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to William K. Lovett, Wildwood, N.J., the sum of $2,516.16 for loss of the motor sloop *Edith* and cargo while engaged in rendering assistance to the keeper and crew of the Holly Beach Life Saving Station at Cold Spring Inlet, N.J., on October 6, 1913.

With the following committee amendment:

Page 1, line 6, strike out the figures "$2.516.16" and insert "$2,040 in full settlement against the Government."

The committee amendment was agreed to.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendment. At the end of the bill insert the customary attorney's fee clause.

The Clerk read as follows:

At the end of the bill insert the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorneys or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

O. H. CHRISP

The Clerk called the next bill, H.R. 1127, for the relief of O. H. Chrisp.

The SPEAKER. Is there objection?

Mr. BLANTON. Mr. Speaker, I reserve the right to object. This man lost a leg when he was a brakeman on the railroad during the time that the Government had the operation of the railroads under its control. I am perfectly willing that he should be compensated but not at more than the rate that we compensate a soldier for the loss of a leg.

Mr. McCORMACK. My understanding is that where there is a service-connected disability he obtains a regular disability rating.

Mr. BLANTON. Of course, this is not service connected.

Mr. McCORMACK. But the gentleman is asking what it is that a soldier gets. In addition, he gets $25 specific compensation to whatever his disability compensation is.

Mr. BLANTON. Mr. Speaker, we have established some precedents here, as my friend from Arkansas [Mr. MILLER] knows. One is that $5,000 has been established as the maximum value of a life. Of course, the gentleman realizes that the Government is not responsible in law at all. Whatever is granted this man is a mere gratuity on the part of the Government. We have established a precedent of $5,000 for a life and never more than $2,500 for the loss of a limb, no matter how serious it has been. If the gentleman is willing to accept $2,500, I am willing to withdraw objection. That is the established maximum for the loss of a limb.

Mr. MILLER. Of course, the gentleman understands that I will have to accept any amendment that he proposes.

Mr. BLANTON. I am putting it up to the gentleman. The same responsibility rests upon his shoulders as upon mine and the rest of us. We must have a rule. We have a rule which fixes $5,000 and not over $2,500 for the loss of a limb.

Mr. MILLER. I happen to know this claimant and have known him for years, and knew him at the time of the accident. He is suffering worse than death at this time.

Mr. BLANTON. He has lost a leg.

Mr. MILLER. Worse than that. He stayed in the hospital for months and months.

Mr. SABATH. He sustained some other injuries?

Mr. MILLER. Oh, yes; many of them. He is a nervous wreck today, and is unable to do anything. The jury gave him $27,500.

Mr. BLANTON. Oh, yes; the gentleman is an earnest advocate.

Mr. MILLER. Oh, no; I did not represent him.

Mr. BLANTON. He could appear before a jury where the jurors know him, and they would respond to the tears that would roll down his cheeks which would come like an onion brings them sometimes.

Mr. MILLER. I do not want to do anything other than to conform to the precedents.

Mr. BLANTON. If he has suffered some other injuries besides the loss of a leg, that is a different matter. Has he any earning capacity at all?

Mr. MILLER. He cannot do anything; he cannot get around.

Mr. BLANTON. He being totally disabled, if the gentleman will accept the maximum that we have always fixed, $5,000, I shall not object.

Mr. MILLER. I accept that, of course.

Mr. BLANTON. And the gentleman will permit me to offer that amendment and help us to carry it?

Mr. MILLER. Yes.

Mr. BLANTON. I withdraw my reservation of objection.

Mr. BLANCHARD. Mr. Speaker, I reserve the right to object. Is the gentleman willing to accept the usual amendment to this being in full of all claims?

Mr. MILLER. Yes.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to O. H. Chrisp, of Bald Knob, Ark., out of any money in the Treasury not otherwise appropriated, the sum of $25,000 in full payment of all damages for personal injuries received by him while in the employ of the Director General of Railroads on January 17, 1919, at Crawfordsville, Ark., on account of the negligence of the said Director General of Railroads.

With the following committee amendments:

Line 6, page 1, strike out "25,000" and insert in lieu thereof "10,000."

Mr. BLANTON. Mr. Speaker, I offer the following substitute.

The Clerk read as follows:

Amendment by Mr. BLANTON as a substitute for the committee amendment: Strike out "10,000" and insert in lieu thereof "5,000."

The SPEAKER. The question is on agreeing to the amendment to the committee amendment in the nature of a substitute.

The amendment to the amendment was agreed to.

The SPEAKER. The question now is on agreeing to the amendment as amended.

The amendment was agreed to.

The Clerk read as follows:

At the end of the bill add: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendment which I send to the desk.

The Clerk read as follows:

Line 6, page 1, after the figures "$5,000", insert "in full settlement of all claims against the Government of the United States."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider laid on the table.

M. AILEEN OFFERMAN

The Clerk called the next bill, H.R. 1301, for the relief of M. Aileen Offerman.

The SPEAKER. Is there objection?

Mr. BLANCHARD. Mr. Speaker, I reserve the right to object.

Mr. ZIONCHECK. Mr. Speaker, I reserve the right to object.

Mr. BLANCHARD. I want to ask the author of the bill with reference to this situation. Some $1,300 or $1,400 has already been paid to Mrs. Offerman.

Mr. SUTPHIN. That was paid by the indemnity company that had the collection of the insurance which she carried.

Mr. BLANCHARD. Will the gentleman make a statement as to the injuries this lady sustained, and her present condition?

Mr. SUTPHIN. Yes. I will be very glad to. The accident was brought about by an Army truck which was dispatched from Fort Wadsworth, N.Y., to Fort Hancock, N.J., The truck got off the road and proceeded down the shore near Middletown where the driver stopped to endeavor to find out his position, and how to get to Fort Hancock. He stopped this truck without any light on it, on a grade, on a curve. Mrs. Offerman came down the road. A car was coming in the opposite direction and there was no place to go except to make a head-on collision or strike the rear of this truck. The driver was arrested and later convicted on a charge of reckless driving. She broke her left leg, her nose was broken, and there were various cuts on her head, and I believe she sustained concussion of the brain.

Mr. HANCOCK of New York. Are there any permanent injuries?

Mr. SUTPHIN. Oh, yes. The report shows she is still suffering from sinus trouble. The claim originally was for $25,000 and the committee cut it down to $2,500. The gentleman will observe that the Government paid that indemnity company $700 for the destruction of that truck.

Mr. BLANCHARD Will the gentleman yield?

Mr. SUTPHIN. I yield.

Mr. BLANCHARD. The hospital and nurses and doctor's bill amounted to $314.50.

Mr. SUTPHIN. As a matter of fact, she is still being treated as the result of that accident. That was a couple of years ago.

The SPEAKER. Is there objection?

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay M. Aileen Offerman, out of any money in the Treasury not otherwise appropriated, the sum of $2,500 for personal injuries and property damage resulting from a collision with United States truck no. 430870, at Five Corners of the Shore Highway, at Middletown, N.J., on December 4, 1930.

With the following committee amendments:

On page 1, line 6, after the figures, insert the words "in full settlement of all claims against the Government of the United States."

The committee amendment was agreed to.

On page 2, line 1, insert the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMOS D. CARVER ET AL.

The Clerk called the next bill, H.R. 1842, for the relief of Amos D. Carver, S. E. Turner, Clifford N. Carver, Scott Blanchard, P. B. Blanchard, James B. Parse, A. N. Blanchard, and W. A. Blanchard.

Mr. GRISWOLD. Mr. Speaker, reserving the right to object.

Mr. BLANTON. Reserving the right to object, this bill involves the sum of $35,916. This matter went to the Supreme Court of the United States, and they made an adverse report on it, and I object.

Mr. HANCOCK of New York. Will the gentleman reserve his objection? I understand this matter went to the Court of Claims, and an award was made amounting to $178,000.

Mr. BLANTON. And the Supreme Court set that aside.

Mr. HANCOCK of New York. The court of appeals reversed it on the technical ground of lack of jurisdiction. When it went to the Senate the matter was gone into very thoroughly. They did not feel that $178,000 was a reasonable figure; that it included a profit, and the figure in this bill represents the actual out-of-pocket expense. It does seem to me there is quite a bit of merit in this bill.

Mr. BLANTON. Under the rules of the House, this bill can come up later on its merits, and we can then try out the matter like the gentleman and I would try a law case across the table in a courthouse involving $35,000. Then we will put it up on its merits; but in view of the fact that the Supreme Court of the United States on the merits of the case reversed it——

Mr. HANCOCK of New York. No, no. I cannot agree with the gentleman. It was reversed on a question of jurisdiction.

Mr. BLANTON. Later on the matter will come up when objections cannot stop it and when the gentleman will be heard, and we will have considerable time for consideration of such matters, because we are going to be here a long time, in my judgment, waiting on another body.

Mr. HANCOCK of New York. I agree this is a very unsatisfactory way to try a lawsuit, but it seems to me the claimants have been pretty roughly treated by the Government.

Mr. BLANTON. Later we will discuss the merits of it, but for the present I object.

Mr. BLOOM. Will the gentleman withhold his objection a moment?

Mr. BLANTON. Certainly.

Mr. BLOOM. The Supreme Court never went into the merits of the case, but it said that the Court of Claims did not have a right to adjudicate or allow claims of this kind. This same bill is the bill that was passed by the Senate recently. Senator KING said he thought they were entitled to more money, but the Senate said they were entitled to the out-of-pocket amount of money spent.

Mr. BLANTON. I think our friend from New York should show the House of Representatives the same deference and respect that he shows Mussolini and the Pope and the Court of St. James. When he appears before them he bows the knee.

Mr. BLOOM. I will do that to the gentleman. [Laughter.]

Mr. BLANTON. He has not done that for his own House of Representatives.

Mr. BLOOM. I just wanted to get the RECORD straight, that the Supreme Court did not decide this case on the merits of the case, but it was simply on the question of jurisdiction of the Court of Claims. The Court of Claims allowed $178,000. Then it was taken to the Supreme Court, and they reversed the case on account of lack of jurisdiction.

The Senate, which passed this bill recently, said they were entitled to the amount they claimed for the out-of-pocket fee. That is the claim at the present time.

Mr. GRISWOLD. Does the gentleman know what the Supreme Court said in that decision?

Mr. BLOOM. Yes. I have read it just this evening.

Mr. GRISWOLD. I can not understand where the gentleman got the idea that that was in any way not a decision on its merit.

Mr. BLOOM. No. The Supreme Court held that the Court of Claims did not have jurisdiction.

Mr. GRISWOLD. I call the gentleman's attention to the concluding paragraph of the decision of the Supreme Court. It is a unanimous opinion of the Court:

> In short, the findings show no facts entitling the respondents to recover compensation from the United States under the provisions of the act of 1917.

Mr. BLOOM. While the gentleman may find that language in the opinion of the Court, I think he will also find that the Senate passed an identical bill the other day allowing the amount out of pocket expenses.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. BLANTON and Mr. GRISWOLD objected.

CHARLES J. EISENHAUER

The Clerk called the next bill, H.R. 2639, for the relief of Charles J. Eisenhauer.

Mr. ZIONCHECK. Mr. Speaker, reserving the right to object, I shall object unless the proponent of the bill will consent to an amendment reducing the compensation from $2,500 to $1,500.

Mr. BLACK. That is acceptable.

Mr. MOTT. Mr. Speaker, reserving the right to object, it appears from the report of the Navy Department that the private who was responsible for causing the injury to Charles J. Eisenhauer by a truck he was driving was not operating the vehicle in line of duty. The accident occurred while the private was conveying some acquaintances from a baseball park to a railway station with some baseball paraphernalia. This, I take it, was the reason for the rejection of the claim by the Navy Department.

The report from the Department is not necessarily conclusive on the merits of the bill, as far as I am concerned. This report does not indicate to what extent the investigation by the committee was made. I should like to know the circumstances of the case.

Mr. BLACK. We have taken the affidavits of the witnesses to this accident. We have the report of the Navy Department.

I have just now agreed to cut down the amount of compensation by $1,000.

We felt, considering all the circumstances, the fact it was a Navy Department automobile, driven by an enlisted man of the Navy, recklessly driven, against whom the claimant can enforce no claim, that Congress should allow reasonable compensation.

This bill has been here ever since I have been in Congress. I have seen it year after year. It has been cut down to almost nothing. I think, in view of all the circumstances, the gentleman could well let this bill go through.

Mr. MOTT. Mr. Speaker, can the chairman of the committee inform the House if there were any circumstances in connection with the accident which would raise the question as to whether the truck was being operated in line of duty? Was the carrying of this baseball paraphernalia from the baseball grounds to the railroad station connected in any way with the official duties of the truck driver?

Mr. BLACK. I could not say. My clerk tells me that he recalls some statement to the effect that it was a game in which the Marines were engaged, played at the Prospect Park parade grounds. He is not quite sure of the facts. I am perfectly honest with the gentleman.

Mr. MOTT. If it were the fact that it was in any way connected with the Navy, that would be conclusive as far as I am concerned.

Would the gentleman consent to have this bill go over until the next time the calendar is called that I may have an opportunity of checking up the matter?

Mr. BLACK. I will look through my documents on this and may call it up later tonight if the gentleman does not mind.

Mr. MOTT. Mr. Speaker, I ask unanimous consent that this bill be passed for the present with the understanding that it may be called up later this evening.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

GEORGE G. SLONAKER

The Clerk called the next bill, H.R. 2990, for the relief of George G. Slonaker.

There being no objection, the Clerk read the bill, as follows:

> *Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to George G. Slonaker, of Gettysburg, Pa., out of any money in the Treasury not otherwise appropriated, the sum of $5,000 in compensation for injuries sustained to his eyes while employed by the War Department at Camp Colt, Pa., during 1918.

With the following committee amendment:

Strike out all after the enacting clause, line 3, page 1, down to and including line 8, on page 1, and insert in lieu thereof the following:

"That the United States Employees' Compensation Commission is hereby authorized to consider and determine, in the same manner and to the same extent as if application for the benefits of the Employees' Compensation Act had been made within the 1-year period required by sections 17 and 20 thereof, the claim of George G. Slonaker, on account of injury to his left eye, and subsequent blindness, alleged to have been proximately caused by his employment as an incinerator operator by the United States Government at Camp Colt, Pa., from March 1918 to November 1918: *Provided*, That he shall file a notice of such injury and claim for compensation therefor not later than 60 days from the date of the enactment of this act: *And provided further*, That no benefits shall accrue prior to the enactment of this act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

GREAT AMERICAN INDEMNITY CO. OF NEW YORK

Mr. WADSWORTH. Mr. Speaker, I ask unanimous consent to return to the consideration of Calendar No. 92 (H.R. 4249), a bill for the relief of the Great American Indemnity Co. of New York.

Mr. ZIONCHECK. Mr. Speaker, I object.

LAKE DENMARK EXPLOSION

The Clerk called the next bill, H.R. 4013, to provide an additional appropriation as the result of a reinvestigation, pursuant to the act of February 2, 1929 (45 Stat., p. 2047, pt. 2), for the payment of claims of persons who suffered property damage, death, or personal injury due to the explosion at the naval ammunition depot, Lake Denmark, N.J., July 10, 1926.

Mr. BLANTON. Mr. Speaker, I am compelled to object to this bill.

Mr. EATON. Mr. Speaker, will the gentleman withhold his objection?

Mr. BLANTON. This bill seeks to appropriate $17,691.58, when the report of the Comptroller General shows that under no circumstances should it be more than $14,000.

Mr. EATON. We have two letters from the Comptroller General addressed to the Congress afterward, giving the result of a further investigation, which comprises four cases and makes up the difference between $14,000 and $17,000.

Mr. BLANTON. They are not in the report. Does the Comptroller General recommend that $17,000 be allowed?

Mr. EATON. Yes.

Mr. BLANTON. Under what date?

Mr. EATON. Under date of January 14, 1933, he recommends a further sum of $1,633.41 for the relief of three sufferers. Under date of February 10, 1933, he recommends that the sum of $1,649.08 be allowed for the relief of the estate of Julia Buck.

Mr. BLANTON. They are not mentioned in this bill. Let me see the reports from the Comptroller General, please.

Mr. EATON. I will hand them to the gentleman.

Mr. BLANTON. After referring to the letters from the Comptroller General, I have no objection.

Mr. MOTT. Mr. Speaker, reserving the right to object, I notice this bill does not carry the usual provision either as to attorney's fees or that this amount is being paid to the claimants in full settlement. If it is agreed that these amendments may be offered, I have no objection.

Mr. EATON. Yes. It is the intention to close the entire matter by this bill.

There being no objection, the Clerk read the bill as follows:

Be it enacted, etc., That the sum of $17,691.58 be appropriated, out of any money in the Treasury of the United States not otherwise appropriated, to make payment of claims for property damage, death, or personal injury due to the explosions at the naval ammunition depot, Lake Denmark, N.J., July 10, 1926, to the respective persons and in the respective amounts as recommended by the Comptroller General of the United States and as fully set forth in House Document No. 217, Seventy-second Congress, first session, and letters of the Comptroller General to the Congress, dated January 14 and February 10, 1933, pursuant to the act of March 2, 1927 (44 Stat., pt. 3, p. 1800), and the act of February 2, 1929 (45 Stat., pt. 2, p. 2047).

With the following committee amendment:

Page 2, line 5, strike out the numbers "217" and insert in lieu thereof "257."

The committee amendment was agreed to.

Mr. MOTT. Mr. Speaker, I offer two amendments, which I send to the desk.

The Clerk read as follows:

Amendments offered by Mr. MOTT: Page 1, line 3, after the amount "$17,691.58", insert "in full settlement against the Government of the United States", and at the end of the bill the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

EMMA F. TABER

The Clerk called the next bill, H.R. 4056, for the relief of Emma F. Taber.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Emma F. Taber, out of any money in the Treasury not otherwise appropriated, the sum of $5,000 for expenses and attendance charges incurred by her on account of injuries sustained by being struck by a Government-owned motor vehicle in Dorchester, Mass., on September 12, 1931.

With the following committee amendments:

Line 6, strike out the figures "$5,000" and insert in lieu thereof "$3,500", and at the end of the bill insert the following:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The committee amendments were agreed to.

Mr. McCORMACK. Mr. Speaker, I offer another amendment.

The Clerk read as follows:

Amendment by Mr. McCORMACK: Page 1, line 6, after the figures "$3,500", insert the words "in full settlement of all claims against the Government of the United States."

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CHARLES J. EISENHAUER

Mr. BLACK. Mr. Speaker, I ask unanimous consent to return to Calendar No. 124, the bill H.R. 2639, for the relief of Charles J. Eisenhauer.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. MOTT. Mr. Speaker, reserving the right to object, this, it seems to me, was a clear case of negligence, and the only question in my mind is whether or not there was legal liability. The chairman of the committee has shown me a

transcript of the testimony, which indicates that to some extent there was a legal liability inasmuch as this man was in a way on duty. The amount has been very drastically reduced, and so far as I am concerned I am willing to withdraw my objection.

Mr. HANCOCK of New York. Mr. Speaker, reserving the right to object, may I ask what sort of duty the truck driver for the Marine Corps was engaged in?

Mr. BLACK. He was asked this question: "Where had you been on duty with this truck?" And his answer was: "To Prospect Park after baseball goods." That is all there is in the investigation to indicate the nature of his duty. It is the general statement that his duty consisted in being at Prospect Park after baseball goods.

Mr. HANCOCK of New York. Does the gentleman understand that this truck driver was engaged in the usual line of duty and acting under orders at the time of the accident?

Mr. BLACK. Yes. There was no complaint lodged against him for being at Prospect Park after baseball goods. These charges were served on him and he was asked the question "What was your duty?" And he said, "I was out to Prospect Park after baseball goods."

Mr. HANCOCK of New York. Does the gentleman, who is very careful in all these matters, understand the truck driver was pursuing his usual duty at the time and under orders?

Mr. BLACK. He was pursuing a duty imposed upon him. I do not suppose he did that every day.

Mr. HANCOCK of New York. He was acting under orders?

Mr. BLACK. He was acting under orders or he would have had serious charges placed against him in addition to that of negligence.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to pay the sum of $2,500 to Charles J. Eisenhauer, of Brooklyn, N.Y., in compensation for injuries sustained June 2, 1919, in the city of Brooklyn, N.Y., when struck by an automobile truck of the United States Marine Corps.

With the following committee amendments:

Page 1, line 5, strike out the words "in compensation" and insert "in full settlement of all claims against the Government of the United States", and at the end of the bill insert the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The committee amendments were agreed to.

Mr. ZIONCHECK. Mr. Speaker, I offer the further amendment that, on page 1, line 4, the sign and figures "$2,500" be stricken and the sum of "$1,500" be inserted in lieu thereof.

The Clerk read as follows:

Amendment by Mr. ZIONCHECK: Page 1, line 4, strike out "$2,500" and insert in lieu thereof "$1,500."

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

H. D. HENION, HARRY WOLFE, AND R. W. M'SORLEY

The Clerk called the next bill, H.R. 4926, for the relief of H. D. Henion, Harry Wolfe, and R. W. McSorley.

Mr. HOPE. Mr. Speaker, I object.

Mr. SMITH of Washington. Mr. Speaker, will the gentleman reserve his objection?

Mr. HOPE. Yes; I shall be pleased to reserve it.

Mr. SMITH of Washington. Mr. Speaker, I consider this bill is very worthy and meritorious. The three claimants in the bill were driving an automobile on the North Cispus Road in the Rainier National Forest, in the State of Washington. Employees of the Forest Service were doing some blasting along the road and the powder man gave no warning or signal and these men proceeded to drive along the highway. The blast exploded at a point in the road to which the automobile was approaching, the machine was blown off the road and down the hillside and the three occupants of the car were thrown out of the automobile and injured.

Mr. HOPE. Will the gentleman yield right there?

Mr. SMITH of Washington. Yes.

Mr. HOPE. There is nothing in the record here to show that either of these men was an employee of the United States. Were they or were they not Federal employees at the time this accident happened?

Mr. SMITH of Washington. I will say in reply to the gentleman that the Forest Service and the Department of Agriculture have admitted that this was a clear case of negligence on the part of the employees of the Forest Service, and a bill was formerly introduced asking for damages in specified amounts approximating over $7,000. Upon the recommendation of the Department of Agriculture and the Forest Service, this very bill, in its present terms, was introduced to bring the claimants within the purview of the United States Employees' Compensation Act.

Mr. HOPE. I do not know what the idea of the party in the Department of Agriculture who suggested this form of bill may be, but I can see no reason why we should give the rights and the benefits of the United States Employees' Compensation Act to men who are not Federal employees. There may be some claim on the part of these men against the Government of the United States, although it is certainly nothing like as large in amount as they attempted to assert in the first place. The evidence here all indicates very clearly that two of these men could hardly be said to have been injured at all and the extent of the injury to the third man was a sprained ankle, and yet, originally, they had a bill introduced here in an amount which in the aggregate was more than $7,000 for very, very trivial injuries.

I would have no objection if this were a bill which would give these men what I would consider fair compensation for the injuries which they suffered, but I do not believe we ought to establish a precedent here by giving men who are not Government employees the rights and benefits of the United States Employees' Compensation Act, and for this reason I feel I must reluctantly object.

Mr. SMITH of Washington. Will the gentleman further reserve his objection in order that I may answer his statement?

Mr. HOPE. Yes.

Mr. SMITH of Washington. It seems to me that by bringing these men within the application of the Employees' Compensation Act designed for Federal employees, we are going to insure the very thing that the gentleman states he is in favor of. In this event these men will receive compensation for losses and payment of medical fees which they may be able to establish and all this bill does is to permit them to claim the benefits of the Federal Employees' Compensation Act and, of course, they will have to establish their loss of time and their actual injuries and disabilities, if they have any. Can anything be fairer than this?

Mr. HOPE. I do not believe we ought to establish such a precedent by giving the benefit of that act to men who, so far as I have been able to discover, were not at this time and never had been Federal employees.

Mr. SMITH of Washington. Let me say to the gentleman, who has been a member of this body for a considerable length of time, while I have not, it is my understanding we are not establishing a precedent, but this very thing has been done on numerous occasions in the past on the recommendation of various departments of the Government; in fact, it has been the custom that where the Government is not willing to admit liability in a specified amount, they recommend legislation to bring the claimants within the purview of the Employees' Compensation Act, and this has been done frequently in the past.

Mr. HOPE. I do not know of any such cases, but I would not say there have not been any.

Mr. SMITH of Washington. There have been many of them, I will say.

Mr. HOPE. I know of no such cases and I see no reason why such a policy should be followed and, therefore, I object.

THEODORE W. BELAND

The Clerk called the next bill, H.R. 4952, for the relief of Theodore W. Beland.

Mr. BLANCHARD. Mr. Speaker, I object.

Mr. GAMBRILL. Mr. Speaker, will the gentleman withhold his objection a moment?

Mr. BLANCHARD. I withhold it; yes.

Mr. GAMBRILL. This bill has been recommended for payment by the Commissioner of Lighthouses. The expenses were incurred in a legitimate way and the Comptroller makes the statement in his report that the bill has equity. The amount involved is only $32.30, and I hope the gentleman will not offer any objection.

Mr. BLANCHARD. Mr. Speaker, at the present moment I am constrained to object. I understand, of course, it can come up at a later time, but I shall have to insist on my objection.

The SPEAKER. Objection is heard.

ESTATE OF VICTOR L. BERGER

The next bill on the Private Calendar was the bill, H.R. 7229, for the relief of the estate of Victor L. Berger, deceased.

There being no objection, the Clerk read the bill as follows:

Be it enacted, etc., That there be paid out of any money in the Treasury of the United States not otherwise appropriated, to the legal heirs of the estate of Victor L. Berger, deceased, the sum of $9,856.12, in full settlement of all claims against the Government of the United States, the same being the unpaid balance, and without interest, of the salary to which the said Victor L. Berger would have been entitled as a Member of Congress in the Sixty-sixth Congress, to which he had been regularly and duly elected but denied his seat therein because of his conviction for an alleged violation of the Espionage Act, which conviction was subsequently reversed by the United States Supreme Court, and the indictments nolle prossed on January 23, 1923, in the United States District Court for the Northern District of Illinois: *Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. BLANTON. Mr. Speaker, I was one of those in this House who voted to prevent Victor Berger from taking his seat, and he was thereby deprived of this money which now I hope will be paid to his widow.

Victor Berger was a Socialist. I never have had any patience with socialism, but I have seen some of the most earnest, conscientious men I have known serve here as Socialists. Meyer London, than whom there was never a better-posted man in the United States nor a more conscientious one, served here with distinction.

Victor Berger had definite views; he was honest, conscientious, and fearless. At the time he was deprived of his seat his case had not been decided, but afterward the United States Supreme Court reversed the judgment against him and the indictment was dismissed, and he afterward served with distinction in this House.

His widow is now old and infirm, and in distressed financial circumstances. What does that mean? That her husband was honest. A man who fills the positions that Victor Berger filled, who dies poor, is honest; and I am glad that I am on this floor at a night session to help pass this bill, and that this widow can now get what should have been given to her husband. [Applause.]

Mr. BOILEAU. Mr. Speaker, I rise in opposition to the pro forma amendment. I should like to say that this bill should be decided entirely on its merits and not upon any sympathy for Victor Berger or for his widow. I believe this is purely a case where this Congress erred several years ago, where a man expressed minority views at a time when people were acting irrational and was deprived of his seat to which he was entitled.

I am glad that Congress is to rectify their act entirely upon the merits of the bill and that we can remedy the wrong not only to Victor Berger but to people who represent minority views. [Applause.]

Mr. O'MALLEY. Mr. Speaker, I move to strike out the last two words. I introduced this bill, and it is the only claim bill I have introduced since I have been a Member of this House, and probably it is the only claim bill that I shall introduce for a long time to come, because I have had perhaps a peculiar aversion to introducing private-claim legislation. This is not my bill alone, but one which I believe is supported by the entire Wisconsin delegation. My Republican colleagues as well as my Democratic colleagues from Wisconsin have felt that this was a simple act of justice on the part of Congress in righting the wrong done the late Victor Berger.

I represent the district that Victor L. Berger represented. I ran against him in 1928. I disagreed with him on political questions, and the reason I ran against him was because I opposed many of his views. Now, I want to read what one newspaper of my State said about this measure after I introduced my bill which has just been passed:

When Victor Berger passed from this life on July 16, 1929, tributes were paid by his fellow townsmen and by former Congressmen. These tributes would be idle words, meaningless in the interpretation, if the Congress of the United States does not remedy a wrong that was done him in the face of the decision of the Supreme Court.

I know that the people of the fifth district as well as myself and the entire Wisconsin delegation deeply appreciate the fair-mindedness of the Members of the Seventy-third Congress that has enabled this bill to pass without objection.

Mr. HOPE. Mr. Speaker, will the gentleman yield?

Mr. O'MALLEY. Yes.

Mr. HOPE. For the purpose of keeping the record straight, this salary, which would have gone to Mr. Berger, had he been a Member of the House, did not go to anyone, did it?

Mr. O'MALLEY. It went to no one. The district was without representation for a certain length of time. The money was turned back to the Treasury.

The SPEAKER. Without objection the pro forma amendments are withdrawn.

There was no objection.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider laid on the table.

C. M. WILLIAMSON

The Clerk called the next bill, S. 2, for the relief of C. M. Williamson; Mrs. Tura Liljenquist, administratrix of C. E. Liljenquist, deceased; Lottie Redman; and H. N. Smith.

The SPEAKER. Is there objection?

Mr. GRISWOLD. Mr. Speaker, I shall not object, if the proponent of the bill will agree to the usual attorneys' fee amendment.

Mr. COFFIN. We have no objection to that amendment.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to C. M. Williamson; Mrs. Tura Liljenquist, administratrix of C. E. Liljenquist, deceased; Lottie Redman; and H. N. Smith, in accordance with their respective interests, the sum of $8,824.10. Such sum represents the amount expended by them in installing a pumping plant and making necessary connections to bring water to their land on the Fort Hall Indian Reservation, and the amount paid by them to the Idaho Power Co. during the years 1920 to 1927, inclusive, for power to operate said pumping plant.

Mr. GRISWOLD. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. GRISWOLD: At the end of the bill insert:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to; and the bill as amended was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider laid on the table.

MARY AGNES RODEN

The Clerk called the next bill, S. 375, to reimburse the estate of Mary Agnes Roden.

The SPEAKER. Is there objection?

Mr. ZIONCHECK. Mr. Speaker, I reserve the right to object in order to find out whether Sophie Walsh was supported by her sister Agnes Roden before her death, or was her sister dependent upon her for support?

Mr. BLACK. I would have to look through the other records. I could not find that out from the report.

Mr. ZIONCHECK. Mr. Speaker, in the absence of an explanation, I object at this time.

WARREN J. CLEAR

The Clerk called the next bill, S. 406, for the relief of Warren J. Clear.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Warren J. Clear, captain, United States Infantry, the sum of $737 in reimbursement for the loss by earthquake and fire of personal property in Tokyo, Japan, on or about September 1, 1923, while he was serving as an attaché, American Embassy, Tokyo, Japan.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider laid on the table.

WILLIE B. CLEVERLY

The Clerk called the next bill, S. 407, for the relief of Willie B. Cleverly.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Willie B. Cleverly the sum of $124.23 in full compensation for money expended by him in doctor's and hospital bills growing out of an injury which he received while in the performance of his duties as temporary surfman at the Point Allerton Station of the United States Coast Guard on January 13, 1924, at which time the said Cleverly was filling a vacancy in the personnel at that station.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendments which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD:

In line 6, after the amount, insert, "in full settlement of all claims against the United States", and at the end of the bill insert the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to, and the bill as amended was ordered to be read a third time, was read the third time, and passed.

Mr. BLACK. Mr. Speaker, before we proceed to the next bill I desire to call attention to the fact that these are Senate bills to which these usual amendments have been added. The Senate has not been in the habit of putting on these amendments. I hope some Senator will read this RECORD.

LEBANON EQUITY EXCHANGE

The Clerk called the next bill, S. 750, for the relief of the Lebanon Equity Exchange, of Lebanon, Nebr.

The SPEAKER. Is there objection?

Mr. BLANCHARD. Mr. Speaker, I object.

Mr. SHALLENBERGER. Mr. Speaker, will the gentleman withhold his objection?

Mr. BLANCHARD. Yes.

Mr. SHALLENBERGER. Mr. Speaker, this is a bill that came over from the Senate, and is a case wherein a farmers' elevator company in western Nebraska at the instruction of the agent of the Revenue Department paid the Government an income tax, which the Treasury now admits was not due, but they did not learn of this fact until 1929 when a ruling was made by the Department that they were not liable for this tax. That ruling was made in February 1921, and in August 1929, the Government here through its Commissioner made the ruling that this company was not liable for this tax.

They made application for the return of the tax, but there were 4 or 5 months lacking of the 4-year stipulation in the law. In other words, the case is that the Government has $2,500 of these farmers out there, which the Government itself admits it never was entitled to, and because of the statute of limitations, the Government retains the money. I hope the gentleman from Wisconsin [Mr. BLANCHARD] will see the equity of this. It is a struggling elevator company in western Nebraska. There is no question about the facts in the matter, except that the statute of limitations runs against them, and therefore the Government is keeping $2,500 of their money which it has admitted does not belong to it.

Mr. BLANCHARD. Will the gentleman yield?

Mr. SHALLENBERGER. I yield.

Mr. BLANCHARD. I think the gentleman will concede there are hundreds upon thousands of cases in exactly the same situation as this one, where the statute of limitations has run, and if we are to open it up on a claim of this kind, quite naturally we should change the law so that all claims may be given consideration. The fact that it is a cooperative organization, of course, does not change the situation as far as the law is concerned. They should not be treated any differently than any other individual or corporation.

Mr. SHALLENBERGER. The point that I wanted to bring to the gentleman's attention is that they did not sleep on their rights. As soon as they received notice that they were not liable to pay this tax they made application to have it returned.

Mr. BLANCHARD. As far as I am concerned, I am perfectly willing to have this called up at a later time, but not too late, for reasons which I am perfectly willing to explain to the gentleman at the proper time, but I shall be obliged to object.

FARMERS' GRAIN CO., OF OMAHA, NEBR.

The Clerk called the next bill, S. 751, authorizing the Secretary of the Treasury of the United States to refund to the Farmers' Grain Co., of Omaha, Nebr., income taxes illegally paid to the United States Treasurer.

Mr. HOPE. Reserving the right to object, and I shall not object if the author of the bill will consent to an amendment to the effect that this shall be in full settlement of all claims against the United States, and also an amendment covering the usual attorney's fee provision.

Mr. BLANTON. Will the gentleman yield?

Mr. HOPE. I yield.

Mr. BLANTON. Is not this the first instance in the gentleman's experience that he ever heard of farmers getting anything back from the income-tax bureau?

Mr. HOPE. I am not sure but what it is.

Mr. BLANTON. It is so unusual that they get anything back that I was very glad to see this bill called up.

Mr. HANCOCK of New York. They do not very often pay any income taxes, do they?

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to refund, from moneys not otherwise appropriated, the sum of $2,186.36 to the Farmers' Grain Co., of Omaha, Nebr., this sum being paid illegally and through error by said company as income taxes to the Commissioner of Internal Revenue, and covered into the United States Treasury.

Mr. HOPE. Mr. Speaker, I offer an amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. HOPE: In line 5, after the figures, insert "in full settlement of all claims against the Government of the United States", and at the end of the bill add the following proviso: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The committee amendments were agreed to.

The bill as amended was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

CHICAGO, NORTH SHORE & MILWAUKEE RAILROAD CO.

The Clerk called the next bill, S. 1069, authorizing adjustment of the claim of the Chicago, North Shore & Milwaukee Railroad Co.

There being no objection the Clerk read as follows:

Be it enacted, etc., That the Comptroller General of the United States is hereby authorized and directed to adjust and settle the claim of the Chicago, North Shore & Milwaukee Railroad Co. for reimbursement for materials furnished and labor supplied in repairing Chicago & Eastern Illinois gondola car no. 93962 that was accidentally damaged on July 24, 1928, while spotted on Government tracks at Fort Sheridan, Ill., and to allow not exceeding $120.39 in full and final settlement of said claim. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $120.39, or so much thereof as may be necessary, for payment of said claim.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

JOHN T. LENNON AND GEORGE T. FLORA

The Clerk called the next bill, S. 1074, authorizing adjustment of the claims of John T. Lennon and George T. Flora.

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Comptroller General of the United States is hereby authorized and directed to allow John T. Lennon and George T. Flora $25 each in full and final settlement of their claims for blood furnished May 4 and May 11, 1926, respectively, for transfusion to Harvey J. Shoppe, a patient in a Government hospital. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $50 for the payment of such claim.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

FRANCIS B. KENNEDY

The Clerk called the next bill, S. 1079, authorizing adjustment of the claim of Francis B. Kennedy.

The SPEAKER. Is there objection?

Mr. GRISWOLD. I object.

POTOMAC ELECTRIC POWER CO., WASHINGTON, D.C.

The Clerk called the next bill, S. 1083, authorizing adjustment of the claim of the Potomac Electric Power Co., of Washington, D.C.

Mr. BLANCHARD. Reserving the right to object, will it be agreeable to have the two customary amendments offered to this bill?

Mr. BLANTON. Well, Mr. Speaker, this company is one of the richest companies in Washington, D.C., and it has lawyers employed by the year, so I do not think it is necessary to put any attorney's fee limitation on here, because the lawyers act by the year anyway.

The SPEAKER. Is there objection?

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Comptroller General of the United States is hereby authorized and directed to adjust and settle the claim of the Potomac Electric Power Co. for the balance necessary to reimburse it for the amount actually expended by said company in making electrical service connections from its mains to the control room on the east bascule draw span of the Arlington Memorial Bridge and to allow said company a balance of not to exceed $2,157.25 in full and final settlement of said claim. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $2,157.25, or so much thereof as may be necessary, for payment of said claim.

Mr. BLANCHARD. Mr. Speaker, I offer an amendment which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: In line 10, after the amount, insert "in full settlement of all claims against the Government of the United States."

And at the end of the bill insert the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to.

The bill as amended was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

SCHUTTE & KOERTING CO.

The Clerk called the next bill, S. 1085, authorizing adjustment of the claim of Schutte & Koerting Co.

Mr. BLANCHARD. Reserving the right to object, I would like to have an explanation of this bill before I consent to its being considered.

Mr. BLACK. I can add nothing to what is in the report. The gentleman is a member of the Claims Committee.

Mr. BLANCHARD. May I say to the distinguished chairman of the committee that many of these bills were reported out long before I became a member of the committee.

Mr. BLACK. I am glad the gentleman came in a little late.

Mr. BLANTON. Mr. Speaker, I do not think the Chairman of our Claims Committee ought to snipe up one of our new Members in that way.

I want to tell my friend who has just gone on that committee that the hardest work I ever did in my life was the 6 years I served on that committee. After a committee had reported by a unanimous vote the Sevier heir bill to pay $100,000,000 to people on a claim that was about 100 years old, some of us who were new Members at the time, stopped it. There is plenty of chance for the gentleman to do good work on that committee even though he is a new Member and I tell him not to let any sarcastic remark of the chairman of the committee stop his good work.

Mr. BLACK. The gentleman from Texas should not get excited about it. My friend, the gentleman from Wisconsin, did not get excited about it. He realized that I said it in a friendly way and with a friendly feeling toward him. I even feel that way toward the gentleman from Texas—not all the time, but every now and then.

Mr. BLANCHARD. Mr. Speaker, I object.

WILLIAM T. STILES

The Clerk called the next bill, S. 1087, authorizing adjustment of the claim of William T. Stiles.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Comptroller General of the United States is hereby authorized and directed to settle and adjust the claim of William T. Stiles for blood furnished October 11, 1926, for transfusion to Charles E. Williams, a patient in a Government hospital, and to allow in full and final settlement of said claim an amount not in excess of $25. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $25 for the payment of such claim.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

DEPARTMENT OF AGRICULTURE

The Clerk called the next bill, S. 1115, to authorize the Department of Agriculture to issue a duplicate check in favor of Department of Forests and Waters, Commonwealth of Pennsylvania, the original check having been lost.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That notwithstanding the provisions of section 3646, as amended, of the Revised Statutes of the United States, the disbursing clerk of the Department of Agriculture is authorized and directed to issue, without the requirement of an indemnity bond, a duplicate of original check No. 2675700, drawn November 19, 1931, in favor of Department of Forests and Waters, Commonwealth of Pennsylvania, for $345, the original check having been lost.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

ELIZABETH B. EDDY

The Clerk called the next bill, S. 1219, to carry into effect the finding of the Court of Claims in the claim of Elizabeth B. Eddy.

Mr. HOPE and Mr. ZIONCHECK objected.

LEBANON EQUITY EXCHANGE

Mr. SHALLENBERGER. Mr. Speaker, I ask unanimous consent to return to Calendar No. 135, S. 750, for the relief of the Lebanon Equity Exchange, of Lebanon, Nebr., as I understand the gentleman from Wisconsin will withdraw his objection.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to returning to Calendar No. 135?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Commissioner of Internal Revenue be, and he is hereby, authorized and directed to receive, consider, and determine, in accordance with law but without regard to any statute of limitations, any claim filed not later than 6 months after the passage of this act by the Lebanon Equity Exchange, Lebanon, Nebr., for the refund of Federal income and profits taxes collected from the said Lebanon Equity Exchange for the year 1920 in excess of the amount properly due: *Provided*, That in the settlement of said claim there shall be no allowance of interest.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

PLAYA DE FLOR LAND & IMPROVEMENT CO.

Mr. MARTIN of Oregon. Mr. Speaker, I ask unanimous consent to return to Calendar No. 108 (H.R. 5284) for the relief of the Playa de Flor Land & Improvement Co.

Mr. ZIONCHECK and Mr. GRISWOLD objected.

LITTLE ROCK COLLEGE

The Clerk called the next bill, S. 1347, for the relief of Little Rock College, Little Rock, Ark.

Mr. GRISWOLD. Mr. Speaker, reserving the right to object, it seems that this is one of those cases where a college regarded Government property as everybody's property. I notice the last report from the Secretary of War is in 1927. He stated in that report that there might be additional losses. Does the chairman of the committee know if there were any additional losses?

Mr. TERRY. We have waited from 1927 to 1934 for a report of them but no report of additional losses has come in.

Mr. GRISWOLD. There was no report of additional losses of these arms that were shipped to Chicago?

Mr. TERRY. No.

Mr. GRISWOLD. Mr. Speaker, in view of the fact there has been no additional loss, I withdraw my objection.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized and directed to reopen and allow credit in the property accounts of the Little Rock College, Little Rock, Ark., in the sum of $1,451.41, representing certain articles of ordnance, quartermaster, and engineer property for which the said Little Rock College is held liable on reports or surveys, as follows: Nos. 7, 8, 11, and 12, approved January 13, 1926, and no. 10, approved January 5, 1926.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

BENJAMIN BRANZELL

The Clerk called the next bill, S. 1426, for the relief of the estate of Benjamin Braznell.

Mr. ZIONCHECK. Mr. Speaker, I object.

Mr. KELLY of Pennsylvana. Mr. Speaker, will the gentleman withhold his objection a moment?

Mr. ZIONCHECK. Yes; I will withhold my objection to permit the gentleman to make an explanation.

Mr. KELLY of Pennsylvania. Mr. Speaker, no one has ever denied the merit of this claim on the facts of the tax payment made.

Benjamin Braznell was a fine old man whom I knew well up to the time of his death. In 1918 an estate tax was paid. Two years later his heirs filed a claim for refund with the Treasury Department. In that claim the estate specifically mentioned one refund and in a general statement asked for this further refund on the basis of excess valuation of the estate. This was in July 1920.

Then, in 1922, the Supreme Court of the United States rendered a decision covering such cases.

The estate filed a claim citing this decision, but the Treasury Department stated that it was after the 4-year statutory limitation.

Now, the claim was made within 2 years after payment. The Treasury Department stated that the claim was just and that it should be paid except for the fact that this claim was made 4 years after the time of payment. Even admitting such technicality, I insist the claim should be paid. The original claim for refund was made within 2 years after the payment of the tax. The statute of limitations could not justly be applied.

This measure has been passed by the Senate on four different occasions. It has been favorably reported to the House, but each time on this technicality statement that the claim was not filed within the 4-year statutory period it was objected to. Now, I ask the gentleman from Washington to allow this measure to pass, that we may make a refund to an estate where the claim was made within the lawful time and not put this burden unfairly upon the heirs.

Mr. ZIONCHECK. If the gentleman will let me explain my reason for objecting to this bill, it is that there are so many claims for taxes which have been paid where the claimants waited until someone else took the burden of going to court and proving that the tax under such circumstances was wrong. The man whose estate this involves is dead. It is not as though someone were in need. The claimant here is an estate, and particularly one that comes in long after the tax was paid.

Mr. KELLY of Pennsylvania. I can show the gentleman the original claim for refund if he cares to see it.

Mr. ZIONCHECK. They got $1,200 refund.

Mr. KELLY of Pennsylvania. The amount of the claim is $2,323.47.

Mr. ZIONCHECK. The $1,200 amount was paid and refunded, but the amount that he asks for now was requested because of some decision made 2 years afterwards?

Mr. KELLY of Pennsylvania. No. He asked for this refund on July 27, 1920, within 2 years after the payment had been made. Then the decision came 2 years after that, and a further specific claim was made under the decision.

Mr. ZIONCHECK. Will the gentleman state whether this party actually took legal steps to get this money back by way of a court action?

Mr. KELLY of Pennsylvania. No; nothing of that kind. The claim in regular form was made on July 27, 1920, within 2 years after payment had been made, and it should have been paid then. It was within the time. The statute of limitation had not run against the claim. The Treasury Department stated that the claim is meritorious but that 4 years had elapsed since its payment.

Mr. ZIONCHECK. Does the gentleman contend that the Treasury Department made a mistake?

Mr. KELLY of Pennsylvania. Yes; I contend the Treasury Department made a very serious and grave error.

Mr. ZIONCHECK. Under those circumstances, I will take the gentleman's word. The record does not show that, but in view of my high regard for the gentleman I shall take his word for it.

Mr. TRUAX. Mr. Speaker, reserving the right to object, may I ask the gentleman from Pennsylvania the amount of taxes that was paid by the party for whom this bill has been drawn?

Mr. KELLY of Pennsylvania. This is an estate tax. The sum of $19,718 was paid in one assessment and $1,400 in another; $21,158 was the total amount of taxes paid.

Mr. TRUAX. That is the total amount of income tax paid?

Mr. KELLY of Pennsylvania. No. This is an estate tax, paid upon the death of Mr. Braznell.

Mr. TRUAX. I may say to the gentleman that on general principles I have been unalterably opposed to the refund and abatement of practically four and a half billion dollars of income taxes during the past 10 or 12 years. The practice is still being followed. We are refunding taxes that were collected back in 1917 and 1918, including war-profit taxes. I say to the gentleman, with all due respect and in the high regard I have for him, that my judgment is that when the greatest of all refunders of income tax, Hon. Andrew W. Mellon, failed to include this amount, I am opposed to going back now and refunding the money to this estate.

Mr. KELLY of Pennsylvania. May I say a word to the gentleman. The Treasury Department never said this claim was unjustifiable. This was an estate tax and not an income tax. I agree with the gentleman's philosophy so far as refunds in general are concerned, and I have opposed the refunding of huge income taxes, but when a citizen of the United States came through during his lifetime and paid his income taxes, and then his estate pays more than is just, under the law, and a proper claim is made on the Treasury Department, I think there is merit to the claim. The Senate has gone into this matter four times. The House committee has passed this bill four times, and each time one individual has prevented the heirs of this old gentleman from receiving that to which they are justly entitled. I hope the gentleman will allow this bill to go through this evening.

Mr. TRUAX. Will the gentleman state what the estate is worth now?

Mr. KELLY of Pennsylvania. The estate is worth very little. I knew the old gentleman during his lifetime and I know those who remain. I cannot say that there is very much of the estate left for any of them.

Mr. TRUAX. Since it is the policy to make gifts or refunds to millionaires, I withdraw my objection.

Mr. BLANCHARD. Will the gentleman from Pennsylvania yield?

Mr. KELLY of Pennsylvania. Yes.

Mr. BLANCHARD. Is the gentleman willing to accept the customary amendment?

Mr. KELLY of Pennsylvania. Yes, certainly.

There being no objection the Clerk read the bill as follows:

Be it enacted, etc., That the Commissioner of Internal Revenue be, and he is hereby, authorized and directed to reopen and allow the claim of the Braddock Trust Co., executor of the estate of Benjamin Braznell, late of Pittsburgh, Pa., and refund the sum of $2,323.47, the balance of taxes illegally collected, under existing laws and decisions.

Mr. BLANCHARD. Mr. Speaker, I offer the usual amendment.

The Clerk read as follows:

Amendment by Mr. BLANCHARD: Page 1, line 7, after the figures "$2,323.47", insert the words "in full settlement of all claims against the Government of the United States" and at the end of the bill insert the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum of not exceeding $1,000."

The amendments were agreed to.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

NANNIE SWEARINGEN

The Clerk called the next bill, S. 1496, for the relief of Nannie Swearingen.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated and in full settlement against the Government, the sum of $100 per month in an amount not to exceed $5,000 to Nannie Swearingen to compensate her for the death of her husband, who was struck by a Government-owned postal motor vehicle on November 26, 1926.

With the following committee amendment:

Line 6, strike out "$50" and insert in lieu thereof "$100."

Mr. ZIONCHECK. Mr. Speaker, the committee amendment would insert $100 in lieu of $50 in line 6, page 1. I am opposed to the committee amendment and think the committee amendment should be voted down.

The SPEAKER. The question is on the committee amendment.

The committee amendment was rejected.

Mr. BLANCHARD. Mr. Speaker, I offer the usual amendment.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: At the end of the bill insert, "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

ANTON W. FISCHER

The Clerk called the next bill, S. 1651, for the relief of the estate of Anton W. Fischer.

Mr. BLANCHARD. Mr. Speaker, I object.

B. & O. MANUFACTURING CO.

The Clerk called the next bill, S. 1782, for the relief of the B. & O. Manufacturing Co.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Comptroller General of the United States be, and he is hereby, authorized and directed to settle and adjust the claim of the B. & O. Manufacturing Co. under contract no. 12429, dated May 28, 1929, for extra expense in recruiting material for trousers delivered to said company by the Navy De-

partment, and to allow not to exceed $1,597.52 in full and final settlement of said claim. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $1,597.52, or so much thereof as may be necessary, to pay said claim.

Mr. HANCOCK of New York. Mr. Speaker, I offer the usual attorneys' fee amendment.

The Clerk read as follows:

Amendment offered by Mr. HANCOCK of New York: At the end of the bill insert:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

HOMER C. CHAPIN

The Clerk called the next bill, H.R. 207, for the relief of Homer C. Chapin.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Homer C. Chapin the cash value of a $500 Liberty bond deposited by him with the Immigration Service of the Department of Labor in the case of Dimitri Ivanenko, which said bond or the proceeds of which was erroneously covered into the Treasury of the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

JOHN A. RAPELYE

The Clerk called the next bill, H.R. 211, for the relief of John A. Rapelye.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Postmaster General be, and he is hereby, authorized and directed to credit the account of John A. Rapelye, postmaster at Flushing, N.Y., with the sum of $1,249.08 to reimburse him for money-order and postal funds stolen from the Jackson Heights station of the Flushing post office on the night of March 3, 1927.

Mr HOPE. Mr. Speaker, I offer the usual attorney's fee amendment.

The Clerk read as follows:

Amendment offered by Mr. HOPE:

At the end of the bill insert: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

ANNA CAPORASO

The Clerk called the next bill, H.R. 262, for the relief of Anna Caporaso.

Mr. ZIONCHECK. Mr. Speaker, I reserve the right to object.

Mr. BLANCHARD. Mr. Speaker, I am going to object, and, perhaps, I can save the gentleman some time.

Mr. ZIONCHECK. I was simply going to say that the amount is excessive.

Mr. BLANCHARD. Mr. Speaker, I object.

LUCY MURPHY

The Clerk called the next bill, H.R. 469, for the relief of Lucy Murphy.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Lucy Murphy the sum of $5,000 as reimbursement to her for the loss suffered by her in the death of her husband, Maurice Murphy, whose death occurred on April 21, 1929, without fault on his part or on her part, through the collision of a trimotored Ford airplane belonging to the Maddux Air Lines, Inc., of Los Angeles, Calif., bearing factory no. 5–AT–10, license no. NC 9636, near San Diego, Calif., with an airplane belonging to the War Department of the United States, which was then and there operated in a wrongful and negligent manner by Lt. Howard Keefer, a United States pilot, then and there flying under orders and in line of duty.

Mr. BLANCHARD. Mr. Speaker, I offer the customary amendments.

The Clerk read as follows:

Amendments offered by Mr. BLANCHARD: On page 1, line 6, after "$5,000", insert the words "in full settlement of all claims against the Government of the United States", and at the end of the bill insert:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

PHYLLIS AND HAROLD LOUIS PRATT

The Clerk read the title of the next bill on the calendar, H.R. 472, for the relief of Phyllis Pratt and Harold Louis Pratt, a minor.

There being no objection, the Clerk read the bill as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Phyllis Pratt and Harold Louis Pratt, a minor, the sum of $5,000 as reimbursement to them for the loss suffered by them in the death of their husband and father, Louis Daniel Pratt, whose death occurred on April 21, 1929, without fault on his part or on their part, through the collision of a trimotored Ford airplane belonging to the Maddux Air Lines, Inc., of Los Angeles, Calif., bearing factory no. 5–AT–10, license no. NC 9636, near San Diego, Calif., with an airplane belonging to the War Department of the United States, which was then and there operated in a wrongful and negligent manner by Lt. Howard Keefer, a United States pilot, then and there flying under orders and in line of duty.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendment.

The Clerk read as follows:

Page 1, line 6, after the figures "$5,000" insert "in full settlement of claims against the Government of the United States." And at the end of the bill insert the following attorney fee proviso: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time and passed.

A motion to reconsider was laid on the table.

IRENE BRAND ALPER

The Clerk read the title of the next bill on the Private Calendar, H.R. 473, for the relief of Irene Brand Alper.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Irene Brand Alper the sum of $15,000 in full settlement for an injury incurred by her when 19 years old, when she was seriously injured and crippled for life by being struck down and run over on the 14th day of August 1921 by the United States Navy car no. 2499, in the city of New York, through the careless and negligent operation of said car by an employee of the United States Government employed at the time to operate said car.

With the following committee amendment:

Page 1, line 5, strike out the figures "$15,000" and insert "$1,250." And on page 1, line 8, strike out "14th" and insert "11th."

The committee amendments were agreed to.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendment.

The Clerk read as follows:

Page 1, line 5, after the figures "$1,250", insert "in full settlement of all claims against the Government of the United States", and at the end of the bill insert the usual attorney's fee proviso, as follows:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

ARTHUR K. FINNEY

The Clerk read the title of the next bill on the calendar, H.R. 526, for the relief of Arthur K. Finney.

There being no objection, the Clerk read the bill as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Arthur K. Finney, of Plymouth, Mass., the sum of $108.77 in full compensation for handling two carloads of coal, totaling 84.19 tons, sold to the United States Government and delivered to the Federal Building at Plymouth, Mass.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

CHARLES W. DWORACK

The Clerk read the next bill on the Private Calendar, H.R. 666, for the relief of Charles W. Dworack.

Mr. HANCOCK of New York. Reserving the right to object, I think we ought to have an explanation of this bill. I observe that in this disaster 34 were killed and a number wounded. I should like to know what has become of the others?

Mr. HARLAN. The disaster occurred in 1922. What happened to those other 9 or 10 who were injured in the accident, I do not know.

Mr. HANCOCK of New York. Thirty-four were killed.

Mr. HARLAN. There were 45 in the plane and most of them were military persons. There were some civilians. There were nine injured. What happened to them, I do not know; this is the only one who lives in my district. This man came out of it almost unrecognizable. He is a perfect example of shell-shock. I have a letter here from the doctor and also a photograph of him after the accident.

Mr. HANCOCK of New York. He went back to work as I understand it and worked for 9 years.

Mr. HARLAN. He went back to work as soon as he could and tried to work. I have the War Department's record here of his efforts to work. Physically he got fairly well repaired, but he is in such nervous condition that it is pitiful. If you talk to him for 5 minutes he will start to cry. He is a complete nervous wreck. This bill passed the House once. It was originally introduced in the Seventy-first Congress and passed the House but was delayed in getting on the Senate Calendar.

Mr. HANCOCK of New York. Does the gentleman feel that his present condition is due to the accident in 1922?

Mr. HARLAN. I have the statement here of the doctor who has examined him, and I certainly do.

Mr. HANCOCK of New York. Would it not be more appropriate then to enact a bill which would give him the benefit of the United States Employees' Compensation Act?

Mr. HARLAN. I would say that would be fine, except that 14 years have elapsed since the man was injured. I should like to do just what the gentleman says. I think reducing this to $2,500 is not fair to the man by any means.

Mr. HANCOCK of New York. I am going to ask then, if it is agreeable to the gentleman, that the bill be passed over temporarily without prejudice, with the understanding that we may return to it, and I should like to sit down with the gentleman and see if we cannot evolve a bill which will properly take care of this case.

Mr. HARLAN. I am willing to do that.

The SPEAKER. Is there objection to the request of the gentleman from New York that the bill be passed over without prejudice?

There was no objection.

PRIMO TIBURZIO

The Clerk called the bill (H.R. 881) for the relief of Primo Tiburzio.

The SPEAKER. Is there objection?

Mr. ZIONCHECK. I reserve the right to object. Is the proponent of the bill willing to have the amount reduced to $1,500?

Mr. LAMNECK. I am.

Mr. ZIONCHECK. I withdraw my reservation of objection.

The SPEAKER. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Primo Tiburzio, of Columbus, Ohio, the sum of $2,500 in full settlement against the Government as compensation for the death of his daughter, Mary Tiburzio, who was killed when struck by a United States mail truck on September 18, 1930.

Mr. ZIONCHECK. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. ZIONCHECK:

Page 1, line 6, strike out "$2,500" and insert in lieu thereof "$1,500."

The amendment was agreed to.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendments which I send to the desk.

The Clerk read as follows:

Amendments offered by Mr. BLANCHARD:

After the amount in line 6, insert, "in full settlement of all claims against the Government of the United States;" and at the end of the bill insert: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to, and the bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider laid on the table.

SARD S. REED

The Clerk called the next bill, H.R. 987, for the relief of Sard S. Reed.

The SPEAKER. Is there objection?

Mr. HOPE. Does the author of the bill have any objection to the usual attorneys' fee amendment?

Mr. McKEOWN. Not at all.

Mr. ZIONCHECK. Will the proponent of the bill accept a reduction of $400 for the excessive amount of stamps that were in the safe at the time the burglary occurred?

Mr. McKEOWN. Yes.

The SPEAKER. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Postmaster General be, and he is hereby, authorized and directed to credit the accounts of Sard S. Reed, postmaster at Earlsboro, in the sum of $1,115.90 on account of the loss of postal and fixed credit funds resulting from the burglary of the Earlsboro post office on May 1, 1927.

With the following committee amendment:

Line 5, after the word "Earlsboro", insert "Oklahoma."

The committee amendment was agreed to.

Mr. ZIONCHECK. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. ZIONCHECK: Line 5, strike out "$1,115.90" and insert in lieu thereof "$715.90."

The amendment was agreed to.

Mr. HOPE. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. HOPE: At the end of the bill, insert: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to; and the bill as amended was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider laid on the table.

A. W. HOLLAND

The Clerk called the next bill, H.R. 996, for the relief of A. W. Holland.

The SPEAKER. Is there objection?

Mr. HOPE. Mr. Speaker, I object.

Mr. McKEOWN. Mr. Speaker, will the gentleman reserve his objection?

Mr. HOPE. Yes.

Mr. McKEOWN. This situation grows out of the fact that in this town there was a discovery of oil such as had never been discovered in this country at any time in the history of the oil business in Oklahoma. That was a little, tiny place that grew overnight to 6,000 people and then to 25,000 people. The postmaster was simply swamped, and lost money. He held onto the post office, and when the administration changed they threw him out.

Mr. HOPE. Admitting that to be true, if the postmaster had made application he would have been entitled to an allowance for clerk hire, if he had made proof of that situation.

Mr. McKEOWN. The gentleman evidently never served when Mr. Burleson was Postmaster General or he would know that it would not have done the postmaster any good to make the application.

Mr. HOPE. As a matter of fact, the record indicates that he did not make any application.

Mr. McKEOWN. He made his application. He put in his whole time trying to serve the public. You cannot imagine the place, where in one night the population grew to 6,000 people. They came in from all over the country. It was the greatest oil strike ever made in Oklahoma, and they rushed in from all over the country, and this man was simply swamped. He had a little, tiny post office, and these people came in there and he was simply swamped with mail. He did everything he could. If there ever was an honest claim for services rendered, it is this claim. He is on a different side of the political fence from me, but I have tried to help him ever since I have been in Congress. He is one man who is surely entitled to be compensated, because he had a very bad deal.

Mr. HOPE. The gentleman did not do what we would expect him to do under normal circumstances, and that is make application for sufficient funds to pay his clerk hire.

Mr. McKEOWN. If the gentleman knew the Postmaster General at that time, and knew how difficult it was to get any help for a little place like that, he would understand why he did not get it, because they did not pay any attention. They simply could not believe it.

Mr. HOPE. Is the gentleman personally familiar with the facts which he is relating now?

Mr. McKEOWN. Yes; because that happened years before I came to Congress, and I was there and I saw this thing. It grew overnight. They just carried the mail in there sack after sack. He hired men. People were standing in line because they came there from everywhere and they had their mail sent care of general delivery. They had no boxes. There are 20,000 people today who get their mail at that place. There are no rural routes out of there. That is the situation. It is a really worthy case.

Mr. HOPE. In view of the excellent explanation given by the gentleman from Oklahoma [Mr. McKEOWN], I will withdraw my reservation of objection.

Mr. BLANCHARD. Reserving the right to object, this claim is for $900.

Mr. McKEOWN. Yes, sir.

Mr. BLANCHARD. The gentleman will be willing to accept the sum of $500?

Mr. McKEOWN. Of course, anything you give me is all I can get. If the gentleman desires to offer that, I cannot object.

Mr. ZIONCHECK. Reserving the right to object, will the author of this bill explain whether or not he is the one person whose private bill was vetoed by the President of the United States recently?

Mr. McKEOWN. I think I ought to have a little good luck now.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The SPEAKER. Without objection, a similar Senate bill (S. 551) will be substituted for the House bill.

There being no objection, the Clerk read the Senate bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated and in full settlement against the Government, the sum of $900 to A. W. Holland in payment of extra services as postmaster at Drumright, Okla., a post office of the fourth class.

Mr. BLANCHARD. I offer an amendment, Mr. Speaker.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: In line 6 of the Senate bill strike out "$900", and insert in lieu thereof "$500."

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill was laid on the table.

SILAS B. LAWRENCE

The Clerk called the next bill, H.R. 1133, for the relief of Silas B. Lawrence.

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $2,000 to Silas B. Lawrence as reimbursement for expenses actually incurred by him as a direct result of personal injuries received by him on August 29, 1897, while in the discharge of his duties as a member of a posse under the command of the United States marshal for

the western district of Arkansas, and as full compensation for said injuries, the pain and suffering from the same, including loss of earnings and any permanent disability resulting from said injury.

Mr. MILLER. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER: In line 10 strike out the word "western" and insert in lieu thereof the word "eastern."

The amendment was agreed to.

Mr. HOPE. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HOPE: At the end of line 13, insert the following proviso: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

JOHN Z. LOWE

The Clerk called the next bill, H.R. 1155, for the relief of John Z. Lowe, former collector of internal revenue for the second district of New York.

Mr. HANCOCK of New York. Mr. Speaker, I object.

Mr. O'CONNOR. Will the gentleman withhold his objection?

Mr. HANCOCK of New York. I will withhold the objection.

Mr. O'CONNOR. Will it do any good for me to try to persuade the gentleman?

Mr. HANCOCK of New York. The gentleman is most persuasive, but at the moment my mind is fully made up.

Mr. O'CONNOR. Of course, this is not giving this man $3,500. He was a collector of internal revenue in New York City. Suit is now pending against him to recover $3,500, and the purpose of this bill is to wipe out that suit.

While he was collector, $3,500 in stamps were sent to him in New York. There has always been some mystery whether they were sent to him, but from the report of the Treasury Department and the Comptroller General and the investigator, it may be that those stamps were stolen in his office before they reached him by some deputy commissioner. That is the worst aspect of the case that could be taken.

There is no suggestion that he ever received them. They were charged to him. They found the seals on the package broken. The collector never got the $3,500 worth of 50-cent stamps. The Government started suit against him.

Within the past few minutes bills have been passed relieving postmasters where stamps were stolen from their safes. There is no question but what these stamps were stolen, and the worst that can be said is that they were stolen by one of his deputy commissioners, some irresponsible fellow in his office; but there is no suggestion of any negligence, let alone guilt, on the part of Mr. Lowe. This is the whole story, whether the gentleman wants to object or not.

Mr. HANCOCK of New York. It has been in question a long time.

Mr. O'CONNOR. This bill has passed one body of Congress several times. It has already passed the Senate. This suit has been pending in the southern district of New York since that date, and the fact that they have not pressed the suit, waiting for legislation to relieve the district attorney of proceedings with the suit, is some indication that the Government itself does not really hold Mr. Lowe responsible for the loss of these revenue stamps.

Mr. HANCOCK of New York. He was under bond, was he not?

Mr. O'CONNOR. I do not know. The thing that makes me feel favorably inclined in this matter is that in many of these cases the principals cannot select their own deputies; their deputies are wished on them.

Mr. HANCOCK of New York. This collector was under bond, was he not?

Mr. O'CONNOR. I do not know about that detail.

Mr. HANCOCK of New York. It so appears from the record, and the bond was executed for the very purpose of protecting the Government against theft. I see no reason why we should come to the relief of the surety company.

Mr. O'CONNOR. I do not understand that it is to come to the relief of the surety company. There is no suggestion here that the responsibility is other than against this collector personally. I have just read the report again but I see nothing in there to lead to any other conclusion.

Mr. HANCOCK of New York. I cannot lay my hand on it at this moment. The suit the gentleman wishes to have dismissed is brought on the bond of the collector, as I remember it. Bond was required for the very purpose of protecting the Government against losses of this kind.

Mr. O'CONNOR. Oh, no; it is not on a bond at all; it is a direct suit against the collector. His accounts were audited and he was charged with this $3,500 and he claimed to be short this $3,500 stamps. They were stolen from him, he thinks, in Washington; but the Treasury thinks in New York.

Mr. HANCOCK of New York. The bill directs that the solicitor for the Treasury Department be directed to instruct the United States attorney for the Southern District of New York to dismiss this suit we are speaking of. Is not this an interference with the executive department of the Government? Is there any reason why a bill should be passed here authorizing the Solicitor General of the Treasury Department to settle this case in any way he sees fit?

Mr. O'CONNOR. I do not know that that is any unusual method of handling it where there is a suit pending. I do not know how otherwise to do it by legislation here except to have the Attorney General, or the Solicitor direct the district attorney who is under him to dismiss or discontinue the suit. There must be some precedent for this form of bill when it was introduced; and it has been introduced several times and passed. I think it passed this body at least once; but it has passed the Senate several times. Of course I used a form. I could not now tell where it came from.

Mr. HANCOCK of New York. I call the gentleman's attention to the language at the top of page 3 of the report from the Treasury Department. The matter was referred to the Solicitor General of the Treasury. Now I begin to quote:

And instructions to commence proceedings in court to recover under the bond of March 11, 1915, the sum of $3,500 shown by the settlement to be due the United States.

Mr. O'CONNOR. Well, that may be, but, of course, that does not relieve this collector who was perfectly innocent in the matter. A bonding company always has its right of subrogation, as the distinguished lawyer well knows.

Mr. HANCOCK of New York. The gentleman from Washington objects to coming to the rescue of bonding companies, even when the condition of the bond has been entirely fulfilled.

Mr. O'CONNOR. That is a different situation.

Mr. HANCOCK of New York. In view of all the circumstances, I feel that I must object.

Mr. O'CONNOR. The case to which the gentleman from Washington [Mr. ZIONCHECK] objected was a little different. There the direct benefit would go to the bonding company; but in this case the collector, Mr. John Z. Lowe, is a distinguished citizen of New York.

Mr. HANCOCK of New York. The Government suffered no loss; the Government had been made whole by the surety company. Here is a case where there was a loss that should be made good under the bond.

Mr. O'CONNOR. I disagreed with the gentleman from Washington that in that case the benefit would go to the bonding company.

Mr. HANCOCK of New York. I suspect that would be the situation in this case, too.

Mr. O'CONNOR. No; here the responsibility falls on an individual. If the individual is responsible, and certainly Mr. Lowe is responsible, the bonding company will surely hold him for the obligation.

Mr. HANCOCK of New York. Then what is the purpose of ever requiring bonds from collectors, postmasters, and other people in positions of trust?

Mr. O'CONNOR. The purpose of requiring bond is for the other party who may recover under it; but it is no protection to a responsible person who gives the bond. The gentleman knows that.

Mr. HANCOCK of New York. The purpose of acquiring a bond is to protect the United States Treasury.

I am awfully sorry, but I do not see any equity in this case.

Mr. SPEAKER. I object.

H. FORSELL

The Clerk called the next bill, H.R. 1254, for the relief of H. Forsell.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Miss H. Forsell, out of any money in the Treasury not otherwise appropriated, the sum of $196.97 in full settlement against the Government for customs duties paid on two packages of merchandise that were not received by the addressee.

Mr. BLANCHARD. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

At the end of the bill add the following: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

LEWIS E. GREEN

The Clerk called the next bill, H.R. 1398, for the relief of Lewis E. Green.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the United States Employees' Compensation Commission is hereby authorized and instructed to receive and determine the claim of Lewis E. Green, a former employee in the United States Arsenal at Tullytown, Pa., without regard to the limitation of time within which such claims are to be filed under the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

YOSEMITE LUMBER CO.

The Clerk called the next bill, H.R. 1405, for the relief of the Yosemite Lumber Co.

Mr. ZIONCHECK. Mr. Speaker, I reserve the right to object.

Mr. HOPE. Mr. Speaker, reserving the right to object.

Mr. ZIONCHECK. I had some questions to ask. Is the gentleman objecting?

Mr. HOPE. I am merely reserving the right to object at this time in order to obtain some further information in regard to the bill.

Mr. Speaker, this bill is a claim for an additional amount above a sum which was paid by the United States Government to the claimant for its services in putting out a forest fire. It appears from the record that the claimant was paid the regular rate which the Forest Service ordinarily pays for this kind of work and the claim which is here made is for an amount in excess of the regular Forest Service rates. May I inquire of the gentleman from California why we should in this case pay a rate which is in excess of the rate ordinarily paid by the Forest Service and which I assume is considered fair and just by all concerned.

Mr. WELCH. Mr. Speaker, the Forest Service has no regular rate. It has been the practice of the Forest Service when a serious fire was under way in any of the Government forests to draft men from the highways, the villages, or towns adjacent to the fire. In this instance the fire was observed by the Yosemite Lumber Co.'s crew, who were cutting lumber adjacent to the Yosemite National Park. Without any request or suggestion from the department they immediately closed down their plant, took 242 of their trained men, together with their cooks and cooking utensils, and proceeded to the park reservation and fought the fire successfully for 3 days. All the company is asking is the amount they would have paid their men had no fire occurred and their men stayed on the job.

Those of us who are conversant with lumber camps know the difference between trained lumberjacks, men who have been employed for years at that particular kind of work, and men who are not so trained. The gentleman from Washington certainly knows the difference, because of his knowledge of the lumber business in his section of the country, as I have in my State of California. These men did excellent work. They were stripped to the waist. As a matter of fact, the company had to go out and bring in truck loads of iced watermelons; it was in the summer time. These trained men stayed there night and day and stopped the fire.

Let us see what the Department says:

This fire started immediately outside of the park but spread rapidly to park lands. It was first observed by representatives of the lumber company who were conducting logging operations in the near vicinity. Although their own lands were not immediately threatened, the company shut down their entire operation and put their entire crew of 242 men on the fire. It appears that without doubt the actual expenses of the company in connection with the fighting of this fire amounted to $6,222.75, the amount of their original claim, and that unless this supplemental claim of $2,114.74 is paid the company will have actually sustained a direct loss of that amount. Inquiry at the Forest Service reveals that claims for the payment of expenses in excess of the standard fire-fighting rates when similarly incurred are customarily approved.

For the above reasons I am in favor of enactment of this proposed legislation.

Mr. HOPE. May I ask the gentleman whether there was any agreement at any time that any amount would be paid in excess of the regular rate paid by the Forest Service?

Mr. WELCH. There could be no agreement. As I stated at the outset, the Yosemite Lumber Co.'s crew, who were employed in their own lumber camp, were the first to observe the fire. They knew of it long before the Government officials were aware of it and they performed a neighborly act, the thing that is usually done in the West; they closed down their own camp and took their trained forces into the Government reservation and stopped the fire. If they had not responded in the manner they did, it is hard to estimate the loss that would have accrued to the United States Government in one of the finest stands of timber in Yosemite National Forest.

Mr. ZIONCHECK. If the wind had blown the other way, it would have burned the lumber company's timber?

Mr. WELCH. Of course, and if there had been no fire at all there would be no occasion for their men to fight the fire. The gentleman knows the spirit of the West as well as I do. He knows the spirit that exists among the men that are in this line of business. They are red-blooded Americans, and they respond to assist a neighbor in trouble.

Mr. ZIONCHECK. I believe that is generally true.

Mr. WELCH. That is true, and the gentleman knows it as well as I do. I know this company well. It is one of the most dependable lumber companies in the West, and all they are asking is what those who have previously passed

on this claim considered to be just and fair. Every penny has been itemized and approved by the Department.

Mr. ZIONCHECK. I do not know what the gentleman from Kansas proposes to do, but as far as I am concerned if the gentleman is willing to reduce the amount of $2,114.74 to the sum of $1,100, I will not object.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the Yosemite Lumber Co., the sum of $2,114.74. Such sum represents the difference between the actual cost to such company for labor, supplies, and transportation of men incurred in the fighting of forest fires in September 1926 in the Yosemite National Park and the amount paid such company by the National Park Service.

Mr. ZIONCHECK. Mr. Speaker, I offer the following amendment: Line 6, page 1, strike out "$2,114.74" and insert in lieu thereof the following: "$1,100, in full settlement of all claims against the Government of the United States."

The Clerk read as follows:

Amendment offered by Mr. ZIONCHECK: Page 1, line 6, strike out "$2,114.74" and insert in lieu thereof the following: "$1,100 in full settlement of all claims against the Government of the United States."

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

NEWARK CONCRETE PIPE CO.

The Clerk called the next bill, H.R. 2188, for the relief of Newark Concrete Pipe Co.

Mr. ZIONCHECK. Mr. Speaker, I enter objection to this bill for the reason I understand there are 2,000 similar claims, and this would be setting a precedent without going into the matter in detail.

I, therefore, object, Mr. Speaker.

CHAMBLISS L. TIDWELL

The Clerk called the next bill, H.R. 2342, for the relief of Chambliss L. Tidwell.

Mr. BLANCHARD. Mr. Speaker, reserving the right to object, I do so for the purpose of obtaining some information from the author of the bill. If the gentleman will advise me with reference to the possibility of determining in a legislative way the merits of this claim, perhaps he can remove any doubt in my mind.

I am sure the gentleman appreciates what I have in mind. We should not preclude the Compensation Commission from making a determination of the facts. I notice this has been called to the attention of the Chairman of the Committee on Claims in a statement made by the Chairman of the United States Employees' Compensation Commission by a letter dated April 10, 1930:

While the bill (H.R. 11323) appears to be intended, by the use of the language "who contracted pulmonary tuberculosis in such service in line of duty", to legislatively determine that fact, it is suggested that, if such be the purpose, it be more clearly stated.

Mr. KLEBERG. May I suggest to my friend that since that letter was written and, in fact, since the bill was introduced, the claimant has died. He died on March 7. The fact of the matter is I introduced this bill on March 9 and had not received in the mail notice of the claimant's death. The claimant left a widow and two young children. She is their sole means of support.

I have here a letter dated April 3, 1933, from the Acting Chairman of the United States Employees' Compensation Commission, which is a rather lengthy letter, going into the records of the Commission and referring to the fact that Mr. Tidwell filed a claim for compensation dated July 30, 1928. It then goes on to recite what is contained in another letter and then refers to the testimony before the Claims Committee with reference to the causes of his death and then makes this statement:

In view of the fact that his death did not occur within 6 years after the date of the injury alleged and referred to in the bill, a copy of which is enclosed for your convenience, any bill for the benefit of Mrs. Tidwell would logically take the form of direct relief. Such direct relief in other cases has taken the form of a provision for the payment of a specified sum.

The letter then sets out a proposed amendment and states:

If, instead of a lump-sum payment, it is desired to have payment made in monthly installments—

They suggest an appropriate amendment. I shall offer the amendment at this time if the bill is allowed to come up.

The bill was once passed by the House and rather than take advantage of the House, and possibly permit the passage of the bill in its present form, I would suggest that the gentleman allow me to present this amendment to the bill and see if it meets with his approval.

Mr. BLANCHARD. Of course, I am reserving the right to object, and I want to know what the amendment provides before I withdraw my reservation of objection.

Mr. KLEBERG. The amendment provides that the United States Employees' Compensation Commission be and is hereby authorized and directed to pay out of the employees' compensation fund to Mrs. Lota Tidwell, during her natural life or until her remarriage, the sum of $75 during each calendar month after the passage of this bill, not to exceed $7,500, in total payment as compensation for the death of her husband, formerly a civil employee of the Mississippi River Commission, whose death on March 7, 1933, resulted from pulmonary tuberculosis incurred in course of and by reason of the performance of his duty as a civil employee of the United States.

Mr. BLANCHARD. If the gentleman will yield at this point, of course, it will occur to the gentleman that the amendment would make this an entirely different bill. Under the original bill the Compensation Commission was to make a determination and finding as to whether or not this man was entitled to compensation. Under the substitute proposal we are determining the entire matter legislatively, without the committee having heard it at all. This is being done without any hearing whatsoever and without any evidence as to whether or not the widow would be entitled to compensation through any rights her husband had.

Mr. KLEBERG. If the gentleman will refer the matter to the Chairman of the Committee on Claims, he will find that the committee is in possession of sufficient evidence to show that the claim was justified before the House committee before the passage of the first bill. In that record there was conclusive evidence, by way of affidavits and things of that sort, which showed beyond doubt that the claimant died because of his connection with work as a civilian employee of the Mississippi River Commission. There is no question at all about the evidence which is in the files of the committee.

Mr. BLANCHARD. I shall turn to my distinguished chairman for advice.

Mr. BLACK. I remember that this bill passed the House, but I do not now recall the details.

Mr. BLANCHARD. But the bill that passed the House is not the substitute proposal at all. The bill that passed the House left it entirely to the Compensation Commission to make the findings. Here we are making the finding for them without even any hearing before the committee.

Mr. KLEBERG. If my friend will permit, if there is a way to permit the Employees' Compensation Commission to look into the merits of this claim I am perfectly willing to have that done.

Mr. BLANCHARD. I will say to the gentleman that that can be done even though the original claimant is now deceased.

Mr. Speaker, I ask unanimous consent that this bill be temporarily passed over.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

W. B. FORD

The Clerk read the title of the next bill on the Private Calendar, H.R. 2419, for the relief of W. B. Ford.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated and in full settlement against the Government, the sum of $2,000 to W. B. Ford, injured in the performance of his duties while postmaster at Oskaloosa, Kans.

Mr. HANCOCK of New York. Mr. Speaker, I offer the following amendment.

The Clerk read as follows:

Page 1, line 6, after the figures "$2,000", insert "in full settlement of all claims against the Government of the United States", and at the end of the bill insert the following proviso:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The bill, as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

JOHN MOORE

The Clerk read the title of the next bill on the Private Calender, H.R. 2512, for the relief of John Moore.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the United States Employees' Compensation Commission is hereby authorized to consider and determine the claim of John Moore, on account of injuries sustained by him while employed by the War Department at Detroit, Mich., on or about August 18, 1919, in the same manner and to the same extent as if said John Moore had made application for the benefits of the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended, within the 1-year period required by sections 17 and 20 thereof: *Provided*, That no benefits shall accrue prior to the approval of this act: *Provided further*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

FARMERS AND MERCHANTS NATIONAL BANK OF GILMER, TEX.

The Clerk read the title of the next bill on the Private Calendar, H.R. 2649, for the relief of the Farmers and Merchants National Bank of Gilmer, Tex.

The SPEAKER. Is there objection?

Mr. HOPE. I object.

Mr. SANDERS. Will the gentleman reserve his objection?

Mr. HOPE. I will.

Mr. SANDERS. This bill passed the House at the last session of Congress, but it was not acted on by the Senate. What objection has the gentleman?

Mr. HOPE. The objections which I have are set out in the adverse report from the Treasury Department. Of course, we have here no evidence whatever that this currency was destroyed. It may be outstanding and turn up at sometime in the future. If this currency was lost, there is no fault on the part of the Government of the United States—it was negligence on the part of the bank or some of its employees.

While it is provided that an indemnity bond shall be given to the Government, yet as a practical matter a bond of indemnity would have to run a very long period, for this currency might turn up in the future. It seems to me impractical to make the Government secure by that means. There is no precedent for a bill of this kind, and I think it would be unwise to pass it.

Mr. SANDERS. Will the gentleman agree that it may be passed over for the present? I think I can cite precedents for this legislation.

Mr. HOPE. I have no objection to agreeing that it may be passed over with a view of bringing it up at some future time.

Mr. Speaker, I ask unanimous consent that the bill be passed temporarily and that it may be called up at some future time.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

JOHN B. RUSSELL

The Clerk called the next bill, H. R. 2672, for the relief of John B. Russell.

The SPEAKER. Is there objection?

Mr. ZIONCHECK. Mr. Speaker, I reserve the right to object. What is the physical condition of this man?

Mr. TARVER. Mr. Speaker, the disabilities of the man at the present time are described by the physician in the evidence submitted to the committee, as a result of a gunshot wound which he received, and which occasioned some injury to his nerves and the muscles of his legs. As a result of that, he still suffers pain. It is to be noted that this man, who was engaged in the business of truck farming at the time of his injury was sustained, lost as a direct result of his injury the amount of his truck crop which he did not have the opportunity to market, in itself amounting to over $1,500.

Mr. ZIONCHECK. That is by his own estimate?

Mr. TARVER. No; by other proof submitted to the committee as well as his own affidavit.

Mr. BLANCHARD. And this occurred in 1898?

Mr. TARVER. Yes.

Mr. BLANCHARD. When was the claim first presented to the Government?

Mr. TARVER. This man first took up the matter with his Congressman, according to letters that I have seen, more than 20 years ago. He is not a man who is versed in the ways of legislative bodies, or who knew anything about the way in which to secure consideration of his claim by the Congress. I do not think he has been lacking in ordinary diligence. I started to say a moment ago that during the last Congress this bill, after considerable discussion, was passed by the House, and at that time, however, an amendment was agreed to reducing the amount of the bill from $2,500 to $1,000.

Mr. ZIONCHECK. Is that agreeable now?

Mr. TARVER. I think I should make that statement in fairness, and while I think the man is entitled to the amount set out in the bill, I would be willing in order to avoid objection, which would mean, of course, that the bill could not pass, to agree to an amendment reducing the amount to $1,500. It certainly would be a very modest sum for the injury sustained.

Mr. ZIONCHECK. Is that agreeable to the gentleman from Wisconsin?

Mr. BLANCHARD. I think so.

Mr. ZIONCHECK. With that understanding I withdraw my reservation of objection.

The SPEAKER. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to John B. Russell $2,500 as compensation for injuries sustained on July 8, 1898, from gunshot wound occasioned by the discharge of a pistol held in the hand of Walter Crowe, private, Company D, Thirty-first Michigan Infantry, in the Chickamauga and Chattanooga National Military Park.

Mr. ZIONCHECK. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. ZIONCHECK: Page 1, line 6, strike out "$2,500" and insert in lieu thereof "$1,500."

The amendment was agreed to.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment by Mr. BLANCHARD: After the figures in line 6, page 1, insert "in full settlement of all claims against the Government of the United States", and at the end of the bill insert:

"*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendments were agreed to; and the bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

CHAMBLISS L. TIDWELL

Mr. BLACK. Mr. Speaker, I ask unanimous consent to return to Calendar No. 167, H.R. 2342, for the relief of Chambliss L. Tidwell, which was temporarily laid aside.

The SPEAKER. Is there objection?

There was no objection.

The Clerk reported the title of the bill.

The SPEAKER. Is there objection to the consideration of the bill?

There was no objection, and the Clerk read the bill, as follows:

Be it enacted, etc., That sections 15, 17, 18, and 20 of the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended, are hereby waived in favor of Chambliss L. Tidwell, a civilian employee of the Mississippi River Commission, who contracted pulmonary tuberculosis in such service in line of duty, and his case is hereby authorized to be considered and acted upon under the remaining provision of such act.

With the following committee amendment:

Line 10, strike out the words "in line of duty."

The committee amendment was agreed to.

Mr. BLACK. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Page 1, line 7, after the word "favor", insert "of the widow of", and on page 1, line 12, at the end of the line, after the word "act", strike out the period, insert a comma, and add: "and that such widow shall be subrogated to all rights of said deceased."

The SPEAKER. The question is on agreeing to the amendments.

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

The title was amended to read: "A bill for the relief of Mrs. Lota Tidwell."

KATHERINE G. TAYLOR

The Clerk called the next bill, H.R. 2818, for the relief of Katherine G. Taylor.

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Katherine G. Taylor, superintendent Taylor Hospital, Ridley Park, Pa., the sum of $159. Such sum shall be in full satisfaction of all claims against the United States for medical aid rendered to Laura Mae Kurtz as a result of being struck by United States Army Cadillac truck no. 60186 on March 20, 1929, near Ridley Park, Pa.

Mr. BLANCHARD. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: At the end of the bill insert the following proviso: "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

CHARLES BERETTA ET AL.

The Clerk called the next bill, H.R. 3044, for the relief of Charles Beretta, Isidore J. Proulx, and John J. West.

There being no objection, the Clerk read as follows:

Be it enacted, etc., That the Comptroller General of the United States is authorized and directed to cancel the claim of the United States against Charles Beretta as a temporary substitute parcel-post carrier, Willows, Calif., at 60 cents per hour for a period from November 13, 1922, to December 31, 1924, and at 65 cents per hour from January 1, 1925, to March 31, 1926, in the sum of $723.55, representing payments to him as such employee for a period from November 13, 1922, to March 31, 1926, he having also held the position of temporary laborer, custodian service, Federal building, Willows, Calif., for a period from November 13, 1922, to March 15, 1923, at $660 per annum (with $240 increase), the position of permanent laborer in said service at said place for period from March 16, 1923, to June 30, 1924, at $660 per annum (with $240 increase), and the position of permanent laborer in said service at said place for a period from July 1, 1924, to March 31, 1926, at $960 per annum, and the combined amount of the per annum rates of compensation of such positions being in excess of $2,000 per annum, contrary to the provisions of section 6 of the act of May 10, 1916 (39 Stat.L. 120), as amended by the act of August 29, 1916 (39 Stat.L. 582).

SEC. 2. That the Comptroller General of the United States is further authorized and directed to release Isidore J. Proulx, former postmaster at Willows, Calif., from liability to the United States for payments to said Charles Beretta for the period from November 13, 1922, to September 8, 1924, amounting to $349.20; and to release John J. West, present postmaster at Willows, Calif., from liability to the United States for payments to said Charles Beretta for the period from September 9, 1924, to March 31, 1926, amounting to $374.35; and to repay said John J. West said amount of $374.35 refunded by him to the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

CARL F. CASTLEBERRY

The Clerk called the next bill, H.R. 3296, for the relief of Carl F. Castleberry.

Mr. HANCOCK of New York. Reserving the right to object, if the author of this bill will accept an amendment to correct the form of it, I shall not object.

Mr. BLACK. On behalf of the distinguished chairman of the Committee on Foreign Affairs, I will accept the amendment.

Mr. HANCOCK of New York. The bill makes it mandatory that the Employees' Compensation Commission shall find that the complainant was injured while in the employ of the Railway Mail Service, in a railroad accident. That is the question we want them to decide. I would like to strike that out at the proper time.

Mr. GRISWOLD. Further reserving the right to object, it seems to me from this report that this claimant was injured on a railroad; that he sued the railroad company, and that he recovered damages from the railroad company; that he was paid according to the judgment he had from the court, and now he comes in and expects to be placed on the Government pay roll in addition thereto. Is that correct?

Mr. McREYNOLDS. That is correct, that he sued, but he did not file any claim for compensation from the Government at all. That was a private claim against the railroad.

Mr. GRISWOLD. But he had two actions at law. He could not have recovered on both of them.

Mr. McREYNOLDS. What two actions at law did he have?

Mr. GRISWOLD. He had one against the railroad company and he availed himself of that action.

Mr. McREYNOLDS. This is not an action at law against the Government. This is simply asking that he can file his claim before the Commission.

Mr. GRISWOLD. I understand that, but he could not have recovered in his local court if the railroad had paid him.

Mr. McREYNOLDS. Why, certainly he could recover. That had nothing whatever to do with the recovery.

Mr. HANCOCK of New York. May I ask the gentleman a question?

Mr. McREYNOLDS. Certainly.

Mr. HANCOCK of New York. If this man should receive an award from the Federal Compensation Commission, would the $1,500 he has already received, be credited against any award that might be made?

Mr. McREYNOLDS. I presume that is a matter that would be taken into consideration, as to whether or not they would allow him any award. We are not asking for any award. We are asking that the Commission be allowed to consider it; that he be allowed to file his claim.

Mr. GRISWOLD. There have been other similar cases before this Committee that have been objected to on that very ground, that a man goes into court because he thinks he can get more there than any place else. He takes his chance and he gets a small judgment instead of a large one, and then he comes back to the Government for more money.

Mr. McREYNOLDS. He could have gone into court and could have filed a claim, and that would not have been taken into consideration.

Mr. O'CONNOR. If the gentleman will yield, what happens in cases like that, in the States which have compensation laws, is that when a plaintiff elects to sue a third party, if he receives less by the suit at common law than he would receive under compensation, he then may come in and claim the balance under compensation.

Mr. BLANCHARD. Is the gentleman certain about that procedure?

Mr. O'CONNOR. That is the procedure in our State. He may elect to sue a third party.

Mr. BLANCHARD. But what is the procedure here? We are going before the Compensation Board.

Mr. O'CONNOR. Well, I should think that anything he recovered at common law would be deducted as against his claim under compensation, as suggested by the gentleman from New York [Mr. HANCOCK].

Mr. HANCOCK of New York. It ought to be.

Mr. GRISWOLD. I am sorry I cannot give the gentleman the correct citation, but there is a case of Rayburn against Wabash Railroad that is similar to this case exactly, and Rayburn has since been before this Congress endeavoring to get a bill of like nature to this bill passed, and he did not succeed.

Mr. McREYNOLDS. Was it recommended by the Department?

Mr. GRISWOLD. It was reported favorably by the committee.

Mr. McREYNOLDS. But was it reported favorably by the Department?

Mr. GRISWOLD. No.

Mr. McREYNOLDS. The only purpose of this bill is to give this man the privilege of filing a claim before the United States Compensation Commission for employee's compensation. Of course, the gentleman knows it must be filed within 1 year. He filed no claim, and he was for some time employed, but it afterward proved very serious to his health.

The SPEAKER. Is there objection?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That sections 17 and 20 of the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended (U.S.C., title 5, secs. 767 and 770), are hereby waived in favor of Carl F. Castleberry, who was injured while in the employ of the Railway Mail Service in a railroad accident on December 2, 1921, resulting in permanent physical and mental disability. The United States Employees' Compensation Commission is authorized to consider and act upon his claim, no. 104497, under the remaining provisions of such act, as amended, as if his claim and notice had been filed within 60 days after said accident: *Provided*, That no benefit shall accrue hereunder until after the enactment of this act.

Mr. HANCOCK of New York. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HANCOCK of New York: Page 1, line 8, after the word "Castleberry", insert the following: "a former employee of the Railway Mail Service", and strike out the remainder of the bill down to the proviso on page 2, line 4.

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

EARL V. LARKIN

The Clerk called the next bill, H.R. 3318, to reimburse Earl V. Larkin for injuries sustained by the accidental discharge of a pistol in the hands of a soldier in the United States Army.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Earl V. Larkin the sum of $1,213.25, out of any money in the Treasury not otherwise appropriated, being for hospital care and medical services rendered Earl V. Larkin, a civilian, who was injured by the accidental discharge of a gun in the hands of a private in the United States Army: *Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. BLANCHARD. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: Page 1, line 5, after "$1,213.25", insert the following: "in full settlement of all claims against the Government of the United States."

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

COCONUT OIL IMPORTATIONS DANGEROUS TO BEEF CATTLE AND HOG INDUSTRY

Mr. AYERS of Montana. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD on the bill H.R. 7835.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. AYERS of Montana. Mr. Speaker, at this day, when all beef cattle and hogs are selling on foot for less than the cost of production, we are adding insult to injury by admitting copra and coconut oils into this country tax-free from the Philippines, and imposing only a 2-cent tariff on such importations from other lands.

We cannot reach the Philippine import by a tariff, but we can impose a processing tax on such articles. This will reach the Philippine imports to the extent of such tax, and it will add just that much to the tariff on such imports from other countries.

While I have always known these imports were injurious to the livestock industry, I never dreamed of the extent of such injury until I learned the facts.

The growth of coconut oil imports into this country is stupendous. It comes as a refined product, and also as copra. Copra is the dried meat of the coconut containing on an average of 63 percent oil. Copra is processed and the oil removed after it enters the United States.

Unless one has had an opportunity to study the actual statistics on this matter he can scarcely comprehend the tremendous extension which has taken place in recent years in the importation of these commodities. I say to you that they have done a great injury to the livestock industry, dairying, and the hog raiser.

It is only a few years ago that we thought these imports were a problem exclusively for the dairyman to handle. We did not give it serious consideration, because we did not realize its seriousness nor its volume. Many thought that the dairyman's fight against such imports and against the use of them in competition with him was mainly a display of jealousy. During all of this time the hog and beef-cattle industries had been asleep and had let these imports creep up to where they are now threatening their very existence.

IMPORTANCE OF BY-PRODUCTS

We all realize that the hog and beef-cattle industries must depend for profit, if they have any profit at all, upon their by-products. Until the depression came along we had foreign markets for our surplus beef, pork, lard, and all other beef and pork products, and we did not realize what was slipping up on us in the importation of coconut oil. We had ample outlets for all our animal fats; hence we were not concerned. Today we awaken from our slumber to realize our injury. Our foreign outlet for animal fats has been cut off entirely, and on investigation we find that our home market has been stolen. The growth of the coconut-oil industry in the Philippines has been some 400 percent in the last 20 years, and its market has been in the United States.

GROWTH OF COCONUT-OIL IMPORTS

During the years 1909 to 1912, inclusive, the average importation of coconut oil into the United States was 76,000,000 pounds per year. During the next 5 years, up to and including 1917, it grew to 239,000,000 pounds annually; during the next 5 years, up to and including 1922, it grew to 425,000,000 pounds annually; during the next 5 years, up to and including 1927, it was 514,000,000 pounds per year; during the next 5 years, up to and including 1932, the average has been 679,000,000 pounds per year. The increase in those 24 years was about 900 percent.

RECENT IMPORT INCREASE IS ASTOUNDING

Since 1932 these imports have increased more rapidly than ever before. The completed figures for 1933 are not out yet, but the last 3 months of that year which are available are astounding. They are for July, August, and September last, and for those 3 months we imported 279,764,000 pounds of coconut oil. The previous months for the year are somewhat less, but the figures for these 3 months indicate that these importations for the year 1933 exceeded 1,000,000,000 pounds.

COCONUT OIL INJURES LIVESTOCK AND HOG INDUSTRY

These coconut oils displace animal fats and are a direct competitor of tallow and lard, as well as butter. To clarify my position on this, it is only necessary to go over the records for a few years back. In 1914 the average of the oleomargarine produced in this country contained 74 percent animal fat and 26 percent vegetable oil, or, in round numbers, it was about three fourths animal fat and one fourth vegetable oil. In 1932 the tables had far more than turned, for the oleomargarine then contained an average of only 19 parts animal fat and 81 parts vegetable oil, or, practically speaking, one fifth animal fat to four fifths vegetable oil.

In 1914 practically all of the vegetable oil used in oleomargarine was home-produced. The statistics for that year show that less than one half of 1 percent of coconut oil went into it, and that it carried a content of 20 percent cottonseed oil, while the statistics for 1932 showed that cottonseed-oil content had been reduced to only 9 percent. Thus, there has been a tremendous expansion in the use of coconut oils in the oleomargarine industry. Coconut oils have taken the place of both animal fats and cottonseed oil.

COCONUT OIL DIRECT COMPETITOR OF LARD

Since the adoption of formulas for lard compounds, these manufacturers have overcome the deficiencies of coconut oil as a mixture with lard, to the extent that it is now used in lard compounds. One hundred and sixty million pounds of coconut oil is now used annually in that field.

Coconut oil has also become the greatest competitor of animal fat and domestic seed oils in the soap industry. Formerly, all of our unedible animal greases found an excellent outlet at soap factories, as did also certain of low-grade home-produced vegetable oils. Coconut oil has taken their place and they are now relegated to the field of fertilizer or fuel.

COCONUT OIL MEASURED IN TERMS OF STEERS AND HOGS

From the records I have been able to figure coconut-oil importations in terms of animal fat. One prime fed yearling steer weighing 1,000 pounds produces conservatively 100 pounds of rendered fat. The coconut oil which has come into this country during the months of July, August, and September of 1933 amounts to the fat produced by 3,000,000 such prime yearling steers, or putting it on a per month basis, it amounts to the fat rendered from 1,000,000 such steers per month.

In terms of 200-pound hogs producing 30 pounds of rendered lard per head, the coconut oil imports during the 3-month period referred to is equivalent to the lard produced by 9,000,000 hogs, or at the rate of 3,000,000 per month.

Normally there are about 9,000,000 cattle and 4,500,000 calves slaughtered under Federal inspection per year. The normal annual slaughter of hogs at Federal inspection plants is approximately 45,000,000 or slightly over 3½ million per month. Consequently the coconut oil imports have grown to about three fourths as much as the normal lard production in this country.

COCONUT OIL IMPORTS INCREASED 83 PERCENT LAST YEAR

Now, to show the astounding increase in these imports, I shall compare the record of the last 3 months available—July, August, and September of 1933, with the same months of 1932. In these months in 1933 it was 279,764,000 pounds; for the same months in 1932 it was 152,510,000 pounds. This amounts to an 83-percent increase during the last year.

Mr. Speaker, figure this, if you please, in terms of beef steers and hogs, and surely it will bring to us a complete realization of the necessity of this amendment.

I am calling attention to these facts in order that I might awaken in the minds of the Members of this House the seriousness of this problem. I am confining my remarks to the injury that is being done beef cattle and hog breeders. Equally as much or more can be said about the injury to the dairy industry, but others have already and will continue to deal with that subject.

It is absolutely a physical impossibility for this country to ever compete with the Philippine situation; that is out of the question; therefore we must place this tax or a greater tax on coconut oils. If we do not do this, the end will be more detrimental than we can possibly conceive at this time, and it is not far distant.

GROWTH OF COCONUT-OIL INDUSTRY IN PHILIPPINES

In 1931 there were 65,000,000 coconut trees in bearing in the Philippine Islands, and at the same time there were 35,000,000 ready to come into bearing. In other words, with the recent imports that I have related, only two thirds of the present trees of the islands were then in bearing. A coconut tree comes into bearing when 5 years old, and reaches full production when 10 years old. Its life is from 60 to 100 years. Once a tree is in production the work of growing the product is practically all done; the shaking of the tree and the gathering of the nuts by Philippine labor at a few cents a day is all that is left in the agricultural end of this industry.

This problem is fatal to the beef and hog men, to the dairymen, and is also of much concern to the cotton growers of this country.

This amendment is not adequate, but it is a starter and it is the best we have at this time. I urge its adoption.

ADJOURNMENT

Mr. BYRNS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 30 minutes p.m.) the House adjourned until tomorrow, Friday, March 2, 1934, at 12 o'clock noon.

COMMITTEE HEARING

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

(Friday, Mar. 2, 10 a.m.)

Continuation of the hearing on H.R. 7852, the National Securities Exchange Act of 1934.

EXECUTIVE COMMUNICATIONS, ETC.

367. Under clause 2 of rule XXIV a letter from the quartermaster general of the United Spanish War Veterans, transmitting the proceedings of the Thirty-fifth National Encampment of the United Spanish War Veterans held at Los Angeles, Calif., August 20–24, 1933 (H.Doc. 151), was taken from the Speaker's table, referred to the Committee on Military Affairs and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. CHAVEZ: Committee on Irrigation and Reclamation. S. 2534. An act to further extend the operation of the act entitled "An act for the temporary relief of water users on irrigation projects constructed and operated under the reclamation law", approved April 1, 1932; with amendment (Rept. No. 859). Referred to the Committee of the Whole House on the state of the Union.

Mr. STEAGALL: Committee on Banking and Currency. H.R. 7963. A bill to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes; without amendment (Rept. No. 860). Referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. DOBBINS: A bill (H.R. 8387) to amend the Air Mail Act in order to provide for open competitive bidding on contracts for carrying of air mail, and for other purposes; to the Committee on the Post Office and Post Roads.

By Mr. WELCH: A bill (H.R. 8388) to authorize a lower rate of interest under certain circumstances for construction loans in the case of vessels built on the Pacific coast; to the Committee on Merchant Marine, Radio, and Fisheries.

By Mr. DOXEY: A bill (H.R. 8389) to amend section 36 of the Emergency Farm Mortgage Act of 1933 and amendments thereto; to the Committee on Agriculture.

By Mr. BURCH: A bill (H.R. 8390) giving superintendents at classified post-office stations credit for substitutes serving under them; to the Committee on the Post Office and Post Roads.

By Mr. GLOVER: A bill (H.R. 8391) authorizing commissioners' loans to rice growers in Arkansas; to the Committee on Agriculture.

By Mr. DOUGLASS: A bill (H.R. 8392) to amend the act authorizing the issuance of the Spanish War service medal; to the Committee on Military Affairs.

By Mr. McSWAIN (by request): A bill (H.R. 8393) authorizing enlistment in the Army for a limited period and intensive military training of boys recently graduated from high school, or young men recently enrolled as students in college, and for other purposes; to the Committee on Military Affairs.

By Mr. VINSON of Georgia: A bill (H.R. 8394) to amend in certain particulars the act approved February 28, 1925, entitled "An act to provide for the creation, organization, administration, and maintenance of a Naval Reserve and a Marine Corps Reserve", as amended, and for other purposes; to the Committee on Naval Affairs.

By Mr. LAMNECK: A bill (H.R. 8395) to amend the Air Mail Act of February 2, 1925, as amended by the acts of June 3, 1926, May 17, 1928, and April 29, 1930, further to encourage commercial aviation; to the Committee on the Post Office and Post Roads.

By Mr. TREADWAY: A bill (H.R. 8396) relating to the taxation of community property income; to the Committee on Ways and Means.

By Mr. MEAD: A bill (H.R. 8397) to provide for the creation of the Saratoga National Historical Park in the State of New York, and for other purposes; to the Committee on the Public Lands.

By Mr. KERR: A bill (H.R. 8398) to place the tobacco-growing industry on a sound financial and economic basis, to prevent unfair competition and practices in the production and marketing of tobacco entering into the channels of interstate and foreign commerce, and for other purposes; to the Committee on Agriculture.

By Mr. BUCKBEE: A bill (H.R. 8399) to provide for the payment of old-age pensions, and for other purposes; to the Committee on Ways and Means.

By Mr. McSWAIN (by request): A bill (H.R. 8400) to encourage and promote commercial aviation in the United States; to the Committee on Interstate and Foreign Commerce.

By Mr. DOCKWEILER: A bill (H.R. 8401) to place the position of postmaster within the classified Civil Service, to abolish the position of assistant postmaster in certain cases, and for other purposes; to the Committee on the Post Office and Post Roads.

By Mr. BANKHEAD: A bill (H.R. 8402) to place the cotton industry on a sound commercial basis, to prevent unfair competition and practices in putting cotton into the channels of interstate and foreign commerce, to provide funds for paying additional benefits under the Agricultural Adjustment Act, and for other purposes; to the Committee on Agriculture.

By Mr. STEAGALL: A bill (H.R. 8403) to guarantee the bonds of Home Owners' Loan Corporation, to amend Home Owners' Loan Act of 1933, and for other purposes; to the Committee on Banking and Currency.

By Mr. CONNERY: A bill (H.R. 8423) to equalize the bargaining power of employers and employees, to encourage the amicable settlement of disputes between employers and employees, to create a national labor board, and for other purposes; to the Committee on Labor.

By Mr. McFADDEN: Resolution (H.Res. 287) authorizing the appointment of a special committee to investigate the Bureau of Internal Revenue; to the Committee on Rules.

By Mr. STRONG of Texas: Resolution (H.Res. 288) to appoint a special committee to investigate the petroleum industry; to the Committee on Rules.

By Mr. SCHULTE: Joint resolution (H.J.Res. 288) to temporarily restrict habitual commuting of aliens from foreign contiguous territory to engage in skilled or unskilled labor employment in continental United States; to the Committee on Immigration and Naturalization.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CARDEN of Kentucky: A bill (H.R. 8404) granting a pension to Nancy Ann Laird; to the Committee on Invalid Pensions.

By Mr. CARTWRIGHT: A bill (H.R. 8405) granting a pension to Nely Keller; to the Committee on Invalid Pensions.

By Mr. CULLEN: A bill (H.R. 8406) for the relief of James M. Robedee; to the Committee on Naval Affairs.

By Mr. FIESINGER: A bill (H.R. 8407) granting a pension to Carolina Chance; to the Committee on Invalid Pensions.

By Mr. FULMER: A bill (H.R. 8408) to place David H. Owens on the retired list of the United States Marine Corps; to the Committee on Naval Affairs.

By Mr. HIGGINS: A bill (H.R. 8409) granting an increase of pension to Ann Strait; to the Committee on Invalid Pensions.

By Mr. HOIDALE: A bill (H.R. 8410) for the relief of Roy Hall; to the Committee on Naval Affairs.

By Mr. KENNEDY of Maryland: A bill (H.R. 8411) for the relief of John H. Gattis; to the Committee on Claims.

By Mr. KNUTSON: A bill (H.R. 8412) granting a pension to Anna V. Brower; to the Committee on Pensions.

By Mr. LAMNECK: A bill (H.R. 8413) for the relief of Alex Lindsay; to the Committee on Military Affairs.

By Mr. McMILLAN: A bill (H.R. 8414) for the relief of Alvah B. Jenkins; to the Committee on World War Veterans' Legislation.

By Mr. McSWAIN: A bill (H.R. 8415) for the relief of William Randolph Cason; to the Committee on Claims.

Also, a bill (H.R. 8416) for the relief of Claud J. Adams; to the Committee on Military Affairs.

By Mr. MULDOWNEY: A bill (H.R. 8417) for the relief of Louis J. Conley; to the Committee on Claims.

Also, a bill (H.R. 8418) for the relief of Alfred J. Buka; to the Committee on Military Affairs.

By Mr. VINSON of Georgia: A bill (H.R. 8419) for the relief of Mrs. G. H. Moore; to the Committee on Claims.

By Mr. WARREN: A bill (H.R. 8420) for the relief of Lt. Comdr. William H. Harrell; to the Committee on Naval Affairs.

By Mr. WHITLEY: A bill (H.R. 8421) for the relief of John N. Knauff Co., Inc.; to the Committee on Claims.

By Mr. WILLFORD: A bill (H.R. 8422) granting a pension to Lydia A. Havens; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

2664. By Mr. AYERS of Montana: Petition of J. J. Kelly, of Livingston, and sundry other citizens of Livingston, Harlem, Havre, and Great Falls, Mont., praying for repeal or modification of the fourth section of the Interstate Commerce Act; to the Committee on Interstate and Foreign Commerce.

2665. By Mr. BAKEWELL: Petition of the Railroad Employees and Taxpayers Association of Connecticut protesting against the present unjust, unreasonable, and discriminatory operation of inadequately regulated busses and trucks over our highways and against subsidizing with public funds any form of transportation, and further petitioning that suitable laws be enacted at once which will eliminate the injustices now existing; to the Committee on Interstate and Foreign Commerce.

2666. By Mr. BEITER: Petition of the Hamburg High School Student Council, Hamburg, N.Y., urging the Congress to support legislation providing Federal loans by grants to needy schools of the Nation, providing for building of schools where needed as part of the Federal Public Works program, to prevent further curtailment of educational opportunities in any way, to insure for the public schools of America the President's new deal; to the Committee on Education.

2667. By Mr. BOYLAN: Letter from the National Marine Cooks, Stewards, Head and Side Waiters Association of New York, enclosing resolution adopted by their association, favoring the enactment of the Wagner-Costigan antilynching bill; to the Committee on the Judiciary.

2668. By Mr. HOIDALE: Petition of the Minneapolis Typographical Union, No. 42; to the Committee on Labor.

2669. By Mr. HARLAN: Petition of the local Socialist Party, of Dayton, Ohio, by Al E. Reidenbach, secretary, and William R. Russell, chairman, protesting to the Government of Austria against atrocities against Socialists, also a request to the President to demand immediate release of all prisoners of the recent rebellion; to the Committee on Foreign Affairs.

2670. By Mr. HOIDALE: Petition of the Junior Chippewa Association, of White Earth, Minn.; to the Committee on Indian Affairs.

2671. Also, petition of the House of Representatives of Minnesota, with resolution by the Minnesota State Railroad and Warehouse Commission attached; to the Committee on Interstate and Foreign Commerce.

2672. Also, petition of the Minnesota State Holstein Association; to the Committee on Agriculture.

2673. By Mr. KINZER: Resolution of citizens of the community and members of District No. 22 Sunday School Association, of Quarryville, Pa., protesting against the Vinson bill; to the Committee on Naval Affairs.

2674. By Mr. LAMBERTSON: Petition of Dr. J. McDonald and 23 other citizens of Sabetha and Hiawatha, Kans., opposing passage of the Copeland bills, S. 1944 and S. 2000; to the Committee on Agriculture.

2675. Also, petitions of Dr. Maude E. Long and 18 other citizens, and of Mrs. H. E. Modeland and 45 other citizens, all of Brown County; and of Charles H. Beronius and 21 other citizens of Topeka, all of the State of Kansas, opposing passage of the Copeland bills, S. 2000 and S. 2355; to the Committee on Agriculture.

2676. By Mr. LINDSAY: Petition of White Rock Mineral Springs Co., New York City, concerning the Fletcher bill, S. 2693; to the Committee on the Judiciary.

2677. Also, petition of International Longshoremen's Association, New York City, concerning the Costigan-Jones bill; to the Committee on Labor.

2678. By Mr. McREYNOLDS: Resolution adopted by the National Guard Association of Tennessee, in convention assembled at Nashville on February 22, 1934, believing in the perpetuation of the ideals of liberty as set forth in the Constitution of the United States, and realizing the necessity of an adequate national defense as to best security for the perpetuation of such ideals; to the Committee on Military Affairs.

2679. By Mr. RUDD: Petition of the White Rock Mineral Springs Co., New York City, opposing the passage of Senate bill 2693; to the Committee on Ways and Means.

2680. Also, petition of International Longshoremen's Association, New York City, opposing the passage of the Costigan-Jones bills; to the Committee on Agriculture.

2681. By the SPEAKER: Petition of Charles Forney; to the Committee on Interstate and Foreign Commerce.

HOUSE OF REPRESENTATIVES

FRIDAY, MARCH 2, 1934

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D.D., offered the following prayer:

Whatever we may feel in ourselves, blessed Heavenly Father, in Thy holy presence may we be conscious that we are safe and strong. Oh, that all may understand, if we desire emancipation, peace, and contentment, we must give ourselves to the cause of God and truth. Make it dearer to us than all things else. Thus every virtue becomes more radiant and every trait of true manhood more resplendent. Refresh in us good thoughts, give new strength to generous impulses, and stimulate the upward-seeking desire to sacrifice ourselves to the enthusiasm of humanity, kindled by divine love. Smother and starve any roots of bitterness that may be in us and help us to contemplate our work with calmness, confidence, and success. We pray in the name of our Savior. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Latta, one of his secretaries.

INDEPENDENT OFFICES APPROPRIATION BILL

Mr. TABER. Mr. Speaker, I ask unanimous consent to insert in the RECORD a statement furnished by the Veterans' Bureau showing the cost of the amendments adopted by the

Senate and the cost of the amendments proposed by Senator BYRNES in the Senate on the independent offices bill.

Mr. PATMAN. Mr. Speaker, reserving the right to object, may I ask if that is the same information that is in the RECORD this morning?

Mr. TABER. It is not the same.

Mr. PATMAN. Has the gentleman examined the RECORD and noted that Senator STEIWER placed in the RECORD a similar statement?

Mr. TABER. I have not seen the statement.

Mr. PATMAN. If it is the same, the gentleman would not care to insert it at this time?

Mr. TABER. No, I would not; and I will make my request subject to this statement not being the same.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

A REPUBLICAN LOOKS AT THE PAST YEAR

Mr. REED of New York. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a speech made by the gentleman from New York [Mr. FISH] over the radio last night.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. REED of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech made by the gentleman from New York [Mr. FISH] over the radio last night:

Let me make clear at the outset of my remarks this evening that I am speaking in my individual capacity as a Republican Member of the House of Representatives, where I have served for the past 14 years. I do not belong to either the ultraconservative or to the ultraradical wing of the Republican Party, and as a former follower of Theodore Roosevelt, I might still be termed a "Theodore Roosevelt Republican." In other words, I do not represent the big business point of view or that of those Republicans who stand for collectivism and Government ownership of railroads and other public utilities and seek to swat those who have any money left at every turn.

No administration ever came into office with greater opportunities than did the Democrats on March 4, 1933, when Franklin D. Roosevelt was sworn in as President. Confronted with a general collapse of banking institutions throughout the country, he declared a bank holiday and won immediate popular acclaim. He followed this wise and practical move within a few weeks by a courageous attempt to balance the Budget, which he was pledged to by his party platform, by insisting on the passage of the economy bill, which cut the nonservice veterans from the rolls, reduced the pay of Government employees 15 percent, and gave autocratic Budget powers to the President.

I supported him whole-heartedly on both of these measures, believing that the interests of the country in a great emergency should be placed above partisanship or special interests. By degrees I have almost come to regret my vote for the economy bill, and should now like to see certain amendments. The reduction, by Executive order, of 25 percent of the compensation of disabled veterans with war-service injuries was never contemplated by anyone who voted for the Economy Act. By the devaluation of the dollar the disabled veteran and Government employee have both been crucified on a cross of economy and inflation.

There is no question in my mind that President Roosevelt started off with the avowed intention of keeping his party pledges, such as balancing the Budget and reducing Government expenditures 25 percent. At just what point he made an about-face, and whether at the instigation of the "brain trust", is a matter for future historians to decide. The fact is that before the administration was a hundred days old almost every promise made in the Democratic platform was scrapped or deliberately repudiated.

Almost overnight the President and the Democratic administration launched into the greatest orgy of spending in the history of any nation in the world. The President, however, clung tenaciously to saving a hundred million at the expense of the actual disabled veterans and the Civil Service employees as a sop to business interests, whereas billions were doled out in every conceivable manner. It is another example of that false economy of saving a few drops at the spigot and permitting a veritable flood of expenditures to flow out of the bunghole. In just one year the Democratic administration has run the Federal Budget to more than ten billions, with a deficit of seven billions. The American taxpayer is the real forgotten man under the new deal.

My own estimate is that both the Budget and the deficit will be increased by over two billions more by June 30 of this year. How does that sound to the voters who supported candidate Roosevelt on his July 30, 1932, speech, when he said: "Let us have the courage to stop borrowing to meet continuing deficits. Stop the deficits." Or later on, when he said, on October 19, 1932, "I regard reduction in Federal spending as one of the most important issues in this campaign. In my opinion, it is the most direct and effective contribution that government can make to business."

The present Congress, under Democratic control, has been the wildest, most extravagant, and, above all, the most autocratic in American history. By use of drastic gag rules it jammed through important legislation with little debate, and often without any opportunity to offer amendments, thereby virtually destroying representative government, which has been the cornerstone of our Republic.

The greatest and most successful output of the present administration is and has been mass propaganda, day and night, to the press and over the radio. This is one crop that has not been curtailed by Government subsidies. Every department and bureau has one or more publicity agents drawing fat salaries out of the Treasury of the United States to scatter propaganda broadcast on behalf of the administration policies, the Democratic Party, and President Roosevelt. It is impossible to take up a radio day or night except to be tuned in on some administration publicity agent upholding the latest socialistic expedient or experiment. It is, consequently, difficult for the people back home to get the facts from out of a mass of political propaganda.

It is seldom that any voice is heard over the radio to defend our ancient landmarks, the Constitution, the sanctity of contracts, the Bill of Rights, and our economic system and representative form of government that have made for the greatness of our Republic since its formation. It has become the popular national sport of the "brain trust", radicals, Socialists, and Communists to inform the American people that everything has been rotten and corrupt in our economic and political systems and that they must be scrapped for some form of foreign dictatorship, such as socialism, communism, fascism, or Hitlerism.

I propose to speak out, call a spade a spade, and let the chips fall where they may. Just how far the constitutional Democrats can endure the radical leadership of the "brain trust", which is leading them step by step into socialism, is a matter which only time and they themselves can decide. That the theoretical panaceas and socialistic remedies advanced by intellectuals and radical college professors are already irksome to many Jeffersonian Democrats is quite apparent.

Mr. David Lawrence, a brilliant newspaperman, in calling for a new party, to be named the Constitutional Democratic Party, fails to appreciate the fundamental strength of the Republican Party, which out of the last 75 years has been in power for 57, and under whose leadership the country attained its greatest growth, development, and prosperity.

The very word "prosperity" is practically synonymous with the record of the Republican Party until the American people, led on by the big international bankers, abused the overabundance of prosperity given to our country from 1921 to 1929 under Republican administrations. During 1928–29 the American people went money-mad and entered on a veritable orgy of waste and extravagance and speculated and gambled on the stock market in an insane idea of getting rich overnight without doing any work. Even the Republican Party and its constructive principles could not withstand such crazy get-rich-quick schemes and methods of high finance when everyone from the office boy to the bank president was gambling on margin and spending most of their time with their eyes glued to the stock-market ticker.

The sound and constructive principles of the Republican Party are more needed today than ever before to restore business confidence and to start the wheels of industry in order to provide employment for American wage earners, and we shall welcome the support of constitutional Democrats when they get ready to turn away from state socialism back to the principles of Jefferson and Lincoln and the Constitution of the United States.

The situation today reminds me very much of a story that is supposed to have been told by Abraham Lincoln. He said two men started fighting with their overcoats on, and they fought so hard that they fought themselves into each other's overcoats. It looks to me as if the Democratic Party has fought itself into the Republican overcoat of centralized government, and, not stopping there, has gone on away beyond that into state socialism, if not actual socialism. What has become of the party of Thomas Jefferson, which stood for individual liberty, State rights, and against governmental bureaucracy and Federal control? Where are the principles of Thomas Jefferson, of no interference by the Government with private industry or with rights of the individual citizens? They have been abandoned and knocked into a cocked hat, and will stay there just so long as the present administration doles out enormous sums and southern Democrats can feed at the public crib. As former Senator Ben Tillman once said of his Democratic colleagues, "The Democratic wild donkeys break into the green corn whenever they get into power."

It is only fair to remember that the American people had the highest standard of living and wages during the 8 years of Republican rule than ever before in any country in the world. At the present time even the Democrats are trying to get back to the price levels of 1926.

The gold devaluation bill, which is nothing more than legalized confiscation of the wealth of the masses, is another of the unsound Democratic monetary policies. The 59-cent dollar may hit one rich man in Wall Street, but it likewise hits millions of wage earners and consumers and their standard of living. It hits all American men and women with small incomes, insurance policyholders, those with a little money in saving banks or who own a few Government bonds. The compensation of the veteran, civil-service employees, widows, and orphans are all likewise cut 41 percent. The real creditors are the American wage earners; and if the creditor is to be cheated by a reduction in the value of the dollar, it is and must be at the expense of labor. The American

Federation of Labor and the American Legion and other great Nation-wide organizations of that character have boldly opposed inflation as they realize the havoc that inflation has brought in every country that it has been tried to the wage earners, Father Coughlin to the contrary notwithstanding.

The cost of living is bound to go up within the next few months, and then there will be a howl from American wage earners when they receive a 59-cent dollar to pay for vastly increased and higher cost of living. The only real gainers will be the Wall Street gamblers and speculators and bankers who can turn their money over rapidly and are in touch with the fluctuating market conditions. The following is an amazing Associated Press report at the time of the signing of the gold devaluation bill, the paternity of which is still shrouded in mystery: "After signing the bill the President turned to Secretary Morgenthau, who will be in charge of the administering of the new monetary policy, and asked, 'Now, that I have signed the bill, is it all right, Henry?' 'No', quickly replied the Secretary of the Treasury, who must carry the load. 'Have you read it?' asked Mr. Roosevelt with a laugh. 'No', replied Morgenthau. 'Neither have I', said Mr. Roosevelt, 'but the experts say it is all right.'"

The administration's revolutionary program, without regard to cost and based on Government intervention, has already scrapped the fundamental principles of our Government and established an enormous bureaucracy at Washington controlling almost all lines of industry. The N.R.A., first acclaimed by the American people, has proved disastrous to many small industries, and it is now an open question whether it has not retarded the return to better and happier times. The C.W.A. became an actual necessity in view of the break-down of the Public Works program, which, after the administration has been in office 1 year, is only employing 20,000 men in the United States. Al Smith never said a truer word when he called attention to the failure of the Public Works program to function and afford employment for American wage earners, which was its primary purpose.

The less I say about the A.A.A. the better for my own peace of mind, as it constitutes the prize example of Government intervention, extravagance, waste, and approach to collectivism and socialism. The destruction and plowing-under of cotton and wheat and the slaughtering and birth control of pigs at a time when millions of Americans are unemployed and hungry is not only fantastic but an abomination of desolation. The very producers who receive Government money for reducing their acreage 25 percent often take a part of the money and spend it on fertilizer and thereby produce just as big a crop on reduced acreage.

Over a billion dollars have been spent on this and other socialistic forms of farm relief, most of which create a vicious circle, and, like all impractical schemes, fail in their purpose of curtailing production. A prominent Democratic Member of Congress from a Middle Western State declared a few days ago that whenever the new deal put $1 into the pockets of the farmer, it took $2 out.

A group of Members of Congress met last week to discuss the dairy situation, and the Democratic Members took the lead in denouncing the Agricultural Department as being honeycombed with Socialists and Communists who were trying to socialize the milk industry and ruin the milk producers in the milk sheds of the South, North, and all States east of the Mississippi.

Let me conclude my remarks by merely touching on the most recent blunder of the Roosevelt administration—its cancelation of air-mail contracts without a hearing or trial, and the disgraceful attack on Colonel Lindbergh because he dared in his capacity as an American citizen to protest against the unfair, high-handed and autocratic action of Postmaster General Farley and the President. Colonel Lindbergh is enshrined in the hearts and minds of millions of Americans, and no person ever shunned or avoided publicity more than he did, even in the days of his greatest glory. It is an outrage, for political purposes, to drag his name through the mud and to try to make him out as a publicity seeker because he spoke with knowledge of the facts with every indication of sincerity and conviction. It is reported in the public press that the Federal Government was investigating his income tax. Has the flame of liberty sunk so low in these United States that a petitioner or even a critic of the administration must have his income tax immediately scrutinized? It might be well for the administration to remember the old adage that "He whom the gods would destroy they first make mad."

I am convinced that the quicker the Republican Party gets back to the early principles of our party, as enunciated by Abraham Lincoln, the sooner we will regain the confidence of the American people and once again become the dominant party in the United States. Lincoln announced the doctrine that human rights were superior to property rights and that labor was prior to capital. We should reaffirm these fundamental principles of our party openly and make them the cornerstone of our present-day Republicanism. We should, however, stand boldly with Lincoln for the maintenance of the Federal Constitution, our free institutions, and against state socialism, a socialistic dictatorship, or actual socialism, all of which are destructive of American ideals and principles of government advocated by both Abraham Lincoln, the founder of our party, and Thomas Jefferson, the founder of the Democratic Party. Step by step the present administration, under the leadership of the "brain trust" and near-Socialists and visionaries, is moving toward Government ownership, state socialism, and the destruction of individual liberty and business enterprise.

With malice toward none and charity for all, I have presented my views without fear or favor on the economic and political problems with which we are confronted. I am convinced that our Nation will pull through and emerge from the depression in spite of the activities of the "brain trust", as I have an abundant faith in the American people. Canada, Great Britain, and other nations are emerging or have emerged from the world depression without indulging in socialistic panaceas, while the United States staggers along under a rapidly increasing burden of debt with business confidence lacking and private enterprise discouraged and all but destroyed.

There is an old American saying, credited to Abraham Lincoln, that you can fool some of the people all the time and all the people some of the time, but you cannot fool all the people all the time. It is my firm conviction that the American people are getting a little fed up on canned propaganda and want to stop and weigh the facts in the balance, and at least to have a presentation of the facts from the minority party, in order to reach their own untrammeled convictions.

AIR SERVICE OF THE ARMY

Mr. MARTIN of Oregon. Mr. Speaker, I received a letter this morning from a "flaming youth", and I ask unanimous consent that I may read the letter to the House at this time.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. MARTIN of Oregon. This letter comes to me from Fairfield, Ohio, and is as follows:

FAIRFIELD, OHIO, *February 25, 1934.*

Hon. CHARLES H. MARTIN,
Washington, D.C.

DEAR SIR: As an Army pilot I want to thank you for your statement in Congress on February 24, as quoted in the press: "The Army Air Corps is as good as Congress has made it. If you appropriate funds, you will have an efficient service. For God's sake do not muddle the flyers. Do not break down their morale." You have struck the keynote of the whole situation. If every Congressman had your understanding of military affairs, we would have an Air Corps which would be the marvel of the world. Can no one else see that what the pilots want is a chance to fly? This is particularly true of the younger pilots. We want a chance to fly all over this great country of ours, to get acquainted with it, its airports, its varied flying conditions. We have been denied that privilege. Some of us, after 2 years of training, found ourselves suddenly out of a job; enlisted as privates in order to continue our flying, which we were just beginning to love and understand. Last year another enlisted pilot's flying pay averaged during 1 month just 7 cents for each hour flown. It was hard to live on $40 a month, but we were allowed to do some flying. Suddenly in February we were limited to 4 hours a month! The Army's taking over the air mail offered us hope perhaps of a little more pay—and more flying. And now they want to take it away from us because a few unfortunate fellows were killed. That is nothing new. Most of us have faced death more than once; have seen our best friends killed. Military flying is dangerous business and must always be. We knew that to begin with. All we ask is the opportunity to make of it at least a respectable career. We will take the risks. Give us a chance.

NOEL PARRISH,
Patterson Field, Fairfield, Ohio.

MESSAGES FROM THE PRESIDENT OF THE UNITED STATES—COMMERCIAL AGREEMENTS WITH FOREIGN NATIONS (H.DOC. NO. 273)

The SPEAKER laid before the House the following message from the President of the United States, which was read and referred to the Committee on Ways and Means and ordered printed:

To the Congress:

I am requesting the Congress to authorize the Executive to enter into executive commercial agreements with foreign nations; and in pursuance thereof within carefully guarded limits to modify existing duties and import restrictions in such a way as will benefit American agriculture and industry.

This action seems opportune and necessary at this time for several reasons.

First, world trade has declined with startling rapidity. Measured in terms of the volume of goods in 1933, it has been reduced to approximately 70 percent of its 1929 volume; measured in terms of dollars, it has fallen to 35 percent. The drop in the foreign trade of the United States has been even sharper. Our exports in 1933 were but 52 percent of the 1929 volume, and 32 percent of the 1929 value.

This has meant idle hands, still machines, ships tied to their docks, despairing farm households, and hungry industrial families. It has made infinitely more difficult the planning for economic readjustment in which the Government is now engaged.

You and I know that the world does not stand still; that trade movements and relations once interrupted can with the utmost difficulty be restored; that even in tranquil and prosperous times there is a constant shifting of trade channels.

How much greater, how much more violent is the shifting in these times of change and of stress is clear from the record of current history. Every nation must at all times be in a position quickly to adjust its taxes and tariffs to meet sudden changes and avoid severe fluctuations in both its exports and its imports.

You and I know, too, that it is important that the country possess within its borders a necessary diversity and balance to maintain a rounded national life; that it must sustain activities vital to national defense; and that such interests cannot be sacrificed for passing advantage. Equally clear is the fact that a full and permanent domestic recovery depends in part upon a revived and strengthened international trade and that American exports cannot be permanently increased without a corresponding increase in imports.

Second. Other governments are to an ever-increasing extent winning their share of international trade by negotiated reciprocal trade agreements. If American agricultural and industrial interests are to retain their deserved place in this trade, the American Government must be in a position to bargain for that place with other governments by rapid and decisive negotiation, based upon a carefully considered program, and to grant with discernment corresponding opportunities in the American market for foreign products supplementary to our own.

If the American Government is not in a position to make fair offers for fair opportunities, its trade will be superseded. If it is not in a position at a given moment rapidly to alter the terms on which it is willing to deal with other countries it can not adequately protect its trade against discriminations and against bargains injurious to its interests. Furthermore, a promise to which prompt effect cannot be given is not an inducement which can pass current at par in commercial negotiations.

For this reason any smaller degree of authority in the hands of the Executive would be ineffective. The executive branches of virtually all other important trading countries already possess some such power.

I would emphasize that quick results are not to be expected. The successful building up of trade without injury to American producers depends upon a cautious and gradual evolution of plans.

The disposition of other countries to grant an improved place to American products should be carefully sounded and considered; upon the attitude of each must somewhat depend our future course of action. With countries which are unwilling to abandon purely restrictive national programs, or to make concessions toward the reestablishment of international trade, no headway will be possible.

The exercise of the authority which I propose must be carefully weighed in the light of the latest information so as to give assurance that no sound and important American interest will be injuriously disturbed. The adjustment of our foreign trade relations must rest on the premise of undertaking to benefit and not to injure such interests. In a time of difficulty and unemployment such as this the highest consideration of the position of the different branches of American production is required.

From the policy of reciprocal negotiation which is in prospect, I hope in time that definite gains will result to American agriculture and industry.

Important branches of our agriculture, such as cotton, tobacco, hog products, rice, cereal, and fruit raising, and those branches of American industry whose mass-production methods have led the world, will find expanded opportunities and productive capacity in foreign markets, and will thereby be spared in part, at least, the heart-breaking readjustments that must be necessary if the shrinkage of American foreign commerce remains permanent.

A resumption of international trade cannot but improve the general situation of other countries, and thus increase their purchasing power. Let us well remember that this in turn spells increased opportunity for American sales.

Legislation such as this is an essential step in the program of national economic recovery which the Congress has elaborated during the past year. It is part of an emergency program necessitated by the economic crisis through which we are passing. It should provide that the trade agreements shall be terminable within a period not to exceed 3 years; a shorter period probably would not suffice for putting the program into effect. In its execution the Executive must, of course, pay due heed to the requirements of other branches of our recovery program, such as the National Industrial Recovery Act.

I hope for early action. The many immediate situations in the field of international trade that today await our attention can thus be met effectively and with the least possible delay.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 2, 1934.*

PHILIPPINE ISLANDS (H.DOC. NO. 272)

The SPEAKER laid before the House a further message from the President of the United States, which was read and referred to the Committee on Insular Affairs and ordered printed:

To the Congress:

Over a third of a century ago the United States as a result of a war which had its origin in the Caribbean Sea acquired sovereignty over the Philippine Islands, which lie many thousands of miles from our shores across the widest of oceans. Our Nation covets no territory; it desires to hold no people over whom it has gained sovereignty through war against their will.

In keeping with the principles of justice and in keeping with our traditions and aims, our Government for many years has been committed by law to ultimate independence for the people of the Philippine Islands whenever they should establish a suitable government capable of maintaining that independence among the nations of the world. We have believed that the time for such independence is at hand.

A law passed by the Seventy-second Congress over a year ago was the initial step, providing the methods, conditions, and circumstances under which our promise was to be fulfilled. That act provided that the United States would retain the option of keeping certain military and naval bases in the islands after actual independence had been accomplished.

As to the military bases, I recommend that this provision be eliminated from the law and that these bases be relinquished simultaneously with the accomplishment of final Philippine independence.

As to the naval bases, I recommend that the law be so amended as to provide for the ultimate settlement of this matter on terms satisfactory to our own Government and that of the Philippine Islands.

I do not believe that other provisions of the original law need be changed at this time. Where imperfections or inequalities exist, I am confident that they can be corrected after proper hearing and in fairness to both peoples.

May I emphasize that while we desire to grant complete independence at the earliest proper moment, to effect this result without allowing sufficient time for necessary political and economic adjustments would be a definite injustice to the people of the Philippine Islands themselves little short of a denial of independence itself. To change at this time the economic provisions of the previous law would reflect discredit on ourselves.

In view of the fact that the time element is involved, I suggest that the law be amended as I have above suggested and that the time limit for the acceptance of the law by the proper authorities and by the people of the Philippine Islands be sufficiently extended to permit them to reconsider it.

For 36 years the relations between the people of the Philippine Islands and the people of the United States have been

friendly and of great mutual benefit. I am confident that if this legislation is passed by the Congress and accepted by the Philippines we shall increase the mutual regard between the two peoples during the transition period. After the attainment of actual independence by them, friendship and trust will live.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 2, 1934.*

Mr. GUEVARA. Mr. Speaker, I ask unanimous consent to address the House for 5 minutes on the message just read from the President of the United States.

The SPEAKER. Is there objection to the request of the Delegate from the Philippine Islands?

There was no objection.

Mr. GUEVARA. Mr. Speaker, it is a matter of gratification for all those who are interested in the welfare of the Filipino people to hear the message of the President of the United States just read to this House concerning the Philippine problem. I believe I speak the sentiment of the Filipino people if I say that the message and the recommendations contained therein meet with their heartfelt approval.

It will undoubtedly preserve the unity of purpose of the Filipino people and the differences that have divided them in the past as to how a law should be enacted by Congress to satisfy their longings and aspirations will end and their attention will in the future be devoted to local problems in order that they may find the path of their prosperity and happiness.

There cannot be found in the history of the world an action like that taken by the President of the United States in his desire to solve the Philippine question.

Now that the international situation in the Far East appears to be gloomy and confusing, the message of the President concerning the Philippines will certainly encourage a more stable situation in that part of the world.

I am in full accord with the measure recommended by the President in his message to extend the time limit for the acceptance of Act No. 311, enacted by the Seventy-second Congress on January 17, 1933, and it will have my earnest support. The proposed modifications of the law after a due and careful investigation are of such importance that in my belief will command the impartial and patriotic attention of Americans and Filipinos alike. In justice to those who were responsible for the enactment of Act No. 311, commonly known as the "Hare-Hawes-Cutting law", over the veto of the President of the United States, I wish to say that they were as they are now animated by friendly spirit and high motives to consider and sponsor any amendment to the law at any time that may be found necessary for the best interest of the Filipino people and for the success of the policy which inspired its formulation and passage.

At the time, Mr. Speaker, when I and my associates supported and advocated the passage of the Hare-Hawes-Cutting Act, we were on record that this law does not fully meet the aspiration and wishes of the Filipino people. Under the conditions and circumstances then obtaining we found out that this act was the best that could be secured from the Congress of the United States. It was then a well-known fact, and it is now a matter of record, that when this law was enacted the President of the United States was opposed to it and his opposition was manifested in his veto.

But then we had the assurances of those who supported and voted for its passage in both Houses of Congress that they will sponsor amendments to the law that might be suggested or recommended from time to time by the representatives of the Filipino people. It is a matter of satisfaction that those friends have honored their word by advocating now certain amendments to the law which will mean its improvement and will lead to the success of its policy and philosophy and to its acceptance by the Filipinos, who had been opposed to the act as originally passed by the Seventy-second Congress.

I just want to say a few words concerning the Chairman of the Committee on Insular Affairs of the House, the gentleman from Alabama [Mr. MCDUFFIE]. In these days of doubts and suspicions, coupled with the political agitation now going on in the Philippines, he has been a real friend to our cause. In spite of illness and the amount of work that he has as one of the most distinguished Members of this House, and confronting the most tremendous economic crisis that has compelled some agricultural sections of this country to antagonize Philippine imports, he piloted successfully the affairs of his committee. The same is true as to the Senator from Maryland [Mr. TYDINGS], the Chairman of the Committee on Territories and Insular Affairs of the Senate. To both committees the Filipino people owe a debt of gratitude and on their behalf I wish to convey their sincerest thanks.

I am sure that my own people will show the same interest as that demonstrated by the gentleman from Alabama [Mr. MCDUFFIE] and the Senator from Maryland [Mr. TYDINGS], and by the President himself in their friendly and sympathetic effort to solve the Philippine question with justice and generosity, and with no other aim but to carry out honorably the pledge of the American people. It is my profound hope that Congress will receive with sympathy and friendly consideration the recommendations of the President in his message. [Applause.]

PERMISSION TO ADDRESS THE HOUSE

Mr. COCHRAN of Missouri. Mr. Speaker, I ask unanimous consent to proceed for 3 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. COCHRAN of Missouri. Mr. Speaker, on page 3431 of the RECORD of February 28 there appears a letter addressed to me as Chairman of the Committee on Expenditures in the Executive Departments, signed by J. R. McCarl, Comptroller General of the United States, commenting upon House bill 6038. The letter was placed in the RECORD by the gentleman from New York [Mr. REED]. It was taken from a committee print. The committee print was ordered for the convenience of its Members. I in no way criticize the gentleman from New York for his action, because the committee print was not marked "confidential", but I feel, and the commmittee unanimously agrees with me, in view of the fact the gentleman from New York has placed the Comptroller General's letter in the RECORD, that in justice to the Members of the House who are interested in this bill it is only proper that the letters from the other departments of the Government commenting on this bill be likewise placed in the RECORD so that no Member of the House will base his conclusions solely upon the letter from the Comptroller General.

Mr. Speaker, acting on behalf of the committee, I ask unanimous consent to place in the RECORD the letters from the other departments, including the letter that I addressed to the departments. requesting a report upon the bill.

Mr. RICH. Mr. Speaker, reserving the right to object, and I do not expect to object, because I am a member of this committee, and I am very desirous that these letters from other Government departments be given the same publicity as the letter from the Comptroller General, I firmly believe that the purpose of the Shannon bill is misunderstood by the various departments of the Government. I believe the enactment of H.R. 6038 into law will be of enlightenment, not only to the Members of Congress but to the various departments of the Government, because I have come to the conclusion that the department heads want to maintain some of the old standards that have been maintained in the Government in years gone by. If we are in the new era today and we want to have the new deal, I think the public will rise and criticize the various members of the departments who have written these letters if the chairman of the committee will get the proper information before them as to what the public wants, and I believe

it will be a good thing for the Members of Congress as well as the members of the committee to have this information.

Mr. SNELL. Mr. Speaker, reserving the right to object, what is this proposed legislation?

Mr. COCHRAN of Missouri. It is a bill introduced by the gentleman from Missouri [Mr. SHANNON] providing for a uniform cost-accounting system in all Government agencies. Mr. SHANNON told the committee Mr. RICH drew the bill, but it bears Mr. SHANNON'S name.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The matter referred to follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EXPENDITURES
IN THE EXECUTIVE DEPARTMENTS,
Washington, D.C., January 23, 1934.

DIRECTOR OF THE BUDGET,
SECRETARY OF WAR,
SECRETARY OF THE NAVY,
SECRETARY OF THE TREASURY,
SECRETARY OF COMMERCE,
SECRETARY OF LABOR,
COMPTROLLER GENERAL,
ADMINISTRATOR OF VETERANS' AFFAIRS:

The committee has been asked to hold a hearing on the attached bill, H.R. 6038. Before doing so I should like an expression from your Department on the measure. It seems to me this would prove very costly to the Government. If that be so, can you estimate what it would cost your Department to comply with such a law?

Sincerely yours,

JOHN J. COCHRAN, *Chairman.*

Mr. COCHRAN of Missouri. A similar letter has since been sent to the Procurement Division, a new agency; the Post Office Department; and the Agriculture Department.

[Committee print]

LETTERS FROM EXECUTIVE DEPARTMENTS CONCERNING H.R. 6038

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, January 24, 1934.

Hon. JOHN J. COCHRAN,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN COCHRAN: The Secretary has referred to me your communication of January 23, 1934, together with a copy of bill H.R. 6038, which if made a law would provide for the establishment of a system of cost accounting in the executive departments and independent establishments of the United States Government.

It appears that the intent of the bill is to procure costs on manufacturing, construction, reconstruction, or repairs undertaken by the various departments. As at present organized the Department of Labor does little or none of these things directly as a Department.

The only accounting now done or contemplated in the future to be done by the Department is a simple system for the control of expenditures under budgetary headings.

All vouchers for materials, supplies, transportation, etc., are preaudited and pay rolls are audited periodically by the General Accounting Office. Major items of construction work as are necessary to meet the needs of the Department are carried on through the Office of the Supervising Architect of the Treasury, and all contracts for work, labor, and material are audited and approved by the General Accounting Office.

Purchases of office supplies, office furniture, etc., are made from the schedules of the General Supply Committee, now a unit of the Procurement Division of the Treasury Department. Printing and binding for the Department is handled through the Government Printing Office.

As at present constituted, therefore, there is no need whatever for any construction cost accounting system in the Department, and unless the general system of audit and control of finances now established is radically changed there will be no use in establishing a cost-accounting system in the Department of Labor even though the bill becomes a law. Such cost accounting as might be required under the bill for expenditures made by or for the Department of Labor would, we assume, be made by the agencies already enumerated as acting for or auditing the expenditures of the Department.

Under the circumstances there is no basis for preparing an estimate of what such a system would cost the Department of Labor.

The procedure as above described is common to many other Departments and independent establishments of the Government.

There is nothing in the bill which indicates what useful purpose will be served by establishing a system of cost accounting as would be provided thereby. If the purpose to be attained is made evident and Congress feels that the information should be procured, then it would seem that instead of establishing numerous independent although correlated systems of cost accounting in the various establishments the whole system of Government accounting should be revised and cost-accounting information procured, analyzed, and reported through one central agency, which agency should, we believe, be the office of the Comptroller of the United States.

Very truly yours,

RICHARDSON SAUNDERS,
Assistant to the Secretary.

BUREAU OF THE BUDGET,
Washington, January 27, 1934.

Hon. JOHN J. COCHRAN,
Chairman Committee on Expenditures in the Executive Departments, House of Representatives, Washington, D.C.

MY DEAR MR. COCHRAN: I have your letter of January 23 asking for my views concerning H.R. 6038, Seventy-third Congress, first session, "to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States", and requesting an estimate of the cost to this office of complying with its provisions.

You will appreciate that from the nature of the duties of this Bureau it has no work or operations that would fall within the scope of the proposed bill.

However, as applied to the Government as a whole, with its far-flung activities which include thousands of contract and hired-labor projects for an inconceivable variety of undertakings, I believe the cost would be out of all proportion to any possible benefits that could accrue to the Government.

When every effort is being made to limit the normal costs of Government operation to a minimum, it would be inconsistent, and I believe most unfortunate, to enact into law any such expensive requirements. Except for the relatively few cases where such data would be required for making direct comparison of costs with those of similar undertakings in private industry, the compilation of this vast volume of records would serve no useful purpose. Generally speaking, the cost-accounting systems that have been worked out after years of experience by the regular departments are designed to meet their respective needs for estimating and operating purposes. While they may be faulty and lacking in uniformity, I do not believe that this justifies imposing upon the departments an elaborate standard uniform system which, aside from its direct additional cost, would be certain to result in expensive duplication.

Sincerely yours,

L. W. DOUGLAS, *Director.*

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, January 29, 1934.

Hon. JOHN J. COCHRAN,
Chairman Committee on Expenditures in the Executive Departments, House of Representatives.

MY DEAR MR. CHAIRMAN: There is before me your request for my views on H.R. 6038, entitled "A bill to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States." The apparent purpose of the measure has been carefully considered and in my judgment the enactment of legislation to accomplish such purpose will ultimately be necessary if the business of the Government is to be conducted on an economical and efficient basis.

Under the provision of the bill agencies of the Government will be required to establish and maintain a uniform system of cost accounting and cost finding which will disclose the cost of each and all factors entering into and forming part of the cost of any manufacturing, construction, reconstruction, or repair operation undertaken. This appears to limit the operation of the act to those activities involving manufacturing, construction, reconstruction, and repairs. Several of the departments and establishments of the Government in some form or other and to a greater or less degree are engaged in industrial or merchandising activities for the Government, although the greater portion of such business is let out to private contractors. It would seem that the provisions of the bill should be so flexible as to permit the extension of cost keeping to all Government activities.

An existing condition which is subject to abuse and may be corrected by the enactment of legislation along the lines proposed by the bill is the present possibility of expending public funds for a given purpose in excess of express appropriation limitations for such purpose. The present system of accounting does not disclose the contributions obtained from other sources to supplement limitations expressly fixed by the Congress, as, for example, the diversion of inventories and services paid for from other appropriations; hence the will of the Congress may in a given case be largely defeated, not always in a deliberate attempt to that end but because the means for doing so are readily available.

The text of the bill seems clear and susceptible to definite application except as to one feature. There is included as an element of cost "interest on investment in property." The question of whether interest on invested capital should be figured and treated as an element of costs is one that has long been debated; there is involved the difficulty of determining the rate of interest that should be handled on the books, whether interest is to be charged on fixed investment or current investment, or both, and whether interest will be computed on fluctuation of investment values. There are many other practical difficulties in the application of the theory of charging interest on invested capital, notwithstanding that the theory seems sound, and the difficulties

encountered commercially will be multiplied many times in governmental accounting.

The expense incident to maintaining a complete cost-accounting system for the Government should not materially increase the expenditure now made for fiscal accounting, as it seems entirely feasible to operate a cost system in conjunction therewith, and the present facilities and personnel should, to a great extent and under proper administration, absorb the additional work involved. I hesitate to venture an estimate of the cost of administering the law because of insufficient data available upon which to predicate such an estimate, but I confidently believe that through the operation of a proper cost-accounting system there will result economies and advantages that will many times outweigh the cost thereof.

It is believed the pending bill will require further amendment. For instance, in the interest of economy and effectiveness, as well as to insure the desired results and make needed information readily available, there should be, to the fullest extent possible, uniformity of method, form, etc., through the Government, and to exact full compliance possibly there should be provided in the law means to that end.

Should the committee decide to report favorably the bill or one having a similar purpose, this office will gladly render you every possible assistance, if desired, in working out such amendments and new provisions as will accomplish the committee's purposes.

Sincerely yours,

J. R. McCARL,
Comptroller General of the United States.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, January 30, 1934.

The CHAIRMAN,
Committee on Expenditures in the Executive Departments,
House of Representatives.

MY DEAR MR. CHAIRMAN: Replying further to the committee's letter of January 23, 1934, transmitting the bill (H.R. 6038) to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States, and requesting an expression from the Navy Department on this measure, I have the honor to inform the committee as follows:

The purpose of this bill is to provide for the establishment and maintenance of a standard, uniform system of accounting and cost finding for the executive departments and other agencies of the United States, and to require annual reports on all work undertaken or articles or things produced during each preceding fiscal year as to cost entering into such work or production and all losses occasioned during such fiscal year through the dismantlement or abandonment of property, equipment, and facilities used in or for such work or production or used for like work or production.

While the Navy has had in effect for a number of years a cost-accounting system which is parallel to, and comparable with, systems maintained in the larger commercial organizations, it is not believed that "a standard, uniform system of accounting and cost finding" will be found practicable for adoption in the executive departments, independent establishments, etc., of the Government.

In the first place the Government does not undertake manufacturing, construction, or repair work for a profit. Its accounts cannot exactly parallel those of a commercial firm—and accounting systems of commercial firms, although based on generally accepted principles, have not been universally "standardized."

The various departments and agencies of the Government have peculiar and particular missions of their own and the purpose and duty of each is entirely independent and largely dissimilar.

Appropriation enactments for the various departments and agencies are based upon these peculiar and particular conditions, and it is vitally essential that records and accounts be maintained in such manner that the Congress can be furnished with detailed information along the lines laid down in such appropriation acts and to substantiate the appropriation estimates. To supplement these records with an attempted installation of "uniform" cost accounts would require increased personnel and greatly expand the records which would make the cost of such installation prohibitive.

So far as the Navy's cost-accounting system is concerned, provision is made for inclusion therein of all factors of Government expense deemed to be properly included in cost, as recognized by accounting authorities and by the larger commercial concerns, as well as the total expenditures of the Government pertaining to such work.

The Navy's cost system includes direct labor, direct material, and overhead, including leave, holiday and disability compensation, as defined in sections 2 and 2 (a) of the bill; it does not include, however, "interest on investment", "insurance", or "property taxes." These items are not included, as no expenditure is incurred by the Navy for such purposes. Furthermore, accepted accounting principles exclude interest on investment from cost, just as dividends to stockholders are not a part of cost but a charge to profit.

The general system adopted by the Navy has never attempted to include a portion of the cost of the Navy Department, as required by section 2 (b) of the bill, because of the vast field of duty of the Navy Department and the slight portion that can be considered nonmilitary and directly pertinent to industrial work. It would require, first, a determination of the proportion of strictly military duties in the Navy Department and then the distribution of the remaining portions to stations and activities charged with manufacturing, construction, or repair work located all over the world, even including repair work done on board vessels at sea.

Under the Navy procedure the individual station concerned maintains a complete itemized cost record for the activities of that station, which record is complete, both as to the appropriation charges and the total cost. From these detailed reports and records monthly reports are prepared to the Navy Department summarizing the monthly expenditures by appropriations, titles, and accounts, analyzing the expenditures under purposes by: New construction, repairs to ships, alterations to ships, plant equipment ashore, purchase and manufacture of stores, ships, equipage, repair to ships' equipage, repair and maintenance of plant equipment ashore, models, tests, and experiments, etc., rather than by particular items or projects making up the totals under such headings.

The requirement under sections 3, 4, and 6 of the bill that the Navy Department or other agency maintain and publish the detailed record now maintained in navy yards and stations would result in a compilation that would be too voluminous to be of any value, the cost of which would be prohibitive. Furthermore, there appears to be no connection with the accounting system of the requirement in section 6 that the annual publication "set forth all losses occasioned during such fiscal year through the dismantlement or abandonment of property, equipment, and facilities used in or for such work or production or theretofore used for like work or production."

The question of factors to be considered in preparing or comparing estimated "costs" in navy yards and other Government activities in the consideration of bids for private parties was fully discussed in both Houses of Congress on section 1 of the "act to authorize the construction of certain naval vessels", approved February 13, 1929. This discussion indicated the intention was to restrict such factors to expenditures under specific appropriation estimates as required for the work. In the enactment, the Congress divided the work between Government yards and private plants on the basis of policy and not on the basis of estimated costs. It does not appear that section 5 of the proposed bill is in accord with the action or deliberations of Congress on this subject.

The Navy has now in effect a cost-accounting system which would comply with the general requirements of the bill so far as the system is concerned. The departmental record and publication required by sections 3, 4, and 6 of the bill would probably increase the expenditures of the Navy alone by some $200,000 or $300,000. This would include additional clerical forces in navy yards and stations to prepare reports, and additional clerks and statistical machines to record these reports in the Navy Department, as well as the cost of compilation and publication of the departmental reports.

Any estimate of the total additional cost would require a survey of the varying conditions and requirements in the several departments and independent establishments. Without such survey, an estimate does not appear to be practicable.

It would appear that the proposed bill would improperly and incorrectly increase the record cost of manufacturing, construction, reconstruction, or repair work undertaken by the Navy and would result in an additional expenditure of funds for record work which is unnecessary and prohibitive.

The Navy Department recommends against the enactment of the bill H.R. 6038.

Sincerely yours,

H. L. ROOSEVELT, *Acting.*

WAR DEPARTMENT,
Washington, January 31, 1934.

Hon. JOHN J. COCHRAN,
House of Representatives, Washington, D.C.

MY DEAR MR. COCHRAN: Careful consideration has been given to the bill H.R. 6038, to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States, which you transmitted to the War Department under date of January 23, 1934, with a request for information and the views of the Department relative thereto.

The supply branches of the War Department maintain systems of cost accounting which, although not uniform in detail, are nevertheless uniform with respect to general provisions and are considered adequate for the purpose. At War Department manufacturing and repair establishments and at stations having charge of large public buildings or Public Works projects the systems maintained determine cost by considering only those elements included in the bill H.R. 6038 for which expenditures are actually made. At the camps and posts of the Army where small construction or repair jobs are undertaken, the accounting system is designed principally for fiscal purposes. It is simple and includes only items for which expenditures are actually made. Every effort has been made to carry on the cost-accounting work of the War Department in as economical a manner as possible.

The legal effect of the bill will be as follows:

1. To change in varying degrees the present cost-accounting systems of the War Department maintained at its manufacturing and overhauling establishments and at stations having charge of large construction and repair projects, to conform in detail to that outlined in the bill. It will further require the setting up of this elaborate cost-accounting system at all stations and posts throughout the Army at which any construction, repair, or overhauling work is undertaken.

2. It will require the War Department to prepare upon the completion of a manufacturing, construction, overhaul, or repair project a detailed report showing all charges required to be made under the system contemplated in the bill. This will include not only charges for which expenditures were actually determined and made, but also those relating to administrative overhead for which no expenditures were actually made. Those items other than those pertaining to administrative overhead and for which no charges are made must be clearly shown in the report.

3. It will require any establishment under the War Department when submitting estimates or bids to include therein the amounts required for the pro rata share of all overhead administrative expenses, notwithstanding the fact that actual disbursements for such charges will not be made.

4. It will require the War Department to prepare an annual report on all work undertaken or articles or things produced during the preceding fiscal year, which report will show in a composite form all of the costs entering into such work or production and in addition losses occasioned through the dismantlement or abandonment of property, equipment, etc.

5. There is objection to changing the present systems of cost accounting which are used by the manufacturing and overhauling establishments of the Army and the stations in charge of large construction and repair projects. Since the system proposed in the bill is more elaborate than that used at most such establishments, there is no doubt that additional personnel would be required. To set up the system, contemplated under the bill, at all posts or stations under the War Department at which overhauling, construction, or repair work is carried out on a small scale would also require additional personnel. At such posts or stations it is quite possible under the systems proposed in the bill to have more personnel engaged in accounting work than on the actual direct labor involved in a construction, repair, or overhaul job.

6. The result will be to increase the running overhead expense of the War Department during times when every effort is being made to keep those expenses at a minimum. It is questioned whether in the case of stations and posts referred to above benefit to be derived from keeping cost accounts as outlined in the bill would be justified by the additional expense involved.

7. The bill contemplates the charging of the pro rata share of administration expense to manufacturing, construction, overhaul, or repair projects. In general, this is not done in the War Department, since expenditures for this purpose are not actually made, and in most cases it is not practicable to determine such share. Other than to furnish information to interested persons, it would seem that no advantage is to be gained from such a procedure.

In summing up it is the opinion of the War Department that the bill would greatly increase the expense of cost accounting and that such a system as is contemplated is not necessary for the efficient operation of the manufacturing, constructing, overhauling, or repair activities of the War Department. It is not practical at this time to give an estimate of the cost which would be involved in establishing and maintaining such a cost-accounting system throughout the War Department. There are so many variable factors involved that any estimate which might be given without exhaustive study covering a period of time would be only a guess.

It is therefore recommended that this bill be not favorably considered.

Sincerely yours,

GEO. H. DERN, *Secretary of War.*

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, February 1, 1934.

Hon. JOHN J. COCHRAN,
Chairman Committee on Expenditures in the Executive Departments, Washington, D.C.

MY DEAR MR. CHAIRMAN: We have given careful consideration to H.R. 6038, to which reference was made in your letter of January 23, to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments.

I believe that cost accounting is essential for the proper conduct of business and that Government establishments should maintain such cost records as may be necessary to enable us to ascertain the cost of projects and certain operations and to furnish Congress with any information it may desire from time to time. As far as the Department of Commerce is concerned, there is in existence cost-accounting systems in the various bureaus, especially in the Lighthouse Service, where the majority of our construction work is performed. The present system was installed quite recently with the assistance of experts from the Comptroller General's Office to fit the type and character of work done in that Service. It is not thought that the benefits to be derived from the installation of such records in all our services will offset the increased expenditures which will be entailed.

It is impossible to formulate an estimate as to how much additional funds would be required for such records, but I am assured by our bureaus that the cost would be considerable.

Very sincerely,

DANIEL C. ROPER,
Secretary of Commerce.

THE SECRETARY OF THE TREASURY,
Washington, February 1, 1934.

Hon. JOHN J. COCHRAN,
Chairman Committee on Expenditures in the Executive Departments, House of Representatives, Washington, D.C.

MY DEAR MR. CHAIRMAN: I have your letter of January 23, 1934, requesting a report on H.R. 6038, entitled "A bill to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States."

Cost records are now maintained where such records are essential to the proper conduct of the Government's business. In this connection it should be borne in mind that a system of cost accounting suitable to the needs of one Government organization might be wholly unsuited to the needs of another. Existing procedures undoubtedly have been designed to meet needs peculiar to different organizations, and are based upon years of experience in the handling of particular lines of work. The substitution therefor of a standard uniform system of accounting and cost finding to meet the needs of every different type of organization, although workable, would result in unnecessary and unproductive accounting work, and consequently would entail an unwarranted expenditure of the public money. Elaborate and expensive systems of cost accounting should not be installed where simple and inexpensive ones will suffice.

In this connection there should also be considered the expense of supervision and policing, the loss in efficiency, and the interference with interdepartmental work, which would inevitably ensue through efforts of accounting officers to enforce compliance with the law according to their interpretations. It is not believed that the apparent purpose of the bill, as set forth in section 5, warrants the imposition of additional accounting expense on the Government, and I hope, therefore, that your committee will not give the bill favorable consideration.

Very truly yours,

H. MORGENTHAU, JR.,
Secretary.

THE SECRETARY OF THE INTERIOR,
Washington, February 1, 1934.

Hon. JOHN J. COCHRAN,
Chairman Committee on Expenditures in the Executive Departments, House of Representatives.

MY DEAR MR. COCHRAN: I have received your letter of January 23, transmitting for report a copy of a bill (H.R. 6038) to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States.

The accounting systems now in force in the Department of the Interior are working satisfactorily and provide all the information necessary for justification of the Budget. To attempt to install a cost system with the additional elements prescribed by the proposed bill would tend toward confusion and not efficiency in government. It would require cost-accounting and cost-finding procedure and results not necessary for Government administration, and would add very materially to the accounting expenses of the Department.

I recommend that the bill (H.R. 6038) be not given favorable consideration by Congress.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

VETERANS' ADMINISTRATION,
Washington, February 2, 1934.

Hon. JOHN J. COCHRAN,
Chairman Committee on Expenditures in the Executive Departments, House of Representatives, Washington, D.C.

MY DEAR MR. COCHRAN: This is in reply to your letter dated January 23, 1934, transmitting a copy of H.R. 6038, "A bill to provide for the establishment and maintenance of a standard system of cost accounting and cost reports for the executive departments of the United States", and requesting an expression from the Veterans' Administration on the proposed measure, together with an estimate as to what it would cost this administration to comply with such a law.

It appears to be the purpose of the proposed measure to require all executive departments and independent establishments to maintain standard uniform systems of accounting and cost finding which will disclose the cost of each factor entering into and forming part of the cost of any manufacturing, construction, reconstruction, or repair operation undertaken.

The bill is incomplete, since it does not outline the standard uniform system of accounting and cost finding which executive offices and independent offices will be obliged to adopt and, under the circumstances, it is impossible to determine the added cost that would be involved in operating under the proposed standard accounting system. It may be stated, however, that the 1935 Budget estimate, as submitted for the Veterans' Administration, does not contemplate the additional expense which such a system would require.

It has been suggested that the requirement specified in paragraphs A and B of section 2, providing for determination of overhead expenses and a pro-rata share of the administrative expense, is impossible of determination and can be arrived at only by a rather indefinite approximation. A consideration of this part of

the measure suggests the possibility that the administrative cost of compiling, computing, evaluating, and maintaining a record of such indirect expenditures might, in some instances, exceed the expenditures themselves.

It is respectfully suggested that the committee give consideration to the possibility of conflict between the provisions of the proposed measure and that part of the Budget and Accounting Act, 1921, establishing the General Accounting Office and imposing certain duties on the Comptroller General of the United States.

In the opinion of this Administration, the bill should specifically state that its provisions do not apply to occupational therapy by-products and products of orthopedic shops of the Veterans' Administration. It is believed, while the Veterans' Administration would not presume to speak for other departments, that other departments of the Government concerned would also desire that such products be specifically exempt from the provisions of the bill.

It is regretted that a more complete report cannot be made in the absence of detailed information concerning the system intended by the proposed measure. Please be assured of my desire to cooperate with your committee in every possible way.

A copy of this letter is enclosed for your use.

Very truly yours,

FRANK T. HINES, *Administrator.*

ORDER OF BUSINESS

Mr. BYRNS. Mr. Speaker, I ask unanimous consent that after conclusion of consideration of the pending appropriation bill and the privileged resolution from the Rules Committee to investigate the War Department it shall be in order to call up the bill (H.R. 7963) to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes, and that the bill be considered under the general rules of the House.

Mr. PATMAN. Mr. Speaker, reserving the right to object, may I ask the majority leader if this is the same bill that passed the Senate day before yesterday, February 28, sponsored by the Senator from Virginia?

Mr. BYRNS. I am going to ask the Chairman of the Banking and Currency Committee to reply to the gentleman.

Mr. STEAGALL. I will say to the gentleman that the bills are the same and that we contemplate substitution of the Senate bill for the House bill, for the reason that it is important to have this legislation passed today. It provides for extension of authority carried originally in the measure passed in 1932 and extended by a subsequent act of last year. The authority expires tomorrow, and unless we act expeditiously there will be considerable confusion and difficulty in the operation of the Federal Reserve banks in connection with these matters.

This bill passed the Senate, as I remember, day before yesterday and is an identical bill, but the Senate bill was not before our committee on yesterday, and therefore we reported the House bill.

BRIBE AND SUBSIDIZE BIG BANKERS

Mr. PATMAN. Mr. Speaker, further reserving the right to object, it occurs to me that this bill should be given thorough consideration by the House. It is very far-reaching. It is another effort to continue to bribe and subsidize a few large bankers in this country to induce them to perform a public service by extending some of the Government's credit for the benefit of all the people and not for just themselves. I regret very much that the committee has seen fit to delay consideration of this bill until the next to the last day, as it is very important legislation.

I understand that under this act the banks have deposited with the Federal Reserve banks $600,000,000 in Government bonds and have received in return for these bonds $600,000,000 in Federal Reserve notes, which, of course, is new money. This is getting to be quite a racket. At the present time the Federal Reserve rate in New York is one and a half percent. Therefore these bankers can put up these three and a half percent bonds and get their money for one and a half percent and collect from Uncle Sam three and a half percent interest on the bonds. Therefore they make a clear profit of $20,000 a year on every million-dollar transaction.

It occurs to me further that the banks will never make loans to industry, commerce, and agriculture as long as they can just go to Uncle Sam and buy paper and use it to their financial advantage as they are using Government bonds today. It seems to me it is in the interest of the general welfare that this privilege only be extended about 3 months so as to give these bankers sufficient time to make some loans that are needed and obtain some eligible paper and put this eligible paper up with the Federal Reserve banks and draw back their $600,000,000 in bonds, which would result in $600,000,000 in loans to industry at a very early date.

I should like to have the privilege of discussing this, Mr. Speaker. I do not want to object, but I should like to have assurance of some time when the bill comes up; and if the majority leader will give me such assurance, I shall not object.

Mr. BYRNS. I shall defer to the chairman of the committee, who will have charge of the bill.

Mr. STEAGALL. Mr. Speaker, I may say in reply to the gentleman, I shall be very glad to extend him such time as I may be permitted to do consistent with the practice in cases of this kind. We have a large committee. I have had no requests so far for time on this side of the House, and so far as I now know I shall be in position to extend time to the gentleman, which I shall be very happy to do; but I must subordinate this desire, to some extent at least, to the wishes of the members of the committee, if time is desired by them. I am sure the gentleman will agree with me about this.

Mr. PATMAN. Of course, I appreciate the gentleman is conscientious in what he has said and will do his best to carry it out.

Mr. STEAGALL. I will give the gentleman some time and do the best I can.

Mr. PATMAN. But the gentleman has stated he must subordinate my request to the wishes of the members of the committee. Therefore, if they request the time, I cannot get any time.

Mr. STEAGALL. I will not say that. I will give the gentleman some time.

Mr. PATMAN. I hope the gentleman will assure me that I can have at least 15 minutes.

Mr. STEAGALL. That would be, of course, one fourth of the time. There would be 1 hour which should be given in part to the 25 members of the committee. I think the gentleman will hardly expect that, if it develops that the members of the committee desire time.

Mr. PATMAN. Would the gentleman object to the request being amended so as to have 1 hour and 15 minutes rather than 1 hour, and then let me have the 15 minutes?

Mr. STEAGALL. I have no objection to that.

Mr. BYRNS. May I suggest to my friend from Texas that that is a matter which can be brought up when the bill is called up for consideration? I am sure there will be no disposition on the part of the gentleman from Alabama or any member of the committee to deprive the gentleman of such time as may be necessary.

Mr. STEAGALL. I can assure the gentleman I shall make a request to increase the time 10 minutes in order to accommodate him to that extent.

Mr. LAMNECK. Mr. Speaker, it is time we were having an opportunity to debate these matters on the floor of the House for a longer time. I object.

Mr. SNELL. Mr. Speaker, may I ask the majority leader about the program for the first of next week? There have been several inquiries made, and I have been unable to answer them. Can the gentleman tell us what he expects to come up on Monday or Tuesday of next week?

Mr. BYRNS. As the gentleman knows, Monday is Consent Calendar and suspension day. I do not know whether there will be any suspensions or not. It is contemplated to take up the War Department appropriation bill on Monday for general debate.

Mr. SNELL. It is the purpose to start that bill with general debate on Monday?

Mr. BYRNS. That is the expectation.

Mr. SNELL. And that will be continued on Tuesday?

Mr. BYRNS. Yes; it would be expected to continue the consideration of the bill until its consideration is finished.

Mr. SNELL. Does the gentleman think it will be concluded on Tuesday?

Mr. BYRNS. Oh, no; I think it will take several days.

Mr. MOTT. Mr. Speaker, I ask unanimous consent to address the House for 2 minutes, to make an announcement.

The SPEAKER. Is there objection?

There was no objection.

Mr. MOTT. Mr. Speaker, I desire to announce that I have filed with the Clerk a petition to discharge the Committee on Veterans' Legislation from consideration of the American Legion's four-point bill, H.R. 7151.

I have also filed with the Clerk a petition to discharge the committee from consideration of H.R. 6548, a bill to reinstate the pension status of the Spanish-American War veterans, and to restore those pensions. Both of these bills have been in committee more than 30 days and no action whatever has been taken on either of them.

I have done this on account of the peculiar and unusual action taken yesterday in the reference of the Senate amendments to the independent offices supply bill to the Appropriations Committee, instead of giving the House an opportunity to vote directly on the Senate amendments, either by way of a motion to concur or by reference to a conference. So far as veteran legislation is concerned H.R. 7151 and 6584 cover the same subject as the Senate amendments which were referred to the Appropriations Committee.

Mr. BYRNS. Will the gentleman yield?

Mr. MOTT. I yield to the able leader of the majority.

Mr. BYRNS. There is nothing peculiar or unusual in the reference of the bill to the Appropriations Committee. It may be unusual insofar as the actual practice is concerned, but the rule specifically provides for the bill to be referred to the committee as it was referred under the general rules of the House.

The gentleman implies that it was done for the purpose of depriving Members of the House from voting on the several amendments. The Members will have full opportunity when the bill is reported back to the House to vote on every amendment.

Mr. MOTT. The distinguished gentleman from Tennessee is entitled to his opinion. My own opinion is that it was a most unusual thing, and that it was done for the purpose of preventing the House from voting on a direct issue. I have inquired of many Members, and some of the oldest Members say they cannot remember any instance where that rule was invoked in a case of this kind. The issue was presented for a direct vote to restore the compensation to service-connected disabled World War veterans and to reinstate the pension status of Spanish War veterans. It was not ambiguous, everybody understood it, and everybody was ready to vote upon it. They were entitled to that vote yesterday—not at some future date when the Appropriations Committee gets through with it. I say by referring it to the Appropriations Committee the House was denied that opportunity, and that is the reason I have filed these petitions.

Mr. BYRNS. I want to say to the gentleman as emphatically as he says that it was the purpose to deny the House a vote, that the House will be given an opportunity to vote on every amendment when the bill is reported back. Now, I will say to the gentleman that in the Seventy-first Congress Speaker Nicholas Longworth referred the Interior Department bill on Senate amendments to the Committee on Appropriations, exactly as was done by the Speaker on this occasion. So the gentleman sees there was a very recent precedent for this action taken when the gentleman's party was in control of the House. There are other precedents prior to that action.

Mr. BULWINKLE. I should like to ask the gentleman from Oregon a question. Does he know what the Senate amendments provide?

Mr. MOTT. Yes.

Mr. BULWINKLE. What is it?

Mr. MOTT. I will tell the gentleman. In the first place, the Senate amendment restores to World War service-connected disability cases the status that these cases had prior to the enactment of the Economy Act.

In the second place, it puts the presumptive cases, so-called, back on the statute books with certain specific limitations, giving to them their former rates of compensation, provided they had already established the service connection of their disability by law. Thirdly, the Senate amendments reinstate the pension statutes of Spanish-American War veterans as it existed prior to the passage of the economy act.

[Here the gavel fell.]

Mr. BULWINKLE. Mr. Speaker, I ask unanimous consent that the gentleman may have 2 additional minutes to answer questions.

Mr. BLANTON. Mr. Speaker, I want to ask the gentleman—— [Cries of "Regular order!"]

Mr. BLANTON. If it is to be the regular order, I object.

POTOMAC ELECTRIC POWER CO., WASHINGTON, D.C.

Mr. BLANCHARD. Mr. Speaker, I ask unanimous consent that the action of the House last evening by which the bill S. 1083, authorizing adjustment of the claim of the Potomac Electric Power Co., of Washington, D.C., was passed, be vacated, and that the bill be considered at this time. I do this for the purpose of introducing a clarifying amendment and removing some surplusage in the bill.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent that the proceedings by which the House passed the bill S. 1083 be vacated for the purpose of offering an amendment.

Mr. BYRNS. Mr. Speaker, what is the bill?

Mr. BLANCHARD. It is one of the private bills passed last evening. It contains surplus language with reference to the full and final settlement of the claim. Likewise there is another clause in the bill which was passed which contains the language "final settlement of all claims against the United States." I am informed that the matter should be cleared up.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The proceedings are vacated, and the Clerk will report the bill.

The Clerk read the title of the bill.

Mr. BLANCHARD. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: Page 1, line 10, strike out "in full and final settlement of said claim."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to; and the bill as amended was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

UNFAIR COMPETITION IN COTTON IN INTERSTATE COMMERCE

Mr. JONES. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture, or any member thereof, may have until tomorrow night at midnight to file a report, and, if desired, minority views, on the bill H.R. 8402, the so-called "Bankhead bill", to place the cotton industry on a sound commercial basis, to prevent unfair competition and practices in putting cotton into the channels of interstate and foreign commerce, to provide funds for paying additional benefits under the Agricultural Adjustment Act, and for other purposes.

The SPEAKER. The gentleman from Texas asks unanimous consent that the Committee on Agriculture, or any member thereof, may have until 12 o'clock midnight tomorrow to file a report and minority views on the bill H.R. 8402. Is there objection?

There was no objection.

ONE YEAR WITH PRESIDENT ROOSEVELT

Mr. ELLENBOGEN. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. ELLENBOGEN. Mr. Speaker, next Sunday is March 4, 1934, exactly 1 year since Franklin D. Roosevelt took office as President of the United States. I feel that it is

fitting that I should devote this talk to the President and to a discussion of his accomplishments.

Let me take you back with me into history and let us try to remember the condition which existed in the United States 1 short year ago, and the sentiment of our people at that time.

COLLAPSE OF THE BANKING SYSTEM AND THE GRAVE STATE OF THE NATION

On March 4, 1933, at 12 noon, just before the President took office, our entire banking system had collapsed. There was hardly a bank in the United States which could have opened its doors for business on the following Monday. One State after another, one Governor after another, had been forced to declare a banking moratorium; the confidence of the people in the entire banking system had been destroyed and those banks that had opened their doors on the morning of March 4, 1933, were faced with long lines of depositors who demanded the return of their money.

Millions of our people were without employment or adequate means of livelihood. The figures most widely quoted were that 13,000,000 people were unemployed. Statistics which have since become available have convinced me that this figure was altogether too low. I venture to say that in March 1933 in excess of 16,000,000 people in the United States were unemployed.

Weakened by over 3½ years of misery and want, hunger and cold, their confidence in a better future undermined, and their faith in our Government shaken, there was then real danger of violence and bloodshed, and perhaps even of revolt.

Wall Street and the money changers had admitted their impotence, and were imploring the Government at Washington to help them. The wheels had stopped turning in our factories. The workshops were idle and bare. Most of our mines were shut down.

Rather than sell the products of his labor at a loss, the farmer permitted food to rot in the fields.

Historians will place their own estimate on the state of the Union at that time. But you and I, who have lived through those days, know that our people were despairing; that our economic structure was tottering; and that even our Government was in danger.

INAUGURAL OF THE PRESIDENT

I shall never forget March 4, 1933, in Washington. I was standing on the inaugural platform. Heavy clouds were hanging over the city and a strong wind was fiercely howling and driving the clouds before it. A few feet away from me Franklin D. Roosevelt, with his hand uplifted and his eyes piercing the future, was taking the oath of office as President of the United States. All America was holding its breath.

Then the new President spoke. He uttered words of hope and of strength, of better days, and of a new deal. As he finished speaking the sun broke through the clouds and the people cheered. It looked as if the heavens were greeting Roosevelt and promising the harassed people of America better days.

From the very moment that Franklin D. Roosevelt took office he faced his problems openly and frankly and took the American people into his confidence. His inaugural address began as follows:

> I am certain that my fellow Americans expect that on my induction into the Presidency I will address them with a candor and a decision which the present situation of our Nation impels. This is preeminently the time to speak the truth, the whole truth, frankly and boldly. Nor need we shrink from honestly facing conditions in our country today. This great Nation will endure as it has endured, will revive, and will prosper.

This policy of open, frank, and fair discussion, and of telling the people the exact truth, the President has followed ever since.

Further on in his address the President said that "this Nation asks for action—action now."

THE PRESIDENT RESTORES THE PEOPLE'S CONFIDENCE IN THE BANKS

Action is what Roosevelt has given the American people.

Facing the situation that existed, Franklin D. Roosevelt, 36 hours after he had taken office, issued a proclamation which legally closed all the banks of the Nation. Then he called Congress into special session, and, through the Emergency Banking Act, provided the currency that was needed if the banks were to be reopened.

The strength, determination, and wisdom of the new President became at once so apparent that he was able to instill new hope and confidence in the hearts of the people, and lay the foundation for the reopening of the banks only a few days later. There were no more runs on the banks. Depositors accepted the assurance of the President that their money was safe and left it there. In fact, hundreds of millions of dollars of currency which had been hoarded were returned to the banks.

THE PRESIDENT'S MEASURES FOR UNEMPLOYMENT RELIEF

In his inaugural address the President had this to say about unemployment:

> Our greatest primary task is to put people to work.

The President at once applied himself to this task. He provided for the recruiting of 300,000 young men and veterans and placed them in the forests to rebuild the woodlands, to fight fires, build trails, and to preserve the natural forests as a heritage of the American people.

Then the President secured the appropriation of $500,000,000 to be contributed by the Federal Government to the various States and municipalities for the relief of the unemployed. The President obtained a Public Works appropriation of $3,300,000,000 to be used in the construction of needful and useful public improvements and thus provide jobs for more than 3,000,000 jobless.

Four hundred million dollars allotted for Public Works were later separated and used for the creation of a Civil Works Administration, which in 4 months provided jobs for 4,000,000 men and women at fair wages.

The C.W.A. was a real blessing to the people, in spite of the fact that some zealous politicians tried to use its machinery to provide their favorites with jobs and to create a political machine out of human misery and suffering.

THE HOME OWNERS' LOAN ACT AND ITS FAR-REACHING IMPORTANCE IN HOME FINANCING

The President then secured the passage of the Home Owners' Loan Act, which created the Home Owners' Loan Corporation for the purpose of relieving the distress of home owners and in saving their homes from foreclosure. Under this act 93,595 homes have been saved in the United States.

While the act has not been administered with the speed and efficiency that was expected, the principle underlying the act is sound. I have proposed in Congress numerous amendments to the Home Owners' Loan Act and am determined to obtain its extension so that it will give real relief for harassed home owners.

The Home Owners' Loan Act pointed a new way in the financing of homes. It substituted in the place of a 3-year mortgage, which had to be renewed every 3 years and which was a constant danger to the home owner, a new type of mortgage, one which matured in 15 years and which may be easily paid off by small monthly payments. The act of Congress also substituted for interest rates, which ranged from 6 to 9 percent, a rate of only 5 percent.

The influence of the Home Owners' Loan Act upon the financing of homes in the country will be far-reaching and lasting. It will, I hope, force the establishment of a permanent method of financing the homes of the American people at low rates of interest and under long-term mortgages.

THE NATIONAL INDUSTRIAL RECOVERY ACT

Outstanding in its place on the President's recovery program is the National Industrial Recovery Act. Under that act the President abolished child labor throughout the length and breadth of the United States. He did away with the sweatshop in which Americans have been exploited to work long hours at miserable wages, sometimes less than $1 per week.

Hours of labor were lessened and higher wages provided. Labor was given the right to organize in unions of its own choice and to bargain collectively with its employers. Busi-

ness and industry were allowed to organize into trade associations and to govern themselves so that unfair trade practices and unfair competition would be removed.

The N.R.A. has its faults and its shortcomings. It has not been enforced adequately enough to ward off the criticism that is made against it. Nevertheless, and allowing all complaint, it has been a tremendous force for the better. It has achieved things for the worker, for the business man, and for industry, which I hope will be of permanent benefit.

LASTING BENEFITS OF THE TENNESSEE VALLEY DEVELOPMENT PROJECT

The Roosevelt plan for the development of the Tennessee Valley will be of lasting value to the Nation. Here the Government will generate electricity by using dams, will provide flood control, reforestation, and other incidental work—in short, achieve complete development of the great resources of the Tennessee Valley. It will provide the yardstick to prove to the American people that electricity can be manufactured and developed for a small part of the cost which is now saddled upon the consumer of electric power.

The project has hardly begun, yet it has already saved millions of dollars to the consumer of electric power in the Tennessee Valley. I am confident that when the Muscle Shoals project is finally developed and functioning it will force reduction of the charges for electric current throughout the United States which will save the consumer of electricity more than a billion dollars. It will permit the free and ready use of electricity in industry and in the home and will hasten the coming of the electric age. Extortionate and excessive charges by electric-power companies must be reduced to a proper basis, and the President has taken the lead in the fight to bring that about.

INSURANCE OF BANK DEPOSITS

Another matter of utmost importance was the insurance of bank deposits. Beginning on January 1, 1934, all deposits in banks which are part of the Federal Reserve System and in such State banks as join the insurance system are insured by a corporation created by the Federal Government. Beginning July 1, 1934, all deposits up to $10,000 will be fully insured, deposits exceeding $10,000 up to $50,000 will be insured 75 percent, and all deposits beyond $75,000 will be insured 50 percent.

This act is of the most importance because it not only safeguarded deposits but assured the safe return of his savings whenever required by the depositor. Further, it gave to the banks themselves confidence that the deposits would not be recalled in an emergency by anxious depositors.

Since this act has taken effect, there is no legitimate excuse why the banks should not loan money for industrial and commercial purposes. A bank which refuses to make loans on safe security fails to perform its function as a bank, and becomes a corporate hoarder of money.

THE GREAT IMPORTANCE OF THE PRESIDENT'S MONETARY POLICY

Of fundamental importance is the monetary policy pursued by President Roosevelt. This policy was inaugurated with the embargo on the export of gold in the spring of 1933, and the decision to suspend the exchange of currency notes for gold, thus bringing about a temporary suspension of the gold standard in the United States.

In October 1933 the President began the purchase of gold in the United States and abroad to raise the domestic price level and thus bring about a general recovery.

The latest chapter in the monetary policy was written with the enactment of the currency bill by this session of Congress on January 30. Under this bill, the President revalued the gold dollar at 59.4 percent. A stabilization fund of $2,000,000,000 was created to be used to protect our foreign trade and to preserve our currency at a level that would best serve the interests of the United States and of our people.

Ownership of three and one half billion dollars in gold, held by the Federal Reserve bank, was vested in the Government of the United States. The President removed the iron grip of financial giants from the throats of our people and set in motion machinery which would bring a more stable dollar, a sound dollar, a dollar that will not be too high and unfair to the debtor nor too low and unfair to the creditor. The basis was laid for the reduction of the burden of a debt which had become unbearable for the home owner, for the farmer, and for the middle class.

On February 15, an appropriation of nearly $1,000,000,000 was made to continue Federal expenditures for unemployment relief and for work relief in the form of C.W.A.

I could easily continue to recite to you the many more legislative acts which were passed under the leadership of President Roosevelt and the numerous administrative actions which were begun under his command. So numerous and so far-reaching, and of such fundamental importance are the acts of Congress, as well as the Executive orders, that it is almost unbelievable that they were accomplished within 1 short year.

PRESIDENT FRANKLIN D. ROOSEVELT

I cannot conclude this talk without speaking about the personality of Franklin D. Roosevelt himself.

I have been privileged to come in contact with our President on several occasions. I have had the good fortune to meet with him in the Governor's office at Albany and in his study at the White House.

President Roosevelt is a man of rare charm and graciousness. He is unusually well informed and discusses with his numerous visitors all kinds of problems. The United States does not have another man today who has such an intimate grasp on the manifold problems besetting the American Nation and the entire world.

His spirit of courage and determination, of confidence and hope, has emanated from the White House and taken hold of the American people. He has set the pace of work in Washington. From morning until night he toils incessantly for the benefit of our people, and has inspired all those around him to do likewise. There has never been in Washington a time when such long and ardous work was carried on with such good spirit and with the hope and confidence in a great future for the American people.

President Roosevelt was elected for a 4-year term, of which only 1 year has expired. I predict that he will be elected to a second term with a majority never before given a Presidential candidate.

THE OUTLOOK FOR THE FUTURE

Difficult are the problems confronting all of us today. Unrest is abroad in the world and war is threatening in many parts of the world. In continental Europe democracy seems to have perished. But America is progressing steadily and safely toward a happier day under the inspired leadership of President Roosevelt. We love him, we admire him, and we believe in him. May God bless him and may he be preserved for the benefit of the people of this country for a long time to come.

Mr. BECK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by including therein an interesting and important statement published in the New York Times on February 28, by the Honorable John W. Davis.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent to extend his remarks by inserting a statement by Hon. John W. Davis. Is there objection?

Mr. LAMBETH. Mr. Speaker, I object.

AGRICULTURAL APPROPRIATION BILL

Mr. SANDLIN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H.R. 8134) making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1935, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. GREGORY in the chair.

The Clerk read the title of the bill.

The Clerk read as follows:

For cooperation with the various States or other appropriate agencies in forest-fire prevention and suppression and the protection of timbered and cut-over lands in accordance with the pro-

visions of sections 1, 2, and 3 of the act entitled "An act to provide for the protection of forest lands, for the reforestation of denuded areas, for the extension of national forests, and for other purposes, in order to promote continuous production of timber on lands chiefly valuable therefor", approved June 7, 1924 (U.S.C., title 16, secs. 564–570), as amended, including also the study of the effect of tax laws and the investigation of timber insurance as provided in section 3 of said act, $1,198,619, of which $23,859 shall be available for departmental personal services in the District of Columbia and not to exceed $1,500 for the purchase of supplies and equipment required for the purposes of said act in the District of Columbia.

Mr. WHITE. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment by Mr. WHITE: Page 43, line 23, strike out "$1,198,619" and insert "$1,700,000."

Mr. WHITE. Mr. Chairman, the activity of the Forestry Bureau of the Government in cooperating with privately owned timber owners and with the States in protecting valuable stands of timber from fire, now supported by a cooperatively financed organization in the several States, is one of the most valuable activities in which the Government is engaged. We have in the forests of the West these organizations which are equipped for fire suppression and fire patrol. They have their men and equipment at strategic points; but, due to the depression and existing conditions, we are unable to finance those organizations adequately without support of the Government. I submit that we should increase this appropriation by at least $500,000, so that we may adequately protect State and National and privately owned forests from the fire hazard and the ravages of the white-pine blister rust. For that reason I ask that the appropriation be increased in the amount of $500,000.

Mr. SANDLIN. Mr. Chairman, I rise in opposition to the amendment. The appropriation carried in this bill for this purpose is the same amount expended and to be expended in the fiscal year 1934. Of course, all of the items in this bill were cut 25 percent last year, and this item is in the same status. A great many of the items in the bill were reduced below the 25-percent cut, but the appropriations carried for this item are the same as expended or to be expended in the fiscal year 1934.

Mr. GOSS. Mr. Chairman, I think the gentleman should explain how much money for this same item has been expended in the C.C.C. work.

Mr. SANDLIN. We all know that it is very difficult to tell exactly how much money was used for that purpose in those C.C.C. camps.

Mr. GOSS. There was considerable.

Mr. SANDLIN. Millions of dollars have been expended in the C.C.C. camps, and, as I understand from the testimony, this type of work was done by the men in those camps.

Mr. GOSS. And, as a matter of fact, they had about 30 of those men in this forest district doing the same work for which the gentleman is trying to boost the appropriation. We have no information that those camps will be discontinued. The gentleman is having all of that extra work done by those men outside of this appropriation.

Mr. WHITE. Mr. Chairman, it should be explained that the C.C.C. force are valuable in the suppression of fires after the fire is started, but we must have the organization to prevent forest fires. We must have the equipment and we must have experienced men. We must have men to patrol these forests and spot these fires and have depots located at strategic points. We have an organization out there of trained men and they must be supported. The lumber companies have been very liberal in their contributions as far as their means will permit, but in the depression they have not been able to carry on. I submit the C.C.C. is useful in suppressing fires, but that is not fire prevention.

We want to prevent all forest fires. When the lightning strikes or some fire gets started, we want to catch it at the inception and stop it. We should not wait until the forest burns and then call in the C.C.C. A paltry $500,000 to carry on this work is needed, if anything is needed, in this appropriation bill.

Mr. LLOYD. Mr. Chairman, I move to strike out the last word.

I rise in support of this amendment. Those who have not lived in the Northwest can hardly appreciate what this means. In my own State alone the Government owns billions of feet of timber. The States, private industry, and private owners are doing everything possible to carry out this great scheme, this study for the prevention of fires. The gentleman from Idaho [Mr. WHITE] and I have seen more than the entire amount of this appropriation in timber value go up in smoke in a single day. We have seen more than $2,000,000 worth of timber destroyed in 24 hours in the Northwest. Those things will happen again. The C.C.C. may be with us for a little while, but this is a plan to develop for the future. You cannot indulge in a penny-wise and pound-foolish proposition in this scheme.

Mr. GOSS. Will the gentleman yield?

Mr. LLOYD. I will be glad to yield to the gentleman.

Mr. GOSS. Is not the gentleman referring to timberlands privately owned more than he is to the national forests?

Mr. LLOYD. Both the national forests and the private owner as well, as I read this hurriedly. This is a study for the prevention of fires in the future.

Mr. GOSS. Near national forests?

Mr. LLOYD. Near national forests. The national forests are scattered throughout the Northwest. You will find a part of a national forest and then you will find a part that is privately owned. It is impossible to disassociate them because when a fire gets started it sweeps over a mountain side and takes both. Two million dollars would not be a large amount for this at all. It would be insurance well spent.

[Here the gavel fell.]

Mr. KVALE. Mr. Chairman, I rise in support of the amendment.

I think if the Members of this House understood the tremendous economy involved here they would not haggle over this addition of a few hundred thousand dollars. As the gentleman from Washington [Mr. LLOYD] so ably said, it is simply insurance against fire.

I believe the committee is sincere in believing that they are supplying adequately for this cooperative work. It carries out, presumably, the full Government responsibility under the Clarke-McNary Act, which guaranteed to the States a certain set sum of money—about 1 to 3, roughly speaking—to be matched by the States.

We appeared before the gentleman's committee, as the chairman will recall. Since the committee decided adversely, we have also been to see the Director of the Budget. The gentleman from Idaho [Mr. WHITE] was kind enough to invite me to accompany him, together with some representatives of forestry associations, one morning to call on the Director of the Budget, yet there again we were evidently unsuccessful.

It is not fire eradication; it is not fire suppression that is involved here at all. Get that. The C.C.C. men have been wonderfully helpful in these various areas in getting out after a fire is beyond control, to help to suppress it, but this item is not for suppression. This is for prevention of fires.

It involves the manning of the lookout towers; it involves the smoke chasers that go to the first sign of smoke and stop the fire before it spreads. It involves patrolmen, experienced. It involves protective and not suppressive work, and that is why the gentleman from Washington [Mr. LLOYD] so well referred to it as insurance.

I hope this item can be included in the bill. It means a great deal to the 39 States involved. It involves the disorganization of an outfit of experienced men which has been carefully built up, and the States have a right to believe that the Government will exercise the good faith that was demonstrated at the time the enabling act was passed.

Mr. Chairman, I ask unanimous consent to include in my remarks at this point a statement prepared by my State forester, Mr. Grover M. Conzet, and by him submitted to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota [Mr. KVALE]?

There was no objection.

The matter referred to is as follows:

1. The Clarke-McNary Act was passed by Congress in 1924 and provided for Federal allotments of money for forest-fire protection to States setting up a fire-protection system and appropriating money therefor. As a result 39 States have built up a system of forest-fire protection based on the anticipation of a definite permanent allotment from the Federal Government in accordance with the plans and regulations set up by the Forest Service, United States Department of Agriculture.

2. The State of Minnesota has increased its fire-protection appropriations from $75,000 a year to $209,000 a year and very materially improved its system of fire protection as a result of the encouragement given it by the Clarke-McNary law and the Federal Government.

3. Minnesota and in all but a few of the other States, in spite of the economic conditions, have not reduced their State appropriations more than the amount of salary reductions, and in some items made a slight increase. The Federal reduction of allotments to Minnesota amounts to something over $27,000, and means a permanent lay-off at this time for more than 30 men.

4. The regular overhead in any State department is more or less fixed and very difficult to change to any extent. That means that most of the reduction in the fire-protection force at this time because of the lack of funds from the Federal Government reflects back to the men in the field such as look-out-tower men, smoke chasers, fire guards, fire foremen, and law-enforcement officers. These are the backbone of the fire-protection organization.

5. Various States for many years, aided by Clarke-McNary allotments, have rapidly built up a budget for tree planting and definite forest management and cultural work. The conservation camps, which number 1,680 over the United States, all do a large amount of tree planting and cultural work, the future success of which depends entirely on adequate fire protection. One or two seasons without adequate fire protection and adverse weather conditions would wipe these millions of dollars of development and improvement out of existence.

6. Minnesota and most of the States have ample provisions for fire-suppression money, but they lack that for fire prevention and forest patrol, much of which is depended upon from the Federal Government.

7. The rate of wages and fire-equipment costs have materially increased, which further embarasses available funds.

8. Fire hazards are very greatly increasing. Economic conditions have started a very definite back-to-the-farm movement, particularly in the cut-over and forest regions. Minnesota statistics show that 50 percent of the forest fires originate from some agricultural pursuit. This back-to-the-farm movement is very definitely going to increase the forest-fire protection problem. The use of fire in land clearing is recognized and such land clearing requires the aid and supervision of a trained field force.

9. Many of the Central and Western States have experienced extreme drought conditions for the past several years, which has greatly increased the fire hazard and the cost of protection. On account of the lack of employment, many incendiary fires have been started for the purpose of gaining work. The tourists and traveling public in general feel more than ever that they are entitled to free use of all forest land for hunting, camping, and fishing. This situation is clearly brought out in the Copeland report presented to the Seventy-second Congress and entitled "A National Plan for American Forestry."

10. The Conservation Corps camps are doing a very excellent work in the State and National forests. They are constructing a large number of trails, telephone lines, and look-out towers, all of which will assist very materially in better fire protection and improvement of the forests, but without man power for protection this work will be greatly depreciated in value. The Civilian Conservation Corps camps are valuable in emergencies for fire-suppression work, but cannot be used in fire-prevention activities.

11. Due to the type of men and the organization of the departments, the State forest service and various departments of conservation are best organized to give proper and immediate action on all of the President's emergency projects such as Public Works Administration, Civil Works Administration, and Civilian Conservation Corps. This takes an exceptional amount of extra time from the regular forces and along with that a decided amount of money for travel and subsistence. This aid has been willingly granted because of the recognized potential benefits to be derived in the future.

12. The Federal Government has a very decided interest in all types of mercantile timber, ground cover, and natural resources, regardless of the status of ownership. Watershed protection, regulation of stream flow, and national defense are most important and play their part regardless of whether it is private, State, or Federal lands. Eighty-five to ninety-five percent of the cost of manufacturing wood products is in labor and other incidentals. It is nationally important to keep these forests productive.

13. The President has taken a direct personal interest in the proper formulation of a lumber code. He has especially provided in this code article X, which defines that certain cutting methods and cultural systems must be carried out by the forest industries in order to insure a recurring crop. This crop must be protected from the dangers arising from the free use of all forest land by the citizens of the United States.

Mr. HOLMES. Will the gentleman yield?

Mr. KVALE. I yield.

Mr. HOLMES. Do the respective States where these forests are located make any contribution at all to the fire prevention within their own States?

Mr. KVALE. Oh, indeed, yes; three to one.

Mr. HOLMES. In other words, they are carrying their local burdens as far as they can?

Mr. KVALE. They are carrying out their end of the contract. They furnish at least 75 percent of the funds. If these funds are not provided, upon which they had based their original plans, their organization will crumble. They will have to dismiss these experienced men. It will have a terrific potential effect in the way of fires. They will be able to suppress them, certainly, but we are trying to prevent them before they occur.

Mr. GOSS. Will the gentleman yield?

Mr. KVALE. I yield.

Mr. GOSS. The gentleman is aware that this bill appropriates the same amount that was carried last year. In addition, we have had the benefit of all this C.C.C. work. Now, where in all these expenditures is the proper place to stop?

This fire prevention is just as interesting to the cities, I would say to the gentleman, as it is to the people in the wooded areas. Cities have been wiped out as well as timberlands.

Mr. KVALE. Certainly.

Mr. GOSS. It is a big problem, but I am not prepared to say that, if we raise it half a million or a million or five million, we could accomplish what the gentleman and I should like to see done to stop these fires. The question is how far we should go.

[Here the gavel fell.]

Mr. KVALE. Mr. Chairman, I ask unanimous consent to proceed for 1 additional minute.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. KVALE. The gentleman is, of course, guided by the highest motives. His colleagues who know him recognize that. Yet the point is if the amendment offered by the gentleman from Idaho [Mr. WHITE] is accepted and incorporated into the bill, the necessary amounts will go to the various States so that they continue their present organization. I have no time to describe the situation as it specifically affects the States.

Mr. GOSS. It is the same amount that was in last year's bill, that they set up their basis on.

Mr. BROWN of Kentucky. Is it not a fact several new areas have been added to the forest reserves this year?

Mr. GOSS. No; very little area has been added, I may say to the gentleman from Kentucky.

Mr. KVALE. No; I do not think that this consideration enters in. It involved promises and commitments by our Government that led States to make definite appropriations and set-ups last year. Then last year we gave them a million and a half. On that basis their legislatures acted and adjourned. The work went on. Like a thunderbolt our action late last summer in impounding funds under the Economy Act crippled them. They could carry on after a fashion for a time. But when members of the committee now tell us they allow the sum available last year they may mean to be fair, but they certainly are not so.

This impounding of funds embarrassed our several State set-ups, but they could carry on for the season. Now, however, the State legislatures, most of them have met. They have had no notice this was to be a permanent policy. They believed the Federal Government would keep its end of the agreement under the Clarke-McNary Act.

This pinch was not felt last—this fiscal—year. I have tried to state the reasons. But now, if the Federal Government breaks faith, under the shallow plea that this bill makes available what they had last year, despite the fact

that the impounding of the stated moneys was accomplished in a midsummer surprise move, these organizations of experienced workers will break down, and our preventive work will suffer a most severe set-back, as Mr. Conzet so eloquently described.

This preventive force—not the suppression force—is built up of experienced men under the terms of the Clarke-McNary Act. It is this force which is now to be broken up as the direct result of our evidence of bad faith and our deliberate failure to live up to our contract.

My State has not reduced its annual appropriations by a penny, believing that the Federal Government would surely live up to its promises. It is pitiful; deplorable. I have gone through and through these forest areas, seen fire sweep through with its devastation, climbed the look-out towers, seen the threatening smoke plumes in hazardous weather, spoken with the rangers in charge of the preventive and suppression work, seen the cathedrallike virgin pines changed into a blazing inferno that needed mass assembly of men and equipment to halt its progress. I know how infinitely better it is to expend money and energy on prevention rather than on suppression.

All that is involved in this item. Now, our States are taken unaware. We fail in meeting our obligation under the Clarke-McNary Act. We say we give them what they had last year—and fail to add that this surprise impounding of part of the funds failed to show its effect until now. We neglect to say that $1,700,000 would be, roughly, our 25 percent, as agreed. We ignore the fact that legislatures in most States now cannot meet to correct this cruel neglect and preserve these State set-ups.

I fervently hope that another deliberative body can take cognizance of some of these facts, affecting as they do 39 of our 48 States, and can replace this relatively small item that will enable the several States to preserve a carefully organized force of thoroughly trained personnel who guard our natural resources against a dread enemy—fire—and who are a most economical insurance against a wasteful, destroying force that can take its toll in 1 day with a destruction in actual value many times that of what we propose to spend today.

Mr. BUCHANAN. Mr. Chairman, I move to strike out the last three words.

I want to say to the Members of the House that this is a cooperative appropriation, the proportion being governed by law. Under appropriations heretofore allowed, the Federal Government has been contributing just about the same as the State governments and private interests have been contributing. The appropriation carried in this bill is sufficient to meet the contributions of the States and private enterprise dollar for dollar; and we should carry no more. In addition nearly $15,000,000 has been spent for the prevention of fire in the forest area, public and private, in the United States; and this was spent by the Government from emergency allotments from the C.W.A. and the Public Works funds. Therefore this amendment ought not to be adopted.

The CHAIRMAN. The question is on the amendment of the gentleman from Idaho [Mr. WHITE].

The question was taken; and on a division (demanded by Mr. MARTIN of Colorado) there were—ayes 28, noes 57.

So the amendment was rejected.

The Clerk read as follows:

Forest insects: For insects affecting forests and forest products, under section 4 of the act approved May 22, 1928 (U.S.C., supp. VI, title 16, sec. 581c), entitled "An act to insure adequate supplies of timber and other forest products for the people of the United States, to promote the full use for timber growing and other purposes of forest lands in the United States, including farm wood lots and those abandoned areas not suitable for agricultural production, and to secure the correlation and the most economical conduct of forest research in the Department of Agriculture, through research in reforestation, timber growing, protection, utilization, forest economics, and related subjects", $145,655.

Mr. WOLVERTON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WOLVERTON: On page 52, line 8, after the conclusion of the sentence before line 9, insert a new paragraph to read as follows:

"Gypsy and brown-tail moth. For the control and prevention of spread of the gypsy and brown-tail moth, $300,000."

Mr. BLANTON. Mr. Chairman, I reserve a point of order on the amendment.

Mr. WOLVERTON. Mr. Chairman, I offer this amendment to meet a situation that has been called to my attention by Hon. A. Harry Moore, Governor of the State of New Jersey, and by the secretary of agriculture of the State of New Jersey. I ask unanimous consent to read telegrams received by me from these officials of the State of New Jersey as part of my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. WOLVERTON (reading):

STATEHOUSE,
Trenton, N.J., February 28, 1934.

Hon. CHARLES A. WOLVERTON,
House of Representatives:

Urge inclusion of $500,000 in Federal appropriation bill for gypsy moth. Understand no provision in present bill. We have exterminated gypsy moth in New Jersey and do not want reinfestation.

A. HARRY MOORE, *Governor.*

Another telegram was received by me from William B. Duryee, secretary of agriculture for the State of New Jersey. It reads:

TRENTON, N.J., *February 28, 1934.*

Hon. CHARLES A. WOLVERTON,
House of Representatives:

Understand no Federal appropriation provided for gypsy moth. Failure to include this item will expose New Jersey to reinfestation and invalidate work and expenditures of past 10 years. Infestation in Pennsylvania sure to invade New Jersey if no money appropriated. At least five hundred thousand should be provided.

WILLIAM B. DURYEE,
Secretary of Agriculture.

These telegrams present a very serious situation that is facing not only New Jersey but also the States of Pennsylvania, New York, Connecticut, Rhode Island, Massachusetts, and Vermont.

The last appropriation bill carried the sum of $408,388 for the control and prevention of spread of the gypsy moth and brown-tail moths. This appropriation bill carries no appropriation whatsoever.

There is a real danger therefore that this destructive species of moth will spread elsewhere throughout the country. The possibility of distribution of the gypsy moth over long distances on shipments of products which might carry it is illustrated by inspection records on such shipments.

The testimony given by Lee A. Strong, Chief of the United States Bureau of Entomology and Plant Quarantine, when he appeared before the Appropriation Subcommittee on Agriculture, January 22, last, shows that during the period the quarantine has been in force up to the end of the fiscal year 1932 more than 101,672 gypsy-moth egg clusters have been removed from shipments, as well as 11,337 specimens in other than egg state. Infestations have actually been discovered on and removed from shipments destined to every State except Idaho, Montana, Nevada, and Oregon. Thus it will be readily seen that the danger is national in scope and not merely local.

The inspection and certification covers commodities which are grouped into nursery, quarry, forest, and evergreen products. Industries located within the infested area and which deal with articles likely to carry this insect are enabled under Federal certification to ship their products in a normal way. If there were no Federal certification, State quarantines, which are practically embargoes, would be in effect in nearly every State. An interstate business in such articles would operate under a severe handicap.

During the fiscal year 1933 certification covered: Evergreen products, 463 carloads and 103,766 less-than-carload lots; forest products, 2,427 carloads, 6 barge loads, and 26,633 less-than-carload lots; nursery products, 124 car-

loads and 57,958 less-than-carload lots; stone and quarry products, 169 barge loads, 4,957 carloads, and 125,623 less-than-carload lots.

Cooperation is being maintained during the fiscal year 1934 with nine States, which States contributed an aggregate amount of $1,161,017 to the cooperative work.

It is true that the President's Budget message indicates that $99,282 of Public Works allotments will be expended for this activity for 1935, but this amount is so small, compared to the amount needed to maintain this important work, that it is almost valueless. A comparison of this small allotment with the appropriations formerly made gives a clear understanding of why I am insisting that it is too small to be of any real value. In 1932 the appropriation was $648,580, in 1933 it was $400,000, and in 1934 it was $408,388. In addition to this latter amount there was also allotted a very considerable sum from P.W.A. funds for projects in New York, Vermont, Massachusetts, Connecticut, and Pennsylvania. There has also been considerable work done by the C.W.A. But the fact, nevertheless, remains that if no appropriation is made in this bill, it will mean a curtailment and reduction in the amount of inspection furnished and in the other and worthwhile activities incidental to the control and prevention of the gypsy and brown-tail moths.

It seems to me to be unwise to curtail this important work at this time. The money already expended by the Federal and State Governments is beginning to show results. A reduction of activity at this time will most surely result in a necessity for larger appropriations at a later date.

I appeal for a favorable consideration of the amendment so that there will be no let-up in the important work being done by this Department.

We owe it to the States which have already contributed large sums to carry on the work in cooperation with governmental agencies.

By way of explanation as to how the amount of $300,000 was determined, let me say that the Department of Agriculture appropriation bill as it was passed last year carried $408,000 for this purpose. This year, as I understand, something over $99,000 has been set aside under the President's Budget message to be used for this work. Therefore, with the $300,000 provided by this amendment, the appropriation for control and prevention of gypsy and brown-tail moths is brought up to approximately the same amount as appropriated last year. The present bill carries no appropriation whatsoever for the control and prevention of the gypsy moth.

Mr. MALONEY of Connecticut. Mr. Chairman, will the gentleman yield?

Mr. WOLVERTON. I yield.

Mr. MALONEY of Connecticut. I should like to make the observation that other parts of the country are similarly interested, and I, too, received like telegrams and communications from my State.

Mr. WOLVERTON. I have pointed out that the control and prevention work is carried on particularly in Pennsylvania, New York, Connecticut, Rhode Island, Massachusetts, and Vermont; but the beneficial effect, as I have stated, reaches throughout the country.

[Here the gavel fell.]

Mr. SANDLIN. Mr. Chairman, I rise in opposition to the amendment.

I appreciate the interest of the gentleman from New Jersey, but the fact is that instead of having $300,000 for this work as provided in his amendment, he will have $360,000, just $60,000 more than he asks for.

There was set aside from the Public Works fund for this same type of work, $1,921,338.

While it is true there is no language carried in this bill to take care of it and there was some question whether or not the bureau of the Department of Agriculture which is handling this matter would have the authority to use any part of this fund beyond the 1st day of July 1934, there are several other items in the bill in the same status as this one; and after a conference with Mr. Burlew, of the Public Works Administration, with the gentleman from Texas [Mr. BUCHANAN], Chairman of the Appropriations Committee, and Mr. Douglas, Director of the Budget, and after phoning Mr. McCarl, the Comptroller General, to see whether it would be satisfactory, the following resolution was agreed on, and we have every assurance that this resolution, if passed by Congress, would take care of the item mentioned by the gentleman from New Jersey. It is included in a letter addressed to the gentleman from Texas [Mr. BUCHANAN], which I will read:

FEDERAL EMERGENCY ADMINISTRATOR OF PUBLIC WORKS,
Washington, D.C., February 15, 1934.

HON. JAMES F. BUCHANAN,
Chairman Appropriations Committee,
House of Representatives.

MY DEAR MR. BUCHANAN: Referring to Administrator Ickes' letter of February 8, regarding the items omitted from the appropriation bill for the Department of Agriculture by reason of Public Works allotments, I enclose a copy of the resolution passed by the Special Board for Public Works, which confirms the action taken by the Budget.

Sincerely yours,

E. K. BURLEW,
For the Administrator.

RESOLUTION FOR SPECIAL BOARD

Whereas the President in presenting the 1935 Budget to Congress has stated that the Administrator and this Board have heretofore allotted funds to the Forest Service, Department of Agriculture, to finance its program for aerial fire control, sanitation, and fire prevention, for planting on national forests, for reconnaissance national forests, and for a forest survey (the Budget, 1935, p. 23) and that the Administrator and this Board have allotted funds to the Bureau of Entomology and Plant Quarantine, Department of Agriculture, to finance its program for gypsy and brown-tail moth, blister-rust control, Dutch elm disease and barberry eradication (the Budget, 1935, p. 24);

Whereas the President in so presenting the Budget has included in the comprehensive program of Public Works the said projects of the Department of Agriculture and it is necessary for accounting purposes that the Administrator and Special Board of Public Works register the President's action in the premises:

Resolved, That said projects be included in the comprehensive program and that the Forest Service and the Bureau of Entomology and Plant Quarantine be authorized and empowered to make expenditures toward accomplishment of said projects in the amounts and for the purposes stated in the Budget for 1935.

Mr. WOLVERTON. Will the gentleman yield for a question?

Mr. SANDLIN. Yes; I yield to the gentleman from New Jersey.

Mr. WOLVERTON. Does the resolution which the gentleman has just read fix a definite amount of expenditure for this particular agency?

Mr. SANDLIN. I yield to the gentleman from Texas [Mr. BUCHANAN] to answer the question.

Mr. BUCHANAN. Yes; it does. There is $360,000 of Public Works money allotted for the gypsy and brown-tail moth unexpended and this will be retained to be expended during the next fiscal year. That is the reason this item was not in the bill.

The Public Works Administration allotted $2,020,000 for the gypsy and brown-tail moth, five times as much as we appropriated last year. They entered an order that this money must be spent during the fiscal year 1934. This was a foolish order. When any department is required to spend money in such a rush it cannot be spent efficiently.

Mr. SINCLAIR. Will the gentleman include all the other items in his statement?

[Here the gavel fell.]

Mr. BUCHANAN. Mr. Chairman, I move to strike out the last three words.

I might as well explain the situation as to the several appropriations.

In the first place, in my judgment, for this Government to have two appropriating authorities, one in the legislative branch and the other in the executive branch, is inimical to an economical Government. [Applause.] This is what we have had during this fiscal year. Congress appropriated $3,300,000,000 for the Public Works relief program, and most of that vast sum has been allotted by what is called the Public Works Board, a majority of whom are Cabinet officers.

Heads of departments generally have an interest in trying to get more money for their respective departments. They

thus allotted $2,400,000,000 out of the $3,300,000,000 to Government departments, in many instances broadening the sphere of Government activities, which will require additional annual appropriations to carry on and administer such additional activities. This money was granted to furnish employment by public works, and I recognize the need for that, but I also stand for an economical Government and economical expenditures, and two appropriation bodies, one overriding the other, produce confusion.

The Budget came to the committee, and after obtaining the items that had been allotted to the Agricultural Department for the regular activities by the Public Works Board in addition or supplemental to what we had appropriated, I found that the Budget took into consideration many of these allotments and did not make an estimate for such project for the next fiscal year. Among the number was the gypsy and brown-tail moth. They have allotted $2,020,000 for that purpose when we had appropriated only $408,000 for this fiscal year. They allowed $2,020,000 for it. Just think of this.

Mr. Chairman, this is money absolutely thrown away. Why? Some of you gentlemen who live in neighborhoods where the gypsy and browh-tail moth exists will shake your head, but let me tell you that we have had this project before us for 15 years or more. We have appropriated money year after year, and the total sum of these appropriations has gone into millions and millions of dollars. What have we found by all this experience, this research, and this investigation? We have found that the gypsy or brown-tail moth cannot be eradicated. Every entomologist and every Government official who has ever had anything to do with this matter frankly states that you cannot eradicate the gypsy or brown-tail moth. What policy did we adopt? We adopted the policy of controlling and preventing its spread. How? We established a 30-mile zone around the infested areas and we undertook to keep that zone moth-free, to prevent the moths from crossing the zone. The female moth cannot fly. The male moth can fly. This was a fortunate situation, because we could keep the zone free of moths and they could not spread to other territories.

[Here the gavel fell.]

Mr. BUCHANAN. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. BUCHANAN. The only legitimate object for which we can appropriate money is to prevent the spread of this insect and to provide for inspection, treatment, and certification of the products out of the infested areas. This is to prevent the unfortunate people who happen to live in the infested zone from becoming bankrupt. In other words, when they have products to ship out of the infested zone, we go in there, inspect the products, and give them a certificate so that they can ship out the products. Otherwise every State would quarantine against their products and bankrupt the people in the infested area.

What is the situation? There is $360,000 that will be available for the next fiscal year from the Public Works allotment to keep this zone free of moths, to prevent their spread, and to enter the infested area, examine, inspect, and certify the products that are shipped.

Mr. WOLVERTON. Will the gentleman yield?

Mr. BUCHANAN. Yes.

Mr. WOLVERTON. I am in full accord with the thought the gentleman has expressed that there should be only one appropriating agency in the Government, because it can be done in that way more intelligently. I make that observation because there is evidently a new appropriating agency. The House Appropriations Committee in this particular instance has evidently taken this fact into consideration and therefore has made no appropriation in this bill, assuming that the other agency to which the gentleman refers will do so.

Mr. BUCHANAN. No. I am not assuming they will do so. They have done so.

Mr. WOLVERTON. If the secondary or supplemental agency referred to can contribute money for this work, is it possible for such agency to withdraw the allotment after it has been made?

Mr. BUCHANAN. No. In order to prevent that, as Chairman of the Appropriations Committee I wrote the Public Works Administrator about that, so that I would be sure that some of this money the Public Works Board has allotted would be used in the next fiscal year. It was some time before I got a reply, but finally I got the representative from the P.W.A., the Budget officer of the Department of Agriculture, and Director Douglas together, and this letter that the gentleman from Louisiana [Mr. SANDLIN] read was the result, making the money that had been allotted by the Public Works Board for these various activities available not only for active work in the field but for the administrative expenses in the Department of Agriculture. There is no doubt about that.

Mr. WOLVERTON. For the information of those who are very sincerely interested with me in seeing that proper provision is made, will the gentleman inform us as to how much will be available for the control and prevention of gypsy and brown-tail moths for the fiscal year commencing July 1, 1934?

Mr. BUCHANAN. Three hundred and sixty thousand dollars.

Mr. HEALEY. Will the gentleman yield?

Mr. BUCHANAN. I yield.

Mr. HEALEY. An appropriation to carry on this work for the last fiscal year was made amounting to $400,000.

Mr. BUCHANAN. About that; yes.

Mr. HEALEY. The gentleman's committee recommended that appropriation and the Congress accepted its recommendation. How much money was spent last year in addition to the appropriation of money by the P.W.A.?

Mr. BUCHANAN. Two million twenty thousand dollars was allotted and we should add to that $400,000, which would mean $2,420,000 as the total amount they had for this year and next year. By the end of this fiscal year they will have spent all but $360,000, and so far as economical or permanent results are concerned, most of it has been thrown away. The only purpose it served was to give employment in a period of unemployment.

Mr. HEALEY. Has the gentleman facts to substantiate that statement?

Mr. BUCHANAN. I have facts to substantiate that or I would not have made the statement. Does the gentleman mean the "thrown away" part?

Mr. HEALEY. Yes.

Mr. BUCHANAN. The other facts I can substantiate. The "thrown away" part is my judgment, because what did they do? They went into an infested area and tried to eradicate a moth that is not capable of being eradicated.

Mr. SWICK. Will the gentleman yield?

Mr. BUCHANAN. Yes.

Mr. SWICK. Will the gentleman explain why it is that for certain of these pests like the corn borer and the pink bollworm and other cotton-destroying insects there are certain definite amounts set out, while for this moth there is no such appropriation?

Mr. BUCHANAN. Because the Public Works Administration did not allot a large appropriation for them and therefore the regular appropriation is carried. If the P.W.A. had allotted for the control of those insects a large sum of money, this bill would have been silent and carried no item of appropriation for them.

Mr. KENNEY. Will the gentleman yield?

Mr. BUCHANAN. I yield.

Mr. KENNEY. Is it not a fact that only $99,000 has been allocated to this work for this year?

Mr. BUCHANAN. The gentleman is referring to the Budget figure that came up here the first of the session. I just phoned Mr. Strong, who has charge of this work, this morning and said I wanted to know definitely what the amount

would be for the next year, and he stated $360,000, and if the gentleman will look at the hearings, he will find that that is also in the hearings and $360,000 will be available next year.

Mr. KENNEY. May I inquire whether Mr. Strong regarded $360,000 as sufficient?

Mr. BUCHANAN. Yes.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey [Mr. WOLVERTON].

The amendment was rejected.

The Clerk read as follows:

Insect pest survey and identification: For the identification and classification of insects, including taxonomic, morphological, and related phases of insect pest control, the importation and exchange of useful insects, and the maintenance of an insect pest survey for the collection and dissemination of information to Federal, State, and other agencies concerned with insect pest control, $121,616.

Mr. BLANTON. Mr. Chairman, on page 53, lines 9 and 10, I move to strike out the words "for the identification and classification."

The Clerk read as follows:

Amendment offered by Mr. BLANTON: Page 53, lines 9 and 10, strike out the words "for the identification and classification."

Mr. BLANTON. Mr. Chairman, there is a good reason for the law which requires appropriation bills to originate in the House of Representatives. This places a duty and a burden upon the Members of the House to see to it that appropriations that take the people's money out of the Treasury are proper and right and just and in the interest of the people.

Many of the rules and precedents of the House have been built around the protection of the people's Treasury. You will find many valuable precedents of this House have come from distinguished Speakers who have been of both parties. There have been many valuable precedents established by Republican Speakers, by no less a distinguished Speaker than our former eminent colleague from Ohio, Mr. Nicholas Longworth.

I want to call your attention to one of his precedents. If you will look on page 2975 of the RECORD of January 23, 1931, you will find a ruling that Speaker Longworth made at that time. It is short and I want to read it to you:

INTERIOR DEPARTMENT APPROPRIATION BILL WITH SENATE AMENDMENTS REFERRED TO COMMITTEE

The SPEAKER (Mr. Longworth). The Chair desires to make a statement at this time, and wishes particularly the attention of the gentleman from Texas [Mr. Garner], in view of the question which the gentleman from Texas propounded to the Chair a few moments ago.

The Interior Department appropriation bill with Senate amendments is on the Speaker's table. It is entirely within the discretion of the Chair what course should be taken with regard to the disposition of this bill. Ordinarily a request is made for unanimous consent to send such bills to conference at once. The other course is that the Speaker himself shall refer the bill to the appropriate committee. In view of the tremendous importance of the question arising under the Senate amendment providing for a $25,000,000 appropriation to the Red Cross, in view of the request of the members of the Appropriations Committee that hearings should be had and that the Red Cross may have the opportunity of stating its position, the Chair is going to take the course of referring this bill to the Appropriations Committee, and refers the bill with Senate amendments to the Appropriations Committee and orders it printed.

There is your precedent, I will say to my friend from Oregon [Mr. MOTT]. There is your precedent for the Speaker sending an appropriation bill, on his own motion, back to the committee. It was established by your own Republican Speaker, Mr. Nicholas Longworth, of Ohio.

This was on a $25,000,000 amendment. The reference yesterday that was made by our distinguished Speaker from Illinois [Mr. RAINEY] was on amendments from another body aggregating $354,432.124.

Mr. SWICK. Will the gentleman yield?

Mr. BLANTON. Certainly.

Mr. SWICK. The Speaker specifically pointed out there, however, that there had been no hearings on that matter. Have there not been hearings on the amounts that were placed in the bill referred to yesterday?

Mr. BLANTON. Why, certainly not, except superficial hearings.

I want to say to my friend that when the emergency officers came in here and asked Congress to give them retirement pay, they first represented there were only about 900 of them. Then later they said there were about 1,500 of them and they got Congress to pass a bill giving them retirement pay, and after they got the law through, instead of 900 of them being retired there were about 6,500 of them retired.

And it so happened that many of them were drawing large salaries from the Government, and from States, and from private corporations, and at the same time they received in addition to their salaries retirement pay from the Government ranging from $125 to $325 per month for life.

I will not have time to do it now but I am going to ask unanimous consent to revise and extend this speech, and later on I am going to review some of the cases and let you know just how this Government has been imposed upon, and just how foolish and ridiculous some of the reasons were for granting retirement.

I will quote to you later some of the evidence that was given at the hearing that our Committee on Military Affairs held on my resolution, House Joint Resolution 355, which eventually caused nearly 5,000 of these emergency officers to be dropped and to lose their fat pensions to which they were not entitled.

The Administrator of Veterans' Affairs testified before the committee and went to the White House with a report in which he said that in his judgment several thousand of these officers on the rolls were in effect a fraud; that they had no pensionable service-connected disability; and that it was an injustice to the veterans of the country to pay them this large monthly retirement pay.

Under Public Act No. 2, by authority of the Congress given the President, nearly 5,000 officers were dropped from the rolls.

By your consent I am having printed as a House document a revision of the old House Document No. 802 that carried the names and the salaries of these 6,500 retired officers. It is being printed today and will be ready for distribution on Monday. It shows that out of this 6,500 formerly drawing retired pay only 1,518 were restored to the list. Only 1,518 have been able to show or prove that they had service-connected disability.

Mr. BLANCHARD. Will the gentleman yield?

Mr. BLANTON. I yield.

Mr. BLANCHARD. How does the gentleman know that this involves an expenditure of $300,000,000?

Mr. BLANTON. It does not. Putting these emergency officers back on the rolls is only one amendment. When I said there had been added to the House bill $354,432,124, that sum was the aggregate of all the amendments. If you will look on page 3297 of the RECORD for last Tuesday you will there see that the President's spokesman in another body, in recounting the various amendments added to our House bill, said:

If we add the amount which has been included in the bill by reason of the increase in the salaries of employees of the Federal Government, which amount is $215,993,124, it means that as a result of the action of the Senate upon the pending bill we will have added to our appropriations $354,432,124.

The law places upon us, Members of the House of Representatives, the burden of preparing and initiating all proper appropriation bills. It is a burden placed on our shoulders by law. It is a responsibility from which we cannot escape. We must meet it, and I commend the Speaker of this House for following the precedent of the former Speaker from Ohio, Mr. Longworth, when he sent the bill back to the Appropriations Committee on his own motion.

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. BLANTON. I always yield to the distinguished lady from Massachusetts.

Mrs. ROGERS of Massachusetts. I am not so certain of that. Is the gentleman sure that every one of these retired officers have been justly taken off the roll?

Mr. BLANTON. Except those, possibly, in the district of the good lady from Massachusetts. I want to state that on that roll was William Wolff Smith——

[Here the gavel fell.]

Mr. BLANTON. I ask for 3 minutes more.

Mr. MARTIN of Massachusetts. Reserving the right to object, I would like to ask the chairman of the subcommittee if he is going to allow any more general debate on the bill?

Mr. BLANTON. I only want 3 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. BLANTON. On that list was William Wolff Smith, who had only 13 days in a swivel-chair service in Washington during the war, and in addition to an annual salary of $9,000 drawn from the Government, he had himself retired at $187.50 per month for the rest of his life. I put the facts before the committee and he resigned.

Mrs. ROGERS of Massachusetts. That is only one instance. What became of the others?

Mr. BLANTON. We produced the evidence on him and he sat there crumpled up like a baby, and he said, "Take me to the hospital." He said, "Let me alone and I will pay the money back to the Government"; and he resigned. There was one officer drawing a big salary from the Government who was retired for "social inaptitude." When we asked his experts what they meant by "social inaptitude", they said that he could not carry on a proper parlor conversation in high society. [Laughter.]

Possibly I ought to be retired if that is a reason for retirement. Probably I cannot carry on the proper kind of a parlor conversation in high society. When another body puts back on the list emergency officers who failed to prove service-connected disabilities, then it is high time, I think, that we have a Speaker, with precedent or without precedent, who under the rules of this House, on his own motion, will send the bill back to the committee. [Applause.]

Mrs. ROGERS of Massachusetts. Mr. Chairman, I ask unanimous consent to proceed for 1 minute.

The CHAIRMAN. Is there objection?

There was no objection.

Mrs. ROGERS of Massachusetts. I would like to ask the gentleman what, in a case such as I heard of today, of a retired emergency officer whose leg is off and his service-connected pension was cut and his retirement was taken away from him? There are a good many cases like that.

Mr. BLANTON. I refer the lady to General Hines, who, in effect, said several thousand of them were frauds and ought not to be there. They have been taken off, and we must not let them be put back.

Mrs. ROGERS of Massachusetts. Yes; but the gentleman knows perfectly well that a great many service-connected battle-casualty cases of men, not retired emergency officers, were cut and cut, as high as 60 percent, during the present administration.

Mr. BLANTON. Oh, I am for taking care of the veterans who were disabled and for the officers who were disabled, but not these officers who were not disabled. I will amplify my views at a later date and give some specific cases.

Mr. Chairman, the great majority of our emergency officers during the World War were of the finest, ablest, noblest, bravest men of this great Nation. They served our country through patriotism with no selfishness or hope of reward. Few of those, comparatively, who had actual service abroad have ever tried to "hold up" their Government since the war.

But, Mr. Chairman, there are always some black sheep in every flock. Among our emergency officers there are some racketeers. After the war closed, many tried to remain in the service, and did remain until Congress was influenced to grant to them 1 year's extra pay, as a bonus for leaving, to enable us to properly reduce the officers of our peace-time Army.

The chief racketeer of them all was Maj. William Wolff Smith. During the war he got a civilian position as a clerk in a department here at $125 per month, or $1,500 per year, which easy, safe, convenient, reclining position he held until October 29, 1918, when he entered the service just 13 days before the armistice, after which he held on until he got his pleasure trip to Honolulu in 1922, received his $1,000 extra pay to get out, immediately went into the Veterans' Bureau, and by Col. Charles R. Forbes, then Director—whom we afterwards sent to the penitentiary—was made General Counsel of the Bureau, drew a salary of $9,000 per year, and helped to pass over the President's veto the Retired Pay Act, under which he drew $187.50 per month, additional to his salary, until we had him and 4,800 others put off the rolls.

Then there is Dr. Jo Marvin Ferguson, formerly of North Little Rock, but now at Lexington, who did not enlist until October 18, 1918, and who did not actually begin service until 7 days before the armistice, who, while drawing a salary of $6,500 from the Veterans' Administration, drew additional retired pay of $150 per month, and his back check he received as accrued pay amounted to $1,051.94 when he retired, which he received in cash. You will find this set out on page 7 of House Document No. 802, which I had printed 2 years ago on March 3, 1931. He was cut off. He is trying to get back.

Then there is District Judge Carl O. Hamlin, of Breckenridge, who for 13 years has been drawing a fat salary holding court in only one county, while when I was a circuit judge I held court in the five big counties of Stephens, Eastland, Callahan, Taylor, and Shackelford; and Judge Hamlin has been drawing retired pay of $150 per month additional from the Government. He was cut off. He is trying to get back. You will find Judge Carl O. Hamlin listed on page 139 of said House Document No. 802, which I had printed on March 3, 1931. During the war Hamlin never saw an enemy. His entire service was in the United States filling easy berths.

You will find many of the more than 4,800 emergency officers whom we have dropped from the rolls and taken from them the retired pay they had been unjustly drawing from the Government listed in my resolution, House Joint Resolution 355, which I introduced in the House on April 6, 1932, giving their names, their addresses, their length of service, the amount of their retired pay, and the big salaries many were at the same time drawing from the Government. It was in the hearing which the Committee on Military Affairs granted me on my said House Joint Resolution 355, during April and May of 1932, that I produced evidence showing the many flimsy, silly, ridiculous, fraudulent excuses upon which many were granted retired pay ranging as high as $556.67 per month for life (drawn by Dr. Lloyd E. Dyer, of Greeneville, Tenn., shown on p. 139 of my said H.Doc. No. 802), and which eventuated in causing these more than 4,800 officers to be dropped from the rolls. Among these 4,800 officers who have been dropped, as listed in said House Document No. 802, printed by me on March 3, 1931, you will find Judge John H. Fraine, Col. Erle Davis Luce, and Col. William Theodore Mollison, of Minneapolis, all drawing retired pay of $312.50 each at the time we dropped them. You will find Edward Lee Kearns, of Pittsburgh; Col. F. S. Van Gorder, of Warren; and Thomas Biddle Ellis, of Philadelphia, each drawing $312.50. You will find Dr. Junius Francis Lynch, of Leesburg; Col. John Houston Merrill, of Washington; Col. John H. Dunn, of South Boston; Dorsey Woodruff Thickstun, of Los Angeles; and Col. Leroy V. Patch, of Payette, all drawing $281.25 each when we cut them off. You will find Col. Charles Lutin Dulin, of Rome; Col. Charles D. Center, of Quincy; and Col. Charles William Decker, of Los Angeles, all drawing retired pay of $300 per month each when we cut them off. You will find Col. Jouett C. Henry, of Hopkinsville, drawing $312.50; Robert E. Steiner, of Montgomery, drawing $375; Gen. William C. Wilson, of Nobleton, drawing $375; and Julian Francis Greeley, of East Milton, drawing $471.96 per month when they were cut off. Naturally none of them like it. This was easy money for them. None of them had suffered any disability in war. None of them had

any battle casualties. None of them were powder-burnt. Each and every one who was actually disabled, with service connection, has been kept on the rolls.

I have just had printed, by authority unanimously given me by the House, the names of all bona fide disabled emergency officers with service connection still allowed retired pay, and there are only 1,518 of them whose names, addresses, and amount of pay you will find printed in my House Document No. 269, just recently off the press. House Document No. 802 contained the names of over 6,300 emergency officers retired, but over 4,800 of them have been dropped from the rolls as undeserving and their retired pay taken from them, and their names do not appear in the revised list just printed in House Document No. 269. Naturally they are mad. They still want to draw their easy money. They are thoroughly organized. They have a strong lobby here in Washington. They have a lobby in each State. Most of them are men of means. Most of them hold lucrative positions. Some are mayors. Some are judges on benches. Some are legislators. Some are prosecuting attorneys. Many are prominent physicians. Many are prominent lawyers. Many are prominent dentists. Some are prominent politicians.

They did everything within their power to defeat me for office last election. They misrepresented me in my district. They maligned my record. They caused vicious newspaper articles to be published. They made a pussyfooting campaign throughout my district. But never once did they disclose their personal grudge or let the people know that my determined fight and hard work here, covering months of laborious effort, had helped to cut them out of their easy money which the tax-burdened people had been paying. And it is their lobby and influence which have put their amendment on the bill, and we must kill this amendment and not let them be put back on the rolls. This money should go to disabled ex-service men and to their widows and orphan children.

"POKER BILL"

When William Wolff Smith entered the service on October 29, 1918, just 13 days before the armistice, he was drawing $125 per month as a clerk in a civilian position. He did not enter as a private. Having influential friends, he applied for a commission. He was examined October 28, 1918, the board reporting that he had the following existing defects:

Defective vision in right eye, defective vision in left eye, three missing teeth, and complete reducible indirect left inguinal hernia—

And he was rejected for general military service, but through influence was accepted for special and limited service, which he entered on October 29, 1918, with a swivel-chair commission here in Washington as captain in the Sanitary Corps.

So he had had 13 days' service in a swivel chair here in beautiful Washington when the armistice was signed on November 11, 1918. Though the war had closed, he held on to his commission, and in 1920 he asked that he be promoted either as a major in the Finance Department or a lieutenant colonel in the Quartermaster Corps. His examining board found that because of his said defects, all of which existed when he entered the service—

He was physically disqualified and incapacitated, and that he also lacked knowledge and experience.

When he left the Army, William Wolff Smith swore:

I certify that at the present time I have no wound, injury, or disease, whether incurred in the military service or otherwise—

And by making that affidavit he got the Army to appoint him a major in the Quartermaster Reserve Corps on January 24, 1923, and he received his 1 year's extra pay for getting out of the Army, and he received his free trip abroad, going to Honolulu during the fall of 1922 at Government expense, routing by Grand Canyon going, and Mount Rainier returning.

Maj. William Wolff Smith immediately secured a position with the United States Veterans' Bureau on January 17, 1923; Col. Charles R. Forbes, whom we later sent to the Federal penitentiary, was then the Director of the Bureau. Forbes gave Smith his appointment, and made him General Counsel of the Bureau, in charge of all legal matters. Smith had no standing as a lawyer, but was a broken-down, disreputable third-class newspaperman, yet had the final legal say on the rights of 4,000,000 war veterans, their widows and orphan children, with head control over the 876 lawyers eventually employed by said Bureau.

Some of you older Members here will remember the first report I filed against Col. Charles R. Forbes, showing the millions of dollars he grafted and wasted. Only such a man as Forbes would have placed Smith in such position.

I want you to look in the CONGRESSIONAL RECORD for April 21, 1932, and see the names, records, and salaries I printed of these 876 lawyers in this Veterans' Bureau, the majority of whom Smith caused to be appointed. You will see that many of them were formerly clerks in Government bureaus drawing salaries from $900 to $1,800 per year, and obtaining law licenses through correspondence schools and otherwise were designated as lawyers, and had their salaries trebled, and quadrupled and some raised to $5,000, $6,000, $7,000, $8,000, and $9,000 per year. You will note that I published their former ratings and salaries, and their raised bureau salaries.

RETIRED PAY FOR DISABLED EMERGENCY OFFICERS

Then, aided and abetted by Maj. William Wolff Smith and by misrepresenting the facts, certain disabled emergency officers influenced Congress, over the President's veto, to pass their bill giving them retired pay for life many times greater than enlisted men draw as compensation for battle injuries. They first assured Congress there were only 900 of such officers and later said there could not be over 1,500 of them. But after getting their law passed and arranging boards that "would scratch each other's back", over 6,300 of such officers were retired, many of them being doctors and lawyers who never heard an enemy's gunfire, and whose only service was swivel-chair safety jobs in the United States, and who while drawing this large monthly retired pay from the Government have held lucrative jobs with either the State or Government at fat salaries.

RECEIVED PAY FROM THREE SOURCES

Some of these emergency officers retired on pay, in addition to their big annual salaries and their big monthly retired pay, and have been drawing additional money from the Government as Reserve officers on active duty. Illustrating this, as the situation existed in 1932 when I checked it, Dr. Julius L. Arntzen, at Tucson, Ariz., received an annual salary of $5,400 from the Veterans' Bureau, and retired pay of $150 per month additional, and then received pay and allowances of $213.27 for active duty as a Reserve officer; Dr. John R. Brown, at Minneapolis, Minn., annual salary, $4,600, retired pay, $125 per month, pay and allowances as Reserve officer, $148.02; Dr. Jesse L. Hall, at central office, Washington, annual salary, $5,400, retired pay, $150 per month, pay and allowances as Reserve officer, $400.40; Dr. Bernard A. McDermott, at central office, Washington, annual salary, $5,000, retired pay, $125 per month, pay and allowances as Reserve officer, $174.49; Maj. William Wolff Smith, general counsel, annual salary, $9,000, retirement pay, $187.50 per month, pay and allowances as Reserve officer, $85.80; Levi A. Beem, at Indianapolis, Ind., annual salary, $3,300, retired pay, $165 per month, pay and allowances as Reserve officer, $206.92; Dr. Edward J. Burnett, Veterans' Home, Dayton, Ohio, annual salary $3,800, retired pay, $150 per month, pay and allowances as Reserve officer, $388.74; Dr. Alpha M. Chase, Denver, Colo., annual salary, $4,600, retired pay, $195 per month, pay and allowances as Reserve officer, $104.28; Dr. William H. Hatcher, dentist at Cincinnati, Ohio, annual salary $4,400, retired pay, $150 per month, pay and allowances as Reserve officer, $232.86; Dr. Horace E. Ruff, at Little Rock, Ark., annual salary, $3,800, retired pay, $243.75 per month, pay and allowances as Reserve officer, $277.24; Dr. Thomas F. Dodd, Washington, annual salary, $4,800, retired pay, $187.50 per month, pay and allowances as Reserve officer, $213.64; Dr. William E. Park, at Oteen, N.C., annual salary, $4,600, re-

tired pay, $150 per month, pay and allowances as Reserve officer, $254.84; Dr. Edd L. Robertson, Washington, annual salary, $5,400, retired pay, $187.50 per month, pay and allowances as Reserve officer, $416.52; Mr. Norman B. Gridley, on appeal board at Newington, Conn., annual salary, $3,300, retired pay, $150 per month, pay and allowances as Reserve officer, $162.78.

RECEIVING FOUR DIFFERENT INCOMES

In addition to receiving their annual salaries, their monthly retired pay, and their pay and allowances for duty as Reserve officers, I found when checking them up in 1932 that Dr. Jesse L. Hall and Dr. Horace E. Ruff were doing private medical practice after official hours.

I found also in 1932 that the following high-salaried, overpaid Veterans' Bureau doctors were doing private practice after official hours: Dr. George I. Birchfield, at Seattle, Wash., salary $4,000, retired pay $150 per month; Dr. Louis B. Derdiger, at Minneapolis, salary $3,800, retired pay $150 per month; Dr. Charles W. Wang, at Philadelphia, salary $3,800, retired pay $125 per month; Dr. Hargus G. Shelley, Wichita, Kans., salary $4,800, retired pay $150 per month; Dr. Vincent M. Diodati, at Philadelphia, salary $4,600, retired pay $150 per month; Dr. John J. Small, dentist, at Philadelphia, salary $3,800, retired pay $150 per month; Dr. Albert Field, at Hines, Ill., salary $4,200, retired pay $150 per month; Dr. Leon M. Ochs, at St. Louis, Mo., salary $3,800, retired pay $125 per month; Dr. Harry Frey, Dallas, Tex., salary $3,800, retired pay $125 per month; Dr. Paul D. Moore, Seattle, salary $3,800, retired pay $125 per month; Dr. Harry S. Monroe, Pittsburgh, salary $4,600, retired pay $125 per month; Dr. Edwin M. Johnson, Washington, salary $4,400, retired pay $150 per month; Dr. Oliver P. Miller, at Louisville, salary $4,600, retired pay $125 per month; Dr. John Ladd, Washington, salary $5,000, retired pay $150 per month; Dr. James L. McKnight, Tucson, Ariz., salary $4,600, retired pay $125 per month; Dr. William R. Leahy, San Francisco, salary $4,600, retired pay $150 per month; Dr. William W. McCrillis, dentist, Los Angeles, salary $3,700, retired pay $150 per month; Dr. Henry C. Lochte, New Orleans, salary $4,400, retired pay $125 per month; Dr. Dick R. Longino, Atlanta, salary $3,800, retired pay $125 per month. They were supposed to be giving all their time to the Government, yet they practiced medicine on the side.

BLANTON'S HOUSE JOINT RESOLUTION 355

On April 6, 1932, I introduced House Joint Resolution 355, calling attention to all of the above, and showing that of the six-thousand-three-hundred-and-odd officers named drawing retired pay, as listed in my House Document No. 802, over 4,800 emergency officers were fraudulently drawing retired pay from the Government, and giving the name, address, position, retired pay, and salary many of them were drawing from the Government, and providing for the dismissal of William Wolff Smith, and for the removal of said officers not entitled to pay from the rolls, and providing for the repeal of said retirement act.

HEARING BEFORE COMMITTEE ON MILITARY AFFAIRS

My said resolution was referred to the Committee on Military Affairs, ably presided over by our friend from South Carolina [Mr. McSWAIN], who promptly gave me an exhaustive hearing. When confronted with proof of the above facts, Maj. William Wolff Smith completely collapsed, agreed to pay back to the Government the money he had drawn from it, and whimpered like a baby. Having been general counsel at the head of the Bureau's legal department, with 876 lawyers under him, he was supposed to be able to hold his own across the table with the leading lawyers of the United States; hence it was pitiful to witness his abject incompetency and helplessness, and he was able to offer no defense whatever against said House Joint Resolution 355, designated as the "Declaration of war against Government parasites", and the proof supporting same with which he was deluged.

HANDICAPS

As is usual in all such cases, one member of the committee in particular, Gen. Burnett M. Chiperfield, of Illinois, tried in every ingenious way possible to hamper, obstruct, and hamstring me in my efforts to develop the evidence before said committee in said hearing. I want, especially, to thank and commend for their sympathetic and able assistance the following distinguished members of the Committee on Military Affairs who bravely insisted that all facts be uncovered and refused to shield any censurable conduct, to wit: Chairman John J. McSwain, of South Carolina; Hon. Lister Hill, of Alabama; Hon. Jed Johnson, of Oklahoma; Hon. Andrew J. May, of Kentucky; Hon. R. Ewing Thomason, of Texas; Hon. William N. Rogers, of New Hampshire; Hon. W. Frank James, of Michigan; Hon. William H. Stafford, of Wisconsin; Hon. Florence Kahn, of California; and Hon. Charles A. Wolverton, of New Jersey. For the hard work they performed, and the efforts they exerted in going to the bottom of everything and allowing no influence to distract them, they deserve the commendation of every red-blooded American in the United States. Even General Chiperfield in the end must have become convinced against his will, for he allowed a motion to be passed unanimously by said committee asking for the removal of William Wolff Smith.

HOUSE DOCUMENT 802

American Legion Posts from all parts of the United States obtained copies of my House Document No. 802, giving the names, addresses, service, and amount of monthly retired pay of all of the 6,300 emergency officers who had been retired on pay as disabled. They also obtained copies of my H.J.Res. 355, and exhausted the supply; and at my own expense I was forced to have extra copies printed, and the demand for them has been so great, that outside of our office copies, there is not an available copy left of House Document No. 802, or of H.J.Res. 355.

Members of American Legion Posts have learned that they have been exploited by some of these so-called "disabled" emergency officers, who have gobbled up important offices and key positions in the Legion, but failed to advise their "buddies" that they were drawing from the Government big retired pay, ranging from $125 to $556.67 per month for life, additional to the big salaries some of them were drawing either in State or Government positions. The buck private, with both legs and arms amputated from wounds received in front-line battle combat in France, did not appreciate some swivel-chair colonel who had only a few weeks' service in the United States being retired for "social inaptitude", or "appendicitis", or "diseased kidney", having no relation whatever to their service, and receiving handsome monthly retired pay several times the amount of compensation paid to the wounded soldier.

SOCIAL INADAPTABILITY

Dr. David O. Smith, of the Veterans' Administration, in giving evidence during the hearing before the Military Affairs Committee on my House Joint Resolution 355, testified that a board of experts examined one of these claimants on August 17, 1925, before the Retired Pay Act was passed, and reported that he had no disability and that he was thoroughly competent; but when this Retired Pay Act was passed, and this emergency officer applied for retirement pay, his examining board on August 6, 1928, reported that he had what they termed was "social inadaptability" upon which they gave him a rating of 70-percent permanent disability, and he was retired on $150 per month for life.

Dr. David O. Smith also testified that when they left the service, all these emergency officers who had not had combat service abroad made oath and swore that they "have no wound, injury, or disease, whether incurred in the military service of the United States or otherwise"; but after the Retired Pay Act was passed in 1928, they then claimed to be diseased and disabled, and that to get around that inconsistent situation General Counsel William Wolff Smith rendered the following opinion:

A statement made for one purpose that conflicts with the statement made for another purpose is not necessarily false. Such conflicting statements are not generally accepted as materially wrong.

DISTRICT JUDGE CARL O. HAMLIN

Judge Carl O. Hamlin, of Breckenridge, was born at Bolivar, Mo., on April 11, 1890; hence was 27 years old when the war started. He had attended Georgetown Law School (Catholic) for 3 years. He had a close relative in the War Congress from the Seventh Congressional District of Missouri, through whose influence he was admitted to the officers' training school at Leon Springs, where he remained from May 8, 1917, to August 1917. Then he went from Leon Springs to Camp Travis, where he remained from August 1917 to September 26, 1918. Then he went to Camp Grant, Rockford, Ill., and remained there from October 1, 1918, to January 30, 1919.

Carl O. Hamlin was never out of the United States during the war. He was never in a danger zone. He never at any time saw a German enemy. His service was performed under perfectly safe environments. When he left the service, he made oath and swore that he had "no wound, injury, or disease, whether incurred in the military service of the United States or otherwise." Then he went to Breckenridge to practice law. Later he was operated upon by Dr. Wilbur Smith, who removed his appendix. He made no claim that appendicitis, an infection for which thousands of men, women, and girls who have never been in the service have been operated upon, was in any way connected with his service. Not until November 1, 1928, many years after he had been district judge, did Carl O. Hamlin file any claim against the Government, and then he claimed that he was troubled with kidney stones.

On October 23, 1928, Hon. Ben J. Dean wrote Hon. Read Johnson, manager of the Veterans' Bureau at Dallas, that Judge Carl O. Hamlin was coming to Dallas to hold court for Judge Royal Watkins, and that he had been bothered with kidney trouble, and asking that he be given consideration. On February 8, 1929, before David Cole, notary public, Judge Carl O. Hamlin, claiming to be disabled, swore to his application for retired pay and sent it to the Veterans' Bureau on February 15, 1929, he then being a district judge, which position he had held for several years, having been appointed to the bench shortly after he got out of the Army. In connection with his application for retired pay, based on being disabled, Judge Carl O. Hamlin filed with the Bureau an affidavit made by Lila Keith, sworn to on November 17, 1928, stating that "Judge Hamlin was nervous, that his lungs gave him trouble, and that he had boils on his head."

The Emergency Officers' Retirement Board on April 1, 1929, decided against him and denied him retirement pay, and he got them to review his case, and then they allowed him retired pay of $150 per month for life, and paid him an adjustment check covering pay at that rate dated back to the date he filed his application for pay. You will find him listed on page 139 of my said House Document No. 802, printed March 3, 1931, as one of the six-thousand-three-hundred-and-odd emergency officers retired on pay upon the assumption that they were disabled on account of their service.

COMMITTEE TOOK DECISIVE ACTION

After holding exhaustive hearings on my said resolution, House Joint Resolution 355, during April and May 1932, the committee by a unanimous vote passed a resolution requesting the Administrator of Veterans' Affairs to discharge William Wolff Smith because of his incompetency and unfitness; and when the House met that day, I took the floor and called attention to their action, and printed their resolution in the RECORD, from which I now quote it:

Resolved, That it is the sense of the Committee on Military Affairs, before which is pending House Joint Resolution 355 and on which considerable hearings have been had, that the Administrator of Veterans' Affairs should discharge from the service William Wolff Smith on the ground of incompetency and unfitness.

Resolved further, That a copy of this resolution be sent to the Administrator of Veterans' Affairs and that a copy be spread upon the minutes of this committee.

Unanimously adopted this the 17th day of May.

And I then made the following observations, which I quote from the RECORD of May 17, 1932:

Mr. Chairman, I want to commend the personnel of the splendid Committee on Military Affairs for having the judgment, the backbone, and the courage to take action when it finds matters going on that ought to be corrected. Gen. Frank T. Hines is a man of his word, and when he assured the committee that he would fire Smith, he meant it, and you will find that he will discharge Smith immediately. We will get rid of one of the biggest parasites in the Government service.

Mr. Chairman, I feel greatly encouraged. We are making great strides in eliminating waste, extravagance, and graft. I feel sure that this splendid Committee on Military Affairs will in a few days report a measure to Congress eliminating from the pay roll of the Government the 876 lawyers whose names and tremendous salaries I placed in the RECORD now employed by the Veterans' Bureau, many of whom are drawing additional retired pay for presumptive disabilities, and at the same time will cause to be removed the hundreds of doctors who are drawing salaries ranging from $3,000 to $8,000 and at the same time drawing additional retired pay for presumptive disabilities, such as "social inaptitude", and so forth, and who are also at the same time engaged in the private practice of medicine.

Two days thereafter the Chairman of the Committee on Military Affairs took the floor and made the following announcement:

Mr. MCSWAIN. Mr. Chairman, I have just received a letter from the Administrator of the Veterans' Bureau to the effect that he has accepted the resignation of William Wolff Smith as special counsel for the Veterans' Bureau, effective immediately after the expiration of his annual leave. [Applause.]

And thus we got rid of "Poker Bill" Smith, and stopped him from drawing a salary of $9,000 per year, and additional retired pay of $187.50 per month for life. And through recommendations of the committee and action that followed taken by Congress and the President, more than 4,800 of said emergency officers were dropped from the pay roll, and their retired pay stopped. They had their cases reviewed by this board, and by that board, and on appeals, and did everything known to the ingenuity of skillful men to get back on the pay rolls. They have cost this Government several hundred thousand dollars in expensive hearings and appeals.

PERSISTENCE OF DISTRICT JUDGE CARL O. HAMLIN

Before getting his retired pay, upon an application for compensation he filed in November 1928, Judge Hamlin was granted compensation and had it dated back. Addressed to Judge Carl O. Hamlin at his post-office box 41, the Veterans' Administration, through S. P. Kohen, on February 27, 1929, notified Judge Hamlin as follows:

Additional allowance for the benefit of your wife and two children; your payments have been increased from $20 to $25 per month from November 1, 1927, through November 19, 1928, and from $80 to $100 per month from November 20, 1928, through December 3, 1928. Effective December 4, 1928, payments will continue at $40 per month.

RETIRED PAY FOR ALLEGED DISABILITY

The Administrator's Board, composed of Chairman J. W. Hayes, Attorney L. A. Lawlor, and Dr. Charles D. Collins, decided against Judge Carl O. Hamlin, holding that he had no disability due to service, and they sent Judge Hamlin their decision, addressed to him at his box 41, from which I quote the following:

The evidence shows that the above-named officer is not entitled to continue to receive retirement pay, * * * the disability for which he was retired with pay is not shown to have been caused by a factor arising directly out of the performance of actual military or naval duty during the World War.

NO DISABILITY INCURRED IN SERVICE

Then, upon insistence, the Central Office Rating Board, in its decision signed by Dr. H. W. Rollings, chief, Dr. C. E. Barton, Dr. O. D. Smith, and Attorney M. D. Gregg, on May 31, 1933, found that Judge Carl O. Hamlin's alleged disability was not incurred in service in the World War, and Judge Hamlin was notified of this decision at his post-office box 41.

On September 19, 1933, from his district judge's office on his district judge's stationery initialed "COH-S", Judge Carl O. Hamlin wrote a letter to the Director of Compensation of the Veterans' Administration, from which I quote:

On June 3, 1933, I was notified by the Director of Compensation that my claim had been carefully reviewed in accordance with the provisions of Public, No. 2, Seventy-third Congress, and that after June 30, 1933, I would not be entitled to any benefits thereunder, for the reason that my disability was not shown to be "service

connected or permanently and totally disabling." The information I respectfully desire is this:

1. Even though I have been dropped from the emergency officers' retirement roll as a presumptive case, would I not then revert back to my former status of "permanent, partial 40 percent disabled" (which status I had prior to my retirement with pay), and be entitled to compensation on that basis until October or such time as my case may be passed upon by one of the reviewing boards created for that purpose?

2. If my case is such as should properly be considered by a reviewing board, will I not be notified to that effect as well as what their final action may be in my case when they have reached a decision?

CARL O. HAMLIN.

On October 12, 1933, the Veterans' Administrator, through Director Brown, notified Judge Carl O. Hamlin at his post-office box 41 that he had been awarded a pension of $30 per month effective July 1, 1933, pending decision on his appeal to be restored to his retired pay of $150 per month.

ADVERSE DECISION AGAINST HAMLIN

On November 28, 1933, another appeal board rendered its decision against Judge Carl O. Hamlin, holding that his claims were not warranted, a copy of same being sent to him at his post-office box 41, such decision being the following:

DECISION

NOVEMBER 28, 1933.

The Adjutant General's Office report shows period of military service from August 15, 1917, to January 30, 1919. This report contains no evidence of kidney disease during service.

The veteran filed claim for compensation November 1, 1928, alleging kidney stone. * * *

The file contains no evidence of the disability during service nor immediately after discharge from service.

It is therefore the decision of the board that service connection for nephrectomy scar, right, following nephrolithiasis, is not warranted. And "is denied." Signed by S. Garland Butler, chairman, Walter B. Bost, Dr. James J. McKinley, Frank C. Tess, and Bernard M. Wise, the board.

On December 6, 1933, Hon. George E. Brown, Director of Compensation, wrote Judge Carl O. Hamlin, at his post-office box 41, advising him the following:

The special review board, central office, has given careful consideration to the evidence in your case, and has reached the conclusion that your condition diagnosed as nephrectomy scar, nephrolithiasis, heretofore presumptively service connected, may not be recognized as service connected as it is not shown that the condition was incurred during or as the result of your active military service in the World War.

In view of this decision of the special review board your award of war-time service-connected pension in the amount of $30 monthly is being discontinued effective November 30, 1933.

From his district judge's office Judge Carl O. Hamlin wrote the following:

DECEMBER 8, 1933.

In reply to: MCC—Bf.
In re: Carl O. Hamlin C-1,433,354.

The DIRECTOR OF COMPENSATION,
Veterans' Administration, Washington, D.C.

DEAR SIR: Your letter of November 24 received, in which you state that, due to the time allotted the special review boards, it would be impossible to decentralize my case file to the regional office at Dallas, Tex., so that I might appear in person before such board. You further assure me, nevertheless, that my case will receive every consideration when heard on review by the special board, central office. * * *

The fact that I filed no application for compensation until in November 1928 * * * ought not to militate against my claim. * * * I cannot help but feel that under Presidential regulation, resolving all reasonable doubts in favor of the veteran, and placing the burden of proof upon the Government, my claim will be established as service-connected by the special board, central office, when they carefully review all of the evidence in my case file.

Respectfully,

CARL O. HAMLIN.

COH—m

REQUIRED TO SHOW SALARIED OFFICE HELD BY HIM

Required to do so by the act of March 20, 1933, and on notice sent him October 12, 1933, and sworn to by Judge Carl Oswald Hamlin on October 24, 1933, before John W. Mackey, notary public, he sent in the following affidavit:

Asked if he held an office, he replied: "I hold an elective office under the State of Texas."

Asked if he had ever applied for any other pension, compensation, and so forth, he replied: "Yes. February 15, 1929, I filed application for retirement under provisions of Emergency Officers' Retirement Act. Application approved effective March 29, 1929. Dropped from retirement roll effective July 31, 1933, under Public, No. 2, Presidential Regulation No. 5, Claim No. C-1,433,354."

HAS COST GOVERNMENT TREMENDOUS SUM

Judge Carl O. Hamlin is still making strenous efforts to be placed back on the pay roll of the Government, and to be granted again his retirement pay of $150 per month for life, same being in addition to his salary as district judge. He is mad at me because he was cut off. He did everything he could against me in my district last election year in trying to defeat me. He imagines that if he can get me out of Congress, he can get back on the pay roll again, and then draw his undeserved retired pay of $150 per month from the Government for life. And he imagines that he can then help to put back the over 4,800 other emergency officers on their big retired pay for life. But we must stop the proposed amendment, to put them back, and not allow this racket to continue longer. As a matter of right and justice Judge Carl O. Hamlin, and these other 4,800 retired officers dropped from the pay rolls, ought to pay back to this Government the thousands of dollars each of them has unjustly drawn from the overburdened taxpayers of the United States. The people ought to know just what effort and hard work it requires to stop racketeering in our departments of Government, especially when the Republicans had absolute control of it for 12 years.

HELPING ONE ANOTHER

You will remember that during the war, before and at the time he entered the service on October 29, 1918, 11 days before the armistice, Maj. William Wolff Smith was employed as a civilian clerk at $125 per month, and he admitted that the only case he had ever tried in his life was a divorce case, and then he represented neither the plaintiff nor the defendant, but the corespondent, and he could not recollect even the style of the case or anything about it; yet after the act was passed granting retired pay to disabled emergency officers—and the amount of such pay was based principally upon their occupation or profession just before entering the service, and the amount of such income they derived from such occupation just before entering the service—it became necessary for the "major" to show "high position" and "big income" at the time he became one of these "paper officers commissioned through influence."

So in his application for retired pay, in filling in the required blanks showing what he did and what he earned just before entering the service, Major Smith stated that he was in "the private practice of law, monthly earnings $600 per month approximately", when he knew that was untrue, and he knew that he had been getting only $125 per month as a civilian clerk. But he had to get two witnesses to swear to the truth of such statement in his application. His two witnesses were Mr. James O'C. Roberts and Miss Annabel Hinderliter, both of whom he had elevated from low civilian clerical positions of $1,500 to high-salaried legal posts in the Veterans' Bureau. And what they all swore to eventually got Smith $187.50 per month retired pay. Roberts had begun as a civilian clerk at $1,400 in 1919 and had been raised to a solicitor at $8,000, and finally raised to $9,000, having taken his law degree while working for the Government.

When Smith took charge of the legal department of the Bureau, he immediately had Miss Annabel Hinderliter transferred from the War Department to the Veterans' Bureau as a civilian clerk at a salary of $1,440 and through rapid promotions elevated her finally to the position of a senior attorney with a salary of $4,800, she having secured her law license while working under Smith for the Government. Here is the record of Roberts' promotions, prior to his final raise to $9,000 per year, as furnished by the Bureau:

James O'C. Roberts, solicitor, central office.

Date of appointment (temporary), $1,500, June 25, 1919; date of appointment (permanent), $1,400, February 1, 1920.

Promotions: $1,620, February 1, 1920; $1,800, August 11, 1920; $2,300, February 16, 1921; $3,000, February 16, 1923; $3,250, December 1, 1923; $3,300, July 1, 1924; $3,800, May 1, 1925; $4,000,

October 16, 1925; $5,200, February 1, 1926; $5,400, July 1, 1926; $6,000, January 1, 1927; $6,500, July 1, 1928; $7,000, January 1, 1930; $8,000, July 23, 1930.

Graduate of Georgetown Law School, LL.B.

Date of graduation, June 1922.

In their affidavits attached to Major Smith's application for retired pay, Mr. Roberts and Miss Hinderliter swore that "they had read the statements made by Smith and that the facts stated were true to the best of their knowledge and belief."

In the hearing on my H.J.Res. 355 before the Committee on Military Affairs, I elicited the following admissions from Miss Annabel Hinderliter from whose testimony I quote the following excerpts:

Mr. BLANTON. Then you admit that on February 12, 1923, you were transferred from the Quartermaster Corps to the Veterans' Bureau as a clerk, at a salary of $1,440?

Miss HINDERLITER. That is right.

Mr. BLANTON. You were assigned to Mr. Smith's office?

Miss HINDERLITER. I was.

Mr. BLANTON. On May 1, 1924, your salary was raised to $1,860?

Miss HINDERLITER. That is right.

Mr. BLANTON. On July 1, 1924, your salary was raised to $2,100?

Miss HINDERLITER. July 1, 1924, I received a $240 bonus.

Mr. BLANTON. Which raised your remuneration?

Miss HINDERLITER. Which added to my salary, increased it to $2,100. That was a bonus.

Mr. BLANTON. Then you did get $2,100 from that date on?

Miss HINDERLITER. No; I got it from May 1, 1924.

Mr. BLANTON. On October 12, 1925, you got $2,400?

Miss HINDERLITER. It started at $2,400 July 1, 1925.

Mr. BLANTON. When did you get $2,500?

Miss HINDERLITER. Effective October 16, 1925.

Mr. BLANTON. On February 12, 1926, your salary went to $2,600?

Miss HINDERLITER. Effective February 1, 1926, my salary went to $2,600.

Mr. BLANTON. On June 29, 1926, your salary went to $3,000?

Miss HINDERLITER. Effective June 1, 1926.

Mr. BLANTON. Then it was effective 28 days before I stated it in this Resolution No. 355?

Miss HINDERLITER. That seems to be right.

Mr. BLANTON. When did you get your license to practice?

Miss HINDERLITER. October 13, 1925.

Mr. BLANTON. When you entered the Bureau in February 1923 as a clerk at a salary of $1,440, you were not then a lawyer?

Miss HINDERLITER. No.

Mr. BLANTON. Now, when your salary was raised to $3,000 on June 1, 1926, you had never tried a case?

Miss HINDERLITER. No.

Mr. BLANTON. You had never prepared a case in a courthouse?

Miss HINDERLITER. No.

Mr. BLANTON. Your salary went to $3,100 on August 1, 1927?

Miss HINDERLITER. On August 1, 1927.

Mr. BLANTON. In December 1927 your salary went to $3,800, did it not?

Miss HINDERLITER. That is right.

Mr. BLANTON. The civil-service examination that gives you a certificate from the Civil Service Commission does not involve any law examination of you, does it?

Miss HINDERLITER. It requires one to show qualifications which are satisfactory before the Commission.

Mr. BLANTON. If you will just answer my question——

Mr. CHIPERFIELD. Give the witness an opportunity to answer the question.

Mr. BLANTON. The question I asked can be answered "yes" or "no."

Mr. CHIPERFIELD. But counsel cannot direct the reply of the witness. It is the right of the witness in every court and everybody to answer questions in reasonable terms, and cowering won't deter me from my position.

Mr. BLANTON. Miss Hinderliter, we will get along, I think, without the General getting disturbed. When I ask you a question which can be answered "yes" or "no", would you mind, please, answering "yes "or "no", and then explain it?

Mr. CHIPERFIELD. One of the most fundamental things which the court would tell a lawyer and witness, either, is that you do not have to answer a question "yes" or "no."

Mr. ROGERS. I do not think that is right. That is one of the places where they make you answer "yes" or "no."

Mr. BLANTON. When did your salary go to $3,800?

Miss HINDERLITER. Effective November 1, 1927, my salary went to $3,800.

Mr. BLANTON. When did it go to $4,000?

Miss HINDERLITER. Effective June 30, 1928.

Mr. BLANTON. When did it go to $4,600?

Miss HINDERLITER. Effective July 1, 1928.

Mr. BLANTON. Then from 1927 to July 1, 1928, you got 3 raises, 1 in November to $3,800, 1 the next June 30, 1928, to $4,000, and 1 the next day, on July 1, 1928, to $4,600?

Miss HINDERLITER. That is right.

Mr. BLANTON. Your salary went to $4,800 in December 1929?

Miss HINDERLITER. It was effective January 1, 1930, but notice of it was dated December 28, 1929.

Mr. BLANTON. Since January 1, 1930, when your salary was raised to $4,800, Major Smith has filed several recommendations that you be promoted to a higher salary, has he not?

Miss HINDERLITER. I know of one.

Mr. BLANTON. You signed that (Smith's application for retired pay) as a witness and swore to it, did you not?

Miss HINDERLITER. As a witness to Major Smith's signature.

Mr. CHIPERFIELD. Is that a part of our record?

Mr. BLANTON. I am going to make it a part of the record. Well, you did sign that document?

Miss HINDERLITER. Yes.

Mr. BLANTON. For whatever it says there—you did swear to whatever it says you swore to?

Miss HINDERLITER. No; not at all.

Mrs. KAHN. No; that was Major Smith swearing to it, and she witnessed his signature.

Mr. BLANTON. Well, whatever it says there that you did, Miss Hinderliter, you, as a lawyer, realize you are responsible for it, do you not?

Mrs. KAHN. Just pardon me 1 minute. I am not a lawyer, but if you witness a will, does that mean you know what is in the will, or do you only witness the signature thereof?

Miss HINDERLITER. You witness the signature, Mrs. KAHN.

Mr. BLANTON. Let me read you something here, Miss Hinderliter. Here is what this application says, "signed and sworn to" and "We, the undersigned, severally solemnly swear": this is not Smith, this is Miss Hinderliter swearing here, and Mr. Roberts, who is now solicitor—

"We, the undersigned, severally solemnly swear that we have known the person [Smith] whose name is subscribed above, 6 and 9 years, respectively, and that we have read the statements made by him, and the facts stated are true to the best of our knowledge and belief." That is signed by J. O'C. Roberts, and by Annabel Hinderliter, and is subscribed and sworn to before F. W. Krichett, notary public, who is a lawyer down there, is he not?

Miss HINDERLITER. Yes.

Mr. BLANTON. Do you know him well.

Miss HINDERLITER. Yes.

Mr. BLANTON. And he swore you to that, did he not?

Miss HINDERLITER. I would have to see it; may I see the paper?

Mr. BLANTON. Say if that is your signature, please, Madam [handing paper to witness].

Miss HINDERLITER. Yes; that is mine.

Mr. BLANTON. With pen and ink?

Miss HINDERLITER. Yes.

Mr. BLANTON. You signed that and swore to it before Mr. Krichett?

Miss HINDERLITER. I said I did.

Mr. CHIPERFIELD. She said so.

Mr. BLANTON. The 6 years refers to the time Mr. Roberts had known Smith and the 9 years to the time you had known him?

Miss HINDERLITER. I think so. I would say so without seeing the paper.

Mr. BLANTON. Where concerning his occupation and income just before he entered the service, it says "private practice of law" and "monthly earnings, $600 per month approximately", before you swore to that, did you make any investigation to find out that his monthly earnings from May to October 29, 1918, were only $125 per month?

Miss HINDERLITER. No.

Mr. BLANTON. You just signed that and swore to it, saying that was true, without making any investigation, did you?

Miss HINDERLITER. I had no way of investigating. Major Smith was a lawyer with offices in the——

Mr. BLANTON. You just took his word for it.

Mr. CHIPERFIELD. Let her finish her answer.

Mr. BLANTON. You say he had offices there?

Miss HINDERLITER. Yes.

Mr. BLANTON. While he was general counsel?

Miss HINDERLITER. For many years after he was general counsel.

Mr. BLANTON. How do you know, Miss Hinderliter?

Miss HINDERLITER. Why, because I knew; I worked for him.

Mr. BLANTON. You worked for him in his private law office?

Miss HINDERLITER. I did.

General ———. I do not see why she should be dragged here and put on this stand and questioned for 2 hours. I propose to quit attending these hearings.

Mr. CHIPERFIELD. I am with you.

Mr. BLANTON. I do not want to be lectured. I am showing that she swore to his application that during the 6 months just immediately before entering the service, Smith was practicing law, making $600 per month, when he had testified already that he was employed as a clerk at $125 per month. If I find rottenness in a bureau, I condemn it.

The CHAIRMAN. This is a congressional inquiry, and the gentleman from Texas [Mr. BLANTON] is under his obligation as a Member of Congress, the same as we are, and I think that we will have to permit that.

Mr. HILL. In determining this 30-percent disability, the Bureau goes into what is called "different variants", and those variants depend upon a man's vocation and the amount of money the man made in that particular vocation. So it does go into the determination of the retired pay.

Mr. BLANTON. Now, with regard to some of the costs of the Bureau, Miss Hinderliter, for the period between October 1 and 6, 1928, you collected traveling expenses for taking some depositions

of $121.31, transportation and Pullman $87.86, per diem $27, other expenses $6.45. You got a per diem in addition to your salary?

Miss HINDERLITER. Yes.

Mr. BLANTON. On January 2, 1929, you went over to Baltimore and back—transportation and Pullman $2.37, per diem $2.15, other expenses $3.50—total, $8.02 for that day?

Miss HINDERLITER. I will admit that, if you get this from the Bureau certified as correct.

Mr. BLANTON. I got this from General Hines.

Miss HINDERLITER. Well, they are probably right.

Mr. BLANTON. Now, October 13 to 16, 1931, to Atlanta, Ga., $83.24—transportation and Pullman $65.44, per diem $13.50, other expenses $4.30—totaling $83.24?

Miss HINDERLITER. Yes; that is right.

Mr. BLANTON. You went to Baltimore October 26, 1931, gas and oil $2.04, per diem $9, other expenses 50 cents, totaling $11.54.

Miss HINDERLITER. I traveled by motor.

Mr. BLANTON. On January 5, 1932, you went to Philadelphia, returning next day, and the Government paid you transportation and Pullman, $12.06; per diem, $7.50; other expenses, $3.50; totaling, $23.06. On February 6, 1932, you went to Chicago and came back February 19, and there was paid you transportation and Pullman, $72.06; per diem, $15; other expenses, $6.20; totaling, $93.26. Miss Hinderliter, is it not a fact that the Bureau has altogether 876 lawyers employed, scattered all over the United States?

Miss HINDERLITER. I do not know how many they have.

Mr. BLANTON. Did you see the number of names I put in the RECORD and their salaries?

Miss HINDERLITER. Yes.

Mr. BLANTON. There were 876 of them.

Miss HINDERLITER. I did not count them.

Mr. BLANTON. Mr. Chairman, I offer the expense account of William Wolff Smith that the Government paid on his trips to Europe.

The CHAIRMAN. If there is no objection, it is so ordered.

Mr. BLANTON. Now I offer in evidence the list of the 876 attorneys, with their salaries, certified by General Hines to be correct.

The CHAIRMAN. Very well.

I want the Members of this House, Mr. Chairman, to look into the CONGRESSIONAL RECORD for April 26, 1932, and see the evidence I put in there, showing the amount of $688.85 William Wolff Smith spent on his first trip to Europe, and the whole page of expense he incurred on his second trip to Europe. On one of these trips he went to Europe to attend the meeting of the American Bar Association. The only kind of bar association that William Wolff Smith would fit in well with is the kind of long ago, where they had a rail to put your feet on and free lunches on the counter. Additional to his trips to Europe the following will show the travel expense of William Wolff Smith, certified to me to be correct by General Hines, Administrator, to wit:

The data submitted relative to Major Smith's travel are complete, with the exception of a trip made during the current month to Columbia, S.C., and Norfolk, Va. This trip was made in connection with war-risk litigation. The voucher has not as yet been submitted, and detailed information relative to this trip is, therefore, not available.

I trust that the information submitted herewith presents the facts which you desire.

Very truly yours,

FRANK T. HINES, *Administrator.*

Summary statement of travel, William Wolff Smith, period May 18, 1923, through Mar. 11, 1932

Period	Number days	Transportation and Pullman	Per diem	Other expenses	Total
1923					
May 18–23	6	$24.10	$16.00	$2.59	$42.69
May 23–June 29	37	106.75	26.00	9.10	141.85

Because it is such a very important matter to the Government to keep these 4,800 racketeers from being placed back on the pay rolls and their undeserved big retired pay restored to them each month for life, I want you to get a clear insight into the character of this General Counsel, William Wolff Smith, who was responsible for their being placed on the pay rolls in the first instance, and who will do everything in his power to get them put back. You can get a better insight by reading some of his testimony given before the Committee on Military Affairs in their hearing on my resolution, House Joint Resolution 355, and from such testimony I quote the following excerpts:

EXCERPTS FROM WILLIAM WOLFF SMITH'S TESTIMONY APRIL 16, 1932

Q. You were practicing law?—A. No, sir; I was in the newspaper—in the publicity business.

Q. If I understood you correctly yesterday, up until you went with the Veterans' Bureau you never in your entire life had but one contested civil case, and that was a divorce case, which you lost?—A. No; I did not lose it; I did not say that.

Q. I thought you said you lost it?—A. My recollection is that I won it, in this way: I represented the corespondent.

Q. Yes; but if I understood the record right, now, you never in your entire life tried but one contested litigated case?—A. Yes, sir.

Q. Only one, and that was a divorce case?—A. Yes, sir.

Q. Was there any appeal from that case?—A. Well, I do not know.

Q. What was the style of that case?—A. I cannot tell you.

Q. You never tried a case in any State of the Union?—A. No, sir.

Q. Who appointed you as General Counsel?—A. Colonel Forbes.

Q. Was that a Presidential appointment?—A. No, sir.

Q. Then why the necessity for Colonel Forbes to go to President Harding about your appointment?—A. When Colonel Forbes went to the White House, he did it to request my being appointed General Counsel. I presume it was customary to consult the President.

Q. Are the lawyers under you appointed by you?—A. On my recommendation. General Hines accepts it or not as he sees fit.

Q. Has he as a rule accepted your recommendations on those appointments?—A. I would say in the majority of instances.

Q. What was your offer you made yesterday about returning your retired pay to the Government?—A. That I would return my checks as they come in to the Treasury.

Q. What are you going to do about that more than $5,000 you drew when first retired?—A. I have used a considerable portion of it. I will go out and try to raise every cent that I have taken, and return it to the Treasury.

Q. Had the Department, before you came in it, and before your case had been turned down by three boards, ever held that a hernia constituted 30-percent permanent disability?—A. I presume not.

Q. You wrote the opinion holding that?—A. I cannot tell without looking it up.

Q. If you did not actually write that opinion, you confirmed it, did you not?—A. Yes, sir.

Q. And ratified it?—Yes, sir; it is good today.

Q. You were in the service 13 days before the Armistice?—A. Yes, sir.

Q. And you had no permanent disability, of course, at that time?—A. None due to service.

Q. You do not have any now?—A. The Board has found that my injuries are due to service.

Q. If the law is amended as proposed, then you and a lot more would go out?—A. Yes, perhaps three or four thousand.

Q. Now look at it and say whether you wrote that opinion making hernia 30 percent?—A. I would say I did.

Q. That is signed William Wolff Smith.—A. I rendered the opinion. There is no question about that.

Q. In addition to your $9,000 salary, how long have you been drawing this retired pay of $187.50 per month?—A. Since May 25, 1928. It was dated back.

Q. It amounts to about $8,000 you have drawn in addition to your $9,000 salary?—A. About that.

Q. You came to a decision——A. This morning; yes, sir.

Q. That you would not take the monthly retirement pay of $187.50 any longer?—A. That is correct.

Q. You enlisted in the Army on October 29, 1918?—A. Yes, sir.

Q. You had tried but one case, a divorce case?—A. Yes, sir.

Q. And at that time you had written no briefs yourself?—A. No court briefs.

Q. Had you taken any action in court?—A. No, sir.

Q. In your application for retired pay, witnessed by Annabelle Hinderliter, you gave as your business just prior to entering the service as "Private practice of law; address, 400 Commercial National Bank Building"?—A. Yes, sir.

Q. When you were discharged from the Army November 25, 1922, did you not make oath to the fact that you "had no wound, injury, or disease, whether incurred in the military service of the United States or otherwise"?—A. I think so.

Q. Do you not know?—A. No, sir; I do not.

Q. You read this bill (by BLANTON, H.J.Res. 355) now being considered by this committee, before today?—A. Yes, sir.

Q. Before you testified yesterday?—A. Yes, sir.

Q. Did not you check up that charge in the bill?—A. Yes, sir. I am willing to admit that I made the oath referred to.

Q. Here it is, "I certify that at the present time I have no wound, injury, or disease whether incurred in the military service of the United States or otherwise. William Wolff Smith, November 25, 1922."—A. That answers the question.

Q. Did you get an extra year's pay at the time you retired?—A. Yes, sir; I retired under that act when they reduced the army.

Q. And you entered the Veterans' Bureau January 17, 1923?—A. Yes, sir.

Q. Do you recall the year your salary was raised from $7,500 to $9,000?—A. No, sir.

Q. The Board considering your application for retired pay was Dr. B. A. Cockrell, Dr. C. J. Harris, Mr. D. E. Smith, Maj. George B. Kolk, and Chairman J. D. Hayes?—A. Yes, sir.

Q. And that board turned down your application?—A. Yes, sir.

Q. Then you appealed?—A. Yes; I took two appeals.

Q. Then your case went before another retirement board composed of N. E. Bateman, Dr. Collins, Dr. McDermott, and Dr. Charles M. Taylor in May 1929?—A. May 24, 1929.

Q. It decided against you?—A. Yes, sir.

Q. Then your case went to the Division of Appeals on January 25, 1930?—A. I took the ordinary steps.

Q. On April 22, 1930, section A of the Central Board of Appeals filed an adverse decision against you, did it not, signed by Charles O. Shaw, Dr. Garrett V. Johnson, Dr. E. L. Robertson, Dr. J. M. Ladd, Dr. F. Manning, and W. L. Pipen?—A. Yes, sir.

Q. Then on May 29, 1930, you requested a special hearing before the Council on Appeals, Dr. Clark, Dr. Tobias, Dr. Tastet, and J. Q. Buzbee, and asked to be represented by Capt. Watson B. Miller of the American Legion?—A. Yes, sir.

Q. And he filed an affidavit with reference to your playing golf, and so forth?—A. I think he testified orally.

Q. You play cards sufficiently to be known as "Poker Bill"?—A. That title was conferred on me in 1900.

(Witness claimed that he did not feel like continuing.)

The CHAIRMAN. Do any of you doctors know about Major's condition? (No response.)

Major SMITH. I am utterly fatigued. I am worn out. You understand that I do not do much talking. I was on the stand 4 hours yesterday. I slept little last night. I vomited my dinner last night and my breakfast this morning. I am exhausted.

Now, was not that a pitiful spectacle, to see the former General Counsel of the Veterans' Administration, drawing a salary of $9,000 per year and drawing additional retired pay of $187.50 per month, and with 876 lawyers under him at one time, go all to pieces under a few hours' examination! It was not only his conscience hurting him, but it was inefficiency and incompetency and unworthiness that caused his collapse. Let me show you just how the Government has suffered under him:

VETERANS' BUREAU ATTORNEYS LOSE IN COURT 85 TO 90 PERCENT OF GOVERNMENT CASES

When Mr. Abaticchio, one of the leading trial lawyers for the Veterans' Bureau, was testifying before the Committee on Military Affairs I brought out the following:

Mr. BLANTON. Mr. Abaticchio, in your judgment, what percent of the cases have we lost?

Mr. ABATICCHIO. Eighty-five to ninety percent, I understand, is the number we lose.

Then I quoted from the decision of United States District Judge Bourkin, of Montana, on August 12, 1931, when in deciding four cases against the Government, he said:

The Veterans' Bureau having rejected the claim, has made its record; and it would be folly to blink the facts that though it assumed to defend the suit, it does little to investigate, prepare, and present—and its defense is hardly worth the name. The plaintiff has it pretty much his own way. Juries are human, and the verdict goes against the United States almost as a matter of course.

Naturally, the Government suffered this tremendous loss with an inefficient, uninformed, unqualified man like "Poker Bill" Smith at the head of its legal department.

WE MUST KILL AMENDMENT

We have these 4,800 emergency officers, some of whom like Judge Hamlin who never saw an enemy, and who never heard an enemy's gun fire, cut off the pay rolls now, and have stopped their big, undeserved retired pay, and we must keep them off, and we must not let them get back. They are thoroughly organized. They have their influential lobby. They will try to beat us in our districts. They will malign us. They will misrepresent us and our records. We must stop them now, and kill their amendment, and then we must go home and let the people of the United States know about them.

The CHAIRMAN. The time of the lady has expired, and the Clerk will read.

The Clerk read as follows:

Foreign plant quarantines: For enforcement of foreign plant quarantines, at the port of entry and/or port of export, and to prevent the movement of cotton and cottonseed from Mexico into the United States, including the regulation of the entry into the United States of railway cars and other vehicles, and freight, express, baggage, or other materials from Mexico, and the inspection, cleaning, and disinfection thereof, including construction and repair of necessary buildings, plants, and equipment, for the fumigation, disinfection, or cleaning of products, railway cars, or other vehicles entering the United States from Mexico, $536,516: *Provided*, That any moneys received in payment of charges fixed by the Secretary of Agriculture on account of such cleaning and disinfection shall be covered into the Treasury as miscellaneous receipts.

Mr. BUCK. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BUCK: Page 54, line 14, strike out "$536,516" and insert in lieu thereof "$552,966."

Mr. BUCK. Mr. Chairman, with money provided by this paragraph the Department of Agriculture enforces foreign plant quarantines at maritime ports of entry and along the Mexican border and other border stations of the United States. It is highly important to the agriculture of every section of the United States that these quarantine stations be maintained at their highest efficiency. The appropriation bill makes a reduction of some $10,000 for port inspection service and some $32,905 for Mexican border service. The State of California is much interested in what crosses the border at the ports of entry in Mexico, as well as in other parts of the United States; and, as I told the committee the other day, we are much better off if we can keep pests out instead of trying to eradicate them after they come in to the tune of several million dollars, such as has been the case with the Dutch elm disease and the Mediter-

ranean fly. Mr. Strong testified in the hearings that there are still hundreds of foreign pests that have not yet entered the country.

It would not be fair to the committee if I did not tell them that I intended to offer an amendment in a much larger sum of money to restore port inspection and border service in its entirety, but I have consulted with the members of the Committee on Appropriations, and have convinced them that my contention is at least partially right and they have agreed to accept the amendment as I now offer it. This will, in part at least, restore the appropriation that was made last year.

Mr. TABER. Mr. Chairman, I rise in opposition to the amendment for the purpose of asking the chairman of the subcommittee a question. How much money was available under the rulings of the Director of the Budget for this particular item, for this current fiscal year? I do not mean how much was appropriated, but I mean how much was allowed to be expended by the Director of the Budget?

Mr. SANDLIN. Five hundred and sixty-eight thousand five hundred and fifty dollars.

Mr. TABER. How much was the Budget estimate on this item when it came to the House?

Mr. SANDLIN. Five hundred and thirty-six thousand five hundred and sixteen dollars.

Mr. TABER. And how much allotment has been made for this particular purpose from the P.W.A. or the C.W.A., if any?

Mr. SANDLIN. None.

Mr. TABER. Did the Department make justification for the expenditure of more than the Budget allotment?

Mr. SANDLIN. They said it would be hampered; yes. They took off the men on the Mexican border between California and Mexico and Texas and Mexico.

Mr. BUCK. Is it not a fact that this will result in the elimination of at least one border-patrol station and a reduction in the force of 14 inspectors on the Mexican border, if the committee's figures are adhered to?

Mr. SANDLIN. That is our information.

Mr. TABER. Fourteen inspectors at $1,000 apiece?

Mr. BUCK. At 13 different patrol stations.

Mr. TABER. Mr. Chairman, I never heard of Government inspectors working for $100 a month at these stations. I have no question that the gentleman is telling what he believes to be the truth; but I do not believe that any station on the border, for proper inspection of this quarantine, could be maintained for that purpose, and if you give them this extra money, I do not see how they could possibly maintain efficient quarantine stations. Therefore it seems to me we ought to go along with what the Budget recommended without going any further.

Mr. SANDLIN. The Budget reduction in the Mexican border inspection service was in the sum of $32,905, and involved the elimination of the 14 inspectors referred to, which would indicate an average annual compensation for these inspectors of more than $2,000. The pending amendment proposes to restore only one half of the Budget cut, or, presumably, about seven inspectors. Mr. Chairman, we went into this question thoroughly with the chairman of the full committee [Mr. BUCHANAN] and notified the gentlemen on the Republican side. We agreed, so far as the committee is concerned, to accept the amendment offered by the gentleman from California.

Mr. SINCLAIR. Mr. Chairman, in my judgment this item is necessary because of the fact that there are a great many insects along the Mexican border that should be kept out of this country.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from California.

The amendment was agreed to.

The Clerk read as follows:

For the acquisition of areas of land or land and water pursuant to the act entitled "An act to establish the upper Mississippi River wild life and fish refuge", approved June 7, 1924 (U.S.C., title 16, secs. 721–731), as amended, and for all necessary expenses incident thereto, including the employment of persons and means in the city of Washington and elsewhere, $1,862, which shall be available until expended, being part of the sum of $1,500,000 authorized to be appropriated for such purpose by section 10 of said act; and for all necessary expenses of the Secretary of Agriculture authorized by section 9 of said act, $31,933; in all, $33,795.

Mr. BIERMANN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I did not know that this section was in this appropriation. I just happened to come on to it now; but it is a splendid example of the evil to which the gentleman from Texas [Mr. BLANTON] referred a little while ago, of duplicating appropriating bodies.

This upper Mississippi wild life refuge is an area of about 90,000 acres, and nearly all of it is within the banks of the Mississippi River. That 90,000 acres has been acquired at an expense of about $800,000 up to this time. In July 1930 this Congress appropriated about $7,500,000 to the upper Mississippi 9-foot channel, and since July 1930 Congress has not appropriated a single dollar for the upper Mississippi 9-foot channel.

At the special session last year the Rivers and Harbors Committee had before it a proposition to authorize $11,600,000 for the upper Mississippi 9-foot channel, and that bill never came onto this floor. The amount that I call attention to was $11,600,000.

With that state of affairs and with that proposal not having even been brought on to this floor and with no appropriation by Congress since July 1930, Mr. Ickes allots to the upper Mississippi 9-foot channel thirty-three and one half million dollars. A part of the result of that allotment of Mr. Ickes and the completion of the 9-foot channel will be the utter destruction of this Upper Mississippi Wild Life Refuge. Other effects will be that the fishing industry in my district, the clam industry, the button factories in my district, will be absolutely destroyed, and the purpose of it is to supply us a kind of river transportation that is obsolete. The advocates of this proposition tell us that it will open a great land-locked area of the Middle West. It will allow the farmers to transport their grain north and south, when they are transporting it east and west. They are not going to transport it north and south on this upper Mississippi 9-foot channel.

I received a letter yesterday from General Ashburn, the head of this Inland Waterways Transportation Co. I had asked him if the transportation rates on the upper Mississippi 9-foot channel would be different than the rates on the present 6-foot channel, and he said "No." The proponents of this proposition to spend $33,500,000 on the upper Mississippi 9-foot channel tell the people, in effect, that the farmers of the United States, while they will not transport their stuff with 6 feet of water, will transport it on 9 feet of water.

Mr. CULKIN. Will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. CULKIN. I should infer from the gentleman's remarks that those projects should take a course through Congress, rather than going through the P.W.A. or through Mr. Ickes.

Mr. BIERMANN. Yes. I think exactly that; and this particular one, I think, should be thrown onto the ash heap.

Mr. CULKIN. The gentleman thinks that course should be more orderly and more intelligent?

Mr. BIERMANN. Yes, sir.

Mr. TABER. Will the gentleman yield for a question?

Mr. BIERMANN. I yield.

Mr. TABER. This proposition involves an expenditure, as a result of the appropriation in this bill, of $33,795 for the upper Mississippi wild life refuge. As I understand from the gentleman, this refuge will all be destroyed as the result of Secretary Ickes' allotment of these funds for the development of the upper Mississippi 9-foot channel?

Mr. BIERMANN. I will say to the gentleman that I am not prepared to say all of it will be destroyed, but almost all of it will be if the 9-foot channel is completed.

[Here the gavel fell.]

Mr. TABER. Mr. Chairman, I rise in opposition to the pro forma amendment.

If I may have the attention of the gentleman from Iowa, I would like to ask him, if we are going to destroy this game refuge by one operation of the Government and spend more money on it by another operation, is it not perfectly apparent that we should strike out this paragraph and have an end to this performance?

Mr. BIERMANN. I may say to the gentleman that when this upper Mississippi 9-foot channel was first authorized, the Army engineers estimated it would cost $98,000,000. The next year they estimated it would cost $124,000,000. If Secretary Ickes succeeds in spending his $33,500,000, there will have been spent, after his expenditure has been completed, about $50,000,000. The hope of the people along the Mississippi River, as far as I know their will, is that this Congress, before we proceed any further in expenditures, will have retrieved its power of appropriating money, and that in that capacity they will refuse to appropriate any more money for the 9-foot channel, and thereby the destruction of the 90,000 acres of wild-life refuge will be stopped.

Mr. TABER. It seems ridiculous that we should go on with this operation of spending money, in view of the fact that it is going to be destroyed as a result of the operation of Secretary Ickes' allotting thirty-three and a half million dollars for the development of the upper Mississippi River. Just as soon as this pro forma amendment is withdrawn I am going to move to strike out the section.

Mr. CULKIN. Will the gentleman yield that I may interrogate the gentleman from Iowa?

Mr. TABER. I yield.

Mr. CULKIN. The theory of the upper Mississippi 9-foot channel is that wheat will go to the South through the Port of New Orleans, is it not?

Mr. BIERMANN. Yes.

Mr. CULKIN. And the natural route and the consuming millions lie to the east; is that not true?

Mr. BIERMANN. That is correct.

Mr. CULKIN. So that the theory of the improvement is based on a false transportation hypothesis?

Mr. BIERMANN. Absolutely.

Mr. CHRISTIANSON. Will the gentleman yield for the purpose of asking the gentleman from Iowa a question?

Mr. TABER. Certainly.

Mr. CHRISTIANSON. The gentleman will admit, of course, that they do eat wheat down South also, and there will be a movement down the Mississippi as well as an east and west movement of wheat?

Mr. BIERMANN. I do not admit that they are any more likely to ship this wheat north and south with 9 feet of water than they are on 6 feet of water when the rates are identically the same.

Mr. CHRISTIANSON. Obviously the barge navigating 9 feet of water would carry a larger cargo than one operating in 6 feet of water. The gentleman states that the people along the Mississippi River are opposed to this project. The gentleman may speak for the people of the State of Iowa, but I do not think he would care to speak for the people of the State of Minnesota on the matter.

Mr. BIERMANN. I am speaking for many of them, because I have a great many letters from people of Minnesota in opposition to the 9-foot channel.

Mr. CHRISTIANSON. I can assure the gentleman that the majority of the people of Minnesota are for it.

Mr. TABER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TABER: On page 58, beginning in line 22, strike out the paragraph ending in line 9 on page 59.

Mr. TABER. Mr. Chairman, I do not know whether the paragraph ought to be stricken out or whether we ought to strike out the $33,000,000 appropriation. It was an unwise use of funds for Secretary Ickes to have set aside $33,000,000 for this work on the upper Mississippi, but he has done it and they are in process of spending the money; and the spending of the money is going to destroy this refuge according to the information that has been presented to us on the floor. Is it not ridiculous that we should carry this language and go on spending money for this refuge while at the same time spending $33,000,000 to destroy it? I cannot go along with such a policy.

Mr. KVALE. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. KVALE. I do not believe the gentleman from Iowa undertook to say that the entire area would be flooded and that all the work would be destroyed. I have not any exact information, but I believe certain portions will be flooded. Added land will be acquired perhaps from certain other areas. Land now arid and suitable for no other purpose will be flooded and will add to the territory which is desirable from the refuge standpoint. I know the gentleman wants to be fair. This undoubtedly is the situation.

Mr. TABER. I do not understand that dredging a channel deeper is going to flood more territory.

Mr. KVALE. Dams will be built.

Mr. TABER. Of course where dams are built there would be some flooding; but when Members of Congress who live right there tell us on the floor of this House that the refuge is going to be destroyed by something that Congress has not any control over, it seems to me it is time we stopped it; and, therefore, I have offered this motion to wipe out the paragraph.

Mr. BIERMANN. Mr. Chairman, I rise in opposition to the amendment.

The plea of the people who are opposed to this Upper Mississippi 9-foot channel is that before the thing is completed Congress will stop it. It just happens that these dams that have been authorized by Mr. Ickes are not the dams that are going to make the biggest destruction in the upper Mississippi wild life refuge, so the 90,000 acres for which the appropriation now under consideration is made will not be greatly affected by the program of Mr. Ickes.

Of course, if the building of the 9-foot channel is carried out in its entirety, then unquestionably nearly every acre of these 90,000 acres will be destroyed, will be covered with water.

It may be interesting for those who are not familiar with this project to learn that the 9-foot channel from the mouth of the Illinois River up to St. Paul-Minneapolis is to be accomplished by the building of dams, one about every 30 miles. The dams will back the water up, inundating this 90,000 acres of wild-life refuge that has been acquired, which territory is said to be the best breeding grounds for fowl and small game animals and game fish in the United States. Through the same operation the fishing industry along the Mississippi will be wiped out, the clamming industry along the river will be wiped out, and if the clamming industry is wiped out the button factories will be put out of business, too. Also the basket industry will be wiped out. At Burlington, Iowa, is the largest basket factory in the United States. It gets all its supplies for making these baskets from the quick-growing timber on islands in the river. These islands will be inundated and the timber destroyed.

I do not believe, however, that this is the time for withholding this appropriation for the Upper Mississippi Wild Life Refuge. We should try at the very earliest opportunity to stop this criminal folly of trying to provide an obsolete method of transportation from the mouth of the Illinois River up to Minneapolis, a means of transportation the people do not want.

Mr. BACON. Mr. Chairman, will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. BACON. I am in accord with what the gentleman is saying, and I may suggest to him that perhaps the better way to stop the program would be to put a limitation on the War Department appropriation bill when it comes up for consideration in the House in the next few weeks. The War Department appropriation bill carries the rivers and harbors appropriations, and it will be perfectly possible to put a limitation on that bill preventing the use of the $33,000,000 for the building of this 9-foot channel. I suggest to the gentleman that he take it up with the Appropriations Committee and be prepared to offer such an amendment on the floor of the House.

Mr. BIERMANN. Do I understand the gentleman to say that this money that has already been allotted by Mr. Ickes to the War Department for this specific purpose cannot be spent if such a limitation were put in the War Department appropriation bill?

Mr. BACON. It can be stopped by a limitation in the War Department appropriation bill.

Mr. BIERMANN. I am heartily in favor of stopping it, and I promise the gentleman I shall be prepared to offer such a limitation if it can be done at that time.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. DOWELL. Could an appropriation which has already been made be stopped by a limitation in the War Department appropriation bill? I think the gentleman from New York is mistaken about being able to stop an appropriation already made.

Mr. BACON. We might not be able to stop the spending of money under contracts already let.

Mr. DOWELL. A limitation can be put in the appropriation bill against the spending of money carried in it for a certain purpose.

Mr. BACON. Under the Holman rule a limitation may be inserted in an appropriation bill against the spending of money for specific purposes.

Mr. DOWELL. But only for appropriations carried in the bill. If the appropriation has already been made and is then being expended it cannot be stopped by a limitation carried in another appropriation bill, except by legislation, which would not be in order on an appropriation bill.

Mr. BACON. It is a question of allocation. Of course, you cannot stop something that has already been contracted for.

Mr. BIERMANN. The money is now in the course of being spent.

Mr. SANDLIN. Mr. Chairman, does the gentleman press his amendment?

Mr. TABER. I think I should press it; yes.

Mr. SANDLIN. The gentleman from Iowa is not opposed to this paragraph of the bill. I think the gentleman should withdraw the amendment, but I do not care to discuss it.

I do not care to discuss this amendment further. The appropriation has been carried ever since 1921, and there has been a total authorization of over $1,000,000 for this project. No one has information here sufficient to strike this paragraph out of the bill. Therefore I oppose the amendment.

The amendment was rejected.

The Clerk read as follows:

Total, Bureau of Biological Survey, $1,054,084, of which amount not to exceed $252,308 may be expended for departmental personal services in the District of Columbia, and not to exceed $14,450 shall be available for the purchase of motor-propelled passenger-carrying vehicles necessary in the conduct of field work outside the District of Columbia.

Mr. THURSTON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, we know that the House of Representatives has a Committee on Foreign Affairs, but I want to call the committee's attention to some of the foreign problems that have become domestic which confronted the committee having charge of this bill. We are providing funds in this bill to exterminate the Mediterranean fruit fly, to control the European corn borer, to eliminate the Japanese beetle, to destroy the Mexican fly, to investigate the Argentine fly, to abolish the Dutch elm disease; also to quarantine and segregate the gypsy moth, which I assume is a resident of all these other nations. So the committee has considered all of these problems from foreign sources in attempting to assist agriculture. I wish our foreign missionaries could induce the people of these nations to keep their pests at home. If they can, a great saving will result for our Treasury.

The pro forma amendment was withdrawn.

The Clerk read as follows:

For carrying out the provisions of the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes", approved July 11, 1916 (39 Stat., pp. 355–359), and all acts amendatory thereof and supplementary thereto, to be expended in accordance with the provisions of said act, as amended, including not to exceed $176,400 for departmental personal services in the District of Columbia, $8,000,000, to be immediately available and to remain available until expended, which sum is a part of the sum of $125,000,000 authorized to be appropriated for the fiscal year ending June 30, 1933, by section 1 of the act approved April 4, 1930 (46 Stat. p. 141): *Provided*, That none of the money herein appropriated shall be paid to any State on account of any project on which convict labor shall be employed, except this provision shall not apply to convict labor performed by convicts on parole or probation: *Provided further*, That not to exceed $45,000 of the funds provided for carrying out the provisions of the Federal Highway Act of November 9, 1921 (U.S.C., title 23, secs. 21 and 23), shall be available for the purchase of motor-propelled passenger-carrying vehicles necessary for carrying out the provisions of said act, including the replacement of not to exceed one such vehicle for use in the administrative work of the Bureau of Public Roads in the District of Columbia: *Provided further*, That hereafter whenever performing authorized engineering or other services in connection with the survey, construction and maintenance, or improvement of roads for other Government agencies the charge for such services may include depreciation on engineering and road-building equipment used, and the amounts received on account of such charges shall be credited to the appropriation concerned.

Mr. DOWELL. Mr. Chairman, I reserve a point of order on the last proviso. My purpose is to make some inquiry about this paragraph.

I note that in this paragraph $8,000,000 is the amount appropriated. There is no other appropriation, I understand, for Federal aid in the construction of roads.

Mr. SANDLIN. There has been no authorization since 1932. The $8,000,000 is a part of the funds remaining from that authorization. The total amount remaining is $16,000,000.

Mr. DOWELL. Is this all that remains of the authorization made at that time?

Mr. SANDLIN. No. There is $16,000,000 plus remaining.

Mr. DOWELL. There is no other authorization since that time. Do I understand from the gentleman that it is the policy of the administration to abolish Federal aid in connection with road building?

Mr. SANDLIN. I cannot tell the gentleman whether that is so or not. My thought is it is not. I am not authorized to speak on the subject at this time, but my thought is that it is not the intention of the administration to abandon contributions to roads. This committee, as the gentleman well knows, is not the proper committee to pass on the matter.

Mr. DOWELL. I understand; but I also know that the gentleman had before his committee, in connection with appropriations, a representative of the Bureau of Public Roads, and the gentleman's committee has had a complete hearing relative to the situation concerning the building of roads.

Mr. SANDLIN. Yes. We held a hearing on this item when it came up.

Mr. DOWELL. Then may I inquire what the program is to be? The gentleman should know, as his committee appropriates the money for the Federal aid system.

Mr. SANDLIN. Speaking for myself, the program will be to appropriate whatever is authorized by Congress for this purpose. The gentleman is a member of the Public Roads Committee?

Mr. DOWELL. Not at the present time. Prior to this time we have been authorizing funds for a regular Federal aid program.

Mr. SANDLIN. Yes.

Mr. DOWELL. Has that been discontinued?

Mr. SANDLIN. I would suggest to the gentleman that as the Committee on Public Roads has full authority to consider bills covering this matter the gentleman take the matter up with the chairman and members of that committee.

Mr. DOWELL. That is the reason I am taking it up on the floor at this time. I have been unable to find out from anyone what the program is to be with reference to the building of roads. I am asking the chairman of this subcommittee, because this is the subcommittee which has al-

ways appropriated money for the building of roads, and I assume it is the proper committee to determine what is to be appropriated for the construction of roads the coming year.

Mr. SANDLIN. My answer to the gentleman is that it is the policy of the Appropriations Committee to appropriate the amount authorized by the Congress.

Mr. DOWELL. As I understand the gentleman, the committee has not appropriated the full amount that is still unexpended?

Mr. SANDLIN. The committee has appropriated all they will use and has followed the custom that has been followed for 16 years by the same committee under both the Republicans and Democrats.

Mr. DOWELL. May I ask the gentleman if he will get the information for the Members of the House as to what the program is to be with reference to the construction of roads in the coming year?

Mr. SANDLIN. I have not the information at this time, and I do not know that it is incumbent upon this committee to say what the legislative committee is going to do. I think the proper course to pursue is to get the information from the committee that is to pass on the authorization. The gentleman well knows that this House is very jealous of the Appropriations Committee legislating. I think wherever possible no items of legislation should be put in an appropriation bill. I have taken this position since I have been a member of the committee.

Mr. DOWELL. The proviso against which I reserved a point of order is legislation. I am asking the gentleman, the chairman of the committee, where there is any authority from the legislative committee to place the provision in this paragraph.

Mr. GOSS. Will the gentleman yield?

Mr. DOWELL. I yield to the gentleman from Connecticut.

Mr. GOSS. I have been on my feet to make a point of order on the word "hereafter" in that paragraph. I was going to suggest that we tie it up to this particular appropriation bill and then it would not be permanent law.

Mr. DOWELL. I do not know that; but this is clearly legislation, as I view it. That is the reason I make the inquiry.

Mr. GOSS. If the committee would accept an amendment to strike out the word "hereafter" and insert the language, "during the fiscal year 1935", that would meet the gentleman's point.

Mr. SANDLIN. If we cut out the word "hereafter", it would accomplish the same thing.

Mr. DOWELL. That is all it would cover if this were cut out. As this reads now it is permanent legislation and should not be in this appropriation bill. I raised the point of order because I thought we should not legislate in this way.

Mr. HASTINGS. Why not move to strike out the word "hereafter"?

Mr. DOWELL. I wanted to find out what is the purpose or the necessity for this legislation?

Mr. SANDLIN. The Bureau of Public Roads, I understand, does work for other departments. They perform certain work for other departments of the Government, such as the Park Service and the Indian Service, and this allows them authority to charge depreciation on the road-building equipment used in such work.

Mr. DOWELL. These machines are owned by the Government, and is there any reason for charging depreciation to one department any more than another?

Mr. SANDLIN. The gentleman understands that this Bureau wants to keep as much of its funds as it can, so that the funds may be used for this particular purpose.

Mr. DOWELL. That is simply a matter of keeping accounts. As a matter of fact, these machines are used by the Bureau of Public Roads; and is there any reason why other departments should be charged for the depreciation of machinery used by the Bureau of Public Roads in its construction of roads?

Mr. HART. If the gentleman will permit, the testimony shows they have to replace these machines and get the money out of these various appropriations. Of course, when their machines are gone they have to come here and get more money.

Mr. HASTINGS. If the gentleman will yield, if you charge the other departments for work done by this Bureau, can the gentleman give any good reason why the depreciation on the machinery used in such work should not be charged to that department? I think the statement is unanswerable.

Mr. DOWELL. If the gentleman please, I am asking a question and trying to get information.

Mr. HASTINGS. That is all this proviso does.

Mr. DOWELL. Mr. Chairman, I have no objection to leaving this legislation in the bill if it is amended to make it apply only to this appropriation and to this year.

Mr. GOSS. Will the gentleman yield there?

Mr. DOWELL. Yes.

Mr. GOSS. If we struck out the word "hereafter" and inserted "during the fiscal year 1935", the gentleman's purpose would be accomplished.

Mr. SANDLIN. If we struck out the word "hereafter", that would cover it.

Mr. GOSS. But we would be absolutely sure if we put in the language I have suggested.

Mr. DOWELL. May I say that the wording of this proviso is such that I believe it might be construed to be permanent law even if the word "hereafter" were stricken out.

Mr. GOSS. But if we insert "during the fiscal year 1935", that will tie it up so that it only applies to this year.

Mr. DOWELL. I think the gentleman is correct.

Mr. GOSS. I had intended to make a point of order on that basis, but if we could have such an amendment accepted, I think it would be better. There is no harm in the language suggested.

Mr. HASTINGS. That is true, and that is what it means anyway. The word "hereafter" makes it permanent law and when you cut out the word "hereafter" it is limited to this appropriation, but there would be no objection to inserting the language which the gentleman has suggested.

Mr. DOWELL. The language is, leaving out the word "hereafter", "whenever performing authorized engineering or other services in connection with", and so forth, which would seem to me to make it permanent law.

Mr. GOSS. Again I suggest that if we include the words "during the fiscal year 1935" there could be no such objection.

Mr. DOWELL. I think that is correct and I will withdraw my reservation of a point of order, if the gentleman will consent to an amendment of this provision to make it clear that it only provides for this fiscal year.

Mr. SANDLIN. I shall accept the gentleman's suggestion.

Mr. DOWELL. With that understanding, Mr. Chairman, I withdraw the reservation of a point of order.

Mr. GOSS. Mr. Chairman, I offer the amendment which I have suggested.

The Clerk read as follows:

Amendment offered by Mr. Goss: Page 62, line 15, strike out the word "hereafter" and insert "during the fiscal year 1935."

The amendment was agreed to.

Mr. HASTINGS. Mr. Chairman, I want to detain the Committee for a moment to inquire of the chairman of the subcommittee having the bill in charge, if I am correct with respect to the amount of money that may be expended for road building during the next fiscal year.

My understanding is that the $400,000,000 of the $3,300,000,000 first authorized and afterward appropriated in the National Recovery Act has all been allocated to the several States, but that part of this money has not as yet been expended, and for this reason the Director of the Bureau of Roads did not insist on appearing before the legislative committee or to ask of this committee for a larger appropriation. As I understand from the chairman of the subcommittee having this bill in charge, there only remains $16,000,000 of

the amount of money heretofore authorized to be appropriated, which could be appropriated by the Committee on Appropriations in this particular bill. I am advised that the statement was made by the Director of Public Roads, Mr. MacDonald, that the amount of $400,000,000 allocated to the States, together with the amount of $8,000,000 carried in this bill, will be a sufficient amount to carry the work forward until February 1935.

Mr. DOWELL. Will the gentleman yield?

Mr. HASTINGS. Yes.

Mr. DOWELL. If that be true, how much money has been unexpended of the amount that was appropriated, added to this $8,000,000?

Mr. HASTINGS. I do not have the exact figures, but I refer the gentleman to page 631 of the hearings, where the allocation of the several amounts totaling $400,000,000 are found, and where there is a statement made by the Director of the Public Roads such as I have indicated, which I understand, in substance, is that it will be sufficient for road building, with the amount appropriated, until February 1935.

Mr. TABER. Will the gentleman yield for a suggestion?

Mr. HASTINGS. I will be glad to yield to the gentleman.

Mr. TABER. If the gentleman will turn to pages 80, 80A, and 81 of the Budget message, I think he will find that approximately $200,000,000 of the $400,000,000 will be available for expenditure in 1935.

Mr. DOWELL. This is the only real information I have received, and I have made repeated inquiries attempting to get this information, as I understand there will be approximately $200,000,000, half of the appropriation made last year, for use in road building next year.

Mr. HASTINGS. Plus $8,000,000 carried in this bill.

Mr. DOWELL. And that will be used in the coming year.

Mr. HASTINGS. I want to say, while I am on my feet, that I think I agree with the gentleman from Iowa. If I had my way about it, I would prefer to see the legislative committee authorize a larger amount of money for road building. I would prefer seeing a much larger appropriation for road building in this bill. But the Director of Roads says that he has sufficient to carry on.

Let me repeat what I have frequently taken occasion to say before in the House, and that is, that I do not believe that any public money is expended to a more useful purpose than in road building. The first good road act was passed in 1916. There was a small appropriation at the time providing for the expenditure of $25,000,000 over a period of 5 years. This act has been amended and enlarged from time to time until a splendid network of good roads has been built throughout the entire country.

There is less criticism of road building than perhaps against the expenditure of money for any other purpose. We earmarked $400,000,000 out of the $3,300,000,000 authorized to be appropriated in the National Recovery Act. As I have just stated, this money has all been allocated to the several States and a detailed statement may be seen on page 631 of the hearings. I notice that my State, Oklahoma, received $9,216,798.

In the event additional funds are asked for the relief of unemployment, it is my judgment that Congress should specifically set apart and earmark a sizeable sum for road building. The building of good roads connects up every section of the country, East and West and North and South. It connects the rural communities with their marketing centers.

It enables children to attend rural schools and all persons to attend churches. It benefits those who live in the cities and those who live in the country. It adds value to the lands in the country and it reduces the cost of hauling farm products to market.

I have heretofore stated that I favor the improvement of every rural-route road and every star-route road. If these routes were improved the local county commissioners, with their funds, would improve the connecting links. This would enable the people to secure employment in every community and remain at home and save part of the money received from their work.

I trust that the Committee on Roads will meet at an early date and authorize an additional appropriation to be made for roads.

This bill carries an appropriation of $8,000,000, leaving only $8,000,000 more unappropriated that has been authorized. I would like to have seen the entire $16,000,000 appropriated. Then if a larger sum for relief work is again asked for I want to emphasize that I think that Congress should earmark, as it did in the National Recovery Act, a large part of it for road building.

We could aid the unemployment situation greatly by expending more money on roads, and second, by expending more money in building standardized public buildings in the smaller cities and towns throughout the country. The larger cities and towns now have adequate public buildings. Certainly every county-seat town should have a public building to house whatever Federal activities there are at that place. Each county-seat town is a permanent town and most of the county-seat towns grow in population and I think we are justified in urging additional appropriations for public buildings in the smaller towns throughout the country, particularly at this time, when the expenditure of money in those places would greatly relieve the unemployment situation.

As stated by the gentleman from New York, that of the $400,000,000 set apart in the National Recovery Act for road building, $200,000,000 remains unexpended, which, with the $8,000,000 provided in this bill, the Director of the Bureau of Public Roads advises will be sufficient to carry on the work of road building until February 1935.

May I again express the hope that prior to that time adequate sums will be made to care for the work of road building and erection of public buildings in the smaller cities and towns throughout the country.

The Clerk read as follows:

Bureau of Agricultural Economics.

Mr. LOZIER. Mr. Chairman, I move to strike out the last word. There are many fallacies which mightily influence individuals, communities, and nations, especially fallacies relating to economic problems. An untruth, if believed, and until it is disproved, has the same psychological effect as the truth. Jeremy Bentham, in his Book of Fallacies, calls attention to a large number of conclusions, formulas, maxims, aphorisms, proverbs, and theories which are quite generally accepted, and although at first glance they appear plausible, on closer examination are found to be obviously fallacious, erroneous, and illogical. The versatile Sydney Smith, the founder and first editor of the Edinburgh Review, in commenting on this posthumous work of Mr. Bentham, said:

> There are a vast number of absurd and mischievous fallacies which pass readily in the world for sense and virtue, while in truth they tend only to fortify error and encourage crime.

A fallacy, if long indulged and unchallenged, soon comes to be accepted as truth. A false philosophy, if its sophistry be not exposed, will be readily accepted as genuine and sound by those who do not investigate for themselves, and who are prone to accept the statements and conclusions of others in reference to matters with which they have no close familiarity. Someone, sometime, somewhere advanced an argument, formulated a maxim, or announced a theory, which the unthinking public acceped without subjecting it to the acid test of logic, reason, and common sense, and once accepted, its accuracy may go unchallenged for years. There are fallacies in religion, science, philosophy, sociology, business, and politics in which much error is cunningly mingled with a little truth.

In every sphere of human activity fallacies flourish on every hand and error in the garb of reason stubbornly contends with truth for the mastery of the world. Every generation explodes old fallacies and incubates new ones. No one familiar with the political history of the American people will deny that skillfully fashioned fallacies have often influenced legislation and dominated the political and economic life of the Nation.

It is not strange that men and multitudes are wedded to some dear falsehood when we consider that nearly every false philosophy has some admixture of truth. Fallacies thrive in the same soil that nurtures truth, just as tares and wheat grow side by side. Our form of government and our complicated business and economic systems furnish a fertile soil for the incubation of fallacies and false systems of political philosophy. Mr. Jefferson, in one of his inaugural addresses recognized this situation when he said:

Error of opinion may be tolerated where reason is left free to combat it.

In connection with the pending bill I desire to call your attention to a fallacy that has been boldly promulgated and pretty generally accepted, to the effect that our agricultural depression is due primarily and exclusively to overproduction of agricultural commodities. No greater or more mischievous fallacy has ever been given such general acceptance.

This false claim and illogical arguments in its support have been so long and so persistently pressed that many well-meaning individuals have, without investigation, accepted this conclusion as sound and axiomatic. Our agricultural distress is not primarily due to overproduction but to underconsumption and to maldistribution of our agricultural commodities. To illustrate:

In the 3 years, 1927, 1928, 1929, we produced in the United States an average of 868,607,000 bushels of wheat annually, while in the years 1930, 1931, and 1932 the annual production only averaged 828,159,000 bushels. That is to say, that in the last 3 years, 1930, 1931, and 1932, we produced on an average annually 40,448,000 bushels of wheat less than the average annual production for the preceding 3 years, 1927, 1928, and 1929.

In the 3 years 1927, 1928, and 1929, the average annual production of corn in the United States was 2,705,793,332 bushels, while for the last 3 years, 1930, 1931, and 1932, the average annual yield of corn was 2,511,664,000 bushels, or an annual average of 194,000,000 bushels less during the last 3 years than during the preceding 3 years.

Now, with reference to cotton. In the 3 years 1927, 1928, and 1929 the average annual production was 14,086,259 bales, while for the last 3 years, 1930, 1931, and 1932, the average annual production was 14,676,368 bales, or an average increase of only 590,109 bales annually.

Take our potato crop. For the 3 years 1927, 1928, and 1929 we produced on an average annually 400,000,000 bushels of white potatoes, while for the 3 succeeding years 1930, 1931, and 1932 the average annual production was 355,000,000 bushels, or an average annual decrease of 45,000,000 bushels.

The total world production of corn in the 3 years 1927, 1928, and 1929 was 12,794,000,000, or an average annual yield of 4,264,666,666; while for the 3 years 1930, 1931, and 1932 the total corn production of the world was 12,866,000,000 bushels, or an average of 4,288,666,666 bushels annually. That is to say, the total world production of corn in the last 3 years averaged only 24,000,000 bushels annually more than the annual production for the 3 preceding years.

The total world production of wheat for the 3 years of 1927, 1928, and 1929 averaged 4,448,000,000 bushels, while the average annual production for the 3 years 1930, 1931, and 1932 averaged 4,782,000,000 bushels, from which it appears that the average annual world production of wheat for the last 3 years was only 334,000,000 bushels in excess of the average annual world production for the 3 preceding years.

The total wheat exports from North America in the 3 years 1927, 1928, and 1929 averaged 476,813,666 bushels, while the exports from North America for the 3 years 1930, 1931, and 1932 averaged 372,569,000 annually. It is significant that the total average annual exports of wheat from the United States and Canada for the last 3 years were 104,244,666 bushels less than the annual average exports for the 3 preceding years.

Moreover, the exports of wheat from all countries has declined in the last 3 years. The total exports of wheat from all countries for the 3 years, 1927, 1928, and 1929, averaged 833,822,333 bushels annually, while the total world exports for the 3 years, 1930, 1931, and 1932, averaged only 708,697,333 bushels annually, or an average annual decline in world exports of 124,125,000 bushels.

These statistics conclusively demonstrate that there has been no overproduction of wheat, cotton, potatoes, or corn, and during the last 3 years the exports of these four major commodities from the United States and from all nations has declined, very largely because the buying power of the masses in all nations has been materially reduced, and in many nations practically destroyed.

On August 1, 1933, the world's stock of wheat amounted to 960,000,000 bushels, of which the United States held 345,000,000, or 36 percent of the world's wheat supply. This was the largest total in history for that date. The world's total supply of wheat August 1, 1933, was 180,000,000 bushels larger than the stock on hand August 1 of the preceding year. On August 1, 1933, the United States stocks of wheat exceeded the combined supplies of Canada, Australia, Argentina, and all other exporting countries, plus the grain then in ocean transit.

Only in recent years have old crop carry-overs become a prominent feature of the world's wheat situation. Changes in August 1 stock had very little bearing on world markets during the post-war period prior to 1929, and until that time neither the United States nor Canada entered the season with as much as 100,000,000 bushels of wheat on hand, and European stocks showed such slight variations from season to season that they were seldom listed in world's tabulations. That is to say, prior to 1929 the world habitually consumed practically all surplus stock of wheat by the time the new crops were harvested and marketed.

From 1925 to 1928 inclusive, the world at no time had a supply of more than 300,000,000 to 500,000,000 bushels of wheat on August 1, but suddenly in 1929 an additional 300,000,000 bushels was piled on top of the already accumulated stock of 500,000,000 bushels, and since 1929 so-called "excessive surpluses" have operated to drive the market price of wheat lower and lower.

But, I repeat these so-called "surpluses" accumulated not as a result of unusual or excessive production, but because of unprecedented and unexpected underconsumption. The people, not only of the United States but of the world, were in such economic distress and their purchasing power had been so tremendously reduced that they were unable to buy wheat or its products, and, therefore, the stocks continued to accumulate in the world's markets, in spite of reduced production.

So I come back to my original proposition that there never was a greater fallacy in the world than that the present agricultural depression and low prices of farm products are attributable to overproduction. It is not overproduction; it is underconsumption; it is a maldistribution of agricultural commodities. I do not believe that since the world began the Almighty has ever permitted the earth to produce more food than was reasonably necessary to supply the wants of mankind, if only the farm products could be brought within reach of the people who were hungry and wanted them.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. LOZIER. Mr. Chairman, I ask unanimous consent to proceed for 3 additional minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LOZIER. For the past several years there has been just as much demand and actual need in the world for agricultural products as there ever was. There has been a gradual falling off in the per capita consumption of wheat, in the per capita consumption of meat products, and of all agricultural commodities, and as a result the carryover from year to year has constantly augmented the surplus supplies. That, as I have said, is not due primarily to overproduction, but inevitably results from the inability of the American people and the people of the world to buy farm products.

We know as a matter of fact that there are millions of people in the cities whose financial condition will not permit them to have meat at more than one meal a week, and then in very limited quantities. Until the purchasing power of the American people is restored, until the people have funds with which to buy farm commodities and other food products at prices far above present market levels, there can be no rehabilitation of the agricultural classes. There are 30,000,000 people who live on farms and depend directly on agriculture for a livelihood, and until the buying power of those 30,000,000 people is restored, and until the farmer is able to sell his commodities at prices which will not only return to him the cost of production, but a fair profit over and above production costs, permanent and Nation-wide prosperity is impossible.

Mr. JOHNSON of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. LOZIER. Yes; I yield to my friend from Minnesota.

Mr. JOHNSON of Minnesota. I agree with the gentleman in what he has said, but has he any record of the increase in the production of dairy and meat products?

Mr. LOZIER. No; I have not placed anything of that kind in the RECORD, but what I said about corn, wheat, cotton, and potatoes applies to dairy and all other farm products. No more butter is being produced in the United States than is needed or desired by the people, but more dairy products are being produced than the impoverished people can buy and pay for.

From what I have said, I do not want to be understood as opposing the President's domestic-allotment plan and his other progressive and forward-looking measures for the restoration of prosperity to the agricultural classes. I am whole-heartedly supporting the entire agricultural program of President Roosevelt, and I am convinced that if it is sympathetically administered, it will lead the American farmers out of bondage and out of the swamps of insolvency into the high hills of prosperity. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. BLANTON. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HASTINGS. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection?

There was no objection.

The Clerk read as follows:

Farm management and practice: To investigate and encourage the adoption of improved methods of farm management and farm practice, and for ascertaining the cost of production of the principal staple agricultural products, $313,670.

Mr. WHITTINGTON. Mr. Chairman, I move to strike out the last word to ask a question with respect to the appropriation of $313,670 for farm management and practice. Will the amount carried in the current appropriation for the year 1935 be the same as that carried in the appropriation for 1934 except as to the matter of the adjustment of salaries?

Mr. SANDLIN. Yes, sir.

Mr. WHITTINGTON. In other words, there is no curtailment of the work that is done during the current year provided for in the pending appropriation?

Mr. SANDLIN. This bill carries the same amount that was carried for 1934.

Mr. WHITTINGTON. So that there should be no occasion for curtailment of the work, and the same work can be done as during the present year?

Mr. SANDLIN. Yes.

The Clerk read as follows:

Crop and livestock estimates: For collecting, compiling, abstracting, analyzing, summarizing, interpreting, and publishing data relating to agriculture, including crop and livestock estimates, acreage, yield, grades, staples of cotton, stocks, and value of farm crops, and numbers, grades, and value of livestock and livestock products on farms, in cooperation with the Extension Service and other Federal, State, and local agencies, $603,701: *Provided*, That no part of the funds herein appropriated shall be available for any expense incident to ascertaining, collating, or publishing a report stating the intention of farmers as to the acreage to be planted in cotton.

Mr. WEARIN. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment by Mr. WEARIN: Page 67, line 7, after the word "cotton", insert the words "or corn."

Mr. WEARIN. Mr. Chairman, I have introduced this very short amendment which will cost the Department of Agriculture nothing. It is quite possible that the amendment may save the American farmer and particularly the corn grower some money. Before I discuss it at length I call the attention of the committee to the fact that under the provisions of the section pertaining to the Bureau of Agricultural Economics there is a limitation that the Clerk read just a moment ago, as follows:

Provided, That no part of the funds herein appropriated shall be available for any expense incident to ascertaining, collating, or publishing a report stating the intention of farmers as to the acreage to be planted in cotton.

My amendment simply adds the words "or corn."

Mr. ARENS. Mr. Chairman, will the gentleman yield?

Mr. WEARIN. Yes.

Mr. ARENS. Why not have it apply to all crops? The prediction of what acreage the farmer is to plant is a damage to all of us.

Mr. WEARIN. I think the suggestion of the gentleman from Minnesota is very good. The reason I did not do that is because I represent a corn section, and I thought the gentleman from Minnesota or some other might be interested in enlarging the amendment to the extent of making it refer to the products from their particular districts. I will support such a motion. I believe the dissemination of such information upon the part of the Department of Agriculture is equivalent to a revelation of what should be a trade secret on the part of the American farmer. There is no reason why the reservation with reference to the publication of planting intentions should be applicable to the cotton producer and not applicable to the corn grower. I think what is true of cotton is also true of corn; that the distribution of such information might readily militate to the disadvantage of the corn grower to the extent that any data indicating increases has a tendency to decrease the market price of the product.

Mr. DOBBINS. Will the gentleman yield?

Mr. WEARIN. I yield.

Mr. DOBBINS. Does not the objection which the gentleman raises to the dissemination of this information apply to the entire paragraph with equal force—information as to the number of acres, planting, crop conditions, and the like?

Mr. WEARIN. Do I gather that the gentleman means that it applies to all farm products?

Mr. DOBBINS. No. I mean does it not apply with equal force to the entire paragraph covering the estimates, crop production, dissemination of information which the Department of Agriculture gives out in monthly estimates? Does not the objection apply with equal force to that?

Mr. WEARIN. I am inclined to think this particular proviso simply refers to the intention to plant cotton and not to the publication of actual data as to the number of acres planted. For that reason I have introduced this amendment including corn. I think the retention of such information, as a matter of secret data within the files of the Department of Agriculture, is of the utmost importance to the corn grower as well as the cotton grower. I trust the committee and the Members of the Committee of the Whole House on the state of the Union will accept the amendment.

Mr. SANDLIN. Mr. Chairman, I am going to leave this question to my friends on the other side, as they come from the corn-growing sections of the country. As far as I am concerned I will not oppose the amendment.

Mr. SINCLAIR. Mr. Chairman, as far as this side of the House is concerned, we have had no discussion of that question at all in the committee. There has not been any

attempt on the part of the committee to insert other crops with reference to this paragraph. However, I have no objection to going along with the gentleman if it is agreeable to the other gentleman on this side. All crops should be considered in the same way, however.

The CHAIRMAN. The question is on the adoption of the amendment offered by the gentleman from Iowa [Mr. WEARIN].

The amendment was agreed to.

The Clerk read as follows:

Enforcement of the standard container, hamper, and produce acts.

Mr. SANDLIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SANDLIN: Page 71, line 23, after the word "produce", insert the word "agency."

The amendment was agreed to.

The Clerk read as follows:

Total, Bureau of Agricultural Economics, $4,916,031, of which amount not to exceed $1,861,856 may be expended for personal services in the District of Columbia, and not to exceed $22,200 shall be available for the purchase of motor-propelled and horse-drawn passenger-carrying vehicles necessary in the conduct of field work outside the District of Columbia.

Mr. JENKINS of Ohio. Mr. Chairman, I move to strike out the last word. I ask unanimous consent to revise and extend my remarks, Mr. Chairman.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. JENKINS of Ohio. Mr. Chairman, I rise to discuss the parliamentary maneuvers which have attended the course of the independent offices appropriation bill, especially as they apply to the passage or rather to the refusal to pass the veterans' amendments to that bill.

It is very unfortunate that legislation seeking to aid the veterans could not be taken up by itself and upon its own merits. The public, which cannot be well informed on the parliamentary practices of the House of Representatives, fails to understand why this cannot be done. There is no real reason for this except that the administration cannot trust the Congress to legislate, even though it has a majority of over 200 Members out of 435, which is the largest majority for any party since the establishment of the Republic.

To get at the very bottom of this opposition to the veterans shown by the President and the administration we must go back to the passage of the Economy Act by the House of Representatives within a week after President Roosevelt took office. At that time the people of the country were in a state of great anxiety due to the closing by the President of all the banks and financial institutions of the country. Finances, private and national, were the common topic of discussion by the people everywhere. The fortitude and patriotism shown by our people then was most commendable.

When the country was in this condition, the President made a great play to balance the Budget. To do this his spokesmen in the House made it appear that his plan was to reduce the expenditures in the Veterans' Department by a reduction of expensive red tape and unnecessary overhead expenses to the extent of about $225,000,000. He was granted this authority under these conditions. This authority was grossly abused immediately, and thereby was disclosed the animosity of the President and his administration toward legislation favoring the veterans. Since that time the administration has balked every effort made by the veterans to regain that which was unfairly taken from them. This is the reason why it is impossible for those sponsoring legislation favorable to veterans to get their measures considered. The committees, which are dominated by Democrats afraid to act for fear of the President's wrath, pigeonhole the bills. And the Rules Committee, which furnishes the necessary "gag rules" for the administration, refuses consideration to any such measures. The veterans, therefore, are forced to "tack on" their measures as amendments to some other bills. The only bills which must be passed in order to keep the Government going are appropriation bills. This class of bills have very frequently been the vehicle by which much legislation has been passed. In the last session of Congress veterans' legislation seeking to undo the consequences of the Economy Act was appended to the independent offices bill. In order to forestall this procedure in this session, the high and mighty Rules Committee early in this session adopted the most drastic course ever yet attempted by any Rules Committee. They prepared and forced through a rule which was opposed almost unanimously by the Republicans and by many Democrats, and would have been defeated except for fear of Executive retribution. This rule provided, in effect, that when the independent offices appropriation bill would be brought up for consideration no amendments could be offered to it except those which the Appropriations Committee itself might wish, and also provided that on no appropriation bill that might be considered at any future time during the life of the Seventy-third Congress could any amendment be added except those which the committee offered. Thus did the Congress blindly and supinely, and to the everlasting disgrace of those who agreed, surrender to the committee and the grasping administration bunch their constitutional right and duty to legislate for the people.

This was nothing less than a rank, unfair, unjust invasion of the rights of the legislative branch of the Government by the Executive. It was also an invasion of the rights of a large group who took up arms in defense of the country. This is much more serious than those who oppose the veterans' requests appreciate. When the time comes for them to seek redress under the rights given by the Constitution, and they are denied this redress by the interposition of a "gag rule", they will appreciate more clearly how dangerous this is. They will then doubt very much our vaunted boast that ours is the "land of the free."

John W. Davis, the erstwhile leader of Democracy, when Democracy was democracy and not socialism, has much to say recently that is apropos of this situation. He says, in effect, that wisdom and common sense in legislation will carry further than hasty expedients devised to circumvent. Does any Democrat who has been voting for these "gag rules" believe in his heart that John W. Davis or Andrew Jackson or Thomas Jefferson or John C. Calhoun or Jeff Davis himself would have voted for such a rule if he were a Member of this Congress? The House was circumvented from the consideration of any veterans' legislation by the simple process of allowing itself to be scared into inaction and to be gagged into inarticulation.

The independent offices appropriation bill passed the House without any amendment for aid of veterans. The Senate, after the interposition of every possible obstacle by administration leaders, ordered the measure before the Senate for open consideration. The administration failed to gag the Senate. The Senate adopted amendments restoring the Spanish War veterans to the pension rolls as they formerly were with the same pension as formerly less 10 percent. The whole of the four-point program of the American Legion was adopted except the fourth point, which provided a pension plan for World War widows.

While the administration would make no concessions to the House and offered only the "gag rule" as its plan, when the Senate showed some fight the administration immediately countered with a proposition of compromise. The compromise was very liberal when contrasted with "gag-rule" tactics, but those in charge of the fight for the veterans could not then in honor accept any compromise.

After passage by the Senate, the next step in regular parliamentary procedure would be to refer the bill with the amendments to the House for action by the House. The usual procedure would have been for the Chairman of the Appropriations Committee to have asked unanimous consent to have the bill with the amendments referred to conferees made up from the membership of the Appropriations Committee with Members of both parties represented. It would be their duty to bring out some report that would give the House the right to pass upon the amendments offered by the Senate. Instead of following the usual course, resort was

had to an ancient rule that has not been invoked for many years, and the existence of which few, if any, Congressmen knew. This rule gives the Speaker the right to refer the bill back to the committee if he chooses. By virtue of this rule the Speaker, refusing to allow the bill to come up under the heretofore universal custom, arbitrarily referred it back to the Appropriations Committee, where it may be emasculated at will, or where it may be buried forever. The only way this bill may be brought to light again if the committee refuses to act is by the invocation of the discharge rule. This is done by the signing of a petition to that effect by 145 Members of the House. This cannot be done until after the committee has held the bill for more than 30 days.

The administration will not risk this procedure, for there is no question that a sufficient number of signatures can be secured to a discharge petition. The administration will not permit a straight-out vote, for if the gag is taken from the mouths of Congressmen, enough of them will be found with courage enough to reclaim their constitutional rights to vote as they please. The administration, with its great boasting of fairness and liberality, dares not permit a straight-out vote.

As soon as the Senate passed these favorable amendments the Democratic leadership immediately called a caucus of their membership. The object was to bind the membership to oppose the Senate amendments. Fearing a revolt among their members, it was decided to call a conference instead of a caucus, the difference being only a sentimental one. A caucus is supposed to bind, while a conference is supposed to effect a unanimity of sentiment. A short time before the arrival of the hour for the conference the Democratic leaders, still fearing an explosion which was sure to follow any convocation of the Democratic membership, grew panicky, and from a conference at the White House with the President the Democratic floor leader called off the conference. It was then that somebody discovered this age-old rule, which was welcomed by the leaders as a drowning man would welcome even a straw. Thus endeth a chapter full of alternating hope and despair for the veterans.

What the next step will be nobody seems to know. It is safe, though, to assume that the administration will now come forward with a proposition of compromise which will carry a substantial increase to the veterans and which will be accepted by their leaders, just as was done in the closing days of the last session, when the Cutting-Steiwer amendment was defeated and a substitute accepted. Thus will the administration keep itself from a defeat, and thus will it seek to convince the veterans that only from it can come any veterans' relief, and that it is the veterans' best friend. I have no doubt that the veterans will be able to understand that whatever gains they have been able to make for their comrades are due to their own efforts, assisted by Senators and Congressmen who are friendly to their cause. It cannot be fairly claimed that the present administration has shown anything but open hostility toward the cause of the veterans.

The Clerk read as follows:

To enable the Secretary of Agriculture, in cooperation with the authorities of the States concerned, or with individuals, to make such investigations and demonstrations as may be necessary in connection with the development of livestock production in the cane-sugar and cotton districts of the United States, $37,036.

Mr. ARENS. Mr. Chairman, I move to strike out the last word. We heard a little while ago of the possibility of the Government appropriating money to create a game refuge at one place and then appropriating money at another place to destroy it. We are at the present time confronted with the question of reducing the production of dairy products, and we have appropriated in a bill sometime ago $200,000,000, of which seventy-five or eighty million dollars will go to eliminate dairy cows. In this bill we are appropriating here $37,000 to show the people of the South how to raise dairy cows and to encourage them to raise dairy cattle in the southern part of the United States. I just wanted to call attention to this fact. Objections were made to appropriating $33,000,000 for developing a waterway for our section of the country. Here we appropriate $37,000 to create competition for people in our section of the country. We appropriated sometime ago a large sum of money, I mentioned, to eliminate surplus dairy cattle, and here we are spending money in the South to investigate and demonstrate and encourage the raising of dairy stock. I just wanted to call attention to the inconsistency.

I withdraw the pro forma amendment.

The Clerk read as follows:

For the application of such methods of control of grasshoppers as, in the judgment of the Secretary of Agriculture, may be necessary, in cooperation with such authorities of the States concerned, organizations, or individuals as he may deem essential to accomplish such purposes, including the employment of persons and means in the District of Columbia and elsewhere, printing and binding, rent outside of the District of Columbia, and for other expenses, $2,000,000, to be immediately available, of which amount not to exceed $7,500 may be expended for personal services in the District of Columbia: *Provided*, That this appropriation shall be used for expenditures of general administration and supervision, purchase and transporation of poisoned bait, or materials for its manufacture, and such other expenses as in the discretion of the Secretary of Agriculture may be deemed necessary, and that the cooperating State shall be responsible for the local distribution and utilization of such bait on privately owned lands, including full labor costs: *Provided further*, That, in the discretion of the Secretary of Agriculture, no part of this appropriation shall be expended for grasshopper control in any State until such State has provided the necessary organization for the cooperation herein indicated: *And provided further*, That no part of this appropriation shall be used to pay the cost or value of farm animals, farm crops, or other property injured or destroyed.

Mr. GOSS. Mr. Chairman, I reserve a point of order on this paragraph, for the purpose of asking for an explanation as to the apparent emergency need for this appropriation, when it has not ever been authorized by law; and also to ascertain if the committee would accept an amendment which would at least tie up this appropriation to the fiscal years 1934–35, so that it could not in any way be construed as a permanent law?

Mr. SANDLIN. I will refer the gentleman to the gentleman from North Dakota, who is more familiar with the grasshopper situation than I am.

Mr. SINCLAIR. Mr. Chairman, the conditions in effect now are these: There has been an inspection made of the territory in the Northwest this past fall to ascertain the extent to which the whole territory was infested with grasshoppers. The Bureau of Entomology has sent several men up there, working in conjunction with local people.

They find that along the international boundary line from the Rocky Mountains to Lake Superior there is the worst infestation from grasshopper eggs that has been known in this country in 50 years.

Mr. GOSS. The gentleman recalls that a few years ago we had this same item before us, and that it was voted down. It was then stated in March that we needed the money by April; and when April came we needed it by June; and when June came we needed it by July. Finally, the House refused to appropriate the money, and after all there was no grasshopper infestation that year, yet we might very easily have spent a million and a half dollars.

Mr. SINCLAIR Will the gentleman allow me to explain the situation?

Mr. GOSS. Yes; I shall be pleased to, for I want to understand what the emergency is this year and why the money is needed.

Mr. SINCLAIR. The infestation a few years ago, of which the gentleman speaks, was in a limited area. It was severe in spots, nevertheless, and the value of the crops the grasshoppers destroyed was not only thousands of dollars but millions of dollars. The grasshoppers have gradually grown worse each year since and have spread out until now they take in practically the entire area of 8 States on this side of the border and of 3 Canadian Provinces on the other side. The estimated damage done by them last year was $20,000,000.

Mr. GOSS. I want to ask the gentleman in this connection if it is going to be necessary to come in here year after year for $1,500,000 or $2,000,000 if we appropriate this amount today on account of the emergency I understand

now exists? Will this be used as a precedent for other areas seeking other millions to exterminate other bugs? Will we have to appropriate millions each year for this purpose?

Mr. SINCLAIR. I may say to the gentleman from Connecticut that I hope we will not have to come back here another year if we get this appropriation and the poison is spread at the right time; that is, the period when the eggs first hatch and before vegetation becomes very green. If we can catch them at the right time, we will be able to dispose of the grasshopper scourge; and we hope not to have to come back for an additional appropriation.

Mr. GOSS. In order that it may be clear and stand of record, it is not the intention to make this a permanent annual affair?

Mr. SINCLAIR. No; it is not.

Mr. BOILEAU. Mr. Chairman, will the gentleman yield?

Mr. GOSS. I yield.

Mr. BOILEAU. I may say to the gentleman that we believe if a sufficient appropriation is provided this year we can kill off most of the grasshoppers, and they will not lay eggs to be hatched another year.

Let me say further that had we spent a substantially large amount of money last year in killing these grasshoppers we would not have had to spend so much money as we have been spending right along through C.W.A. and other relief measures to feed livestock because the farm crops were destroyed by the grasshoppers. I feel it will prove to be a saving to the country, and it certainly will be a great help to that great western section.

Mr. JOHNSON of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. GOSS. I yield.

Mr. JOHNSON of Minnesota. I think there is an emergency, as the gentleman from North Dakota has stated. In the State of Minnesota during the summer in drought-stricken areas the grasshoppers multiply by the millions.

I do not think we will have to have the appropriation continued for more than the next 2 years if we can have it this year; but we certainly do need it now.

Mr. GOSS. Mr. Chairman, will the chairman of the committee accept an amendment, on page 80, line 23, after the figures "$2,000,000", to insert the words "to be available during the fiscal years 1934 and 1935"?

Mr. SANDLIN. Would that be agreeable to the gentleman from North Dakota?

Mr. SINCLAIR. That is agreeable to me.

Mr. GOSS. That at least limits the period during which it may be used.

Mr. SINCLAIR. To be immediately available.

Mr. GOSS. That language is in the bill. I am not striking that out. I am simply making it available for these 2 fiscal years only.

Mr. ARENS. Mr. Chairman, will the gentleman yield?

Mr. GOSS. I yield.

Mr. ARENS. Will the language of the gentleman's amendment be construed to mean that this money will have to be spent if it is appropriated?

Mr. GOSS. No. I hope it will not be necessary to spend it, I may say to the gentleman from Minnesota; that is the object of this colloquy; but it would be available if necessary.

Mr. ARENS. Will not the probable effect of the amendment be to encourage the offices to use the money anyway?

Mr. GOSS. No; I will take a chance on that just to tie it up to these 2 fiscal years.

Mr. SINCLAIR. Of course, the gentleman understands another $2,000,000 will be required from the States and counties where this infestation has taken place.

Mr. GOSS. Is there not any language in the bill to indicate that the States are required to contribute an equal amount?

Mr. SINCLAIR. Yes; they are required to cooperate.

Mr. GOSS. They are required to cooperate, but that does not mean necessarily that they are required to appropriate, I may say to the gentleman from North Dakota.

Mr. SINCLAIR. They are required to cooperate. No part of the money appropriated for this item may be used to pay the cost or value of farm animals, farm crops, or other property injured or destroyed.

Mr. GOSS. But the States will not be required to contribute any money.

Mr. SINCLAIR. Yes; they will.

Mr. GOSS. How much; that is what I want to find out?

Mr. SINCLAIR. They will probably have to contribute an amount equal to what we are appropriating.

Mr. GOSS. But the language of the bill does not require it.

Mr. SINCLAIR. The whole cost of distributing and spreading the bait must be borne by the States, the counties, and the farmers. It was brought out in the hearings that this sum will equal the amount here appropriated.

Mr. GOSS. Mr. Chairman, I withdraw my point of order and offer the amendment.

The Clerk read as follows:

Amendment offered by Mr. Goss: Page 80, line 23, after "$2,000,000", insert the following: "to be available during the fiscal years 1934 and 1935, and."

The CHAIRMAN. The question is on the amendment of the gentleman from Connecticut.

The amendment was agreed to.

The Clerk concluded the reading of the bill.

Mr. SANDLIN. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and, the Speaker having resumed the chair, Mr. GREGORY, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee, having had under consideration the bill (H.R. 8134) making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1935, and for other purposes, had directed him to report the same back with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. SANDLIN. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them in gross.

The amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

WILLIE B. CLEVERLY

Mr. BLANCHARD. Mr. Speaker, I ask unanimous consent to vacate the proceedings by which the bill (S. 407) for the relief of Willie B. Cleverly was passed last evening for the purpose of offering an amendment.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent to vacate the proceedings by which the bill S. 407 was passed last evening. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the title of the bill.

Mr. BLANCHARD. Mr. Speaker, I offer an amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BLANCHARD: Page 1, line 6, strike out the words "in full compensation."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

ORDER OF BUSINESS

Mr. BYRNS. Mr. Speaker, I wish to renew my request that after the consideration of the privileged resolution

from the Rules Committee which will be presented shortly it shall be in order to call up the bill (S. 2766) to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes, under the general rules of the House, a similar House bill having been reported by the House Committee on Banking and Currency.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

PROFITEERING IN MILITARY AIRCRAFT

Mr. SMITH of Virginia. Mr. Speaker, at the request of the Rules Committee I call up House Resolution 275.

The Clerk read as follows:

House Resolution 275

Whereas there are a number of bills pending before the Committee on Military Affairs of utmost importance to the problem of national defense in general, and to the operations of the War Department; and

Whereas allegations and charges of a serious nature have been made relative to profiteering in military aircraft and aircraft engines purchased by the War Department; the leasing of public property by the War Department to private concerns under terms and conditions alleged to be contrary to public interest; profiteering in the purchase of War Department property; the awarding of contracts without competitive bidding, and methods of purchase of military aircraft under which the aircraft purchased is inferior in performance to the military aircraft of other world powers, and to the requirements of national defense: Therefore be it

Resolved, That the Committee on Military Affairs, or any subcommittee appointed by the chairman, be, and is hereby, authorized and directed to inquire into and investigate the allegations and charges that have been or may be made relative to profiteering and irregularities involving the expenditure of public funds for national defense and other matters in which the problem of national defense in whole or in part is involved; be it further

Resolved, That the said committee, or such subcommittee thereof, shall make a thorough and exhaustive investigation of all allegations and charges that have been or may be made in connection with any and all matters pertaining to legislation or proposed legislation coming within the jurisdiction of said committee, and shall make a full and complete report to the House of Representatives, together with such recommendations as it deems advisable; and be it further

Resolved, That for the purpose of this resolution the said committee, or any such subcommittee thereof, is authorized to hold such hearings, to sit and act during the sessions and the recesses of the present Congress, at such time and places, either in the District of Columbia or elsewhere, and to employ such expert, clerical, and stenographic services as may be found necessary, and to require by subpena or otherwise the attendance of witnesses, to administer oaths, to compel the production of books, papers, and documents by Government or private agencies, and to take and record such testimony as the committee or subcommittee may deem advisable or necessary to the proper conduct of the investigation directed by this resolution.

With the following committee amendments:

Page 2, line 6, after the word "defense", insert the words "the use and disposition of surplus property", and on page 2, line 22, strike out the language "and to employ such experts, clerical, and stenographic services as may be found necessary."

The committee amendments were agreed to.

Mr. SMITH of Virginia. Mr. Speaker, I have no demand for time over here.

I may say that this resolution is reported unanimously by the Rules Committee, and at a hearing of the members of the Military Committee before the Rules Committee it was stated that the resolution had the unanimous support of that committee.

Mr. MARTIN of Massachusetts. Mr. Speaker, will the gentleman explain the resolution. This is quite an important resolution.

Mr. SMITH of Virginia. I shall be glad to do so.

Mr. MARTIN of Massachusetts. I would also suggest that the gentleman yield me the usual 30 minutes. I do not expect to use it all, but I would like to have the time in case I need it.

Mr. SMITH of Virginia. Mr. Speaker, I yield 30 minutes to the gentleman from Massachusetts and 5 minutes to the gentleman from South Carolina [Mr. McSWAIN].

Mr. McSWAIN. Mr. Speaker, this resolution is no afterthought. It is the result of long experience and consideration. On March 20, 1933, I introduced House Concurrent Resolution No. 6, asking for a full investigation into matters of this same general nature, and on January 11, of this year, I introduced House Resolution 219, asking for the establishment of a special committee to be appointed by the Speaker, to investigate the same general subject matter.

Inasmuch as it was thought by many, especially some members of the Committee on Military Affairs, it would be better that the investigation be made by those who are already familiar with the general subject, the effort to have resolution 219 passed was abandoned, and this resolution was brought out upon the authority of the committee by its unanimous vote.

Mr. Speaker, I may say this is a broad and sweeping power, but it is not intended that this power shall be exercised with any partisan or political motive or purpose. It is solely for the purpose of discovering the truth in order to guide us in the matter of framing legislation. We will not besmirch any reputation upon hearsay evidence. It is no fishing party for scandal or slander. It is an effort to purge, if there be anything wrong, and to rectify a system which many allege to be wrong.

But, on the other hand, Mr. Speaker, I can assure you there will be no whitewashing, so far as this committee is concerned, and wherever the truth points, there the charge will follow.

Mr. CULKIN. Will the gentleman yield?

Mr. McSWAIN. I yield.

Mr. CULKIN. I note in the press that there is a grand-jury investigation going on with reference to some of this subject matter. Will this investigation have any adverse or unfavorable effect on that criminal investigation?

Mr. McSWAIN. I cannot conceive that it would have any influence whatever.

Mr. CULKIN. In other words, will the effect of calling witnesses before the committee be to give them immunity from criminal prosecution?

Mr. McSWAIN. Oh, no. Any witness that comes before our committee is absolutely liable in any civil court for any proceeding that the truth may justify.

Mr. CULKIN. Would he be liable in a criminal prosecution if you swore him? Would not that fact give him immunity?

Mr. McSWAIN. No, indeed.

Mr. GOSS. He could be required to waive immunity.

Mr. McSWAIN. I understand; but that refers to the civil courts. The Congress, as I understand from the precedents and from good parliamentary and constitutional principles, is a grand jury of inquest in all the affairs of government and all persons are bound, upon the demand of the Congress, to come and testify and tell the truth with regard to Government matters irrespective of their responsibility or liability as witnesses, as defendants, or otherwise, in the civil courts.

Mr. CULKIN. In the gentleman's opinion, the passage of this resolution will not impede or affect unfavorably the present grand-jury investigation?

Mr. McSWAIN. In no way whatever, and this investigation, as I have already said, is not for the purpose of running down and trying to find some particular individual guilty. The purpose is to find out how these things happen and to enable us, knowing these facts, to frame legislation to prevent their recurrence. It is to guide us in the framing of adequate legislation.

While I am on my feet, Mr. Speaker, I may say this resolution is broad enough to cover the inquiry that has been proposed by the gentleman from New Jersey [Mr. HARTLEY] with respect to the relations between the War Department and a concern called the Mercur Corporation, which has some sort of operating arrangement, under contract, for the Port Newark Army base at Newark, N.J.

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield the gentleman 2 minutes.

Mr. BUCHANAN. Will the gentleman yield?

Mr. McSWAIN. I yield to the gentleman from Texas.

Mr. BUCHANAN. What will be the cost of this inquiry?

Mr. McSWAIN. We propose to ask the Committee on Accounts to authorize an expenditure of $10,000.

Mr. BUCHANAN. Is the gentleman prepared to state to the House it will not cost any more than that?

Mr. McSWAIN. I am prepared to state to the House I hope it will cost much less than that, because we have called upon the General Accounting Office, the Department of Justice, and the Department of the Inspector General of the Army to give us assistance. We will not spend one single cent that is unnecessary, and there will be no junketing trips, I can assure the gentleman, because under the resolution pending before the Committee on Accounts, I am to O.K. any expenditure, and I assure the gentleman there will be no junketing and there will be no waste of money.

Mr. MARTIN of Massachusetts. The gentleman from Texas [Mr. BUCHANAN] has asked the question which I intended to ask the gentleman, but may I state that it was also understood when the gentleman appeared before the Committee on Rules that the gentleman would not come back and ask for another appropriation.

Mr. McSWAIN. Yes; I can say that we will not be back asking for another appropriation.

This committee has already been working all day for 4 weeks under the permission of the House to be absent from its sessions. We have been working some days until after dark in an effort to obtain the truth, but having no assistance from auditors and investigators, our efforts sometimes seem to be frustrated by the skillful evasion of those who have appeared before us.

Mr. HARTLEY. Will the gentleman yield?

Mr. McSWAIN. I yield.

Mr. HARTLEY. I may say that the investigation of this Mercur Corporation at Port Newark will result in a saving of many times the $10,000 which the committee has requested.

Mr. McSWAIN. I think we are losing there something like $120,000 a year.

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield 5 minutes to the gentleman from Kansas [Mr. McGUGIN].

Mr. McGUGIN. Mr. Speaker, the people of Kansas have a particular interest in seeing this resolution adopted. The Assistant Secretary of War, Harry H. Woodring, is a former Governor of our State and is a citizen of the district I represent. He is not of my political party. I am glad to speak of him as my friend and neighbor.

I may say to you that the people of Kansas, irrespective of party politics, believe in the character and integrity of Harry H. Woodring. Kansas Republicans seek no political advantage by an unwarranted besmirching of the character of Harry Woodring or any other Democrat.

In the light of grand jury proceedings and newspaper comment thereon, there is no question but that at this time there is a cloud on the War Department.

The people of Kansas, in common with the rest of the people of the United States, want to see the truth served; they want honesty and integrity in the War Department and every other department of this Government.

I believe that the Military Affairs Committee of the House will conduct this proceeding in a dignified and honorable manner. I do not believe the committee will permit it to be used to gain political advantage by blackening the character of people, even though they be officials of the former administration. At the same time, I do not believe the committee will whitewash any official of this War Department.

I am particularly eager to see this resolution go through and be adopted by this House, giving this committee the opportunity to make a most thorough investigation. I would be most amazingly surprised if it should develop that anything has been done by the present Assistant Secretary of War, Mr. Woodring, which would point to any malfeasance on his part.

It is the truth which we want, and when that truth is brought out by this committee it will serve justly every person connected with this or the preceding War Department, and, above all, will serve well the true needs of the people of this country.

Now, all that has been written and printed growing out of hearsay and innuendo has to a greater or lesser degree pointed the finger of suspicion to this great Kansan, a man whom the people of Kansas revere and respect, not only as of yesterday but as of today. We are particularly anxious to see the full proceedings brought out to the sunlight of day. We believe and hope that when that is done there will be no finger of suspicion pointing toward Harry H. Woodring, former Governor of Kansas and the present Assistant Secretary of War, whom the people of Kansas respect very much.

I thank you. [Applause.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield 10 minutes to the gentleman from New York [Mr. FISH].

Mr. FISH. Mr. Speaker, I am glad to add my voice in support of this investigation, particularly as I know it will be conducted by the Chairman of the Military Affairs Committee, one of the ablest men in this House and absolutely fair-minded, who has given his word to the Members of the House that it will be conducted impartially, without regard to politics, and that those who are guilty, irrespective of party, will be prosecuted. I am sure that that is the attitude of everyone on this side of the House. If there is any crookedness or graft in the War Department, it ought to be exposed, and those responsible and who are found guilty sent to jail, no matter to what party they belong or how high or how low in rank or official position. I am more than glad to vote for this resolution because for years I have felt that this House has been shirking its duty; that it had evaded investigations of the bureaus and departments of the Government and had imposed that burden on the Senate of the United States. That body has rendered great service to the people of our country in exposing the Teapot Dome scandal, in exposing Fall and Forbes, and in exposing the tax dodgers, such as Wiggin, of the Chase National Bank, and Mitchell, of the National City Bank, while we have not conducted any investigations on a large scale, except that in respect to the activities of the Communists in the United States, in the many years that I have been in the Congress. I hope this is the beginning of the use of the powers of the House, representing the people and being closer to the people, to keep in touch with the departments of the Government and to investigate executive bureaus and departments of the Government whenever necessary.

I further hope that this committee will investigate the Army Air Corps and the operations of the Air Corps not only for the last 10 days but for a number of years past. When that matter was up for discussion in the House the other day I defended the Army Air Corps, I defended the efficiency of the Army air flyers, and said that the trouble was that they were sent out in open and inadequate machines in heavy snowstorms without proper equipment, without sufficient knowledge of the mail routes and landing places, and without practical experience in the use of radio-beam devices, but since then I have listened to a political speech made by the head of the Army Air Corps, and I doubt if my statements in the House were correct. General Foulois, head of the Army Air Corps, said everything was near perfection in the Air Corps, that they have the best machines, that they could operate the air mail as well or better than the air mail transport companies. The fact is, Mr. Speaker, and we all know it, that six of these Army flyers have been killed either in flying the air mail or preparatory to it or learning routes or ferrying others to carry the air mail. It does not make so much difference to the officer who is killed, or his family, whether he was flying the air mail directly or was preparing to do it. I have repeatedly said that the Army flyers were just as efficient and brave as any, but that they should not have been sent out to fly the mail without knowledge of the routes. The distinguished Speaker of this House had this to say about the Army Air Corps:

We have found out in the air mail emergency that the Army pilots are not properly trained and do not understand beam flying. If we are unfortunate enough to be drawn into another war, the

Air Corps would not amount to much. If it is not equal to carrying the mails I would like to know what it would do in carrying bombs.

This is not an alleged Republican political speech, but the statement of the Democratic Speaker of the House. As I pointed out in the House yesterday, the air mail subsidies cost this Government only $7,000,000 a year, and they have done more to build up the air mail transport service and make it the greatest service in the world on merely $7,000,000 subsidies and to build up and develop aviation for national defense and made available these air mail pilots for national defense than any other like expenditure. These pilots could be used overnight, and if Government money was ever well spent, it was spent to develop the air mail service of our country.

Under this resolution I probably have no right to discuss the air-mail service, but I shall merely read into the RECORD the figures that have been presented to me today of the total number of deaths in the air-mail service: 1 death actually flying the mail, 3 deaths of men who were familiarizing themselves with routes, 1 death on ferry trip with the air mail, 2 deaths in the Air Corps, in no way connected with the air mail. Accidents and injuries: There were 4 Army men injured flying the mail, 2 were not connected with the air-mail operation. Crack-ups, 12. The minor crack-ups, 3; major crack-ups, 9.

I estimate those crack-ups alone have already cost the Government of the United States $250,000. I estimate that the compensation for the deaths of the Army pilots for their families will cost about $10,000 annually, the interest on $200,000. Therefore practically $450,000 is the cost to the Government in the last 10 days for flying the air mail, and the subsidy alone for last year was only $14,000,000, but $7,000,000 was returned in air-mail postage. If this percentage continues, it will cost the Government of the United States a great deal more than $7,000,000 subsidy when air-mail postage is deducted to have the Army fly the air mail if we have any more crack-ups, if we have any more injured Army pilots or any more killed. In conclusion let me say that a blunder is often worse than a crime, and in this case the hysterical and hasty cancelation of the air-mail contracts without any investigation or trial or hearing was a crime, and is now and has been responsible for the death of six air-mail pilots, and we ask, in the name of that mother of Lieutenant Lowry, in her words, What is the Government going to do about it?

That is the question the American people are asking, and that is the question they are entitled to have asked, "What is the Government going to do about it?"

Mr. REILLY. Will the gentleman yield?

Mr. FISH. I yield.

Mr. REILLY. Is it not worth something to the country to have the Army airplanes find out what real flying means?

Mr. FISH. Well, I hope it will be; but I cannot tell, in view of the political speech made by General Foulois, commander of the Army Air Corps.

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. FISH. I yield.

Mrs. ROGERS of Massachusetts. Is it not true that our Army flyers and Navy flyers have very remarkable records for their flying, their altitude flying, their close-formation flying?

Mr. FISH. If given a chance and properly equipped, they should be the best in the world.

[Here the gavel fell.]

Mr. SMITH of Virginia. Mr. Speaker, I yield 5 minutes to the gentleman from Alabama [Mr. HILL].

Mr. HILL of Alabama. Mr. Speaker, I have listened with a great deal of interest to the remarks of the gentleman from Kansas [Mr. MCGUGIN]. With reference to those remarks, I want to say that as a member of the subcommittee on aviation of the Committee on Military Affairs, before which subcommittee the Assistant Secretary of War, Mr. Woodring, has appeared several times recently, Mr. Woodring made an unusually favorable impression on that subcommittee. He was a most helpful witness, and he certainly impressed me, as one member of the committee, as a Government official who was trying his best to do his duty, and who had tried to carry out the law according to what he thought was the intent and purpose of Congress.

A great deal has been said this afternoon about corruption, malfeasance, and misfeasance. I believe that the passage of this resolution will bring about a thorough and complete investigation. If there be any corruption or malfeasance or misfeasance, I am confident that this investigation will bring it to light, as it should be brought to light, but I want to leave the thought with the House that this resolution was presented perhaps not so much out of any charge of misfeasance or malfeasance or corruption as because of the fact that the law which Congress passed in 1926 providing for the purchase of aircraft and aircraft material has apparently not been carried out, and that through failure to carry out the spirit and intent of that act there has grown up a system for the purchasing of aircraft and aircraft material that has perhaps enabled an air trust to grow up in this country, which has resulted in profiteering on the part of this air trust and kept our Government from getting the planes with that speed and performance that our Air Corps should have.

The gentleman from New York [Mr. FISH] has referred to what he calls a "political speech" by the present Chief of the Air Corps, General Foulois. I want to say that General Foulois was before the Subcommittee on Aviation of the Committee on Military Affairs for over 3½ hours yesterday afternoon. He was sworn as a witness before that committee. He certainly made no political speech, but he answered many questions and presented a statement with reference to the carrying of the mail by the Air Corps pilots in a very solemn and thoughtful manner. The testimony given by General Foulois under oath shows unequivocally that on the night that the Air Corps pilots were sent out to carry the mail they were adequately equipped from the standpoint of safety to those pilots and to their planes.

We have heard a great deal of talk on this floor in these later days about Air Corps pilots and their planes not being properly equipped. The testimony of General Foulois absolutely contradicts any such proposition. It has been said that our pilots did not know how to fly the beam. The testimony of General Foulois shows that before a man can become a pilot in the Air Corps he must graduate as a flyer at the Air Corps school at Kelly Field, Tex., and in that school he is taught to fly the beam, and after he leaves the school and goes out as an Air Corps pilot he practices flying the beam.

Mr. FISH. Will the gentleman yield?

Mr. HILL of Alabama. I do.

Mr. FISH. Is it not a fact that there have been pilots who only graduated a few months before from the air school, who have had practically no experience flying the night mail?

Mr. HILL of Alabama. No, sir. The testimony of General Foulois shows that not a single man, not a single Air Corps pilot was put on the job of flying the mail unless that pilot had been in the service for a minimum of 2 years, and unless he had at least a minimum of 12 or 14 hours of night flying, and nearly all of them had had several hundred hours of day flying.

The reason we had these deaths, gentlemen, was not due to any lack of equipment, was not due to any lack of training, but because the pilots ran into that unusual, that extraordinarily cruel weather that we had during those first nights. Only 1 Air Corps pilot has been killed while flying the mail, and 4 have met their deaths in flying incidental to carrying the mail. Four of these five pilots went down because of the weather, just as did that great ship of the private commercial company go down because of the same weather when eight persons were killed.

Mr. FISH. Will the gentleman yield?

Mr. BACON. Will the gentleman yield?

Mr. HILL of Alabama. I do not have time to yield. I am sorry. I want to say, further, that all this talk we

have heard on the floor of this House about legalized murder is a lot of political claptrap. Furthermore, these private companies, having had their contracts annulled on account of fraud and collusion, have sought to do all they could to get the mind of the public off of that fraud and collusion. They have shouted about "legalized murder" in an effort to make the people forget the collusion and fraud of their companies, and to make the people believe that there was something wrong in having the contracts annulled. [Applause.]

[Here the gavel fell.]

Mr. SMITH of Virginia. Mr. Speaker, I yield 5 minutes to the gentleman from New Hampshire [Mr. ROGERS].

Mr. ROGERS of New Hampshire. Mr. Speaker, I have an unusual interest, perhaps, in some phases of this investigation which is to be undertaken by the committee of which I have the honor to be a member. To begin with, and it goes back many years, the first time I went up in the air in a plane I came down in a crash and wondered what it was all about, because I had the good fortune to survive. Again, because in the Sixty-eighth Congress I had the honor of being a member of the Lampert special committee which investigated aviation on behalf of this body. Again, because I now have the honor to be chairman of subcommittee no. 3 of the Committee on Military Affairs, which subcommittee has charge of all questions relating to military aviation. And, finally, in perhaps a closer way, because I have a brother who was in the Air Service of the Army during the World War.

It seems to me, Mr. Speaker, that we as Members of Congress, whether Republicans or Democrats, ought to get away from any political question in this matter and to realize that we are investigating a subject which is more dear than politics, a subject which relates not only to property, to lives, but, perhaps, to the integrity and salvation of the Nation itself. [Applause.] When I say this, I say it because we hear charges of legalized murder hurled against the head of the administration for asking the Army air force to carry the mail. Let me bring out, Mr. Speaker, if I may, what the records of this Government show during the last 10 years as to deaths in the military Air Service, during which time we heard nothing about legalized murder. In 1923, 58 members of the military Air Corps of this country were killed; in 1924, 34 were killed; in 1925, 38 were killed; in 1926, 42 were killed; in 1927, 43; in 1928, 27; in 1929, 61; in 1930, 52; in 1931, 26; in 1932, 50; in 1933, 46; and from July 1 to October 1, 1933, 13 were killed. Yet during all this time we heard nothing about legalized murder.

So, Mr. Speaker, let us realize that we are here to investigate this question as servants of our country. Let us not prejudge it today, but let us obtain all the evidence from sources on which we can depend; and let us then see to it that we put the fighting forces of this Nation in proper condition to insure national defense and to protect and safeguard the lives and property of the citizens and young manhood of America. [Applause.]

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield 2 minutes to the gentlewoman from Massachusetts [Mrs. ROGERS].

Mrs. ROGERS of Massachusetts. Mr. Speaker, I shall take but a minute. I believe in thoroughly investigating this whole situation. There is an interesting editorial in last night's Star. General Foulois did not, when he appeared before the committee, bring out, it seems, the fact that these men had had no real practice in flying over the air-mail routes. As you know, before commercial pilots are sent out alone they must have flown 40 hours with a copilot. It is an entirely different proposition to send a man out alone for the first time over an unknown route in bad winter weather in an open cockpit plane. The copilot who knows the route could have looked up the navigation for the pilot and could have managed the radio control and the maps. Apparently General Foulois did not say that before the committee.

Mr. HILL of Alabama. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. HILL of Alabama. General Foulois did say that in some instances there was a copilot.

Mrs. ROGERS of Massachusetts. But in very few instances, because the Army does not have many of the type of ship to accommodate a copilot. It only has a few of these ships and they are the big passenger ships.

Mr. BACON. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. BACON. The gentleman from Alabama stated that the Army flyers were taught to fly the beam. I find in this morning's New York Times this short paragraph:

> Pilots at Newark actually on mail duty continued yesterday to take instructions in blind flying under the direction of Lt. O. A. Anderson. Arrangements were made with C. S. "Casey" Jones to take over the blind-flying equipment of his flying school at Newark for the next few days.

In other words, this bears out what I said the other day that these young flyers at Mitchel Field had not been taught to fly the beam. I talked to Jones. He is an expert on the subject. Several Army flyers asked him to teach them how to fly the beam.

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield 2 additional minutes to the gentlewoman from Massachusetts.

Mr. BACON. Will the gentlewoman yield further?

Mrs. ROGERS of Massachusetts. I yield.

Mr. BACON. We now find that the Army is doing what some of the Army flyers asked Mr. Jones to do, and the pilots are now being taught what they should have been taught 10 days ago.

Mrs. ROGERS of Massachusetts. Yes; that is true.

I also want to bring out the fact that a great many commercial pilots were taught to fly the beam originally by Lieutenant Hegenberger. I think the Army school where he teaches is in Texas. So, although originally the commercial pilots learned to fly the beam from the Army, they have been through their baptism of fire by flying the mail routes over and over again.

I wish I could impress upon the House the terrible blow that has been dealt commercial aviation. As I have said before, I personally know what it means to use commercial planes in an emergency, for once I had to fly west to reach a terribly sick relative. I do hope everything possible will be done to help commercial aviation and to make it accessible to the people in case of emergency and to facilitate business. Air transportation is a great industry and a very much needed one for our country. At the present time the air public is suffering by the curtailed commercial air travel, and business suffers by poor air-mail service. The public is also paying the bill.

If, as some of the Members claim, the Air Corps is not satisfactory, if it is inefficient, then for heaven's sake help commercial aviation, which has proven its worth time after time. It is a very necessary part of our national defense.

Mr. HILL of Alabama. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. HILL of Alabama. According to the testimony of General Foulois these Air Corps pilots who have been flying the mail were taught to fly the beam; and General Foulois testified that this man, Casey Jones, to whom the gentleman from New York [Mr. BACON] referred, has some system he has been trying to sell the Army. He came to Washington and tried to sell it to the Army.

Mrs. ROGERS of Massachusetts. I do not know about that, but I do know that while these men may have been taught the theory of flying the beam, they have not had the requisite number of hours of actually flying the beam over the air-mail routes in the worst months of the year. The average number of hours per Army pilot for the year 1934 is 150, whereas the commercial pilots average 75 or 100 hours a month per pilot.

The Army Air Corps apparently blows hot and then it blows cold as to whether the Army flyers are sent out to fly the mail routes in planes adequately equipped. If the planes have been adequately equipped and the flyers have had the same chance that the commercial flyers had had, then General Foulois makes but a very poor case for the efficiency of his Army pilots. But there is one way both the Army and the administration know that the Army pilots are unequipped, and that is in experience in flying many times over the same air-mail route with a copilot before flying the course alone. I draw attention to the number of heated, closed planes that can be operated by the commercial lines and are operated by them.

Type of plane used by the commercial lines; open or closed pilot's cockpit

	Open	Closed	Total
United Air Lines	13	111	124
American Airways	18	80	98
Western Air Express	3	10	13
Eastern Air Transport	13	31	44
Northwest Airways	3	17	20
Pennsylvania Air Lines	2	10	12
Transcontinental & Western Air	2	40	42
National Parks Airways	2	6	8
Kohler Aviation Corporation	0	3	3
United States Airways	0	7	7
Total	56	315	371

I feel very sure that the commercial pilots never use the open-cockpit planes for flying in the winter months unless they prefer to use them. The Members all know that the Army does not have the necessary number of enclosed planes for use in flying the air mail. As a result the Army fliers of necessity must use the open-cockpit planes.

If the Members think it is easy to fly a plane in an open cockpit in cold stormy weather—and manage radio controls, maps, and instruments for navigation with cold fingers, I just wish they would try it. Much has been said about coddling the Army pilots. No one wants to coddle them. They do not want to be coddled. They are always anxious to serve, to respond to every command. They have proved their ability in very difficult altitude flying, very difficult bombing attacks, very difficult formation flying, and in very difficult air navigation over uncharted courses in this country and other countries. Send the Army pilots back to their regular work of being prepared to defend us in the air. If the pilots are doing air-mail work how can they be trained in work with our troops? How can they be trained in what to do in case of war if they are flying the mails——

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield 1 minute to the gentleman from New York [Mr. BACON].

Mr. BACON. I do not think the gentleman's statement about Mr. "Casey" Jones is correct. I have known Mr. Casey Jones for many years. He was a famous World War "ace" and one of the original air-mail flyers. He did not come down to try to sell anything to the Government; he came down at the request of some of the young flyers at Mitchel Field. He told me he was willing to go ahead and teach these flyers at cost without payment for the moment. He made the same statement before the gentleman from South Carolina [Mr. MCSWAIN], who will bear me out, I am sure, because he is a fair man. I took Mr. Jones to see him, and he told the whole story to the gentleman from South Carolina. Mr. Jones told us that the actual cost to him of teaching some 25 flyers how to fly the beam would be about $2,000. He told us he would go ahead and do it and take his chances on reimbursement for the actual cost incurred. He told us he did not want any profit. Therefore, it is unfair to him to say he came down to sell anything to the Government. His only desire was to help in an emergency. If General Foulois is correct that all Army flyers know how to fly the beam, why are they now being taught with Casey Jones' equipment?

Mr. HILL of Alabama. Will the gentleman yield?

Mr. BACON. I yield to the gentleman from Alabama.

Mr. HILL of Alabama. General Foulois testified before the subcommittee yesterday afternoon that Mr. Jones came down to see him and he did have something to say.

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield 5 minutes to the gentleman from Michigan [Mr. JAMES].

Mr. JAMES. Mr. Speaker, I have been a Member of the House Military Affairs Committee for 15 or 16 years. Part of that time I was acting chairman and chairman. There never has been any politics in the Military Affairs Committee.

As acting chairman I had charge of the hearings in 1926, made the report, and had charge of the bill on the floor. I was chairman of the House conferees. Senator WADSWORTH was Chairman of the Senate Military Affairs Committee and chairman of the Senate conferees. We had the idea at the time we were passing the bill that it would provide 1,800 planes ready for military service. I made the statement a year ago at the first meeting of the new committee that, in my opinion, we had less planes equipped for war in 1933 than we had in 1926. Now we have the admission of the Air Corps in 1934, 8 years after the passage of the act, that we have only 200 attack, bombing, and pursuit planes equipped to go to war. We did not know until the other day, when the Air Corps came around for another program, that they were not complying with the law passed in 1926. We had not the slightest idea that practically every bid is let without real competition.

We had men come before our committee and make the statement that men go from the Army and work for private industry at a good salary and then come back into the Army again. In other words, they go out of the Army and come back again. Personally I do not know of any of these men. I do not believe that the records will show that there is anybody of that kind; but it is due you gentlemen, it is due the Congress, and it is due the people of the United States to find out whether men can go from the Army into private aviation at a salary of $8,000 or $10,000 and come back to the Army—because, if a man comes back to the Army and does business with the concern from which he received $8,000 or $10,000, he does not represent the Army. He represents the concern he was working for.

Mr. WADSWORTH. Will the gentleman yield?

Mr. JAMES. I yield to the gentleman from New York.

Mr. WADSWORTH. Would this transferring in and out be only in the case of Reserve officers?

Mr. JAMES. No. They were talking of men in the Regular Establishment.

Mr. WADSWORTH. Men who are granted leave?

Mr. JAMES. Men who are granted leave. They retain their commissions in the Army; they go into private aviation and then come back to full pay in the Army.

Mr. WADSWORTH. I have understood that quite a number of men in the Army Air Corps held Reserve commissions and are on active duty for a year or two, then pass back to civil life and may be called up for active duty again after a certain period of time.

Mr. JAMES. I am referring to men in the Regular Establishment. I know of no such men myself.

Mr. COCHRAN of Missouri. Will the gentleman yield?

Mr. JAMES. I yield to the gentleman from Missouri.

Mr. COCHRAN of Missouri. There is a law which provides that a retired Navy officer cannot accept employment from a partnership, corporation, or individual selling materials to the Navy. Does not that same law apply to the Army?

Mr. JAMES. I understand the Army has the same law, but I am not referring to that. I am referring to men who leave the Army and go to some aviation concern and then come back to the Army again. As I say, I know of no such men. I stated that we would look up the record of anyone who came within this category; and if we found him out, we would put him out of the Army. We have had men tell us that they have been threatened with court martial if they told the truth to our committee.

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I yield the balance of my time to the gentleman from Michigan [Mr. JAMES].

Mr. JAMES. I have been told by responsible Members on this side of certain things that they wanted us to investigate. We are not trying to smear anyone. Having been on the Military Affairs Committee for 15 years in the capacities of acting chairman and chairman, I am not an enemy of the War Department. I say this, and I told the members of the committee the same thing, that until such time as we shall have a thorough investigation and find out who are guilty, recommending these men for court martial and clearing the rest, I would not vote for a single War Department bill, whether it be the Air Corps or any other branch of the Department.

Mr. McSWAIN. Will the gentleman yield?

Mr. JAMES. I yield to the gentleman from South Carolina.

Mr. McSWAIN. Is this not an inquiry which the Army itself ought to invite, because so long as these charges are made and remain uninvestigated and the identity of the guilty unestablished, it constitutes a slur upon the entire personnel?

Mr. JAMES. So I have informed responsible generals in the Army. I have told them that this is their responsibility as much as ours, and that every man in the Army ought to be glad to have the investigation to determine what men in the Army should be court-martialed.

Mr. CULKIN. Will the gentleman yield?

Mr. JAMES. I yield to the gentleman from New York.

Mr. CULKIN. Can the gentleman tell the House how much money we have spent on aviation in the last 2 years? The gentleman states we now have 200 planes.

Mr. JAMES. I stated that we have 200 planes out of all the money we spent since 1926.

Mr. CULKIN. How much have we spent during that period?

Mr. JAMES. I do not know the exact figures. The program we put through at that time Mr. Madden estimated would cost $150,000,000. In addition to that, we have been told by responsible Members of the House that they have been told that the specifications on trucks have been changed. We have been told that in another branch a contract was awarded by the Government to a bidder who was $300,000 above the others. That information I have from the Comptroller General.

Mr. Speaker, I sincerely hope that this resolution will pass. There will be no politics in it. We do not want to blacken the reputation of any man. I am just as careful of everybody's reputation as I am of my own; but, as I said, having been on the committee for 15 years, I sincerely hope that we will be able to conduct such an investigation. [Applause.]

Mr. SMITH of Virginia. Mr. Speaker, I yield 10 minutes to the gentleman from New York [Mr. MEAD].

Mr. MEAD. Mr. Speaker, of course I realize that partisanship is responsible in great part for some of the speeches that have been made in connection with the recent experiences of our Army Air Corps.

I want to make a statement to you, and I shall try to leave politics out of it. I favor the return of the air mail to the private transport lines under proper legislative restructions, but I want to say to you that every member of the Army Air Corps is a victim of the veiled partisan attacks leveled at the Army, and I resent it. Those who stand up in the Chamber and refer to them as "these rosy-cheeked boys of the Army who ought not to be up there in the air in open cockpit ships, flying at night or in a storm—it is a shame—it is legalized murder." To my mind every red-blooded American who believes in the traditions of the American Army is sick and disgusted with such partisan attacks, and it is time that these were stopped. [Applause.] Even those who made these speeches believe in the Air Corps, but politics prompts the attacks. I regret every death that ever befell our brave flyers, but such attacks will not help the situation.

I want to say further that on midnight last Monday night if the private transport lines had been flying the mail nearly every ship would have remained on the ground, but even though orders were sent out by the Chief of the Air Corps to keep the Army pilots on the ground in bad weather they took chances. When Army pilots were told to turn back if the storm became too severe, not an Army man stayed on the ground, not an Army man turned back, because it is not the spirit of the Army to turn back, the Army goes through. [Applause.]

So I say enough of this sob stuff. We all regret these unfortunate accidents. Let us be proud of the American Army and Army Air Corps—support and sustain them. Any man who reads the CONGRESSIONAL RECORD and analyzes these unfair statements will come to the conclusion that those who made these partisan speeches charged the administration or the Postmaster General or somebody with legalized murder, and what are the specifications, picayune and petty as they are? Here they are: They are flying the rosy-cheeked boys in open ships; they are without radio; they fly without beam and directional flying; they have no blind-flying apparatus or instruments; no night-flying equipment, and they are ordered to fly with this poor equipment in stormy weather.

Mr. FISH. Will the gentleman yield?

Mr. MEAD. No; I must refuse to yield, because I only have a few minutes to answer 10 speeches on the subject made by the gentleman from New York. If I get more time I will be pleased to yield. [Applause.]

Now, Mr. Speaker, are open ships used by private lines? Yes, of course they are; more open ships were used by private lines than are now being flown by the Army in carrying the mail.

Are they more dangerous than cabin ships? No; the safest ship in the world for air-mail purposes is the open ship. The ship that was flown by every private transport line with an air-mail contract.

What radio equipment has the Army? Every essential bit of radio equipment that any private line has and all that is necessary for safe flying in any kind of weather.

What blind- and night-flying equipment has the Army? One hundred percent of all the night- and blind-flying equipment they need. Every instrument and all the flares required. You stop talking about it if you do not know what you are talking about.

Do they fly on a radio beam? Yes; certainly they fly on a radio beam. And they have directional-flying apparatus.

Now, let us have the facts. I have the specifications here and I shall read them if I have the time.

How does the Army air equipment compare with the equipment used by private companies? It is, in my judgment and in the judgment of the Army Air Corps, as good if not better than the equipment now being used by the private transport lines; and when I say this I mean their equipment, and their planes. Their ships cost more, and are worth more and they are inspected in greater detail than are like ships built for commercial purposes.

Were they ordered to fly in bad weather? No; they were not. They were ordered to remain on the ground, and I have here copies of the radiograms and telegrams sent by the Post Office Department and the Chief of the Air Corps supporting my statement.

But let me answer the critics in the words of General Foulois. This certainly was not a political address. It sounds to me like manly talk coming from a two-fisted, red-blooded American fighting man, who refuses to stand for your coddling and pampering, even though it is politics. Here are the words of the general:

> Much has been said lately of the type of Air Corps officers now actually flying the mail. Some would have you believe them a bunch of rosy-cheeked young babies. On the contrary, they constitute a corps of highly intelligent, rugged, determined, loyal,

and fearless young officers. It is my most cherished honor to be their chief, and no human being worthy of the name could betray their trust.

Let that sink in, those of you who launched those veiled attacks upon the Army Air Corps.

Continuing, General Foulois said:

Today they have no superiors in the world as military flyers; and, given a fair chance, I am certain they will in a very short time be carrying the air mail in a favorable comparison with their excellent commercial-pilot comrades. Our military pilots are not weaklings looking for sympathy. They should be treated like men and not like children. If there is anything that the average, red-blooded American military pilot resents—

And, my friends, when he said this he meant it—

it is this recent twaddle about inexperienced, rosy-cheeked boys being sent to their death. They are proud that theirs is a man-sized job, and they have no desire to be coddled.

Now, Mr. Speaker, let me insert in the RECORD copies of the radiograms sent out to these boys asking them to remain on the ground or to turn back if the storm looked serious enough to turn them back; and do not forget that only 1 man flying the air mail has been killed and that 8 have been killed during this same period of time in a ship operated by one of the commercial transport lines. In all the record of aviation, military and air mail, even when the Army carried the first air mail from San Francisco to New York, the record of the Air Corps compares favorably with the record of the commercial transport lines.

I want you to know that I have the evidence here which shows the Army has the equipment, every bit that is necessary, their records stands out the equal of the private lines; and if these attacks continue, I shall, for one, stand out against the return of the air mail to the private transport lines until the good name of our Air Corps is vindicated again. These attacks directed against our pilots by men on that side of the aisle must stop. [Applause.]

Now, Mr. Speaker, I ask unanimous consent to publish in my remarks certain telegrams and other statements which I have here.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. MEAD. Mr. Speaker, I have here a copy of a radiogram sent to zone commanders on February 11, 1934, and also a copy of a radiogram issued on February 16, 1934, which was sent to all zone commanders. They require no further explanation from me. But I trust they will be read by all who are interested in this subject. They indicate the solicitude the Chief has for his corps.

EXHIBIT No. 1

(Radiogram sent to all zone commanders Feb. 11, 1934, by the Chief of the Army Air Corps.)

EXTRACT

Operations will be conducted under present Air Corps flying regulations, especially as concerns weather conditions.

EXHIBIT No. 2

WAR DEPARTMENT,
ARMY AIR CORPS MAIL OPERATIONS,
Washington, D.C., February 16, 1934.

Maj. B. Q. JONES, Air Corps,
Commanding Officer Eastern Zone,
Army Air Corps Mail Operations,
Floyd Bennett Airport, Brooklyn, N.Y.

N-222-EZ 42

Lt. Col. H. M. HICKAM, Air Corps,
Commanding Officer Central Zone,
Army Air Corps Mail Operations,
Municipal Airport, Chicago, Ill.

N-222-CZ 59

Lt. Col. H. H. ARNOLD, Air Corps,
Commanding Officer Western Zone,
Army Air Corps Mail Operations,
Newhouse Hotel, Salt Lake City, Utah.

N-222-WZ 53

In conduct of air-mail operations, zone commanders will govern their operations with a view to safeguarding lives and property at all times, even at sacrifice of mail service. Before clearing any scheduled trip, careful consideration will be given to experience of personnel, suitability of aircraft, night-flying equipment, and blind-flying equipment. Steps will be taken to inculcate all personnel engaged in air-mail operations with the above principle.

FOULOIS.

EXHIBIT No. 3

WAR DEPARTMENT,
ARMY AIR CORPS MAIL OPERATIONS.
Washington, February 17, 1934.

Lt. Col. H. H. ARNOLD, Air Corps,
Commanding Officer Western Zone,
Army Air Corps Mail Operations,
Newhouse Hotel, Salt Lake City, Utah.

Maj. B. Q. JONES, Air Corps,
Commanding Officer Eastern Zone,
Army Air Corps Mail Operations,
Floyd Bennett Airport, Brooklyn, N.Y.

N-234-EZ 47

Lt. Col. H. M. HICKAM, Air Corps,
Commanding Officer Central Zone,
Army Air Corps Mail Operations,
Municipal Airport, Chicago, Ill.

N-234-CZ 63

Impress most emphatically upon all pilots the utmost necessity for extreme care and judgment in flying the air mail during the first few days of operation. If weather conditions are uncertain, instruct your pilots they must stay on ground, even if this interrupts the mail schedules for several days. The safety of pilots, mail, and planes is of more importance than keeping of air-mail schedules. Drill these instructions into your pilots daily until they thoroughly understand the safety-first policy of Air Corps.

FOULOIS.

EXHIBIT No. 4

[Radiogram]

WAR DEPARTMENT,
ARMY AIR CORPS MAIL OPERATIONS,
Washington, February 24, 1934.

Lt. Col. H. H. ARNOLD, A.C.,
Commanding Officer Western Zone,
Army Air Corps Mail Operations,
Newhouse Hotel, Salt Lake City, Utah.

N--------WZ--------

Lt. Col. H. M. HICKAM, A.C.,
Commanding Officer Central Zone,
Army Air Corps Mail Operations,
Municipal Airport, Chicago, Ill.

N--------CZ--------

Maj. B. Q. JONES, A.C.,
Commanding Officer Eastern Zone,
Army Air Corps Mail Operations,
Floyd Bennett Airport, Brooklyn, N.Y.

N--------EZ--------

Pilots will not be on flight duty more than a scheduled 8 hours in any 24 period and shall have 24 consecutive hours' relief from all duty in each 4-day period. Only pilots of more than 2 years' service in the Air Corps will be used on air-mail operations involving night flying unless weather conditions all along the route to be flown are excellent. After take-off on a night air-mail run no pilot will proceed on his flight unless his flight instruments are working satisfactorily and he is receiving proper reception on his radio. Pilots on night runs will not commence flights under unfavorable weather conditions nor will they continue flights into unfavorable weather conditions. No pilot will take off when weather is doubtful unless he has received a clearance on weather which is not older than 30 minutes before time of take-off. Control officers will be held responsible that every plane which passes through their control station has had required inspections that radio equipment, instruments, engine, and controls are operating satisfactorily. He will check from no. 1 to see that maintenance-inspection requirements have been complied with. All pilots must thoroughly understand that under certain atmospheric conditions ice will form on planes, propeller hubs, and venturi tubes of instruments normally between 28 and 34° F., and no flights will be continued into weather conditions conducive to ice formation. No pilot will be sent on an air-mail trip or ferry flight unless he has had previous experience in flying the type of airplane assigned for the mission. Control officers will be held responsible that every pilot who passes through their control station is fully informed of such of the foregoing instructions as concerns him. When compliance with above instructions necessitates cancelation of trips or delay of mail, postal authorities will be contacted as per previous instructions. Zone commanders will take immediate steps to transmit these instructions to control officers by radio or telegraph and will also take immediate steps to have these instructions printed and distributed without delay to all control officers and pilots.

FOULOIS.

Now, let us see what General Foulois thought about these charges. This information is from his speech delivered over radio February 27 last:

Our initial air-mail operations necessitated a complete redistribution of military airplanes, equipment, and personnel throughout the entire United States, in order to place pilots and planes at air-mail stops, and provide additional ground facilities for all operations. This redistribution was accomplished primarily by Army airplane transportation.

The initial air-mail routes put in operation by the Army Air Corps are those connecting 11 of the 12 Federal Reserve bank districts. These involve 12 main routes covering 70 air-mail stops, over a distance of 13,284 route-miles, which, when considered in connection with the number of scheduled daily trips, total 40,827 miles to be flown normally each day. The cancelation of certain routes in the former airway system, the activities of stamp collectors, and other factors during the first week of operation caused the air-mail poundage to be greatly in excess of that previously carried over the same routes now operated by the Air Corps. In some cases the poundage has been in excess of 100 percent over the loads normally carried, thus necessitating the dispatch of 2, and sometimes 3, planes on a schedule which normally should have been handled by 1 plane.

Army aircraft used in carrying the mail over the initial routes have, from the beginning of actual operation, been adequately equipped for receiving weather broadcasts and for following the directional radio beams operated over air-mail routes by the Department of Commerce. The planes used on the initial routes are also equipped with instruments for blind flying and for night operations.

With further reference to the use of radio I would like to clarify an apparent prevalent misconception in connection with an airplane following a directional radio beam. The ground radio stations transmitting these beams are located along the mail routes from approximately 100 to 150 miles apart. These beams usually overlap between stations, and so long as the pilot follows the beam he will receive through his earphones a continuous hum. If he deviates from the course laid by the beam, the hum is broken into a series of "A's" or "N's", depending on whether he is to the right or left of the beam. Aerial strip maps, prepared by Government agencies, and used by pilots, show these beams and on which side thereof the "A" and "N" signals will be received. The operation of our radio sets used for this purpose is just as simple as the operation of the radio set in your home, and requires only a few hours' time to become thoroughly proficient therein. Radio-beam flying, however, should not be confused with so-called "blind flying", which, although it includes radio-beam flying as one of its requisites, is an entirely different and much more difficult undertaking.

Although the Army Air Corps has been training its flying personnel in radio and in instrument flying for years, it has only been during the past year that improved radio and blind-flying instruments have been available in any quantity for general service use. Our experience in flying the air mail, in which radio and instrument flying play such an important part, will therefore be of inestimable value to our future training, and thus better prepare the Army Air Corps to carry out successfully its air force military operations in any and all kinds of weather, to the end that our national-defense mission of protecting our borders from air invasion during military emergencies may be more fully executed.

We have had, and still have, many other handicaps to overcome, and all facilities placed at my command by the War Department will be used to eliminate such handicaps. The flying of military aircraft designed primarily for combat purposes is recognized as inherently hazardous under all conditions, and accidents increase when flying activities are carried out on a large scale. However, to date only one fatal accident has occurred on a scheduled air-mail run. In this connection I would like to state that no attempt has been made by the Air Corps to maintain a high percentage of mail schedules regardless of hazards involved. On the contrary, I have from the very start continually stressed in my instructions that the safety of operating personnel is the paramount consideration in these operations.

I am honestly and frankly of the opinion that the hazards involved in flying the mail are not as great as those involved in peace-time military flying, when military flying is considered as a whole. Further, the officers on duty with the Air Corps mail operations in an executive capacity are most capable officers of many years' experience in air operations. They are intelligently and efficiently carrying out the foregoing policies and thoroughly understand that the safety of the pilots flying the mail takes precedence over all other considerations.

I would like also to ask you to discount as untrue, unfair, and unfounded certain of the recent accusations and headline-seeking phrases which have reflected not only against the efficiency of the Air Corps personnel but also against the present administration. Much of this, in my belief, is nothing more or less than partisan propaganda designed to advance interests which are by no means unselfish. These attacks, in a number of cases, have emanated from persons absolutely unqualified, in my opinion, to pass judgment on such matters, especially if any weight is to be given to the adage that "air experience is the best teacher."

I seriously question the many statements which have been made by individuals in public and private life during the past few weeks to the effect that the Army Air Corps is poorly trained and poorly equipped, as compared to foreign air powers. I will promptly agree that, insofar as quantity of aircraft is concerned, we are behind at least four foreign air powers. This fact has been frequently stressed in the past. But I will not admit that the normal quality of our material and the general efficiency of our personnel is exceeded by any air power in the world.

Much has been said lately of the type of Air Corps officers now actually flying the mail. Some would have you believe them a bunch of rosy-cheeked young babies. On the contrary, they constitute a corps of highly intelligent, rugged, determined, loyal, and fearless young officers. It is my most cherished honor to be their chief, and no human being worthy of the name could betray their trust. Today they have no superiors in the world as military flyers; and, given a fair chance, I am certain they will in a very short time be carying the air mail in a favorable comparison with their excellent commercial-pilot comrades. Our military pilots are not weaklings looking for sympathy. They should be treated like men and not like children. If there is anything that the average red-blooded American military pilot resents it is this recent twaddle about inexperienced, rosy-cheeked boys being sent to their deaths. They are proud that theirs is a man-sized job, and they have no desire to be coddled. Such public statements are a direct challenge to the average young Army pilot, and detrimental to the iron flying discipline so essential to a military pilot. Therefore, I urge the thinking public to give the Army air-mail pilots its loyal support. Lack of trust eventually will break the morale of the strongest of seasoned veterans, and when morale is gone all is lost.

Every day our pilots and men are rapidly gaining familiarity with their new duties, and I am certain that our entire organization for handling the air mail will soon be working smoothly and efficiently. Please remember, however, that no matter how experienced a pilot may be, or how efficient and modern his aircraft equipment, frequent accidents will still occur, both in commercial and military flying. Both types of flying constitute a stern and serious busines, but, in spite of this fact, the Army Air Corps welcomes this present opportunity to improve its organization, improve its aircraft equipment, and improve the training of its pilots, in proper peace-time preparation for any military war emergency which may arise.

Here is an answer to the charges, furnished upon request by the War Department:

In view of the misstatements that have been made regarding the operation of the air mail by the Army Air Corps, the following is furnished for your information:

On February 19, 10 days after the Executive order was issued, the Army began to carry the mail. It initiated the operation of 12 main routes, including 70 air-mail stops and covering a distance of 13,284 miles. Scheduled trips involve the flying of 40,827 miles each day on air-mail runs.

From the very beginning all Army aircraft used in carrying the mail have been equipped with radio for receiving weather broadcasts and for following directional radio beams operated over the air-mail routes by the Department of Commerce. Similarly, these airplanes have been equipped with instruments for blind flying and with night-flying equipment. Personnel flying in Army airplanes are always equipped with the best procurable parachutes, a safety precaution not usually followed in commercial practice. While many of the military airplanes have open cockpits, the pilots are furnished and use the best procurable protective clothing. Open-cockpit airplanes are conceded to be safer than those having closed cockpits. Commercial companies frequently use them where only mail is carried.

The Air Corps has been training its flying personnel in radio and in instrument flying for years. However, it has only been during the past year that improved radio and blind-flying instruments have been available in sufficient quantity for general service use. The wide experience gained in flying the air mail in which radio and instrument flying play an important part will be of inestimable value in training the Air Corps, and will result in its being far better prepared to perform successfully military operations under all weather conditions. To carry out the Air Corps role in national defense, pilots must be ready to fly at any time and under any conditions that may be imposed by the requirements of the service.

The flying of military aircraft is recognized throughout the world as being inherently hazardous under any and all conditions, and accidents in the military forces necessarily increase when flying activities are carried out on a large scale. Considering the nature of normal military flying, which requires the maneuvering of large fighting forces in formation in the air, it is believed that the hazards involved in flying the air mail are not as great as those involved in ordinary peace-time military flying. To date only one fatal accident has occurred on a scheduled air-mail run.

In flying the air mail, just as in normal military peace-time flying, every effort is made in the military service to safeguard the lives of the personnel involved. From the very start instructions issued have stressed the importance of safeguarding the lives of flying personnel engaged in carrying the mail. Pilots carrying the air mail were selected for their known flying ability under service conditions. Only pilots of more than 2 years' service in the Air Corps are being used in night flying, unless weather conditions all along the route to be flown are excellent.

It is generally recognized that today the quality of our flying material and the general efficiency of our personnel are not excelled by any air power in the world.

The Army will continue to carry the mails as long as it may be necessary with that high standard of performance which has invariably characterized its services in emergencies.

FEBRUARY 28, 1934.

Here are reports of the accidents which have occurred since the Army took over the mail:

FEBRUARY 26, 1934.

Memorandum for the Chief of Staff:

In compliance with your telephonic request of this date the following information is furnished:

On February 16 Second Lts. Jean D. Grenier and Edwin D. White, Jr., Air Reserve, were killed while flying between Cheyenne, Wyo., and Salt Lake City, Utah. The airplane was a two-seater A–12 (attack) type. They were not carrying the mail and were not attempting to maintain an air-mail schedule, but were flying over the mail route to familiarize themselves therewith.

At about 10:50 p.m., February 16, Second Lt. James Y. Eastham, Air Reserve, piloting a B–7 (bombardment) airplane, was killed about 7 miles from Jerome, Idaho. He was flying from Salt Lake City to Seattle, Wash., and under exactly the same conditions as were Lieutenants Grenier and White. Lieutenant Eastham had had considerable experience with the B–7 airplane and had flown over this course twice before.

The three above-named pilots cleared Salt Lake City under favorable weather reports, with further instructions from the commanding officer at that point to come back in case unfavorable weather was encountered. Local weather conditions were threatening, but the ceiling over the mountain peaks was at least 1,000 feet, with the average ceiling along the route up to 5,500 feet. The pilots on both of these runs had communicated their position to the ground stations by radio about 10 minutes prior to the accidents. Lieutenant Eastham circled in the vicinity of the airport at Jerome, Idaho, and was apparently endeavoring to make a landing thereat.

Second Lt. Durward O. Lowry, Army Air Corps, was killed on the morning of February 22 near Deshler, Ohio. He was piloting an observation (O–39) type airplane, and was flying between Chicago and Cleveland, having taken off from Chicago at 4 a.m. Lieutenant Lowry was on a regular air-mail run when killed and was carrying mail. He apparently had attempted to make an emergency parachute jump, for the rip cord was pulled and pilot was caught in the tail of the airplane.

On February 22 First Lt. F. I. Patrick, Army Air Corps, was killed near Denison, Tex., while flying a P–26 (pursuit) airplane. Lieutenant Patrick was in no way connected with air-mail operations, and was on a training flight from Barksdale Field, La., to Sherman, Tex.

During the afternoon of February 23 Second Lt. James H. Rothrock, Air Reserve, piloting a C–29 (amphibian type) airplane, with Second Lts. William S. Pocock, Jr., and George E. McDermott, Air Reserve, as passengers, took off from Floyd Bennett Field, Brooklyn, N.Y., at 2:05 p.m., for Langley Field, Va., via Bolling Field, D.C. They made a forced landing on account of motor trouble in the sea about 5 miles southeast of Fort Tilden, N.Y. Lieutenants Rothrock and Pocock were rescued by the United States naval destroyer *Bernadou* about 7:20 p.m., Lieutenant McDermott having disappeared from the airplane a few minutes prior to the rescue. This flight was for the purpose of ferrying pilots to air-mail stations and was therefore connected with the mail operation but was not on an air-mail run nor carrying mail.

The customary procedure in the Army Air Corps is for station commanders to immediately report by radio a brief account of all accidents. A board of officers is then appointed to make a detailed investigation into the cause of such accidents. Up to date the detailed reports covering the above accidents have not been received, and the information submitted herewith has been taken from the brief radio reports.

Attention is invited to the fact that only one Air Corps officer has been killed while actually carrying the mail.

B. D. FOULOIS,
Major General Air Corps,
Chief of the Air Corps.

No one regrets these unfortunate accidents more than I do, but I am informed that a fatality occurs every 12 days in military aviation and every 29 days in commercial aviation. We should foster and promote aviation by supporting legislation in its interest.

POST OFFICE DEPARTMENT,
SECOND ASSISTANT POSTMASTER GENERAL,
Washington, February 28, 1934.

Hon. JAMES M. MEAD,
House of Representatives.

MY DEAR MR. MEAD: In compliance with the telephonic request made by you for certain statistics, the following information is furnished:

On exhibit sheet no. 1 is a record by fiscal years showing the number of pilots killed, the number of passengers and others killed, the total number of persons killed, and the number of pounds of air mail destroyed, from the time of the establishment of air mail service to the present date.

On exhibit sheet no. 2 is a list furnished by the Department of Commerce showing the number of open- and closed-cockpit airplanes operated by the air-mail contractors.

The Department of Commerce reports that 95 percent of all airplanes on scheduled routes are equipped with some type of radio, and of the 95 percent, 60 percent of the planes are equipped with two-way radio.

While no definite information is available with reference to automatic control for airplanes, it is understood that the operators who held mail contracts prior to cancelation had only used this device in an experimental way on a few individual ships.

With reference to the precautions taken by the Post Office Department to prevent unnecessary loss of life in flying the mail, the Second Assistant Postmaster General personally in every conference with the officials of the Army Air Corps stressed the fact that no unnecessary risks should be taken and that the Post Office Department preferred to take the responsibility for the delay of mail rather than for the Army pilots to jeopardize their lives. Mr. Stephen A. Cisler, general superintendent of Railway and Air Mail Service, also in several conferences with the Army officials reiterated the attitude of the Post Office Department that there should be no unnecessary risks taken. The orders issued by Army officials disclosed beyond doubt that the policy of the Post Office Department was thoroughly understood and that the officers of the Air Corps also took every reasonable precaution to prevent loss of life.

HARLLEE BRANCH,
Second Assistant Postmaster General.

Air-mail fatalities, by fiscal years

Fiscal year	Pilots killed	Passengers and others killed	Total killed	Pounds of mail destroyed
Government operated:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF THE AIR CORPS,
Washington, February 24, 1934.

Memorandum for the Chief of Staff:

With reference to the present agitation over the Army Air Corps accidents during the past 2 weeks there is submitted herewith data on the total number of accidents in scheduled commercial air transport services since January 1928:

	Accidents	Fatalities
January to June 1928	35	6
July to December 1928	51	18
January to June 1929	61	17
July to December 1929	76	22
January to June 1930	44	27
July to December 1930	47	5
January to June 1931	61	14
July to December 1931	65	23
January to June 1932	67	26
July to December 1932	48	14
January to June 1933	48	6
July to December 1933	53	10
Total	656	188

The foregoing is submitted in compliance with your telephonic request of the evening of February 23, 1934.

B. D. FOULOIS,
Major General, Air Corps, Chief of the Air Corps.

Normal casualties of Army Air Corps about 45 per year.

Now, let me read what happened on private lines. Here is the report from the Department of Commerce giving us the civilian accident record since the Army took over the air mail, showing that eight people were killed in one crash and one in another. Why did not you mention these crack-ups? [Applause.]

CIVILIAN ACCIDENT RECORD SINCE ARMY HAS BEEN FLYING MAIL—REPORT FROM DEPARTMENT OF COMMERCE

One fatal accident in scheduled civilian flying during the period the Army has been carrying the mail (accident on United Air Lines at Salt Lake City; eight killed).

One forced landing; none injured (Georgia; Eastern Air).

Four accidents in miscellaneous flying; that is, outside of scheduled flying (1 of these 4 was fatal).

Commerce Department says above report does not cover all the accidents but only those reported upon so far. Reports will probably be coming in from their inspectors as finished for the next 2 months on accidents which occurred during the storm period. They have no record of all accidents for this period at the present time.

Anyone who reads the charges made by some of our Republican colleagues can find an answer for them in these official statements and records. I am only anxious to correct the RECORD and to give you the facts in the case. They made the charges, but they cannot be sustained.

Mr. SMITH of Virginia. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

Mr. SMITH of Virginia. Mr. Speaker, I move to strike out the preamble.

The motion was agreed to.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

On motion of Mr. SMITH of Virgina, a motion to reconsider the vote whereby the resolution was agreed to was laid on the table.

REREFERENCE OF CERTAIN BILLS

Mr. BROWNING. Mr. Speaker, by direction of the Committee on the Judiciary, I ask unanimous consent that the bills, S. 682, to prohibit financial transactions with any foreign government in default on its obligations to the United States, and H.R. 2850, relative to the securities of foreign governments which have defaulted in their contract obligations to the United States, be rereferred from the Committee on the Judiciary to the Committee on Foreign Affairs, with the understanding, however, that such reference shall in no wise constitute a precedent for the reference of any bills which define a criminal offense and prescribe a penalty therefor to any committees other than the Committee on the Judiciary.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that the bills S. 682 and H.R. 2850 be rereferred from the Committee on the Judiciary to the Committee on Foreign Affairs. Is there objection?

There was no objection.

ONE YEAR UNDER THE NEW DEAL

Mr. CARPENTER of Kansas. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. CARPENTER of Kansas. Mr. Speaker, it is just a year since Mr. Roosevelt was inaugurated as President of the United States. It is therefore well that we review the events as they have occurred to determine whether we can report progress. To do so it is necessary that we first note the condition we were in, in the period just preceding, and at this time 1 year ago.

Wheat was then selling for 30 cents a bushel; corn, 7 to 12 cents per bushel; oats, 10 cents per bushel; cotton, 5 cents per pound or lower; and all other agricultural products at corresponding low prices. Wages were gradually being lowered as unemployment increased until there were about 14,000,000 jobless men and women, directly affecting, including themselves, some 35,000,000 people. The farmers everywhere were facing mortgage foreclosures. Over all the country were closed factories, empty store buildings, and impoverished towns and cities. Taxes were unpaid and municipalities and counties ceasing to function. Despair had taken the place of confidence. There was only one hope that sustained the people in the terrible condition they found themselves in, and that was the coming of a new leader. A leader who talked with understanding terms and in a language that all could understand, and who, instead of condemning the common man, the laboring man, and the farmer, attempted to view their situation from their point of view and interested himself in their cause. In short, he promised them a new deal. Franklin D. Roosevelt, when he became President 1 year ago, assumed the greatest responsibility of any President since the time of Lincoln. Every bank in the country was closed, and we were on the verge of a panic that would have led us to chaos.

The welfare and future of not only our country but each and every individual in this country depended upon him. His utterances on March 4 were calculated to give us much encouragement. Thereupon action became his byword. The banks were saved. Congress was called in an extraordinary session and the President proceeded to set the national house in order. Then followed a series of emergency laws enacted by Congress upon the recommendation of the President. The results of which were to take us off the gold standard; to afford relief to agriculture; to save the farmers from foreclosure; to help the home owners in the towns and cities; to prevent the sale of fraudulent stocks and bonds by making the seller beware as well as the buyer; legislation creating useful camps where the youth of the country could be gathered off the highways and byways and paths that might lead to crime; legislation providing for the guaranty of bank deposits, thereby making the earnings and life savings of all, and especially of the older people, secure; and legislation to assist labor of all kinds, including railroad labor.

This legislation was supported by me, not because I was told to do so by any particular person or because it was popular but because in my judgment it was right and for the best interest of the people of my district and the country at large, and any legislation I did not believe was right or for the best interest of my people I just as vigorously opposed, and will continue to do so as long as I remain in this office.

To be sure, some of the legislation, as might be expected in such an emergency, was not perfect, and in some cases caused hardship, but the results of the legislation as a whole in relieving the terrible conditions in this country should be considered, and what are they? First, confidence in our country, our future, and ourselves has been restored. The price of wheat to the farmer is now better than 70 cents per bushel; cotton better than 10 cents per pound; corn, 50 cents per bushel or better; oats, 38 cents per bushel; and the price of every other agricultural product, with just a few exceptions, has increased or is on the upgrade. Thousands of farms and homes have been saved, most of the factories opened, millions of people put back to work, deposits in banks up to $2,500 secured, protection given from unscrupulous stock-and-bond salesmen, and racketeering and unfair business practices abolished, and all this without any bloody revolution or dictatorship established in this country.

The man in the White House has not assumed the role of dictator; his every action has been with the consent of Congress. In fact, he has not gone anywhere near as far as Congress has authorized him to go, and, more than anything else, he has been satisfied for every Member of Congress to vote according to the dictates of his own conscience, in keeping with our American principles of government.

In conclusion, let me say the American people have been patient and long suffering through it all; their spirit has been wonderful; and regardless of their former party affiliations, they have given the President and Congress their full measure of support and cooperation.

COLLATERAL SECURITY FOR FEDERAL RESERVE NOTES

Mr. STEAGALL. Mr. Speaker, I call up the bill (S. 2766) to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes, and ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Alabama calls up the bill S. 2766, on the Union Calendar, and asks unanimous consent that it be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That the second paragraph of section 16 of the Federal Reserve Act, as amended, is amended to read as follows:

"Any Federal Reserve bank may make application to the local Federal Reserve agent for such amount of the Federal Reserve notes hereinbefore provided for as it may require. Such application shall be accompanied with a tender to the local Federal Reserve agent of collateral in amount equal to the sum of the Federal Reserve notes thus applied for and issued pursuant to such application. The collateral security thus offered shall be notes, drafts, bills of exchange, or acceptances acquired under the provisions of section 13 of this act, or bills of exchange endorsed by a member bank of any Federal Reserve district and purchased under the provisions of section 14 of this act, or bankers' acceptances purchased under the provisions of said section 14, or gold certificates: *Provided, however*, That until March 3, 1935, or until the expiration of such additional period not exceeding 2 years as the President may prescribe, the Federal Reserve Board may, should it deem it in the public interest, upon the affirmative vote of not less than a majority of its members, authorize the Federal Reserve banks to offer, and the Federal Reserve agents to accept, as such collateral security, direct obligations of the United States. On such date or upon the expiration of such period so prescribed by the President, or sooner should the Federal Reserve Board so decide, such authorization shall terminate and such obligations of the United States be retired as security for Federal Reserve notes. In no event shall such collateral security be less than the amount of Federal Reserve notes applied for. The Federal Reserve agent shall each day notify the Federal Reserve Board of all issues and withdrawals of Federal Reserve notes to and by the Federal Reserve bank to which he is accredited. The said Federal Reserve Board may at any time call upon a Federal Reserve bank for additional security to protect the Federal Reserve notes issued to it."

Mr. STEAGALL. Mr. Speaker, this bill provides an extension of a measure passed on February 27, 1932, which authorized the Federal Reserve banks, upon approval of a majority of the Federal Reserve Board, to issue Federal Reserve notes based upon Government bonds to the same extent and in the same manner that Federal Reserve notes were authorized to be issued when secured by eligible commercial paper. The original act was in operation for 1 year, and a subsequent bill was passed extending that measure down to the 3d of March 1934. It is urgent that this bill be enacted now in order that confusion and embarrassment be not visited upon the Federal Reserve banks in connection with Federal Reserve notes now outstanding which are protected by Government bonds.

Mr. McFADDEN. Mr. Speaker, will the gentleman yield?

Mr. STEAGALL. In a moment. There are $570,000,000 of such notes outstanding at the present time. If this legislation is not passed, then after the 3d day of March such notes will have no legal status. It would become necessary for the Federal Reserve banks to take some action to restore the legality of these notes now in circulation. To do that it would be necessary, under the general law, to substitute eligible paper for those bonds. To accomplish that it would be necessary for member banks to borrow of the Federal Reserve banks. Borrowing is not being practiced now, except in a very limited way. Rediscounts now in the Federal Reserve banks amount to only about $150,000,000, so that the Federal Reserve banks, in order to bring about necessary rediscounts of commercial paper, would be forced to unload Government holdings, which would result in the withdrawal and contraction of the supply of the Nation's currency. That is not thought desirable, I am sure, by many Members of the House, and it is not thought desirable by the administration.

This legislation freed something like $1,000,000,000 of gold which had to be carried for protection of Federal Reserve notes at the time of the enactment of the original measure, for the reason that there had been such a decline in rediscounts by the Federal Reserve banks that it became necessary to carry 80 percent of gold as security or collateral for Federal Reserve notes, and that tied up nearly $1,000,000,000 of gold, which was a very uneconomic use of our gold supply. Under the measure passed that gold was freed, and it made possible an increase in the amount of currency in circulation of something like two and a half billion dollars, and more than a billion dollars of Government bonds have been used as a basis for the circulation of Federal Reserve notes.

The SPEAKER. The time of the gentleman from Alabama has expired.

Mr. STEAGALL. Mr. Speaker, I ask unanimous consent to proceed for 1 minute.

The SPEAKER. Is there objection?

There was no objection.

Mr. STEAGALL. Mr. Speaker, it is very important from the standpoint of the general necessity for currency expansion that this liberalized policy of issue be continued. It is also important, or at least might become very important, in connection with the liberal financing program now being carried on by the administration. This authority will relieve the administration, to the amount of several billions of dollars, from the necessity of an appeal to private investors and banks for the purchase of Government securities in the financing program of the Treasury.

The SPEAKER. The time of the gentleman from Alabama has again expired.

Mr. STEAGALL. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. PATMAN] may address the House for 10 minutes.

Mr. McFADDEN. Reserving the right to object, I should like 10 minutes on this bill.

Mr. STEAGALL. As far as I am concerned, I shall be very happy for the gentleman to have it.

Mr. McFADDEN. Mr. Speaker, I ask unanimous consent that when the gentleman from Texas [Mr. PATMAN] concludes I may address the House for 10 minutes on this bill.

The SPEAKER. Without objection, the request of the gentleman from Alabama is granted.

There was no objection.

The SPEAKER. Without objection, the request of the gentleman from Pennsylvania is granted.

There was no objection.

BANKERS' BONUS BILL

Mr. PATMAN. Mr. Speaker, I expect to introduce an amendment to one part of this bill, and, of course, expect to get 5 minutes' time to discuss that amendment. That will make up the 15 minutes' time that I expected to get.

This bill is to continue a privilege that was first granted to Federal Reserve banks for 1 year, in February 1932. At that time the distinguished gentleman from Alabama [Mr. STEAGALL] gave as his reason for the adoption of this measure that it was necessary to keep from going off the gold standard. The bill was passed under a gag rule, no amendments were in order. A year ago, 1933, another bill was introduced for the purpose of extending this same privilege another year. The reason given was that there was a panicky condition existing and in order to save our gold and keep us from going off the gold standard we would have to pass this bill. It was again passed under a gag rule, no amendments were in order. I opposed the bill each time.

FACTS EXISTING IN 1932

In 1932 the Federal Reserve banks had $2,900,000,000 deposited with the Federal Reserve agents to secure $2,900,000,000 of Federal Reserve notes. Nine hundred million dollars of that represented eligible paper and $2,000,000,000 of gold, and it was the view of the gentleman from Alabama at that time, that it was necessary to permit the substitution of United States bonds in order to release a billion dollars' worth of gold, which he said was needed at that time to protect the gold standard. It was thought France was going to demand a large amount of gold which she held in the United States, and this bill was necessary to release gold to be used in the event France should make such a demand. But the condition that existed then does not exist now, and this bill is extending a great privilege to a very few people.

WHAT IS FEDERAL RESERVE BANKING SYSTEM?

Let us think for a moment what the Federal Reserve banking system is. The Federal Reserve banking system operates almost solely on the credit of this Nation. The Government does not own one penny of its capital stock. It is owned solely by private banks. It was organized as a nonprofit-making institution for the purpose of extending adequate credit to commerce, industry, and agriculture. Such amendments as we now have before us have diverted the system from the object of its creation and have caused it to be used in the interest of private bankers solely. A Federal

Reserve bank has a right to issue money that is a blanket mortgage upon all the property of all the people of this Nation. Every Federal Reserve note—paper money—so issued is a blanket mortgage. Federal Reserve banks do not guarantee to redeem that money, but the Treasury of the United States, the people of this country, agree to redeem it. It occurs to me that it is an idiotic and imbecile system that will permit a private banking institution so to handle the credit of this Nation that that banking institution can buy United States Government bonds, with Government credit, and then that same Government continue to pay interest to that private banking institution on those bonds that it has purchased on the Government credit. The privilege under this amendment is going much further than that. I doubt that you would vote now to extend the privilege I have just mentioned, but the privilege before you goes much further than the privilege I have just discussed.

The question is squarely before us, Are we going to continue this system of issuing money on Government bonds or will we defeat this bill and do what the Constitution says to do—"Coin money and regulate its value"?

ELASTIC CURRENCY INTENDED

The object of the creation of the Federal Reserve banking system was to extend credit and elastic currency for the benefit of commerce, industry, and agriculture. It was never intended that they would operate in the markets and speculate upon Government bonds for their benefit and for the benefit of member banks. The first bill that was proposed 2 years ago, which allowed the substitution of Government bonds for eligible paper was the first bill that encouraged banks to get out of the banking business and quit loaning money to industry, trade, commerce, and agriculture, and just speculate and make money in United States Government bonds, and that is what they have been doing. There is no incentive for them to loan money to agriculture, commerce, and industry as long as they can manipulate the Government credit in the manner in which they are manipulating it today.

CAMEL'S NOSE UNDER TENT

When this bill is read, I expect to offer an amendment. The bill provides that the privilege shall be extended 1 year and, with Presidential approval, it may be extended 2 additional years. That is the way the Federal Reserve Banking System has always gotten its special privileges, just by getting a little hold and annually securing so-called "perfecting amendments", just like the camel getting its nose under the tent, and finally the camel, hump and all, gets under the tent. That is the way it has been doing ever since the Federal Reserve Banking Act was enacted. This is another attempt to get another great privilege at the expense of the people of this country. First, they just wanted it a year to keep from going off the gold standard. Next, they wanted it for another year to keep from going off the gold standard. Now they want it for 3 years, although we are off the gold standard, and they bring it in here just 1 day before the time expires and they say it is an amergency and that we must pass it now. The very next thing to a gag rule. I am going to offer an amendment providing that instead of this privilege being extended 3 years it shall be extended until June 3, 1934. That is 3 months. That will give the Federal Reserve banks time to let industry have some money. Let them get some eligible paper in exchange for credit which the people need, and let them put up this eligible paper and get the bonds back. It will have a tendency to encourage them to let the people have the money that they want, and that is what we should do. Although I am against the bill and have opposed it every time, I am willing for the privilege to be extended 3 months. During that time another bill can be brought in and full and free discussion may be allowed.

BANKERS' BONUS BILL

This bill should be known as the "bankers' bonus bill." It is another attempt, by bribery and by bonus and by subsidy, to try to persuade the bankers of this country to render a public service to the people by extending to them a part of the Government's credit which they have been using for themselves and for the benefit of themselves. I hope the time will come in the very near future when the Government of the United States will make direct loans to industry, will make direct loans to people who need Government credit. That is necessary. The banking system of this country has fallen down in its efforts, if it has made any effort, to extend sufficient credit to commerce, industry, and agriculture, although such system has been favored by the Government in every conceivable way. No other business is allowed to use the Government credit free, just the Federal Reserve System, which is controlled by a few large banks and such banks as are allowed to deposit Government bonds drawing annual interest of 3⅜ percent and receive in return for them new currency paper money, and while using the money, also get credit on the bonds. I wish someone would give a good reason why the Government should not issue the money in the first place rather than issue bonds, sell the bonds, and then let the holder get money in return for them. The Government is paying the holders of Government bonds a billion-dollar bonus this year.

MONEY ISSUED ON I O U'S

As it is today, the member banks of the Federal Reserve put up their own notes, just I O U's, and get money issued on them, and they even want to enlarge this privilege. When they put up these notes with the Federal Reserve, they want the Federal Reserve to have the privilege of taking the United States bonds that have been purchased with Government credit as collateral security for the issuance of that money and at the same time get interest on the bonds that are put up as collateral security.

Suppose you owed a mortgage on your home and you gave me the money to pay the mortgage, and I got the mortgage transferred to me in return for your money, would it be right for you to continue to pay interest on that mortgage? That is exactly what the Government is doing.

A BIG RACKET

The Federal Reserve Banking System today holds $3,000,000,000 in Government bonds. The Government should not have to pay interest on bonds that have been repurchased with Government credit; but they did it, and are doing it. It is not right that they should do it, and I am not willing for the privilege to be continued or extended.

CONTINUE ONLY 3 MORE MONTHS

Probably the Members do not desire to kill the bill outright since it is just a day before the old law expires, and a full discussion has not been permitted, but let us not continue the privilege more than 3 months, during which time this Committee on Banking and Currency, headed by the distinguished gentleman from Alabama, can bring in another bill, and under the general rules of the House we can thoroughly discuss it. If it is a good proposition, the House will pass it; but if it is not a good proposition, it will be defeated. So, let us attempt to amend the pending bill in order that the privilege may not be extended longer than 3 months without a better understanding of what is allowed under it.

1945 BONDS

Under this bill they can take bonds, due in 1945, payable in 1945—they can do that anyway, but this is an extension and enlargement of that privilege—and deposit these bonds with the proper official and get new money on these bonds; and at the same time they use the money they get interest on the bonds deposited. It is not fiat money, rag money, or greenbacks, it is good money; but offer to let the 3,500,000 veterans ask for the same privilege and the same money is called greenbacks and no good. Of course, they do not want the privilege extended until 1945 in this bill, but they are going to get it if you pass this bill because next time, instead of 3 years it will be 6 years, or maybe 25 years, or maybe longer. Just before the time expires another bill will be brought in to give them an extension of the same privilege. They have never lost a valuable privilege. They always manage to get their privileges extended and enlarged. Gag rules, emergency, and many other methods are used to carry out their purposes.

SUPPORT AMENDMENT

Therefore, my friends, I hope you will support the amendment which I shall introduce to limit the provisions of this bill to 3 months. This will give them plenty of time to bring in a bill and give the House time to consider properly the bill. The records show that most of the country banks are doing their part. It is the large banks that will benefit the most by this bill that are refusing to do their part.

One half of the Government bonds today are owned by the large banks of this country. Think of it, half of them; and the Government is paying the banks a bonus, or a subsidy, of $500,000,000 a year. And yet they will not make deserving loans to industry. If you want to continue this privilege, vote for this bill as it is. The Government will pay holders of tax-exempt interest-bearing bonds a billion-dollar bonus this year. It should not be paid. Think of the many ways a billion dollars could be used to better advantage of the people. The bonus system for the banks must be stopped. If you are in favor of the Congress issuing money as contemplated by the Constitution, vote to refuse the banks this extension of that very valuable right.

[Here the gavel fell.]

Mr. ELLENBOGEN. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended 2 minutes in order that I may ask him a question.

Mr. BURKE of Nebraska. Mr. Speaker, I object.

The SPEAKER. The gentleman from Pennsylvania [Mr. McFADDEN] is recognized for 10 minutes.

Mr. McFADDEN. Mr. Speaker, I am assuming that the House bill is the same in all respects as the Senate bill. I ask the chairman of the committee whether I am correct?

Mr. STEAGALL. The bill passed the Senate day before yesterday, and we are considering the Senate bill in order to expedite passage of the measure to meet the peculiar conditions that exist. The committee, however, unanimously reported the House bill on yesterday, and the House bill is identical with the Senate bill.

Mr. McFADDEN. This is a bill to extend the period during which direct obligations of the United States may be used as collateral security for the basis of the issuance of Federal Reserve notes.

The purpose of the original enactment was to protect the gold reserve. The renewal that was given subsequently was also involved in that same situation. The situation today has entirely changed. The purpose of the enactment of this bill today is to permit the continued use of the hopper into which Government bonds are placed and out of which, when the crank is turned, come Federal Reserve notes.

The real reason that this is necessary is that $10,000,000,000 has to be raised by the United States Treasury, and this is one of the vehicles that is to be used to furnish the inflation which will be necessary in order that the Treasury may sell United States bonds to get the money to carry out its financial program. We might just as well recognize this fact. I am at a loss to understand why they have delayed until the last minute the question of renewing this act.

This is a part of the general plan of the Federal Reserve and the Treasury to avoid any real discussion on the subject of the issuance of Federal Reserve notes and the operations of the Federal Reserve System in this House. We were told on the 4th day of last March that the money changers were to be thrown out of the temple. The Federal Reserve System management represents a large part of the money changers, and during the past 10 days we have seen a definite reversal of the policy of throwing the money changers out of the temple and an endorsement by the President of the United States of a continuance of the Federal Reserve System in the same manner it has been operated for the past several years.

I should like to ask the leader of the Democratic side whether or not any attention is going to be paid to an examination of the operations of the Federal Reserve System. I am asking the leader of the Democratic side now what they are going to do with the impeachment resolution that is lying before the Judiciary Committee. Are you going to act on it, Mr. BYRNS?

Mr. BYRNS. The resolution is before the Judiciary Committee.

Mr. McFADDEN. The gentleman from Tennessee is the leader of his party and there are resting with the committee accusations against the Federal Reserve System and protests against the continued exploitation of the American people by the Federal Reserve.

Mr. BYRNS. As the gentleman has just stated, the matter is before the Committee on the Judiciary, and I have no doubt that this committee will give it the fullest consideration and investigation. As an individual Member of Congress, however, it is impossible for me to say to the gentleman what will or will not be done by that committee.

Mr. McFADDEN. Over 2 years ago, in response to a resolution proposing an investigation of the Federal Reserve, I was assured by the leadership on both sides of this House that at the following session, after the election, a thorough investigation would be made of the operations of the Federal Reserve System. This has not been had and I can get no cooperation from the committees as regards the examination of the operations of the Federal Reserve. The exploitation by the Federal Reserve of this very question of note issue is at stake in this proposed study of their operations. There should be a complete study of the operations of the Federal Reserve System because of the well-known mistaken policy under which they have been operating. They themselves admit the mistaken policy, which was largely responsible for the collapse in 1929, and has caused us hundreds of millions of dollars of loss; yet in the very bill now before us is a clause phrased in these words:

> That the Federal Reserve Board may, should it deem it in the public interest.

Has the Federal Reserve, in these important decisions which they have made in the past, when they furnished the money to operate the stock-exchange speculation, as they did, worked in the public interest? Are they working in the public interest now? The same management, the same mismanagement, that was in operation in 1929 is still in charge of the operation of the Federal Reserve System.

As the gentleman from Texas has pointed out, the bill grants a further extension of the operation of this note issue for 3 years. It is a mistake to grant this extension of this note-issuing privilege for 3 years. It should not be more than 1 year, as heretofore.

The gentleman has referred to the franchise that is given to this system to issue these notes. Over $3,000,000,000 worth of these notes are outstanding now. If the Federal Reserve loans that money at 4 percent, they get $120,000,000 a year. The law provides that when the Government lends its credit to the Federal Reserve System they were to pay a certain percent for this credit. Have they done this? Not one penny have they ever paid. This franchising of the public credit to the Federal Reserve System has been a fine racket. It is a racket today.

Mr. McFARLANE. Will the gentleman yield?

Mr. McFADDEN. I am sorry; I have not the time.

If we continue this legislation, we should at least see that the law is carried out in its original intent and purpose, and see that this system pays back into the Public Treasury that which the law said they were to pay back.

I do not want to keep continually talking about what the Federal Reserve is doing to this country. I have done everything within my power to get both sides of this House to audit not only the Federal Reserve System, but the Treasury of the United States. When the banking bill was before this House last spring and when the banks were all closed, I begged the incoming administration to draw a red line through the operations of the Treasury and the Federal Reserve System and audit their books. This has not been done. When you talk about throwing the money changers out, every financial operation that has been passed, every assistance from every board that has been created under the new deal and every assistance from the Reconstruction Finance Corporation has been used to strengthen the position of the bankers who are responsible for the great losses that the people of this country have suffered. It has

been a consistent policy that has been followed. Here is a continuation of the same proposition with an endorsement to continue further to operate this system in order to bolster the banks, the private investment, and the international financial interests. How long must the people of this country wait to know about the operations of their financial system? Let me say as solemnly as I can that you are not going to restore confidence in the United States, in your Government, or in your financial system, until the American people are given assurance that everything is right in the Treasury and in the Federal Reserve System. [Applause.]

[Here the gavel fell.]

Mr. LUCE. Mr. Speaker, we have listened to two interesting arraignments of the Federal Reserve Board. The attitude of my colleague from Pennsylvania toward that body has been made well known to the House. His views so far have not convinced.

The attitude of the gentleman from Texas particularly interested me. If I wished to make this a topic in a political campaign I need not go beyond the four corners of the speech of my friend from Texas to find damning arraignment of his administration.

This measure is brought before us by the administration, by the financial agents of the administration, the Treasury and the Federal Reserve Board. This embodies their program for meeting what is probably the greatest danger and the most difficult situation since the days of the Revolutionary War, when, by reason of the disordered state of the finances this country came near going to wreck. Under these circumstances, for one I am disposed to put the same confidence in the Treasury and in the Federal Reserve Board that when the Democrats were in a minority they gave to the Republican Secretary of the Treasury and the Board as it was then constituted.

The Federal Reserve Board was never contemplated to be a political agency. It was never constituted as such. I am told that at the present moment every member of that Board is a Democrat. If there be any criticism, then it goes to a Democratic Secretary of the Treasury and a Democratic Federal Reserve Board; but I refuse to share in such intimations, such insinuations, such charges.

The finances of this country have always been in the hands of honorable men, men who were never subservient to the financial interests of the country as represented by Wall Street. It is absurd, it is preposterous, to tell this House and to tell the country that the Democratic Secretary of the Treasury and the Democratic Federal Reserve Board are nothing but the servants of the wealthy people of the country, the slaves of the money interests of the country.

Does the gentleman from Texas not know the reason money is not loaned to industry is because his administration, working through the Comptroller of the Currency, demands that loans shall not be made on shaky securities, demands that the banks shall be kept liquid, and demands that payment shall be made on outstanding obligations? The banks would be delighted to lend money to industry. They cannot find borrowers who can present security that will be satisfactory to the examiners sent out by the Comptroller of the Currency. That is the heart of the whole problem.

Mr. PATMAN. Will the gentleman yield?

Mr. LUCE. With the greatest of pleasure, because may I say, the more the gentleman speaks on the subject upon the floor of this House the more he puts his foot in it.

Mr. PATMAN. The gentleman is entitled to be facetious over such an important matter. The gentleman in 1932, when he discussed this bill, gave as a reason for its passage then the fact that they needed this gold that the Federal Reserve banks had put up, amounting to about $1,000,000,000. In 1933 in discussing the same bill the gentleman gave as a reason the fact that the emergency still existed.

[Here the gavel fell.]

Mr. MARTIN of Massachusetts. Mr. Speaker, I ask unanimous consent that the gentleman be allowed 5 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PATMAN. Since we have gone off the gold standard and since the Federal Reserve banks have $4,000,000,000 in gold and they only need $1,600,000,000, and having $2,400,000,000 of idle gold, where is the necessity for the passage of this bill?

Mr. LUCE. I am not going to bandy figures with the gentleman. My answer is adequate to my own judgment and conscience. This measure is asked by the men to whom we have entrusted the responsibility of meeting a tremendous problem with respect to the finances of the Government, due to the measures that his party has put upon the statute books, and the proclamations that his President has issued. I am willing to trust his Secretary of the Treasury. I am willing to trust his Federal Reserve Board. The gentleman is not.

Mr. Speaker, I yield back the balance of my time.

The Clerk read the bill for amendment.

Mr. ELLENBOGEN. Mr. Speaker, I offer an amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. ELLENBOGEN: Page 2, line 16, after the words "United States", insert "and such obligations as are guaranteed unconditionally both as to principal and as to interest by the United States."

Mr. ELLENBOGEN. Mr. Speaker, the purpose of this amendment is to include in this bill not only the bonds of the United States but also those bonds that are guaranteed unconditionally both as to interest and as to principal by the United States. I refer in particular to the farm-loan bonds, which only a few weeks ago were guaranteed by the Government, and also to the home-loan bonds. In a message which was presented to the Congress yesterday the President has requested us to guarantee also the home-loan bonds.

Mr. Speaker, these bonds will be as good as the Government bonds, because they will have behind them not only the unconditional promise of the Government of the United States but also the security of the homes of the country.

If the privilege that is extended to the Government bonds to issue currency on the security of such bonds will also be extended to the farm-loan bonds and later to the home-loan bonds, after they are guaranteed, the Farm Loan Corporation and the Home Owners' Loan Corporation will be able to sell these bonds at a lower rate of interest.

Mr. Speaker, the Farm Loan Corporation and the Home Owners Loan Corporation are going to have losses. Today the Home Owners Loan Corporation is selling its bonds or is exchanging its bonds carrying a rate of interest of 4 percent and charging the home owner 5 percent. There is only a difference of 1 percent, which is insufficient or which, in my opinion, will be insufficient to absorb the losses that will be suffered by the Home Owners Loan Corporation, and I assume the condition is the same as to the farm-loan bonds.

I can see no harm in the passage of this amendment, and on the contrary, I believe it will permit these two corporations—the Farm Loan Corporation and the Home Owners Loan Corporation—to fix a lower rate of interest for their bonds, and thus save money for themselves and absorb some of the losses.

Mr. Speaker, I hope the House will adopt the amendment.

Mr. STEAGALL. Mr. Speaker, any amendment to this bill now would defeat its passage within the time within which it is urgent and necessary. In that connection I say to the gentleman from Pennsylvania [Mr. ELLENBOGEN] that it is contemplated that legislation will be passed dealing with the bonds of the Home Owners' Loan Corporation to which he refers, and to other bonds to which the Government has become responsible as to both principal and interest, and that the purpose contemplated by his amendment will in all probability be taken care of in another bill which will be before this House at an early date, and I ask the gentleman to withdraw his amendment.

Mr. ELLENBOGEN. Mr. Speaker, will the gentleman yield?

Mr. STEAGALL. Yes.

Mr. ELLENBOGEN. I have looked over the bill introduced by the gentleman relating to the Home Loan bonds, and I do not find such provision in it, and in addition to the Home Loan bonds I also have in mind the Farm Loan bonds; but if the gentleman will assure me that the House will be given an opportunity to vote on a proposition like this, then I do not desire to endanger the passage of the bill, although I believe it is a deplorable policy to bring such an important bill before the House at the last moment. If the gentleman will give me such assurance, I will withdraw my amendment.

Mr. STEAGALL. I can only assure the gentleman that it is expected that such legislation will be considered by the Committee on Banking and Currency connected with the measure providing for Government guarantee of bonds. Such a provision is embodied in a bill now pending and which was introduced by me.

Mr. McGUGIN. Mr. Speaker, will the gentleman yield?

Mr. STEAGALL. Yes.

Mr. McGUGIN. If I read the amendment aright, I do not believe the gentleman from Alabama means to convey to the House that at some time we are going to have legislation that will carry out that amendment. If I read it right, it will provide for issuing currency against all Government bonds. We now have approximately $30,000,000,000 of Government bonds, and with these $4,000,000,000 that will make $34,000,000,000, and it would make possible a 700-percent inflation.

The SPEAKER. The question is on agreeing to the amendment offered by the gentleman from Pennsylvania.

The amendment was rejected.

Mr. PATMAN. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. PATMAN: Page 2, line 9, after the word "however", strike out "that until March 3, 1935, or until the expiration of such additional period not exceeding 2 years as the President may prescribe" and insert in lieu thereof the words "that until June 3, 1934."

AN AGENT WHO REPRESENTS BOTH BANKS AND GOVERNMENT

Mr. PATMAN. Mr. Speaker, the gentleman from Alabama suggests that he wants this bill passed without delay. There are 12 Federal Reserve banks in the United States, and at each Federal Reserve bank there is a Federal Reserve agent who occupies a dual position. He represents the Federal Reserve bank where he is, and also he is the agent of the Government of the United States. He not only has these bonds in charge but he has the gold in charge; and if we were to fail to pass this bill today or tomorrow or next week, all in the world that he would have to do would be a mere bookkeeping transaction. He would transfer the bonds back and put the gold up as collateral security for the issuance of these Federal Reserve notes.

SURPLUS OF GOLD

The Federal Reserve banks today have $4,000,000,000 in gold. They need only $1,600,000,000 to cover the notes they have outstanding. Therefore, they have idle and unincumbered more than $2,400,000,000 in gold. There is no real necessity for this legislation at all, but in order to be absolutely fair I suggest that we give them 3 months, and that we ourselves have 3 months in which to study the proposition, and if it is a good thing we can pass it, and if it is a bad proposal we can defeat it. I am getting tired of this bill being brought in here under such circumstances every time.

WILLING TO TRUST PRESIDENT

With reference to the remarks of the gentleman from Massachusetts [Mr. LUCE], the gentleman is evidently gratified that one measure recommended by President Hoover and Secretary of the Treasury Mills will probably receive support from leaders of the present administration. He said that I was not willing to trust our Secretary of the Treasury and the President. I want the gentleman to understand that I am perfectly willing to trust them, but I am sure they are not asking for powers they do not need, that have been abused in the past. I am not willing to make them accept a responsibility they do not need, and one that if exercised will not promote the general welfare. If the President or Secretary of the Treasury should suggest to me how this bill would aid the President's program, I would withdraw my objection to it. There are banks in this country that have for the last several years paid 200-percent dividends. There is one in Pittsburgh, Pa., owned by a former Secretary of the Treasury, Mr. Mellon, that has paid a 200-percent dividend a year for years by using the credit of this Nation, free of charge. No other business or industry in the United States is allowed to use the credit of this Nation free of charge. It is only certain bankers in the country who have been allowed to do it.

AMENDMENT SHOULD BE PASSED

There is no reason in the world why this amendment should not be passed, which will allow the time to be extended for 3 months. My objection is not new. When the bill came up in 1932, I opposed it then. We asked for a roll call, and I was 1 of 15, including 2 or 3 other gentlemen from Texas, and others, who opposed it at that time.

NOT AN INFLATIONARY MEASURE

We opposed it a year ago because it is not an inflationary measure. It is not a measure that will expand the currency. It is a measure that will contract the currency. It is a contraction measure and not an inflationary measure, for the reason it induces and persuades banking institutions to put their money in Government bonds, and not in commerce, industry, and agriculture, and any time you induce the banks to use their money by putting it into Government bonds, you are not helping commerce, industry, and agriculture.

ADOPT 3 MONTHS' AMENDMENT

That is exactly what you are doing in this bill. Therefore I ask you to vote for this amendment, which will allow 3 months' more time. The Federal Reserve banks have plenty of power to control the situation without any inconvenience or without any trouble. Banks can still put up their own I O U's, the bankers' note, the note of that bank, and get the money of the United States, guaranteed by the United States, issued upon that banker's note. Therefore if they were to be embarrassed by the failure of this bill, they certainly could resort to the means that they have now to get money in its place. I ask you to adopt this amendment, which will in no way jeopardize the merits of this bill. If we allow another year, this Congress will not be allowed to pass on the question again. Another Congress will pass on it. Since we know something about what is attempted, let us stay with it until the question is finally settled. We are paying holders of Government tax-exempt, interest-bearing bonds a billion dollars this year. It is a pure bonus. It should not be paid.

Mr. BUSBY. Mr. Speaker, I offer a substitute to the amendment just offered by the gentleman from Texas.

The Clerk read as follows:

Substitute offered by Mr. BUSBY to the amendment offered by Mr. PATMAN: Strike out the words "three months" in the amendment and insert in lieu thereof "twelve months."

Mr. BUSBY. Mr. Speaker, I very seriously doubt the advisability of enacting this kind of legislation if we are going to maintain the bank set-up in this country and use it to furnish us a medium of exchange with which to carry on business. Of course, we are committed to it, and we look to it for nine tenths of the efficiency of the exchange that we have to use.

When the Federal Reserve Act was enacted it was thought proper to permit currency to be issued on certain short-term paper and gold for the purpose of benefiting trade and commerce. Now, a great many gentlemen do not know it, but we have been issuing commodity money ever since the Federal Reserve bank was set up. That money—Federal Reserve notes—is 60 percent commodity money, or it was until the first enactment of this act. We used to discount short-term bills and obligations, based on commodity loans and property loans, on which to issue money. When this bill was first

enacted we changed that policy and began to use Government debts on which to issue Federal Reserve notes, a total departure from the original purpose of the issuance of Federal Reserve notes on property loans. Nobody will dispute that. The chairman of the committee will not dispute that. But 2 years ago we were called upon to make this radical change, a change that was favorable, of course, to the holders of Government bonds and obligations. Now, we have gone along here for these years, and this is drifting into a permanent policy which converts the banking set-up of this country into an institution to finance the Government. Is that not ridiculous? Issuing Government bonds with interest for the banks so banks can pledge them with the Government so the Government can issue money, when the original purpose was to finance business and commerce and trade. Is that not ridiculous?

I think 1 year is long enough for us to enact this law. I am not proposing to cut off anything that has been the practice under this act. Let us pass this substitute for the amendment offered by the gentleman from Texas and extend the proposition 1 more year, but keep the power in the hands of Congress. I am appealing to you on a proposition that I believe you will stand for, because the Congress after all is responsible in this money matter, and the President is not particular about having it turned over to him for 3 years. I hope you who are listening will stand by me and help us adopt this substitute so that we can keep the matter in our hands as it has been before. I appeal to you in earnest. If 1 year was a sensible proposition in 1932 or 1933, it ought to be likewise in 1934.

Mr. LAMBERTSON. Will the gentleman yield?

Mr. BUSBY. I yield.

Mr. LAMBERTSON. Since these leaders on the committee cannot tell us, can the gentleman tell us why you waited until this eleventh hour to bring this bill in?

Mr. BUSBY. That is a form of strategy in which the House often permits itself to be thrown, in order to coerce Members into doing something that they ordinarly would not do. That is the truth of the matter.

Mr. LUCE. Will the gentleman yield?

Mr. STEAGALL. I yield.

Mr. LUCE. I should like to say something that perhaps the chairman of the committee would not want to say. This is not the fault of the committee. The committee acted as soon as it was requested to act. The blame, if there be any, is not to be placed upon the committee.

Mr. BUSBY. Will the gentleman let me answer?

Mr. STEAGALL. I yield.

Mr. BUSBY. Of course, the committee only received the bill about an hour before we were called upon to have hearings. The hearings lasted 30 minutes on yesterday. That is the only opportunity we had in regard to the matter.

Mr. STEAGALL. Mr. Speaker, this bill was sent to the Committee on Banking and Currency only a few days ago. In the rush and confusion of the hour, with several subcommittees at work, and repairs under way in the committee room, the committee was not called as soon as perhaps it should have been to consider this measure.

The Senate passed the bill day before yesterday.

The committee was called together and hearings were held yesterday. It was considered in the committee and reported without objection.

One gentleman, who is not here, indicated that he might see fit to offer amendments to the bill when it got into the House. Other members, and I think practically the entire committee was present, agreed—certainly all those who are here now were present—and agreed to the bill, although they had opportunity, then, to suggest amendments for consideration of the committee. So much for that.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. STEAGALL. I have not time just now.

I wish to say in answer to the gentleman from Texas that going off the gold standard has not affected in the slightest degree the operations of the Federal Reserve banks in the matter of the issuance of Federal Reserve notes.

Mr. O'MALLEY. Mr. Speaker, will the gentleman yield?

Mr. STEAGALL. I beg the gentleman's pardon, but I cannot yield. I want to make a statement. Then I shall be glad to yield.

The only thing that took place was that the gold holdings by the Federal Reserve banks were transferred to the Treasury for revaluation, and gold certificates, so-called—and they are in fact gold certificates—were issued by the Treasury to the Federal Reserve banks in place of the gold taken over. Those certificates, as everybody understands, were for the same amount in dollars and cents as the gold held by the Federal Reserve banks before its transfer to the Treasury. The profit in that transaction, of course, inures to the benefit of the Treasury, I think very properly, and for which I am very glad.

Now, when application is made to issue Federal Reserve notes by the Federal Reserve banks, the Federal Reserve banks must carry against Federal Reserve notes the same amount in gold certificates that were formerly carried in gold or gold certificates which were specifically redeemable in gold. So when the Federal Reserve banks are called upon to issue Federal Reserve notes they must have commercial paper, eligible paper, for 60 percent of the amount of the notes issued and 40 percent in gold certificates. The transaction is just the same in effect as it was under the old order when the Federal Reserve banks held the actual gold and gold certificates specifically redeemable in gold.

The Federal Reserve banks find themselves with only $150,000,000 of eligible paper on hand. They have no power to compel member banks to ask for rediscounts.

The Federal Reserve banks have no power to issue Federal Reserve notes unless they have the collateral to support those notes. The only collateral they may use is eligible commercial paper supplemented by 40 percent of gold or gold certificates. In the absence of eligible commercial paper they must protect Federal Reserve notes by gold or gold certificates. In the present situation it means that they must protect the Federal Reserve notes by gold certificates, unless they are permitted to continue the use of bonds as security. Federal Reserve notes already outstanding—and they amount to $570,000,000—would lose their legal status as money with consequent confusion. The only remedy would be for the Federal Reserve banks to go out into the market and sell Government bonds and draw in money that is now in circulation and contract the currency of the country or substitute gold certificates for bonds. Any such use of gold certificates would curtail the possible enlargement of circulating currency. The tendency would be to contract the currency when many of us believe conditions demand expansion.

[Here the gavel fell.]

Mr. STEAGALL. Mr. Speaker, I ask unanimous consent to proceed for 2 additional minutes.

Mr. BUSBY. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended 5 minutes, for I wish to ask him a question.

Mr. MARTIN of Massachusetts. Mr. Speaker, I demand the regular order.

The SPEAKER. The regular order is, Is there objection to the request of the gentleman from Alabama?

Mr. BUSBY. Mr. Speaker, I object.

The SPEAKER. The question is on the amendment of the gentleman from Mississippi [Mr. BUSBY] to the amendment of the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Speaker, I move to strike out the last word.

The SPEAKER. That would be an amendment in the third degree.

Mr. PATMAN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. PATMAN. What kind of a motion could a Member make to secure recognition at this time?

Mr. MARTIN or Massachusetts. Mr. Speaker, I demand the regular order.

The SPEAKER. The question is on the Busby amendment.

The question was taken; and on a division (demanded by Mr. BUSBY) there were—ayes 34, noes 35.

Mr. BUSBY. Mr. Speaker, I ask for tellers.

Tellers were refused.

Mr. McFADDEN. Mr. Speaker, I raise the point of no quorum. This is too important a matter to be crowded through in this manner.

The SPEAKER. The Chair will count. [After counting.] One hundred and three Members present; not a quorum.

Mr. BYRNS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 97]

Abernethy	Doughton	Kleberg	Robinson
Andrew, Mass.	Douglass	Lanzetta	Romjue
Andrews, N.Y.	Drewry	Lee, Mo.	Rudd
Arnold	Driver	Lehlbach	Sadowski
Auf der Heide	Duncan, Mo.	Lesinski	Scrugham
Bakewell	Eagle	Lewis, Md.	Sears
Bankhead	Eaton	Lindsay	Shallenberger
Beck	Edmonds	McClintic	Shannon
Beedy	Ellzey, Miss.	McGrath	Shoemaker
Beiter	Evans	McLean	Simpson
Berlin	Faddis	McLeod	Smith, Va.
Black	Farley	McMillan	Smith, Wash.
Boland	Fernandez	McSwain	Smith, W.Va.
Boylan	Fish	Mansfield	Somers, N.Y.
Britten	Fitzgibbons	Marland	Stalker
Brunner	Flannagan	Marshall	Stokes
Bulwinkle	Ford	Merritt	Strong, Pa.
Burch	Frear	Millard	Stubbs
Cannon, Wis.	Fulmer	Milligan	Studley
Carley, N.Y.	Gambrill	Montague	Sullivan
Carpenter, Nebr.	Gasque	Montet	Sutphin
Cary	Gavagan	Moynihan, Ill.	Sweeney
Cavicchia	Gifford	Norton	Taylor, Colo.
Celler	Gillette	O'Connell	Taylor, Tenn.
Chapman	Goodwin	O'Connor	Terrell, Tex.
Chavez	Goss	Oliver, Ala.	Thomason
Claiborne	Granfield	Oliver, N.Y.	Thompson, Tex.

Dear	Johnson, Tex.	Reed, N.Y.	Withrow
Delaney	Kahn	Reid, Ill.	Wood, Ga.
Dickstein	Kelly, Pa.	Richards	Young
Dockweiler	Kennedy, N.Y.	Robertson	Zioncheck

The SPEAKER. Two hundred and forty-nine Members have answered to their names. A quorum is present.

On motion of Mr. BYRNS, further proceedings under the call were dispensed with.

The SPEAKER. The question is on the amendment of the gentleman from Texas.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to proceed for 3 minutes in order to explain the amendment that is pending before the House.

Mr. STEAGALL. Mr. Speaker, because of the circumstances I am forced to object, a thing I have never done in this House; but under the circumstances I must do so.

Mr. BROWN of Kentucky. Mr. Speaker, I offer a substitute for the amendment offered by the gentleman from Texas.

The Clerk read as follows:

Amendment offered by Mr. BROWN of Kentucky as a substitute for the amendment offered by Mr. PATMAN: On page 2, lines 10 and 11, strike out "March 3, 1935, or until expiration of such additional period not exceeding 2 years" and insert in lieu thereof the following: "such time, not exceeding 1 year."

Mr. BYRNS. Mr. Speaker, I make the point of order that a similar amendment has just been voted down.

Mr. BROWN of Kentucky. Mr. Speaker, I want to be heard on the point of order.

Mr. BYRNS. It is very clear that the House voted down a similar amendment.

Mr. BROWN of Kentucky. It was not the same amendment.

The SPEAKER. The point of order is overruled.

Mr. BROWN of Kentucky. Mr. Speaker, my amendment on page 2, line 10, strikes out "March 3, 1935" and inserts in lieu of that statement "such time not to exceed 1 year as the President may prescribe."

This bill prescribes the authority under which the Federal Reserve System buys Government bonds and get 4, 4½ percent, or whatever it is, on the bonds, then issues currency on these bonds. That authority expires on March 4. The Senate is not now in session. You are brought here on the last day that this authority can be extended and asked by the committee to swallow the bill that they have been holding here since February 14 because this has to be made a law today.

May I say that one of the reasons why you have some insurrection on the part of the 160 new Members of this House is just such action as the committee is taking today. [Applause.] The gentleman from Massachusetts said to one Member who was objecting to this sort of thing that when you opened your mouth you stuck your foot in it. I came here to stick my foot into some things.

I resent such actions as this, that cause us at 6:30 at night to vote on a measure that is more important to the people of the country than anything you can bring before this Congress. "Money", said Adam Smith, "is the life-blood of the nation." John Stuart Mill said it is like the blood that flows through the human body, and yet on the last day we can extend the authority, the committee brings in a bill it has had since February 14 and asks us to swallow it because it is necessary, the Senate not being in session.

I may say that the Constitution provides that Congress has the right to coin money and to regulate the value thereof. This bill says that the Federal Reserve System has the right to buy the obligations of this Government, collect the interest on the obligations, then lend it to whoever wants to borrow the money at whatever rate of interest they may choose to charge, including brokerage fees and other things which increase the rate of interest. There is no opportunity to amend. This is the last hour this can be passed.

It should be the sense of this House to say once and for all: You cannot bring a bill of this importance in here at midnight and crowd it down the throats of the Representatives of the people. We want time to discuss these things. Why, it has taken generations to teach the people of this country that nobody understands money. Why do we not understand it? Because it serves the interest of organized bankers not to let the people understand money; because it serves their interest not to let us study the bill, not to let us debate, and then bring the bill in at the last minute.

As far as I am concerned I do not want to hinder the progress of this country; I do not want to put any obstacle in the way. I have stood by the program from the beginning to the end, but I am not going to stand for being called up here at 6:30 to vote on a bill that no Member of the House has had an opportunity to read, to discuss, to debate, or know anything about; and to extend to the bankers of the country the right to take our Government credit, draw 4½-percent interest on this credit, and then lend it to the people of this country and charge them 6-percent interest to boot.

It is not so important but what we can wait until Monday. My amendment is an amendment which merely gives the President the authority to extend this thing for a year if he finds it necessary; and if the amendment is voted down, then the gentleman from Texas has an amendment that will extend it to July 1, and we ought to adopt that amendment and extend the time to July 1. [Applause.]

Mr. STEAGALL and Mr. PATMAN rose.

Mr. PATMAN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. PATMAN. Mr. Speaker, the gentleman from Kentucky [Mr. BROWN] has offered a substitute for my amend-

ment. Would I not be entitled to recognition in opposition to that amendment?

The SPEAKER. A member of the committee would be entitled to prior recognition.

Mr. STEAGALL. Mr. Speaker, I am sorry that my brilliant friend from Kentucky has not kept quite apace with the discussion of this measure. I feel sure he would not have taken the position he has if he were entirely familiar with the facts.

Mr. BROWN of Kentucky. Will the gentleman yield? Have I had any chance to get familiar with the facts?

Mr. STEAGALL. Let me say to my friend that this is a measure which should be determined upon its merits. If gentlemen in this House were governed entirely by considerations of personal convenience, all of us would have had our dinners, been enjoying the quietude of our homes and apartments.

The Banking and Currency Committee is not responsible for the trend of business in the House today. When this matter was called to the attention of the leader, he informed me that the Department of Agriculture bill would be out of the way, he thought, in an hour and that this bill should follow another measure which he thought would be passed in a few minutes. In order to be accommodating and courteous, as I thought, I acquiesced in the suggestion and made no insistence that we should take up the bill in advance of those measures.

This bill comes from the Committee on Banking and Currency with a unanimous report, after full consideration and hearings, with only one Member indicating he was not entirely satisfied with the bill, and he is not here.

I want to submit to this House that no Member has offered opposition to the passage of this bill. The only proposals are that it be made effective for 3 months only or that it be made effective for 1 year. It is only operative for 1 year unless extended by the President.

As for clothing the President with power to extend the legislation for a year, the administration is exercising that power now by asking the Congress to pass a bill extending the time by legislative action for a year.

Mr. Speaker, it was not anticipated that in offering this measure, which passed the House without substantial objection in 1932, and again last year without serious opposition, we would be confronted with insistence that because of any delay we were undertaking to force something through the House.

This bill was taken up by unanimous consent under the general rules of the House. If gentlemen are not willing to be governed by the general rules of the House, and are not willing to consider legislation when its consideration is agreed to by unanimous consent, I do not know what we should be required to do in order to satisfy them. [Applause.]

Mr. Speaker, I move that all debate on the bill and all amendments thereto do now close.

The question was taken; and on a division (demanded by Mr. STEAGALL) there were—ayes 75, noes 90.

Mr. STEAGALL. Mr. Speaker, I demand tellers.

The SPEAKER. The gentleman from Alabama demands tellers. All those in favor of taking this vote by tellers will rise and stand until counted.

Mr. STEAGALL. Mr. Speaker, I withdraw the demand.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to proceed for 5 minutes.

The SPEAKER. Is there objection?

Mr. MARTIN of Oregon. Mr. Speaker, I object.

Mr. GRAY. Mr. Speaker, I ask unanimous consent to speak for 3 minutes.

The SPEAKER. Is there objection?

Mr. MARTIN of Oregon. I object.

Mr. McCORMACK. Mr. Speaker, I move to strike out the last word. I should like to ask the chairman of the committee, the gentleman from Alabama, if this is the Glass-Borah amendment that was put on the loan corporation bill which was passed last session?

Mr. STEAGALL. It is not the same.

Mr. McCORMACK. Substantially the same.

Mr. STEAGALL. No; it is not. That bill was entirely different. That bill authorized the national banks to issue currency on bonds. This is a measure which authorizes the Federal Reserve banks to use Government bonds as collateral for Federal Reserve notes in the same manner that they may use eligible commercial paper.

Mr. McCORMACK. Does this allow them to use 4¼-percent interest bonds or consols for expansion of the currency?

Mr. BUSBY. In the past we have authorized them to use consols that were formerly permitted to be used by national banks when we authorized the issue of national-bank notes, and the Government said that they could issue currency based on 4¼ bonds drawing interest and issue currency.

Mr. McCORMACK. Is not this substantially along the line of the Glass-Borah amendment?

Mr. BUSBY. No; that was an independent act in relation to eligible paper. If we should refuse to pass this bill today the only effect would be a suspension of their authority to make loans until we passed it next week. It would not invalidate the loans that had been made or the money outstanding on the loans. It would simply suspend the making of loans until we passed the bill next week. It would only delay the passage a few days.

Mr. WEIDEMAN. Will the gentleman yield?

Mr. McCORMACK. Yes.

Mr. WEIDEMAN. Under this bill, this is the method where bankers put up bonds and get currency in return, they paying one-half percent for the issue of the currency. Is not that so?

Mr. BUSBY. It might be so.

Mr. WEIDEMAN. Is it not so?

Mr. BUSBY. I do not want to divulge the secrets of the bankers. [Laughter.]

Mr. McCORMACK. What I should like to get an answer to definitely is whether the banks are to issue currency based upon Government bonds which are now paying 4¼-percent interest.

Mr. BYRNS rose.

Mr. BUSBY. Mr. Speaker, I hope this House will not adjourn until we settle this proposition while we are in a humor.

Mr. MALONEY of Connecticut. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Connecticut.

Mr. MALONEY of Connecticut. I should like to ask the gentleman from Massachusetts or the Chairman of the Committee on Banking and Currency what the objection is to a considerable debate upon this particular measure?

Mr. BUSBY. We are ready to vote on the bill.

Mr. McCORMACK. I want to make this thought in my mind clear. Could a national bank issue a million dollars' worth of currency based on a million dollars' worth of Government bonds paying 4 or 4¼ percent?

Mr. BUSBY. No; the national banks cannot use Government obligations that carry more than 3⅜ percent, but this is the Federal Reserve bank.

Mr. McCORMACK. Can the Federal Reserve bank do it?

Mr. BUSBY. That is correct.

EFFORT TO BRIBE BANKERS WITH GOVERNMENT MONEY TO EXTEND CREDIT

Mr. PATMAN. Mr. Speaker, this is another bankers' bonus bill. I want to explain it again for the benefit of the Members who have just come in. It is another effort to bribe, to subsidize, a few big bankers of this Nation into rendering a public service. We have been trying it for the last 2 years and have not succeeded, and they now propose to give them an additional bonus and bribe and subsidy to try to persuade them to do in the next 3 years what they have refused to do in the last 2 years. Two years ago, in 1932, a bill came before this House to allow the Federal Reserve banks to put up United States Government bonds to the Federal Reserve agent instead of eligible paper and get money in return for them. The Federal Reserve Bank System was organized for the purpose of helping com-

merce, industry, and agriculture. This is diverting the course of the object of the creation of the Federal Reserve banks by letting these bankers manipulate, speculate, and make sure profits with United States Government bonds, and not only get money in return for the bonds but get interest on the bonds they put up as collateral security.

GAG RULE OR EMERGENCY EVERY TIME

Mr. KENNEY. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I cannot yield. In 1932 the gentleman from Alabama [Mr. STEAGALL] brought a bill here under gag rule allowing this privilege for 1 year. We had no fair opportunity to debate it. We had no opportunity to offer an amendment to that bill. At that time he said it was an emergency; that we needed the relief quickly to save our gold. He even criticized a Member of the House for insisting that the facts be publicly told as to why the bill was necessary. It was a deep secret. It was whispered around that France would soon endeavor to drain gold from this country. The House passed that bill under a gag rule surrounded by mystery. We were getting ahead of France. We later discovered it was a false alarm—just another bankers' bonus. Last year, 1933, they came in here saying that they needed an extension of the bill for another year in order to release the gold and save the gold standard. The gentleman from Massachusetts [Mr. LUCE] could hardly hold back the tears when he said the emergency still existed; that we must extend the privilege another year. The mysterious bill, after the Secretary of the Treasury visited certain Members early that morning, was ushered through the House under another gag rule. The House fooled again, but the Members are used to that. The people have been, and are, fooled, too, in regard to the Government's idiotic and imbecillic system for the issuance and distribution of money. One of these days the people are going to get wise. When they do, the money system will be changed or their representatives in Congress will be changed. We should help our President by pointing these things out. He has done more against the Money Trust than any President this country has ever had. He is with the folks, so let us help him destroy special privilege.

Mr. McGUGIN. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I do not have the time to yield. I hope the gentleman will not overlook the fact that he brought both bills here under gag rules in 1932 and 1933. Now he brings another bill here in a way that is tantamount to gag rule and asks you to extend the great privilege for 3 more years. Ever since the Federal Reserve System was established these chiseling amendments have been brought in under just such circumstances as this one is brought in. If you know what this bill is you will not vote for it, but in order that all the Members may know what it is, I have offered an amendment to permit it to remain the law for 3 more months, and during that time we can study it, and the Banking and Currency Committee can bring the bill in here if it is a good thing and ask us to extend it any length of time they want it extended. If it is a good propostion this House will adopt the Banking and Currency Committee's recommendation, but if it is a bad thing the bill should and will be defeated. I say, vote down this amendment of Mr. BROWN's extending it for 1 year, and then vote for my amendment extending it 3 months.

NO INCONVENIENCE

That will not inconvenience the banking system, it will not inconvenience the Treasury or this Congress and will give you an opportunity to find out just exactly what you are voting for. I tell you, the greatest racket on earth today is our Federal Reserve banking system and the hundred banks of this Nation which have been operating and manipulating the Government's credit of this country through the Federal Reserve banking system. They have been issuing free of charge mortgages upon your home and mine and our income and the income of all the people; they are getting paid for it by the people they issue the credit to, and also getting paid from the Government that gives them the privilege of doing it. If you understand this bill, you will not vote for it, but in order to make it absolutely sure it is all right to defeat it, we will extend the privileges for 3 additional months, and I ask that it be extended no longer than 3 months. Do not overlook the fact that the Government is paying $1,000,000,000 this year to holders of tax-exempt, interest-bearing bonds of the Government.

The SPEAKER. The time of the gentleman has expired.

Mr. BYRNS. Mr. Speaker, I move to strike out the last word. This bill was taken up, I think, about 4 o'clock. I thought it was entirely agreeable, because I had consulted the gentleman from Texas [Mr. PATMAN] with reference to the time that he should have, and he has had that time. I thought it was entirely agreeable to proceed with the consideration of the bill, which I am informed is recommended and requested by the Secretary of the Treasury and the Federal Reserve Board, and I am told that they are anxious to have it passed.

The time expires tomorrow. I am not going to have anything to say about any criticisms of the committee for its failure to bring it in sooner. It was taken up, as the gentleman from Alabama [Mr. STEAGALL] has said, by unanimous consent of the House. Not a single Member objected to its being taken up and considered. It was taken up with the idea that it would be discussed. As I understand, the gentleman from Texas [Mr. PATMAN] was entirely agreeable to the arrangement, because the arrangement was made with him prior to the unanimous-consent request, which was allowed. There seem to be gentlemen who want to discuss the matter.

I am going to move that the House adjourn until tomorrow. I had hoped that we could adjourn over tomorrow until Monday, but the passage of this bill, I am told, is absolutely necessary, and it is important that it be passed. Certainly it should be passed tomorrow, if the time expires tomorrow.

I move that the House do now adjourn, Mr. Speaker.

The SPEAKER. Will the gentleman withhold his motion for a moment?

Mr. BYRNS. I withhold the motion.

BILLS PRESENTED TO THE PRESIDENT

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee did on this day present to the President, for his approval, a joint resolution and bills of the House of the following titles:

H.J.Res. 278. Joint resolution to amend Public Act No. 81 of the Seventy-third Congress, relating to the sale of timber on Indian land;

H.R. 93. An act to authorize the Secretary of War to sell to the Plattsburgh National Bank & Trust Co. a tract of land comprising part of the Plattsburgh Barracks Military Reservation, N.Y.;

H.R. 715. An act to award the Distinguished Service Cross to former holders of the certificate of merit, and for other purposes;

H.R. 6219. An act to repeal certain specific acts of Congress and an amendment thereto enacted to regulate the manufacture, sale, or possession of intoxicating liquors in the Indian Territory, now a part of the State of Oklahoma;

H.R. 7205. An act to provide for the care and transportation of seamen from shipwrecked fishing and whaling vessels;

H.R. 7554. An act to extend the times for commencing and completing the construction of a bridge across the Missouri River at or near Farnam Street, Omaha, Nebr.; and

H.R. 7705. An act to extend the times for commencing and completing the construction of a bridge across the Mississippi River between New Orleans and Gretna, La.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. SUTPHIN, today, on account of illness in his family.

To Mr. HANCOCK of North Carolina, for 3 days, on account of illness in his family.

AMERICAN SUGAR INDUSTRY IS DOVETAILED INTO OUR ECONOMIC STRUCTURE AND MUST BE PROTECTED

Mr. AYERS of Montana. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. AYERS of Montana. Mr. Speaker, when the United States produces less than one third of its consumption of any particular agricultural product, I am at a total loss to grasp any reason why we should reduce production on that commodity.

Continental United States produces less than one third—to be more accurate, a fraction less than 28 percent—of the sugar it consumes, and yet a proposal is made to reduce its production and to establish a reduced quota for the United States, and then, in order to meet the consumption demand, the proposal is to increase the quota of foreign sugar, and to invite it by reduced tariff rates. To me such proposal seems ridiculous. Any agricultural commodity, ranking as sugar does in the family of American agricultural commodities, should by all means be encouraged and advanced instead of limited or reduced.

The idea of putting an American agricultural product on a quota basis and retarding its production when the product is produced to the extent of less than one third of our consumption seems to me to be in direct opposition to all established standards of American progress. Really, it seems a step backward.

By reason of the proposal of the Agriculture Department it is my firm belief that the real picture of the situation has not been brought to the Department. I am sure that the purpose of the Department is of the highest and that the intentions of its officers are sincerely for the best interests of all of the people of the Nation. I am equally sure that they desire facts, not only in this but in all cases. I feel sure that these gentlemen will yield when the real facts are put before them. Therefore, it behooves the Members of Congress from the sugar districts to get the true picture of the situation before their colleagues and before the Agriculture Department so that they may be brought to see the actual ruinous results of the contemplated move, on the domestic sugar situation.

The Agriculture Department has explained its purpose to regulate sugar production in this country through the Agricultural Adjustment Administration by the allotment of tonnage to the American producers as well as the import producers. It was frankly put forth that the idea was to cut down our own production and increase Cuba's production. It also proposes to reduce the tariffs on import sugar and to collect a processing tax upon sugar manufactured in this country. Now that, in my judgment, would be a step toward the ultimate destruction of the sugar-beet grower, the cane grower, and the domestic sugar industry in general.

This proposal is made on the theory of opening up a foreign market for other of our products in Cuba. Well, now let us see what a chance we are taking on that proposition. Cuba's entire population is only 3,765,000, about the same as the city of Chicago and its suburbs. Now, in order to experiment on opening a market on an island of that population are we going to jeopardize one of our own industries that brings a decent living to an equal or greater number of our own people? I hope not. Surely our first concern is our own people.

Although Cuba has only this small population, it produces more than twice as much sugar as the United States and at only a fraction of our cost. When the door is once opened, as proposed, we will never be able to shut it.

This is a matter of grave and vital importance to us. Therefore my criticism and opposition is against the plan and against any step toward its advancement. I believe that such a program would ultimately destroy this all-important agricultural industry in this country.

Under the proposed plan, whereby America goes on a limited quota basis, domestic competition with the imports is eliminated. This competition must be maintained and supported by adequate tariffs. Without domestic competition, foreign sugar is incapable of price control. If our domestic production is limited, and this proposal goes into effect, it would ultimately eliminate it and we would then be at the mercy of importers.

Let us see who these importers are. This is a trap set right here at home. About 2 years ago our Commerce Department, in making a survey of the Cuban situation, estimated that there was over a billion and a quarter of American money invested in Cuba. Of this vast sum, nearly a billion, to be exact, $918,957,000, was invested in commercial, industrial, and agricultural enterprises. Let us see what they were—sugar refineries and cane plantations. These American money changers, who already have about 90 percent of our money, are not satified with what they are doing to us here at home, but they are trying to corner the other 10 percent through the channels of tax-reduced and tax-free imports owned by them.

SUGAR PROPOSAL CONFLICTS WITH RECOVERY PROGRAM

No person doubts that Cuban sugar can be produced at a cost far under American sugar, and no one can doubt that without adequate tariff protection against foreign production and processing taxes on our insular production, it would be only a short time before the domestic industry became only a memory.

To impress the seriousness of the Department's proposal, let me inject a few pertinent questions: If it should go into effect what will happen to the 100,000 American farmers who, with their families, depend solely upon the crops that produce the American sugar? These farmers themselves are not the only ones who will suffer by the enactment of this law.

What will happen to the tens of thousands of farm laborers during the growing and harvesting seasons of the sugar beets? What will happen to the thousands of sugar-beet factory workers and the skilled labor and the executives who operate these factories? What is to happen to the livestock growers who depend upon the byproducts from the sugar factories for their livestock feed? What will happen to the annual freight bills paid to the railroads and the trucks for transporting the raw material and the refined products? What will happen to the machinery, the coal, the coke, the lime rock, the chemicals, and all the other products of American industry which are used in sugar production and refining in this country? And remember that all of these separate industries likewise give employment to a lot of people. What is to happen to these thousands upon thousands of employees in these industries? If this program is adopted, what is to become of the sugar-beet refineries in this country? Eighteen in Colorado, 16 in Michigan, 15 in Utah, 7 in Nebraska, 9 in Idaho, 8 in California, 5 in Wyoming, 4 in Montana, 5 in Ohio, 3 in Wisconsin, and 3 in Iowa, around all of which have been built successful, progressive, and prosperous towns and communities. And what is going to happen to all of the other industries dependent upon these towns and communities? Let that include the banks of these towns, the merchants, the butchers, the bakers, and all the other small business men.

What is to become of them? Last, but not least, what is to happen to the other farmers of these States who by reason of affiliation with this industry are interwoven into it? And what is going to happen to the 1,000,000 acres of productive and fertile lands in these States which are now devoted to the growing of beets? These lands are the most fertile and the most highly developed of all the lands in the Western States. They are all under irrigation and have been developed at a great expense and at extreme hardship to the owners. Are these lands, which are just exactly the opposite of borderlands, to be, like borderlands, retired from production, or are they to be devoted to the production of other crops of which we are now producing a surplus? I trust you will find substance for thought in those questions. Surely, when we consider all of these things, we must conclude that the proposed program is absolutely in opposition to the Agricultural Adjustment Administration and the great recovery program that has been undertaken.

By no means should the sugar industry come under the allotment plan. The allotment plan was designed to reduce

production on the agricultural products of which we have a surplus. The fact that our sugar production only meets a fraction less than 28 percent of our consumption divorces it from any idea consistent with the allotment plan.

By the plan proposed we would actually be taking all of the farmers, toilers, and laborers that I have enumerated out of gainful occupation and employment. That would be ridiculous, for they are all now engaged in an industry which can be expanded to the extent of more than 390 percent before it is adequate to take care of our own consumption. For the benefit of foreign labor, foreign industry, a foreign country, and the American capitalist who has invested his money there, this proposal is urged upon us. It will never do. My idea is to protect home people who are devoting their lives and their all in building a home industry rather than protecting those who have seen fit to invest their money in the building of an industry in a foreign country. Let us be for deserving and patriotic home people, for home industry, and for our own country first and all the time. [Applause.]

AMERICAN SUGAR INDUSTRY SHOULD BE EXPANDED

Mr. Speaker and Members of the House, for the life of me I cannot see why our domestic sugar industry should not be fostered, extended, and expanded rather than decreased at all, and particularly rather than be decreased by this proposed method, which will ultimately destroy it. The only reasonable conclusion that can be drawn from the Agricultural Adjustment program that is going on is that lands should be taken from the class of production in which we have a surplus and put into the production of products on which we have a shortage. Common sense tells us that the program should be to let one hand wash the other, and surely that would be the way to do it.

In the sugar-beet States of the West, the beet farmer, by reason of the high character of the soil necessary for this production, and by reason of the fact that it is all under irrigation, and by reason of the fact that there has been a shortage in the production of this commodity, has been the only farmer, during all of this depression, who has been able to keep his head above water. The banks and all the business men of the towns in sugar-beet territory have stood the depression better and have called upon the Government for less relief than any other class in the entire West. I hope that we will not now hit that farmer on the head, for if we do he will go under with the rest and with him will go the towns and the communities he has been supporting.

By the sugar experts favoring this proposal we are told that they expect to take approximately 17 percent of the American sugar-beet acreage out of production; we are also told that it will not reduce the price paid to the farmer for his production, and that it will not increase the price to the American consumer; and at the same time we are told that the deficit caused by a 17-percent reduction will be made up by increased importations, and that the importation tariffs will be reduced. Well, now, ladies and gentlemen of the House, just how can that be done? Somebody has to be hurt, and under the program it is not Cuba, for it is slated for all the benefit. These New York fellows, who are Cuba so far as sugar is concerned, have seen to that. Therefore, it must be Americans who will pay the penalty for the benefits that Cuba gets.

Under the proposal, as it has developed before the various committee hearings, the consumer seems to have been safeguarded, and after he has been safeguarded and Cuba has been protected to the extent of a benefit there is no one else to put the load upon except the producer—the grower. What is worse is that when this proposal is worked out to its ultimate conclusion it will destroy the domestic sugar industry.

It seems to me that just the opposite of this proposal should be put into effect if we intend to apply sugar to and make a success of it under the Agricultural Adjustment Act. The spirit of that act, so far as original production is concerned, is for the curtailment of crops of which a surplus is produced, such as cotton and wheat, and its spirit is to aid and assist in the production of crops of which we have a material shortage, such as sugar. In this way one class of farming takes up the slack of the other and helps to equalize the situation. If the domestic sugar industry could have the encouragement and the protection that would justify its expansion to a point somewhere near domestic consumption it would aid materially in the solving of our agricultural troubles.

HOME INVESTMENT SHOULD BE PROTECTED FIRST

The argument of protecting American money invested in foreign countries is all right so far as it does not affect our own people and their investments in our own country. These farmers, these sugar refineries, and all of the investments incident to this industry here in America, are bearing their share of tax burdens and Government support, and should come before the American capital invested and administered in a foreign country. The Cuban investment of American capital was made by reason of cheap labor and low cost of production in Cuba. Under such circumstances, American money invested in a foreign country is not deserving of a bit of consideration. [Applause.]

These same men who are seeking the protection of their Cuban investments, together with their Wall Street financial allies, are the ones who have for the past 3 years been evading their income taxes; they are the ones who have been drawing the fabulous salaries from the banks when the stockholders and depositors were forced to suffer; they are the ones who have made millions upon millions in ocean-mail subsidies; they are the ones who for years have been selling worthless foreign securities in this country; they are the ones who have broken down and destroyed the independent banking system of this Nation; they are the same ones who control the present banking system; and it is they who go to the Government Treasury and have money issued to them on Government bonds while the Government is paying them interest on it and then pyramid these issues to the end that the money of the country is being taken out of circulation; they are the ones who control and dominate the New York Stock Exchange. They are the ones who exploited the Treasury through the air-mail subsidy contracts; they are of the kind that can, by inside workings, run an investment of a mere $250 up to $35,000,000 in a short time, as did B. F. Rentschler in the aircraft industry. And now they say to us, protect our Cuban investment at the destruction of America's domestic sugar industry and the ruination of the millions of loyal hard-working Americans.

AMERICA FOR AMERICANS

The domestic sugar industry is tied up with and dovetailed into the economics of every region where it is located, and it just cannot be replaced by something else.

Much testimony was submitted before the committee and much argument had there about adopting a "permanent policy" for our sugar industry. Let me suggest along the line of permanent policy that as long as we do not produce our own supply we should be protected by quotas and adequate tariff on both the refined and raw products imported from foreign countries. Quotas should be fixed on sugar imports from our insular possessions, and processing taxes should be imposed upon their raw products imported and refined in this country.

All these should be elastic quotas so that they could be retarded from time to time in conformity with our own production; and as long as our own production is under our own consumption, let our production expand in the ordinary and natural manner. In other words, let the law of supply and demand adjust itself in a natural and orderly manner on our own production and consumption. In short, let us take care of ourselves first, and foreign countries only after that has been done. [Applause.]

It has been urged that we should buy the Cuban sugar because it can be produced there cheaper than in America. If that is a sound theory of economics, then we should buy our wool and mutton in Australia, our beef in Mexico and the Argentine, our cotton in India, our wheat in Canada, our butter and cheese in Denmark and Switzerland. In fact, if that is sound political economy, we should buy all our agri-

cultural products from foreign countries and surrender our entire standard of living to the cheap labor and peasantry of a foreign country, for it is a fact that all of our agricultural products can be produced in some foreign country cheaper than in America. Do we desire to go down to that standard of living? Certainly not. Then let us get the proper picture impressed upon the minds of the administration offices in the Agriculture Department, to the end that the sugar industry of this country get its just deserts instead of being crucified on the cross of Mammon. [Applause.]

ADJOURNMENT

Mr. BYRNS. Mr. Speaker, I renew my motion to adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 55 minutes p.m.) the House adjourned until tomorrow, Saturday, March 3, 1934, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

368. Under clause 2 of rule XXIV, a communication from the President of the United States, transmitting a supplemental estimate of appropriation amounting to $40,000,000 for the Farm Credit Administration for the fiscal year 1934, to remain available until June 30, 1935, for the purpose of carrying into effect the provisions of the act entitled "An act to provide for loans to farmers for crop production and harvesting during the year 1934, and for other purposes" approved February 23, 1934 (H.Doc. No. 271), was taken from the Speaker's table, referred to the Committee on Appropriations, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. DOUGLASS: Committee on Education. H.R. 7059. A bill to provide for the further development of vocational education in the several States and Territories; with amendment (Rept. No. 861). Referred to the Committee of the Whole House on the state of the Union.

Mr. DE PRIEST: Committee on Indian Affairs. H.R. 5871. A bill to provide for the protection and conservation of the grazing resources of the undisposed of ceded Indian lands the tribal title to which remains unextinguished; without amendment (Rept. No. 862). Referred to the Committee of the Whole House on the state of the Union.

Mr. PEAVEY: Committee on Indian Affairs. S. 555. An act to authorize the acquisition by the United States of the land upon which the Seneca Indian School, Wyandotte, Okla., is located; without amendment (Rept. No. 863). Referred to the Committee of the Whole House on the state of the Union.

Mr. O'MALLEY: Committee on Indian Affairs. House Joint Resolution 257. Joint resolution authorizing the Secretary of the Interior to arrange with the several States for the education, medical attention, relief of distress, and social welfare of the Indians, and for other purposes; with amendment (Rept. No. 864). Referred to the Committee of the Whole House on the state of the Union.

Mr. ROGERS of Oklahoma: Committee on Indian Affairs. H.R. 7976. A bill to add certain public-domain land in Montana to the Rocky Boy Indian Reservation; without amendment (Rept. No. 865). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE

Under clause 2 of rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H.R. 2850) relative to the securities of foreign governments which have defaulted in their contract obligations to the United States; Committee on the Judiciary discharged, and referred to the Committee on Foreign Affairs.

A bill (S. 682) to prohibit financial transactions with any foreign government in default on its obligations to the United States; Committee on the Judiciary discharged, and referred to the Committee on Foreign Affairs.

A bill (H.R. 4091) for the relief of Stanley A. Jerman, receiver for A. J. Peters Co., Inc.; Committee on Claims discharged, and referred to the Committee on War Claims.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. McDUFFIE: A bill (H.R. 8424) to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands, to provide for the independence of the same, and for other purposes; to the Committee on Insular Affairs.

By Mr. ELLENBOGEN: A bill (H.R. 8425) to reduce the tax on articles made of fur to 2 percent, and for other purposes; to the Committee on Ways and Means.

By Mr. CHRISTIANSON: A bill (H.R. 8426) to authorize payment of farm-loan mortgages with bonds issued by the mortgagee banks, and for other purposes; to the Committee on Agriculture.

By Mr. MARTIN of Massachusetts: A bill (H.R. 8427) to release veterans from the liability to pay interest on loans secured by adjusted-service certificates, and for other purposes; to the Committee on Ways and Means.

By Mr. JAMES: A bill (H.R. 8428) to provide for the establishment, maintenance, and operation of one or more branches of a national banking association created by the union or consolidation of two or more national banking associations under the general banking law of the United States and the supervision of the Comptroller of the Currency; to the Committee on Banking and Currency.

By Mr. THOMPSON of Illinois: A bill (H.R. 8429) to revive and reenact the act entitled "An act authorizing D. S. Prentiss, R. A. Salladay, Syl F. Histed, William M. Turner, and John H. Rahilly, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near the town of New Boston, Ill.", approved March 3, 1931; to the Committee on Interstate and Foreign Commerce.

By Mr. DOUGHTON: A bill (H.R. 8430) to amend the Tariff Act of 1930; to the Committee on Ways and Means.

By Mr. PIERCE: A bill (H.R. 8431) authorizing the payment to the Snake or Piute Tribe of Indians of the former Malheur Indian Reservation of Oregon of damages for the restoration of certain lands to the public domain; to the Committee on Indian Affairs.

By Mr. SMITH of Virginia: A bill (H.R. 8432) to provide for a preliminary examination of Dogue Run in Fairfax County, Va., with a view to preparing plans and an estimate of cost of dredging so as to restore navigation from the Potomac River to the George Washington gristmill; to the Committee on Rivers and Harbors.

By Mr. FLETCHER: A bill (H.R. 8433) to enable the several States and Territories and the District of Columbia to meet the crisis in public education through the cooperation of the Federal Government; to the Committee on Education.

By Mr. CANNON of Missouri. A bill (H.R. 8434) to authorize the reimbursement of the Missouri State Highway Department, certain drainage and levee districts, and certain individuals for funds contributed to the War Department for use in the construction of permanent improvements on the Missouri River; to the Committee on Rivers and Harbors.

By Mr. LAMNECK: A bill (H.R. 8435) to amend the Air Mail Act of February 2, 1925, as amended by the acts of June 3, 1926, May 17, 1928, and April 29, 1930, further to encourage commercial aviation; to the Committee on the Post Office and Post Roads.

By Mr. ELLENBOGEN: A bill (H.R. 8436) to provide for a census of population, occupations, and unemployment, to advance the date of the census of agriculture to November 12, 1934, and for other purposes; to the Committee on the Census.

By Mr. RANKIN: A bill (H.R. 8437) authorizing the War Department to complete the channel-improvement and flood-control project of the Tombigbee River, in Itawamba County,

Miss., which has already been started by the United States Government; to the Committee on Flood Control.

By Mr. DRIVER: A bill (H.R. 8438) to legalize a bridge across St. Francis River at or near Lake City, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. MITCHELL: A bill (H.R. 8439) granting the consent of Congress to the Highway Department of the State of Tennessee to construct a bridge across the Cumberland River near Carthage, in Smith County, Tenn.; to the Committee on Interstate and Foreign Commerce.

By Mr. KELLER: Resolution (H.Res. 289) to provide for the appointment of a special committee for the purpose of investigating the real-estate-bond situation, investigating the practices of real-estate bondholders' committees, and other things; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANDREWS of New York: A bill (H.R. 8440) for the relief of Charles Colver; to the Committee on Military Affairs.

By Mr. BURKE of Nebraska: A bill (H.R. 8441) authorizing W. S. O'Brien, of Omaha, Nebr., to bring suit in the Court of Claims of the United States against the United States of America for reimbursement of expenses incurred on account of certain sanitary improvements in the city of Colon, Republic of Panama; to the Committee on Claims.

By Mr. EAGLE: A bill (H.R. 8442) authorizing the retirement of First Lieut. Lucius L. Handly, Medical Corps, United States Army; to the Committee on Military Affairs.

Also, a bill (H.R. 8443) for the relief of the heirs of Frank Boddeker; to the Committee on Claims.

By Mr. FITZPATRICK: A bill (H.R. 8444) for the correction of the naval record of officers and sailors who served on the *St. Louis*, the *Harvard*, and the *Yale* during the Spanish War; to the Committee on Naval Affairs.

By Mr. FOCHT: A bill (H.R. 8445) granting an increase of pension to Mary Rinard; to the Committee on Invalid Pensions.

Also, a bill (H.R. 8446) granting a pension to William M. Atkinson; to the Committee on Invalid Pensions.

By Mr. HAMILTON: A bill (H.R. 8447) for the relief of William Foster Whitlow; to the Committee on Naval Affairs.

By Mr. HOWARD (by departmental request): A bill (H.R. 8448) for the relief of N. Lester Troast; to the Committee on Indian Affairs.

Also, a bill (H.R. 8449) for the relief of George St. Cyr; to the Committee on Military Affairs.

By Mr. KVALE: A bill (H.R. 8450) for the relief of Peter McDonough; to the Committee on Naval Affairs.

Also, a bill (H.R. 8451) for the relief of William J. Darmody; to the Committee on Claims.

By Mr. McDUFFIE: A bill (H.R. 8452) for the relief of the owners of the late American schooner *Three Marys;* to the Committee on Claims.

Also, a bill (H.R. 8453) for the relief of the owners of the late American schooner *Frederick A. Duggan*; to the Committee on Claims.

By Mr. MARTIN of Oregon: A bill (H.R. 8454) granting a pension to Capt. Wama Louie; to the Committee on Pensions.

By Mr. TAYLOR of Tennessee: A bill (H.R. 8455) for the relief of Thomas Green; to the Committee on Claims.

By Mr. THOMAS: A bill (H.R. 8456) for the relief of Ettie A. Shepard; to the Committee on Claims.

By Mr. THOMPSON of Illinois: A bill (H.R. 8457) for the relief of Thomas H. Dolly; to the Committee on the Civil Service.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

2682. By Mr. AYRES of Kansas: Petitions of various citizens of El Dorado, Caldwell, and Newton, Kans., protesting against the passage of the Tugwell-Copeland measure; to the Committee on Interstate and Foreign Commerce.

2683. By Mr. BURNHAM: Petitions of residents of the Twentieth California Congressional District, urging restoration of pension benefits to veterans of the Spanish-American War, their widows, and dependents, which they received prior to the passage of the Economy Act; to the Committee on World War Veterans' Legislation.

2684. By Mr. CARPENTER of Kansas: Petition of Mrs. Lon Richards and 20 others living in and around Keats, Kans., protesting against the passage of Senate bill 2000, introduced by Senator COPELAND; to the Committee on Interstate and Foreign Commerce.

2685. Also, petition of Chloe M. Willis and 12 others living in and around Manhattan, Kans., protesting against the passage of Senate bill 2000, introduced by Senator COPELAND; to the Committee on Interstate and Foreign Commerce.

2686. Also, petition of Robert Wisly and 20 others living in and around Abilene, Kans., protesting against the passage of Senate bill 2000, introduced by Senator COPELAND; to the Committee on Interstate and Foreign Commerce.

2687. By Mr. CARTER of California: Petition of F. Rossi, Thomas J. Brady, and 48 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2688. Also, petition of Frank J. Campbell, L. C. Parker, and 48 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2689. Also, petition of Mrs. Herman W. Johnson, Hilda Sears, Mrs. B. Barnett, and 41 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2690. Also, petition of Dr. Thomas C. Hughes, Elsie Curran, Edith Asher, and 47 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2691. Also, petition of Lucy Jamison, Margaret Fisher, and 48 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2692. Also, petition of C. B. Ingram, G. Cammerer, R. J. Clark, and 47 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2693. Also, petition of Mattie A. Richmond, C. W. Wilson, H. A. Walker, and 47 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2694. By Mr. DONDERO: Petition of the Common Council of the City of Detroit, Mich., urging the passage of the so-called "Johnson bill" to limit jurisdiction of Federal courts in suits brought to restrain State officers in enforcement of public-utility rate orders; to the Committee on Interstate and Foreign Commerce.

2695. By Mr. FORD: Petitions signed by numerous voters in the Fourteenth Congressional District of California, asking for legislation which would restore to Spanish-American War veterans, their widows, and dependents, the pensions they were receiving prior to the passage of the Economy Act; to the Committee on Appropriations.

2696. By Mr. GUEVARA: Resolution unanimously adopted at a mass meeting held by the Philippine League for Freedom in the Filipino Community Center Assembly Hall, January 28, 1934, affirming its confidence and faith in the present Philippine independence delegation headed by Hon. Manuel L. Quezon, and refuting the remarks made by Hon. NUMA S. MONTET, Congressman from Louisiana, who de-

cared that the members of the present Philippine delegation, now in Washington pleading for immediate and complete independence, are "obstructionists" and "do not carry the mandate of the Filipino people." The Philippine League for Freedom endorses the stand taken by the Philippine Legislature in rejecting the Hare-Hawes-Cutting Act, and condemns Mr. MONTET's statement against the delegation; to the Committee on Insular Affairs.

2697. Also, resolution unanimously adopted by 600 Filipinos of Chicago, January 1, 1934, commemorating the thirty-seventh anniversary of the death of Dr. Jose Rizal, pledging their whole-hearted support and undivided loyalty to the present independence delegation headed by Hon. Manuel L. Quezon, president of the Philippine Senate; to the Committee on Insular Affairs.

2698. Also, resolution unanimously passed by the League for Philippine Freedom assembled January 28, 1934, questioning the statement by the Chairman of the Senate Committee on Territories and Insular Affairs to the effect that "it was the overwhelming opinion of Congress that the Hawes-Cutting Act is the fairest bill to both Nations which can be passed, and that if the Filipino people do not want it, no better bill can be written and passed which will be acceptable to both Nations"; and asserting that it rejoice in the knowledge that the Filipino people have petitioned, and still petition, the Congress of the United States to grant them the independence which they honorably covet; to the Committee on Insular Affairs.

2699. Also, petition subscribed by the members of Cuyo Camp, No. 35, Veterans of the Spanish-American War, and signed by Manuel Juan, commander, Camp No. 35, and others; Department of Veteran Army of the Philippines, United Spanish War Veterans, Cuyo, Palawan, P.I., November 13, 1933, respectfully requesting, first, that pensions be extended to all Spanish-American War veterans without age limitation; second, that the point of service be above all the measure considered in the matter without discriminating residents and nonresidents in the continental United States; and third, that more equitable and reasonable treatment be accorded to all veterans who fought and gave their best under the American flag; to the Committee on Appropriations.

2700. By Mr. HILDEBRANDT: Petition of the Lincoln Parent-Teacher Association of Sioux Falls, S.Dak., urging passage of House bill 6097 for supervision of motion pictures, known as the "Patman bill and House Resolution 144"; to the Committee on Interstate and Foreign Commerce.

2701. By Mr. JOHNSON of Texas: Petition of C. M. Bredehoft, of Centerville, Tex., opposing the Tugwell bill; to the Committee on Interstate and Foreign Commerce.

2702. Also, petition of Austin Beene, Hillsboro, Tex., opposing the Tugwell bill; to the Committee on Interstate and Foreign Commerce.

2703. By Mr. KRAMER: Petition of California State Chamber of Commerce, protesting against the proposed reductions in the research and extension work of the United States Department of Agriculture; to the Committee on Agriculture.

2704. Also, petition endorsing House bill 5694, pending before Seventy-third Congress, the purpose of which is to create a Bureau of the Blind in the Post Office Department, to provide for the issuing of licenses to blind persons to operate stands in Federal buildings, and for other purposes; to the Committee on the Post Office and Post Roads.

2705. By Mr. LAMNECK: Petition of Stella S. Elder, president, Ada Rees, secretary, Woman's Home Missionary Society, Third Avenue Methodist Episcopal Church, urging early and favorable hearings on the Patman motion-picture bill, H.R. 6097, providing means for higher moral standards for films entering interstate and international commerce; to the Committee on Interstate and Foreign Commerce.

2706. By Mr. LEHR: Petition of the House of Representatives of the State of Michigan (the senate concurring), petitioning the President of the United States, Franklin D. Roosevelt, to recommend to Congress the enactment of legislation providing that as a regulation of interstate commerce all taxes or excises of any State on personal property may be levied upon, or measured by, sales of like property in interstate commerce, by the State into which the property is moved for use or consumption therein; to the Committee on Ways and Means.

2707. By Mr. PETTENGILL: Petition of L. E. Thornton, of Elkhart, Ind., and several hundred others, in behalf of the Hatfield-Keller railroad labor pension bill; to the Committee on Interstate and Foreign Commerce.

2708. By Mr. RICH: Petition of the Abbie M. Everett Woman's Christian Temperance Union of Williamsport, Pa., favoring House bill 6097; to the Committee on Interstate and Foreign Commerce.

2709. By Mr. SHANNON: Petition of Elmer Urie and 160 others, urging that the House adopt the Steiwer-McCarran amendment to the independent offices appropriation bill, relating to Spanish-American War veterans; to the Committee on Appropriations.

2710. By Mr. SMITH of Washington: Petitions signed by 2,017 residents of Cowlitz, Thurston, Mason, Lewis, and Clark Counties, State of Washington, requesting that legislation be enacted by Congress to restore to the Spanish War veterans, their widows and dependents, the pensions which they formerly received (the petitions state that practically 98 percent of the people approached signed the documents); to the Committee on Appropriations.

2711. By Mr. SUTPHIN: Petition of the American War Mothers Association, urging that a commemorative Mothers' Day stamp be authorized and issued by the Post Office Department; to the Committee on the Judiciary.

2712. By Mr. WOLCOTT: Petition of Henry J. Welkenbach and 14 others, asking for relief for Spanish War veterans by the restoration of pensions; to the Committee on Expenditures in the Executive Departments.

2713. Also, petition of C. W. Spaulding and 20 others, advocating the enactment of an amendment to the pure food and drug laws to assure continued professional protection of legally responsible registered pharmacists; to the Committee on Interstate and Foreign Commerce.

2714. Also, memorial of the Legislature of the State of Michigan, to enact legislation to correct discrimination against sales at retail; to the Committee on Ways and Means.

2715. By the SPEAKER: Petition of Branch 105, Russian Mutual Aid Society; to the Committee on Labor.

HOUSE OF REPRESENTATIVES

SATURDAY, MARCH 3, 1934

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D.D., offered the following prayer:

O Lord and our God of all comfort, gentleness, and long-suffering, bear with our limitations, teach us, and give us help. Renew and refresh our strength and persuade us that difficulties are the playthings of heroes, and may we not complain. Here we would energize and fortify ourselves by prayer and supplication. O let us feel the breath divine. Take our errors, our pains, and our sins to Thy compassionate breast, and there may we find a place of forgiveness, harmony, and accord. O tell us, Heavenly Father, that there is a place where no eye weeps, no heart bleeds, and the feeblest effort at goodness receives support. We beseech Thee, blessed Lord, give us the power of a mighty faith to satisfy our hunger, a faith that climbs high, heaven kissed; then ours shall be a growth in wisdom, a growth in knowledge, a growth in courage, and a growth in love. Amen.

The Journal of the proceedings of yesterday was read and approved.

COLLATERAL SECURITY FOR FEDERAL RESERVE NOTES

The SPEAKER. The pending business is the further consideration of the bill (S. 2766) to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes.

Without objection, the pro forma amendments will be withdrawn, and for the information of the House the Clerk will report the Patman amendment and the Brown substitute for the Patman amendment.

The Clerk read as follows:

Amendment by Mr. PATMAN: Page 2, line 9, after the word "however", strike out "That until March 3, 1935, or until the expiration of such additional period not exceeding 2 years, as the President may prescribe" and insert in lieu thereof "That until June 3, 1934."

Amendment by Mr. BROWN of Kentucky for the amendment offered by Mr. PATMAN: Page 2, lines 10 and 11, strike out "March 3, 1935, or until the expiration of such additional period not exceeding 2 years" and insert in lieu thereof "such time not exceeding 1 year."

Mr. SNELL. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. SNELL. I did not understand the original statement of the Speaker with regard to the parliamentary situation. Was one of these amendments defeated last night?

The SPEAKER. No; these amendments are pending. The Busby amendment was defeated. The pending amendment is the Brown substitute for the Patman amendment.

Mr. SNELL. Then it would be in order to offer a substitute amendment to the Brown amendment.

The SPEAKER. An amendment could be offered to the Brown substitute amendment.

Mr. BLANTON. Mr. Speaker, there has been one amendment to the Brown substitute already.

The SPEAKER. That has been disposed of; it was defeated.

Mr. SNELL. Mr. Speaker, may the Brown substitute amendment be again reported?

The SPEAKER. Without objection, the Brown substitute amendment will be again reported.

The Clerk read the Brown substitute amendment.

Mr. McGUGIN. Mr. Speaker, I move to strike out the first word.

Mr. Speaker, I cannot help but believe that the House last evening was taking some matters unduly seriously. It is true this bill was brought up yesterday afternoon when the Membership of the House had no warning that it was going to be brought before the House. I do not like that way of legislating.

Mr. GOLDSBOROUGH. Mr. Speaker, will the gentleman yield?

Mr. McGUGIN. I yield.

Mr. GOLDSBOROUGH. I call the gentleman's attention to the fact that the bill was brought up by consent; it was brought up under the general rules of the House.

Mr. McGUGIN. I understand that, but very few of the Members were here. Ordinarily we should have greater opportunity of knowing the contents of bills; but so far as this particular bill is concerned there is not anything new about it. As a matter of fact it is 2 years old; it has been in operation 2 years. Not only have we had time to observe the bill for 2 years but we have the advantage of the experience gained through its operations for these 2 years.

The bill was first enacted during the Hoover administration when the Democrats were in control of the House. For 1 year it was administered under Mr. Hoover, and for 1 year it has been administered under Mr. Roosevelt.

In the light of experience the bill is not subject to the criticism that there is an abuse on the part of the Executive Department of controlling the value of money under this bill. I am in full accord with the gentleman from Kentucky [Mr. BROWN] in his statement that Congress should meet its constitutional responsibility of coining money and regulating the value thereof; but we cannot set up the printing presses on the floor of the House.

This bill is for a temporary period of time, for 1 year plus 2 more years, within the discretion of the President.

Mr. DIES. Mr. Speaker, will the gentleman yield?

Mr. McGUGIN. I will yield later if I have time.

I was opposed to the so-called "devaluation bill" when it was in the House because it was permanent legislation, and Congress, by a majority vote, was permanently vesting in the Executive power which could only be returned to Congress by two-third vote. That is not this bill. This bill is for a limited period of time, for 1 year, and for 2 more years if the President chooses to extend it. I can see no occasion for the criticism which has been leveled against this bill unless you are opposed to the bill in its entirety.

Now, as to the Patman amendment extending the time for 3 months, I do not believe we want to start into the business of legislating 3 months at a time; that period is too short. Personally, if I had my way about it, I should rather by this bill extend the time for 2 years positively, and then if at a future date there is occasion to further extend the bill it can be done.

I doubt the wisdom of Congress passing a bill extending it for 1 year and then providing that the President can extend it for 2 years. It means that we are extending legislative power to the President for at least 2 years' time. This Congress is taking away from the Congress which will be elected next fall power to pass on the matter. I do not believe we should do that; but I see nothing dangerous in the enactment of this bill.

Mr. SNELL. Mr. Speaker, will the gentleman yield?

Mr. McGUGIN. I yield.

Mr. SNELL. I find myself pretty nearly in agreement with the gentleman from Kansas. It seems to me that if there is an emergency the emergency would be entirely covered if we extended the time definitely for 1 year.

Then let the next Congress take up the matter. Some Congress will be here a year from now, and let that Congress meet the situation as it exists at that time.

Mr. McGUGIN. I may say to the gentleman that I think the fair thing would be to extend it for 2 years, just the same as the bill was originally enacted under our administration.

Mr. BUSBY. Will the gentleman yield?

Mr. McGUGIN. I yield to the gentleman from Mississippi.

Mr. BUSBY. This has never been enacted for 2 years. It has been enacted for 1 year only.

Mr. McGUGIN. In that event I should rather enact it for 1 year and strike out the provisions extending the period of time.

[Here the gavel fell.]

Mr. SNELL. Mr. Speaker, I ask unanimous consent that the gentleman from Kansas may proceed for 5 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DIES. Will the gentleman yield?

Mr. McGUGIN. I yield to the gentleman from Texas.

Mr. DIES. Does the gentleman believe that the Government should be compelled to pay interest on these direct obligations during the time they are held as security for the Federal notes issued on them? That is the question I should like the gentleman to answer definitely.

Mr. McGUGIN. Viewing it from one standpoint I do not, but if we do not do it we shall have to change the complete principle of issuing currency in this country, not only since the Federal Reserve but before the Federal Reserve.

Mr. DIES. No.

Mr. McGUGIN. Yes.

Mr. DIES. These are direct obligations of the Government and not strengthened with collateral or with gold, but just the direct obligation of the Government on which the Government pays interest that you are going to permit to be taken to the Federal Reserve System, have the currency issued on them, and the holder not only gets the currency but also gets interest.

Mr. McGUGIN. May I ask the gentleman this: Suppose there is a bank in your town that has $50,000 in Government bonds, would the gentleman rather have that bank keep the $50,000 in bonds in its vault or send the $50,000 in bonds down here to Washington and obtain some currency, then take the currency back to the bank and lend it to the people of his community who need credit?

Mr. DIES. I am perfectly willing for the bank to get the currency, but the bank should not want interest on these bonds while it has the benefit and the use of the currency.

Mr. McGUGIN. The thing about this legislation is that 2 years ago when it was being enacted the inflationists in this House were pointing to it as a great achievement and in addition the inflationists in this House in the closing days of the Seventy-second Congress forced the Borah amendment to the home loan bill. The Borah amendment is in principle similar to this bill.

Mr. PATMAN. Will the gentleman yield?

Mr. McGUGIN. I yield to the gentleman from Texas.

Mr. PATMAN. I wish the gentleman would name the inflationists in this House who favored this bill claiming it would cause inflation of the currency.

Mr. McGUGIN. If I had the roll call on the Borah amendment, I should say the gentleman himself perhaps voted for it.

Mr. PATMAN. I am not talking about the Borah amendment. I am talking about this bill. The gentleman charged that the inflationists supported this bill 2 years ago claiming it would inflate the currency.

Mr. McGUGIN. This bill in the first instance was passed by practically the unanimous vote of this House, and if I had the roll call I could probably show that the gentleman himself voted for it.

Mr. PATMAN. I did not.

Mr. McGUGIN. Perhaps the gentleman did not. Most of the gentleman who advocated inflation voted for the bill.

Mr. STEAGALL. Will the gentleman yield?

Mr. McGUGIN. I yield to the gentleman from Alabama.

Mr. STEAGALL. The gentleman is entirely correct when he says that this bill was supported by the so-called "inflationists" in this House. The measure was offered and advocated by Dr. Fisher. It was originally introduced in the House by Mr. GOLDSBOROUGH, whose position is well known to everyone, and the gentleman from Texas, with 14 others in the House, voted against the bill. So the statement of the gentleman from Kansas is borne out by the facts.

Mr. McGUGIN. I cannot yield further, because I desire to make this statement. If the principle of permitting banks to issue currency on Government bonds is wrong, then my answer is that a mistake has been made for many, many years, and we cannot correct by assaulting this one particular bill which is up for consideration today. If we were considering a bill which was providing for a new currency and credit system as a substitute for our present system it might well be worthy of support. Those who are opposing this bill, if they succeed, will wreck our present money and credit system, while they are providing no substitute. Whatever may be said of our system, it is better than no system. At this particular moment it is not within our power to provide a new system. It is only within our power today to defeat this bill and thereby destroy the only credit system which is available for financing Government obligations. We hear it said that only the banks are benefited by this bill and the people receive no benefits. Let us see about that. The Government is spending money by the billions of dollars. Most of it is being used for direct relief and as credit for individuals and business institutions. The Government then in turn borrows the money to meet these expenses. This bill is the only way that the Government can finance these obligations which are being created to meet expenses incident to our various relief measures.

Mr. PATMAN. Will the gentleman yield?

Mr. McGUGIN. I yield to the gentleman from Texas.

Mr. PATMAN. If the gentleman considers Ogden Mills an inflationist, the gentleman's statement is correct. I was before the committee when he appeared there 2 years ago and asked for the passage of this legislation and a year ago when he asked that it be extended, and he certainly did not argue that it was inflationary.

Mr. McGUGIN. A former distinguished Member of this House, Mr. Ramseyer, of Iowa, who advocated inflation, was one of the principal supporters of this bill, and it was Mr. Ramseyer who forced three roll calls in this House on the Borah amendment to the home loan bill, which is practically the same as this bill.

Mr. ELLENBOGEN. Will the gentleman yield?

Mr. McGUGIN. I yield to the gentleman from Pennsylvania.

Mr. ELLENBOGEN. In reference to the example that the gentleman cited about the small bank having $50,000 of Government bonds and getting currency for it, may I ask the gentleman this question: Suppose the bank would take that currency and buy some more Government bonds, and so forth, and would make 4 percent or about 4 percent on the money which it received.

Mr. McGUGIN. I may say to the gentleman that if he and others like him in this Congress do not meet their responsibility in providing enough revenue to meet the appropriations they so cheerfully make, that is exactly what is going to happen.

Mr. ELLENBOGEN. We are anxious to meet our responsibility.

The pro forma amendment was withdrawn.

Mr. SNELL. Mr. Speaker, I move to strike out the last three words.

Mr. BLANTON. Mr. Speaker, a parliamentary inquiry. Are we allowing this by unanimous consent?

Mr. SNELL. The gentleman does not have to allow me anything by unanimous consent.

Mr. BLANTON. Mr. Speaker, I make the point of order that this is an amendment in the third degree. There is already one amendment pending to strike out the last word. There are also two other amendments, which would make the gentleman's amendment an amendment in the third degree. It would be in order were the McGugin amendment withdrawn.

The SPEAKER. By unanimous consent, the McGugin amendment has been withdrawn.

Mr. SNELL. Mr. Speaker, I move to strike out the last two words.

Mr. BLANTON. That motion is in order now, since the McGugin amendment has been withdrawn.

Mr. SNELL. I moved to strike out three words before, and both motions were correct.

Mr. Speaker, it seems to me that in the consideration of this legislation we should really confine ourselves to the matter in this bill before the House. As I understand the Brown substitute, it would give the President the right to extend the existing legislation for a period of 1 year.

I am perfectly willing to accept the statement of the administration that there is an emergency, although personally I think we are overworking that word at the present time, but I am willing to accept it in connection with this legislation. If we do extend this right to the Federal Reserve Board for a period of 1 year, we certainly will meet the emergency situation that is rising at this time. There will certainly be some House in session in another year; and if this emergency exists at that time they can pass on it on its merits.

To me we are making a serious mistake by continually making these emergency measures almost permanent policies of Government, and I am opposed to that part of this bill. I think we are doing all we should be asked to do at this time if we recognize the present existing emergency and extend the period for 1 year. This will meet the objections of practically everyone, it seems to me, who is opposed to this bill at the present time, and I think it would be fair and proper and right to adopt such an amendment.

Mr. FITZPATRICK. Will the gentleman yield?

Mr. SNELL. I yield.

Mr. FITZPATRICK. If we accept that amendment, it means the measure must go back to the Senate and wait for action by that body.

Mr. SNELL. I am perfectly satisfied in my own mind that that is not going to materially change the situation. The Senate will be in session on Monday, and certainly no banking business is going to be transacted on the afternoon of Saturday.

Mr. BYRNS. Mr. Speaker, I rise in opposition to the pro forma amendment.

I am rather glad that we meet here today under little different circumstances from those of yesterday. I am sure, in the discussion of this bill and our action upon it, we are going to maintain an even temper.

Some criticism was made of the Committee on Banking and Currency because it did not report this bill at an earlier date. I do not think this criticism is entirely just or warranted, especially when we take into consideration the fact that when this bill was reported they did not ask for a rule to put it over but asked unanimous consent, and not a single Member on either side of the Chamber objected to its being taken up for consideration yesterday afternoon. Certainly, this estops any criticism that may be leveled against the committee for any delay in reporting the bill. One objection upon yesterday would have prevented its consideration.

Under these circumstances I think we are all in a position to consider this bill upon its merits and to consider the amendments upon their merits. There are some $570,000,000 of reserve notes, as I am informed, which are backed by these securities at the present time. If this bill does not pass, if we do not continue this authority to the Federal Reserve Board, we are going to have this amount of reserve notes outstanding, with nothing behind them as security except 40 percent of gold certificates and bonds for which authority no longer exists.

Mr. PATMAN. Will the gentleman yield?

Mr. BYRNS. In just a moment. I want to finish this statement first.

As the gentleman from Kansas [Mr. McGUGIN] said a moment ago, these bonds draw interest now, and whatever action you may take with reference to this bill, they will continue to draw interest out of the Treasury; and, for my part, I would rather see these bonds, upon which the Government is paying interest, used for the purpose of providing additional money and currency in this country than to be sent here and the banks deprived of this privilege.

So I say, whether you like this or not, in a sense it is an inflationary measure to a certain extent.

Now, here is the situation in which we find ourselves. The authority lapses today, and I am speaking now upon the authority of officers of the Treasury Department when I say that in order to prevent confusion, it is important that this bill be passed.

Now, what does the amendment of the gentleman from Kentucky [Mr. BROWN] carry?

The bill provides for an extension of 1 year, and then it gives the President of the United States authority to continue it for either 1 or 2 years, as his judgment dictates. The Brown amendment merely leaves this extension of 1 year to the President. You know and I know, with the Secretary of the Treasury and the Federal Reserve Board asking for this extension of 1 year by legislation, undoubtedly the President, acting upon their advice, as I think we ought to act, will extend it for 1 year. Why pass it to the President when we know he will extend it for 1 year? Congress meets in January, and if it is desired at that time to withdraw the discretionary power given to the President, Congress will have the authority to withdraw it before the President can exercise such discretion next March.

So it seems to me it is a tempest in a teapot that we have raised here in the consideration of this bill.

The Senate is not in session today, and, as I have said, the authority lapses today. Suppose you adopt an amendment to this bill. It will have to go back to the Senate, and it may be several days before the matter can be ironed out and the bill become a law, as it must do, in the judgment of the Secretary of the Treasury and the entire Federal Reserve Board.

I hope that we will pass this bill today as the Senate passed it.

Mr. BLANTON. Mr. Speaker, I want to ask the gentleman one question, not to be taken out of his time. The gentleman was not quite correct when he said that the next Congress could stop it. It could stop it if it had two thirds of the votes. Suppose next February the new Congress wanted to wind it up and pass a bill to that effect, the President could veto it and it would take two thirds of the House and two thirds of the Senate to pass it over the veto.

Mr. BYRNS. Of course the gentleman from Texas is correct, but I know that there is no one who is more willing to trust the President of the United States to act with proper discretion than my good friend from Texas.

Mr. BLANTON. I am, and if the President says "pass this bill", I am going to vote for it. But if it were not demanded by the President, I would vote for the Brown amendment.

Mr. BYRNS. I am going to say to my friend—I am not speaking for the President—that the administration, as represented by the Secretary of the Treasury, as I have been personally told, would like to see the bill passed.

Mr. BLANTON. I do not take orders from the Secretary of the Treasury, but just now I do take them from our Commander in Chief, the President of the United States. Since the White House has requested that this bill be passed today, just as it is, I am going to vote for it. [Applause.]

Mr. BYRNS. I hope the House will look at this matter in the same way. Gentleman on the other side of the aisle, it seems to me, ought to feel precluded from any objection to the bill—and I say it in the utmost good faith—because the bill has passed the House twice at the instance of a Republican administration and a Republican Congress.

It is true that in February 1932 a Democratic House acted upon the recommendation and request of the administration and passed this bill. And it was passed, as the gentleman from Alabama has said, with only 15 votes against it. There was practically no opposition to this measure on the floor of the House at that time.

Now, if you are in favor of increasing the currency, it does seem to me, gentlemen, that you are not entirely consistent in voting down this authority to the President of the United States. I feel sure that the President is going to act in accordance with the advice of the Secretary of the Treasury and the Federal Reserve Board. [Applause.]

The SPEAKER. Without objection, the pro forma amendment is withdrawn.

There was no objection.

Mr. BUSBY. Mr. Speaker, I move to strike out the last two words. Mr. Speaker and Members of the House, I desire to discuss the merits of the proposition that we are now considering. I was a little bit surprised to notice in yesterday's afternoon paper these headlines:

Bank holdings of United States bonds soar. Reserve report figures much higher than war-time peak.

A total of $6,195,000,000.

There is a reason why banks are holding more Government bonds today than they ever did before. The report shows that the excess reserves—that is, the money banks have and will not lend to business, but hold to buy United States bonds with—of the member banks amount to $1,100,000,000, which is more idle money than they have ever had in the history of this country. The excess reserves is money of the banks which they are waiting to use with which to buy Government bonds.

I heard the chairman, Mr. STEAGALL, say yesterday—and it is in the RECORD—that not more than $150,000,000 of eligible paper was being used for Federal Reserve loans by the member banks at the present time. When this bill passed 2 years ago there were $4,000,000,000 of eligible paper in this country—that is, the amount of short-term loans made by the banks to business, which paper could be used to borrow on from the Reserve banks.

Mr. SISSON. Mr. Speaker, will the gentleman yield?

Mr. BUSBY. In a moment I shall yield. What happened 2 years ago when this bill passed, giving the banks the privilege of borrowing from the Federal Reserve banks on Government bonds instead of on loans to business, as the law had always required? I hope you will get this.

ONLY LOANS TO BUSINESS COULD BE USED

Before this bill first passed the only way that any bank could get Federal Reserve notes was to take eligible paper—evidence of loans made to business—to the Federal Reserve banks and on it get a loan from the Federal Reserve which was made in Federal Reserve notes. Is not that true, I ask the Chairman of the Committee on Banking and Currency?

Mr. STEAGALL. Oh, absolutely.

FUNDAMENTAL PURPOSE OF THE FEDERAL RESERVE SYSTEM WAS CHANGED BY THIS LAW

Mr. BUSBY. That has ceased to be. The banks have quit making loans to business, because they can now invest their funds in Government bonds, and should they need currency they do not have to have on hand "eligible paper" but they can take those Government bonds to the Federal Reserve and draw currency on them. Business has been left out of the picture, as everyone knows. They do not have anything more to do with business, and this law enacted 2 years ago, renewed for a year in 1933, and now being made practically permanent by being passed for a 3-year period——

Mr. O'MALLEY. Mr. Speaker, will the gentleman yield?

Mr. BUSBY. Yes.

Mr. O'MALLEY. And the banks then take that money and buy more Government obligations, and make a vicious circle out of this whole proposition.

Mr. BUSBY. Of course that could happen.

WHEN BUSINESS IS ABANDONED AND DIES, WHO WILL PAY THE TAXES TO PAY THE BONDS AND INTEREST?

What has happened to business in the last few years? The banking interests of the country have abandoned it. They are now opening up bids for the sale of Government bonds, and each issue is being oversubscribed five or six times, while there is not any help for business in this country.

PURPOSES OF FEDERAL RESERVE SYSTEM DIVERTED

We have totally diverted the purpose of the Federal Reserve System, and this bill now before us is one piece of experimental legislation that we have tried that has almost ruined the business situation in this country, and in truth and in fact, it ought to be defeated outright today. [Applause.] We may sell United States bonds by the use of this legislation, but we will kill business by it and make it hard for the people to pay those bonds and a billion dollars annual interest.

Mr. SISSON. Mr. Speaker, will the gentleman yield?

Mr. BUSBY. In a moment. I say it ought to be defeated outright, because 2 years' experience with it has shown us that we can no longer expect as business men to get accommodations at the banks as long as the Government has bonds to sell. I yield to the gentleman from New York.

Mr. SISSON. I have great respect for the ability of the gentleman from Mississippi and his information on currency, but the gentleman is a member of the Committee on Banking and Currency, and did the gentleman express any objection to this bill when it was before our committee?

Mr. BUSBY. I did not.

Mr. SISSON. Or reserve the right to fight it on the floor?

Mr. BUSBY. I did not. I never had time to consider this, as is the case with most of these bills that are brought in by the chairman of our committee, just like the rest of the House never has time to look into them when they are brought here as rush orders. We could deliberate, we could reason if they would give us a chance to consider, discuss, and deliberate and act intelligently, as I feel we ought to do.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Mr. McFADDEN. Mr. Speaker, I rise in opposition to the pro forma amendment for the purpose of attempting to clarify to this House the main purpose of this bill. Most of the discussion upon the bill so far has been upon the issuance of Federal Reserve notes. Let me try to clarify in your minds this one point: That that is not the main question in the bill. The main question in this bill is the use of Government credit by the Federal Reserve System to make a market for Government bonds through the member banks. The actual practice of the banks that will use money or credit from the Federal Reserve banks will be as follows: A member bank that wants money or credit from the Federal Reserve banks takes, say, its million dollars' worth of United States bonds to the nearest Federal Reserve bank. It then has the privilege of taking the amount in Federal Reserve notes, but as a matter of fact 99 percent of them take it in a book credit on the books of the Federal Reserve bank, which book credit is a checking account. I cannot in the short time allowed me distinguish thoroughly to you gentlemen the difference between a book credit in the Federal Reserve and the issuance of Federal Reserve notes. There is a very great difference. When the member bank chooses to take its advance in Federal notes it is a closed proposition. The Federal Reserve have the member bank's bonds and the member bank has the Federal Reserve notes. When the credit is established on the books of the Federal Reserve bank to the credit of the member bank it is subject to an expansion of 10 to 20 times or more—a very different situation. The use to which this authority is being put is for the purpose of using the Government's credit, which is loaned to the Federal Reserve bank, as a basis for the banks to purchase Government bonds. It can multiply many, many times. It is a hopper into which these Government bonds go in the use of Uncle Sam's credit to further inflate Federal Reserve bank credit and carry on the Treasury operations in the sale of Government bonds to the banks and investors of the country. It is part of that plan which was used in 1928 and 1929 when the Federal Reserve Board gave to the New York stock market in 1928, $60,000,000,000, and in 1929, $58,000,000,000. It is a method of the use of the Government's credit which is extended to the Federal Reserve System, upon which the Federal Reserve banks have never paid one penny, although it was provided in the law that they should. That is the serious question in regard to this kind of legislation.

Mr. McCLINTIC. Mr. Speaker, will the gentleman yield?

Mr. McFADDEN. Yes.

Mr. McCLINTIC. When a bank puts up bonds with the Federal Reserve, who clips the interest coupons?

Mr. McFADDEN. The interest coupons might possibly be clipped by the Federal Reserve bank, but the coupons would belong to the member bank.

Mr. McCLINTIC. If the member bank gets the money and also has a right to draw the interest on the bonds, then it has a distinct advantage, because it can collect interest on the money that is derived from the bonds.

Mr. McFADDEN. The Federal Reserve always exacts interest from its member banks. It gets the Government credit free, and the law provides that when this credit is released to the Federal Reserve banks the Federal Reserve banks should pay for it.

I have repeatedly called the attention of this House to the fact that that particular phase of the law has been deliberately violated from the time the act was passed up to the present time.

Mr. FORD. Will the gentleman yield?

Mr. McFADDEN. I am sorry, but I do not have time.

Now, as far as this act is concerned, there is no emergency. There is not any immediate emergency here. No harm can come if this bill is not passed today. It should be understood before it is passed, because the transactions that they have carried on will not suffer. It will simply mean that for 2 or 3 days they may not have authority to grant further credits. The gentleman from Mississippi [Mr. BUSBY] has just told you that the Federal Reserve banks are overflowing with credit. They are. They cannot use it. The need for this bill is for the further extension of the Government's credit to the banks, to permit those banks to buy Government bonds, because the credit of the Government is at stake.

The situation has completely changed since this law was originally enacted. At that time the Treasury, owing to the demands for gold from abroad, wanted to use some of the

gold that was held by the Federal Reserve agents as part security for Federal Reserve note issues. They were then seeking the right to withdraw this gold from the Federal Reserve agents and substitute Government bonds therefor, whereas now all the gold is supposed to have been removed from the Federal Reserve banks and impounded in the United States Treasury, and the situation that then existed, on this account, does not now exist. The Treasury now asks that this authority be continued for the sole purpose of increasing the use of the Government's credit by the Federal Reserve banks to enable the Treasury to sell Government bonds through a pyramiding process of Government credit through the agency of the Federal Reserve, a system so complicated that the average American cannot possibly understand the operation without expert assistance.

The SPEAKER. The time of the gentleman from Pennsylvania [Mr. McFADDEN] has expired.

Without objection, the pro forma amendments will be withdrawn.

There was no objection.

Mr. KELLER. Mr. Speaker, I move to strike out the last two words.

Mr. Speaker, in 1864 the National Bank Act was passed by the United States Congress. It became the law and it has been the law from that time until the present time. That national bank law permitted associations to form what we call "national banks", to buy Government bonds, deposit them with the Treasury, and receive currency back for the bonds. They were permitted, of course, to loan that money and to receive interest on it. They were permitted to collect interest on the bonds which they had deposited. That was done in 1864 and that has been continued from that day until this. It is not new, and whether it be just or unjust is not a matter for consideration at the present time, as I look at the matter.

One year ago tomorrow Franklin D. Roosevelt became President of the United States; and out in front, on the main steps of this Capitol, he delivered such an appeal in his inaugural address as has seldom been heard by the American people. In that he pointed out the tremendously difficult condition that the American people were facing at that time, economically. This Congress met at the same time, and we took our oaths of office, and then we proceeded to enter into support of Franklin D. Roosevelt to take us out of the depression. That is a great service that he undertook, and that is a great service that we have been rendering in standing by him in whatever he has asked, looking toward that greatly desired object. I am perfectly frank to say to this body that in theory I am entirely in accord with what the gentleman from Mississippi [Mr. BUSBY] and the gentleman from Texas [Mr. PATMAN] both have said, and at the right time and under the right conditions I shall be glad to help rewrite entirely the banking law of this country, because I believe it ought to be rewritten; but this is not the time to undertake that great work. This is the time to stay put. This is the time to admit that we are progressing and to refuse to do anything that will hinder that progress. This is the time to get something of an idea of what we have accomplished during the past year. You gentlemen on the Republican side have generally stood with Roosevelt, with the people of this country. I hope you will do it today in this matter.

Mr. HOEPPEL. Will the gentleman yield?

Mr. KELLER. I will not, because I do not have time.

I appeal to my Democratic friends, because it has been thrown at us a great many times lately by our friends on the other side, and I do not blame them for it. They are seeking political advantage. If we permit them to get it, that becomes our fault and not theirs. What I am trying to get over to my Democratic friends is this: My individual opinion, as I said before, is in hearty accord with the opinion of the two gentlemen who have spoken so clearly on this question of currency and credits, and I repeat that when the time comes I will be glad to join with the Members of this House in rewriting the entire banking law, so as to give the people of this country every right which they deserve and ultimately must have, but I do not see the possibility at the present time of denying a specific thing which the President's Cabinet member has asked for, without endangering the progress that we are unquestionably making at the present moment. [Applause.] That is what I am trying to do. I am not trying to put forward my individual opinion. [Applause.]

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. GRAY. Mr. Speaker, there is no time like the present time. The future is not ours. I am here in this term of Congress, and I feel assured that I will be here in 3 months. I may not be here in 12 months. The probabilities are that I will not be here in 12 months, nor be here in 2 or 3 years, when this matter will come up again as it has come up at the different times in the past to continue the control of the manipulating bankers and financiers over the money and credits of the country. To make plain what I am trying to impress here is the uncertainty of life and politics. I come from a 28,000 majority Republican district, with 1 Democratic county and 8 Republican counties, and I read, from the rumblings and rumors coming in, that Hon. James E. Watson will oppose me for reelection. Mr. Watson is a good man and a great campaigner. I have some little qualifications in that line myself, but I cannot assure you that I will come back against Watson. I can only assure you that if Watson is a candidate, the campaign will be a spirited one and there will be hell on the Wabash. [Applause and laughter.]

As much as I admire and respect the ex-Senator, it was not my intention to describe Mr. Watson or to designate him as a "good man." That was an inadvertence. What I wanted to say, and I think I should say, would be that Mr. Watson was an able, forceful, and resourceful man. To say that the ex-Senator was a "good man" would leave the misleading inference that he was a Democrat, or follower of Jefferson, which would not only be resented by the ex-Senator himself but would call forth a storm of protests from the rank and file of the Democrats and leave me in disfavor with both sides. [Laughter.]

I am not allowing myself to be misled or thrown off my guard nor to mistake a landslide for individual personal popularity. I know that voters, leaving their party to cross the line and vote for opposing candidates do not leave to vote for candidates. They leave to vote against candidates, and to chastise their party for dereliction of duty. And after they have voted against their candidates and inflicted proper punishment to their party leaders commensurate with their sins of omission and commission, they lose the spirit of animosity and revenge and go back and pursue the even tenor of their ways.

For these reasons as well as others I will vote for the Patman amendment to continue this power of the bankers to control our money and credits for only 3 months. I am reasonably assured that I will be here for 3 months. This will give me ample time to investigate the emergency and pass final judgment upon the pressing need of this bill today, and of the necessity of a surrender for a further time of the constitutional power of Congress to issue money and regulate the value thereof. And because I may not be here during the next or succeeding Congresses to interpose against a further surrender of this vital power over money to the manipulating bankers and financiers, now pressing this concession before the House, I shall vote against the bill unless limited by the Patman amendment.

Mr. Speaker, I know something of the bankers and financiers asking this concession here today, to allow them to use the people's money and credit. I know something of their history. I know something of their antecedents. I know something of their ways, of their shrewdness and cunning.

I know something of the secret bankers' meeting held May 18, 1920, in Washington, D.C., under the very shadow of this Capitol, behind closed doors and curtains. I know something of the secret resolution passed ordering the Federal Reserve Board to contract and withdraw from circulation the money and credits of the country. I know how they

silently folded their tent and secretly moved away, and for 2 years 8 months and 4 days covered and concealed their secret resolution as the assassin conceals his crime. I know these men concealed this meeting and the resolution they passed until the Manufacturers Record, of Baltimore, Md., on the 22d day of February, 1923, published a report of the secret proceedings, when the world for the first time looked in upon the secret conclave of conspiring bankers.

And I know that during these 2 years 8 months and 4 days, while the bankers were concealing their crime from the unsuspecting people of the country, they started the misleading propaganda of mystery and led their puppets, catspaws, stool-pigeons, and parrots to repeat after them in blind, vacant stare, "This panic is all a mystery."

Mr. Speaker, these men, in the background here today, and always in the background, are the same manipulating financiers and bankers, or are their successors in office and place of power of the men who held the secret bankers' meeting; who concealed their crime for 2 years 8 months and 4 days; who started the propaganda of mystery; and who have refused the assent for the President to use Federal Reserve notes, denied the right of the people to use their own money and credit in their struggle to extricate themselves from the panic brought upon them. These same men are here today holding this same bill over Congress, demanding that the Government continue to issue and guarantee money and turn it over to them free or for the trivial cost of printing and paper so that they can loan it back to the Government at 3 or 4 percent, and to the people at 5, 6, or 7 percent.

They are demanding their stranglehold upon industry, commerce, and trade to continue for another 3 years; and with this demand upon Congress they are holding out the veiled threat that unless their demands are complied with, they will withdraw their loans and the bond market will be forced down to a ruinously low level, destroying public credit and forcing a relapse of the panic, if there has been such revival as to make a relapse possible.

Mr. Speaker, this panic is not a mystery; this panic is a conspiracy. This panic is a deep, dark criminal plot. [Applause.] No pirates ever boarded a merchant ship to scuttle and sink the vessel, no highway robbers ever rode masked, no bandit, burglars ever blew a safe with more deliberate, criminal intent than the bankers who held the secret meeting and are, in the background here today, asking this concession from Congress—the right to use the credit of the Government, by and through which to rob the people of their earnings, substance, and income. [Applause.]

But, Mr. Speaker, this money which they are threatening to withdraw is not their money, but under the Constitution is the people's money which the Government has issued and guaranteed by pledge of public credit and turned over to them for the trivial cost of printing and paper to be loaned back to the Government and the people and upon which to collect vast sums of interest. But their demand includes more than that we continue to furnish them money to loan back to us at interest. Their demand includes the power over money, the power to control the volume of money, the power to contract money and lower prices when they are ready and want to buy, the power to expand money and raise prices when they are ready and want to sell, the power to bring prosperity or to make a panic at will.

Mr. STEAGALL. Mr. Speaker, will the gentleman yield?

Mr. GRAY. I yield.

Mr. STEAGALL. I remind the gentleman that the officials who participated in the conference of 1920 to which he refers are all dead.

[Here the gavel fell.]

Mr. MARTIN of Oregon. Mr. Speaker, I ask unanimous consent that the time of the distinguished gentleman from Indiana be extended 5 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. GRAY. I thank the gentleman from Oregon for this consideration affording me time for answering the gentleman from Alabama [Mr. STEAGALL].

This assurance by my colleague that the gentlemen to whom I have referred are pleading an alibi without a death certificate supports the allegation. As individuals, they may be dead, which, of course, I would regret, but the system lives on to menace the welfare of 120,000,000 people.

I am more interested in the demise of the Federal Reserve System than I am in any of the individuals engaged and participating in the criminal operations which I have tried to describe. And there is another difference to be observed and to which I would call the gentleman's attention. An individual may die, his body perish and disintegrate, while the soul lives on. But a corporation has no soul and its corporate body survives in perpetuity.

I am not begrudging these individuals, with perverted or calloused conscience, a further lease on life, especially if they will recant and atone for their crimes against the people. I prefer to see them spared until they can reduce their bond-bloated and distended bodies to such dimensions as will enable them to pass through the eye of the needle, a figure of speech for the golden gate.

What I am more interested in here is to see the soulless corporate body of the Federal Reserve System die and be interred by this Congress, or be allowed to die a natural death instead of prolonging its existence and continuing its powers from time to time under this or that pretext or the pressure of some great emergency, foreboding dire calamity to the people unless further concessions and powers are granted to them.

I want to see more individuals with souls and conscience in control of the money and credits of the people and less of soulless corporations exercising the constitutional power of Congress over the supply and distribution of currency.

I hope these individuals now strategically reported dead by the chairman of the committee were spared to live long enough to recant and atone for their crime against the people and make peace with their God.

Mr. Speaker, I realize that the committee reporting this bill is acting properly, loyally, and patriotically in the discharge of its duty to this House. I realize that if I were a member of this committee, I would feel constrained to present the bill for the consideration of the House. The responsibility for this bill is on the Members of the House and is not properly chargeable to the committee reporting it out upon the floor. I have full and absolute confidence in the honesty, integrity, and loyalty of the chairman and every member of this committee. In the meantime, I want it understood that I make no retraction of my charge against the international bankers and financiers who held the secret meeting in Washington and passed the secret resolution. My regret is that language fails me and words are inadequate to censure and condemn the men who deliberately brought this panic upon the country and all the woe, want, and destitution resulting, all to increase the value of their bonds and war-debt claims, and for sordid profit and financial gains.

Mr. HOEPPEL. Mr. Speaker, will the gentleman yield?

Mr. GRAY. If I were to yield to anyone in the world, it would be to the gentleman from California; but I want to make a few further observations in regard to this bill, and the wisdom and necessity of printing and guaranteeing the money and turning it over to the manipulating bankers to loan back to the Government at interest.

For the benefit of the gentleman from Alabama [Mr. STEAGALL], I wish to read from the bill passed on May 12, 1933. I call attention to part 8, Public Law No. 10, Seventy-third Congress, section 43, clause (b), to show the helpless subserviency and dependency of this Congress and the President under the relentless autocratic power of the international bankers and financiers and their Federal Reserve System, as follows:

(b) If the Secretary, when directed by the President, is unable to secure the assent of the several Federal Reserve banks to the agreements authorized in this section—

For the use of Federal Reserve money—

then the President is authorized to direct the Secretary of the Treasury to cause to be issued in such amount or amounts as he may from time to time order United States notes as provided by existing law.

And here follows other provisions of the act providing for the revaluation of gold or the remonetization of silver to be resorted to concurrently or in the alternate. [Applause.]

Mr. Speaker, think of the humiliating spectacle of the President of the United States and the great American Congress, the Senate and the House of Representatives, speaking for and acting for 120,000,000 free people, all crawling upon their bellies before the throne of the golden calf and the money kings of today, biting the dust at their feet, imploring, supplicating, and entreating the money-mad misers and shylocks to allow, to permit, to "assent", to use their own money and credits. But, Mr. Speaker, were our prayers answered, were our supplications and entreaties met, did the President of the United States obtain the "assent" of these bankers to use and control our own money which the Government had printed and turned over to them at the nominal cost of printing and paper to be used by them in exploiting the people and exacting from the people untold millions in interest charges?

No, Mr. Speaker; I am sorry to say that Congress and the President were turned down, and, failing to obtain the "assent" of the international bankers and financiers to use the people's own money in the recovery program, and to whom we had prayed and supplicated for the right to use and control our own money, and the President on failure to obtain the assent under the powers conferred upon him and under the authority delegated by Congress, declared for the revalution of gold, and failing to obtain the assent to take the corpus of the gold, seized upon and took the gold under the right of eminent domain.

And the President, further failing to obtain the assent of the several Federal Reserve banks and the Federal Reserve Board to finance the recovery program under the powers conferred upon him by the act, declared for and resorted to the revaluation-of-gold plan, from which and under which to make available for use a sufficient volume and supply of money to restore the depleted monetary supply and the relative value of money and commodities as well.

I had not previously favored the revaluation of gold as a first and preliminary step; but realizing that all must join under one theory, I submerged and gave up my own personal preference and joined in the President's program with a will and determination to cooperate with him to the limit.

I did this willingly, freely, and cheerfully, because upon full consideration and determination I was convinced that any one of the several measures provided—whether a resort to Federal Reserve notes, or a remonetization of silver, or the revaluation of gold, or the issuance of United States currency notes—would all lead substantially to the same result—the restoration of the volume and supply of money which had been withdrawn from circulation by the conspiring, manipulating bankers.

But, Mr. Speaker, we are no longer dependent upon these financiers for money. Under the gold-revaluation program we have provided for more money, more than we need or can use. It must be realized and understood that the practical effect of the revaluation of gold is the same as if new gold mines were discovered and the gold supply increased and doubled, doubling the gold reserve as a basis for money. This money is free from the scarecrow, immune from the hue and cry, of "inflation", "fiat money", and "printing-press money." This is money based upon gold, redeemable in that great precious metal, not in single gold dollars but in gold bars. And here the President of the United States is to be congratulated as a strategist in forestalling and meeting the propaganda of fiat and printing-press money at the threshold which would have otherwise succeeded, had the other forms of money been resorted to. And in addition to this redemption in gold, this money is guaranteed by the credit of the Government, the guaranty that makes bonds as good as gold, and by all the property of the people, and by all the wealth of all the people, and by all the earnings and income of the people, and all the natural resources of the country.

But this is not only the best money in the world. The gold base expanded by revaluation provides for an ample and copious supply of currency more than we need or can use and more than is necessary or required to raise values to the 1926 price level and restore prosperity to the country.

What we need here today is not to perpetuate this criminal folly and farce by extending this stranglehold upon the money of the country, but to stop giving up our money to bankers to loan back to us at interest and maintain control over our money and credits not only to pay our own public debts and save interest, but to loan out directly to the people at reasonable rates and take the interest ourselves.

Mr. Speaker, I helped to make the Federal Reserve money system, and under a good-faith administration it could be the most perfect and complete instrumentality for the control of the volume and supply of money and to stabilize values and the price level which has ever been devised by men as a part of the agencies of government. But by reason of its concentration of power in one central body to effect control, it becomes at once a threatening danger, a monster, menacing evil in the hands or subject to the influence of selfish, greedy interests. And by reason of this concentration of power is a greater danger and menace, even greater than the old national-bank money system.

The Federal Reserve money system may be compared with or to a new efficient, effective weapon prepared by men for their own defense, which, falling into the hands of the enemy, can be turned and used against them with deadly, destructive effect, and by which they can be overcome and conquered by means and instrumentalities devised by themselves.

The Federal Reserve System was created following the money panic of 1907 and for the one sole and only purpose of recovering back to Congress and the President, as the sworn and chosen representatives of the people, the constitutional power to regulate money and the value thereof, and the power to control the volume and distribution of money and credit in circulation at all times responsive to the needs and requirements of the people.

The System was provided especially and particularly to take the control of money and credit away from the manipulating financiers and bankers, who had monopolized and cornered the money supply in 1907 in a mad orgy of speculation and brought a panic upon the country. This was when you can remember the bankers told us that they had our money but could not give it to us.

These men had compelled under duress the little country banks to send their deposits of nickels and dimes, the savings of their people, to the New York bankers to be held as a condition upon which the country and small bankers could obtain crop-moving money and to meet their patron's requirements from time to time. It was the intention of the law to protect the small bankers from the imposition of these Wall Street money racketeers and afford them to obtain money for their local use without a surrender of their deposits.

Under this new system the little banks, as a matter of right and without crawling upon their bellies before the money kings and surrendering their saving deposits, could send up eligible paper, notes, and other prime obligations to pay money and obtain the necessary funds with which to meet the business requirements of their respective communities.

On returning here after an absence of 16 years I find these changes in the Federal Reserve law: I find the law enacted to put the bankers out and to put the people in so modified by pressing emergency legislation that the people are put out and the bankers are put back in. The mother of this law would not recognize her own child and the father of the Federal Reserve System, Woodrow Wilson, would spurn it as a spurious offspring. This boasted servant of the people has become a money octopus, resisting the power and defying the Government itself. And today this system not only con-

trols values and the price level here in our own country, but dictates values and the price level in every country of Europe and has become the arbitrator of the economic world.

The system was to be a public institution, the Government was to share in the incidental profits and earnings, and instead of supplicating for the assent of the Federal Reserve Board, was to be the master, commanding and directing the Federal Reserve Board as the servants of the public and to compel its operations to serve the public welfare and in the interests of all the people.

But since the enactment of the law and the creation of the Federal Reserve System the law has been modified, changed, and amended by piecemeal from time to time, until today its whole character as a public agency has been changed and perverted. The Government has been put out of the corporation. It no longer holds a share of stock or participates in the earnings and is left in a praying attitude before a money octopus, begging for the assent of the Federal Reserve Board, only to be turned down and denied the use of the money, the control of which the Constitution vests exclusively in the Congress.

It was following one of these apparent trivial amendments, the amendment of April 13, 1920, amending section 14 of the Federal Reserve Act, that the secret bankers' meeting was held. This was the section which under the law was to wrest the control of money from the manipulating bankers and international financiers and recover that power back to Congress and the President. The amendment passed Congress without notice, debate, or a record vote, but proved to be the dagger or stiletto by which the Federal Reserve System was brought to its death as a public agency to serve the interests and welfare of the people.

Under this new money system—with its boasted flexible provisions for contraction and expansion of currency and credits to meet the needs of the people in every locality of the country, and above all was to insure and safeguard against the recurrence of economic depression and make panics impossible—the greatest and most destructive of all panics has come upon the people, bringing want, suffering, and distress to an industrious, frugal, and resourceful people in a land of plenty and great abundance, and transforming a Canaan into an economic wilderness and a desert of despair. [Applause.]

Mr. GOLDSBOROUGH. Mr. Speaker, sometimes it is unwise to explain the purpose of a measure, but, in my opinion, it is necessary to go into detail about the necessity for this legislation at this time. The administration has gone a long way in its effort to drive the money changers from the temple. The people of the United States are not yet ready, in the judgment of the administration, for a managed currency; they are not yet ready for the issuance of money without some sort of a reserve. The public is in the habit of having the Government issue its bonds when it needs money for public purposes.

Unless this bill is passed the market for Government bonds will drop immediately.

Mr. O'MALLEY. Mr. Speaker, will the gentleman yield for a question?

Mr. GOLDSBOROUGH. With great pleasure.

Mr. O'MALLEY. Does it not seem to the gentleman that if this is such a great emergency somebody somewhere has been guilty of gross negligence of duty in waiting until the last minute to bring the bill into the House? I do not know who has delayed this measuse, or for what purpose there was delay, but in the handling of the affairs of this Government no one has a right to neglect the people's business until the last possible minute.

Mr. GOLDSBOROUGH. My own opinion is, my own judgment is, that the administration felt there would be no opposition to the extension of time asked for in the bill.

Mr. O'MALLEY. Does the gentleman mean to say that the Treasury Department is so confident that anything it brings to this House at the eleventh hour will go across without any opposition, and that is the reason the bill came in here last night?

Mr. GOLDSBOROUGH. I may say that this legislation has been on the statute books for 2 years, and I presume the Treasury felt that the membership was quite well acquainted with the situation. I really have no reason to suppose that there was any sinister purpose in bringing this up in the way it was brought up.

Mr. O'MALLEY. But does not the gentleman think that somebody has neglected his duty? He knew for 1 year that this authority was going to expire on a certain day.

Mr. GOLDSBOROUGH. I do not know that it would help the situation any to criticize the Secretary of the Treasury. I may say that I have no doubt that in general there is a feeling down at the other end of the Avenue that Congress will go along with the program.

Mr. O'MALLEY. Go along with the President.

Mr. GOLDSBOROUGH. And they have reason to feel that way.

Mr. O'MALLEY. I will go along with the President. The Brown amendment gives the President entire authority in the matter; in fact more authority than is now in the bill. Adopt the Brown amendment and I may vote for this bill.

Mr. GOLDSBOROUGH. I want to make a statement that I did not make yesterday, and that is you cannot sustain the bond market unless this extension of time is given. Unless the Government can market its bonds, under our present set-up we cannot carry on the extensive public works now in the process of being worked out.

Mr. SHOEMAKER. Will the gentleman yield?

Mr. GOLDSBOROUGH. I yield to the gentleman from Minnesota.

Mr. SHOEMAKER. I do not know why we want to suspend these things. Why do we not issue the bonds, make them interest free, and put the credit of the Government up instead of letting the bankers make a rake-off on us every time we turn around?

Mr. GOLDSBOROUGH. I should like to do that.

Mr. SHOEMAKER. Let us do it then.

Mr. GOLDSBOROUGH. I have not the power to do it, and in my judgment the President does not believe he has the power.

Mr. SHOEMAKER. Let us give him the authority to do it instead of tying ourselves up in this way. It is up to us as Congress.

Mr. GOLDSBOROUGH. I will give you my own view of the situation.

[Here the gavel fell.]

Mr. GOLDSBOROUGH. Mr. Speaker, I ask unanimous consent to proceed for 5 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

Mr. GOLDSBOROUGH. May I call attention to the tremendous advance we have made in less than a year. The administration has aroused public consciousness to the iniquities of child labor; it has aroused public consciousness to the fact that if we put buying power into the hands of the workers of this country it will make all society prosperous.

Mr. SHOEMAKER. Will the gentleman yield further?

Mr. GOLDSBOROUGH. I will in a minute, because I admire the gentleman.

The administration has taught the country that there is no magic about this metallic standard. It has devalued gold; it has supported a measure which will make the deposits of the poor man in the small banks of this country as safe as in the Chase National Bank of New York. All of these things have been done.

In my judgment, the administration does not feel that it would have sufficient public sentiment back of it to justify the issuance of what has been called fiat money. It is necessary to borrow money from the banks, and therefore it is necessary to sustain the selling price of these bonds. This is the reason, and, in my judgment, the sole reason why the administration is behind this extension. I have been just as frank as I can be. To my certain knowledge

this bill is not asked for to help the bankers. That is not the purpose.

I now yield to the gentleman from Minnesota.

Mr. SHOEMAKER. I am in perfect accord with the gentleman on many of the things he has stated, but so far as the child-labor proposition is concerned, may I call the gentleman's attention to the fact that there are many States that have not ratified it, and may I say further that public opinion is what did away with child labor? They found out it was better that children be taken out of industry and let the fathers work, or they would have to feed the old folks at home. The automatic machine came in and did a lot of work and caused unemployment until public sentiment brought it about. We have issued bonds after bonds that are absolutely never going to be paid by this Government or any other government. If this is the basis the gentleman is going on, if we are going to get everything we can, all right. I am perfectly willing to help the gentleman spend $500,000,000,000 and we will all have a good time and then not pay the bonds, which is what is going to happen in the end anyway.

Mr. AYERS of Montana. Will the gentleman yield?

Mr. GOLDSBOROUGH. I yield to the gentleman from Montana.

Mr. AYERS of Montana. This law was first passed for 1 year, and at the expiration of that year for another year. It comes up now and they ask for 3 years. What is the objection of the committee to the Brown amendment?

Mr. GOLDSBOROUGH. There is none, so far as I am concerned. I think the President feels that this trouble will be over in a year, so that the whole thing will be done away with; but if it is not, he wants the power to carry it on. That is my understanding.

Mr. AYERS of Montana. Why not adopt the Brown amendment? The Brown amendment covers 1 year.

Mr. DINGELL. Will the gentleman yield?

Mr. GOLDSBOROUGH. I yield to the gentleman from Michigan.

Mr. DINGELL. Is not this measure an inflationary measure which will grant the Federal Reserve banks the privilege to further inflate the currency, something that the United States Government up to this time has not dared do? Is it not true this would inflate the currency and grant a power to the Federal Reserve banks which the United States Government up to this time has refused to grant?

Mr. GOLDSBOROUGH. I could answer the question in the way the gentleman suggests. I want to be perfectly frank. This bill is to preserve on a 40-percent basis the gold-note reserve of the Federal Reserve banks, so that they will not have to go above 40 percent. This allows them to issue more Federal Reserve notes.

Mr. DINGELL. Will these notes be used for a further extension of credit, or will there be a further shrinkage?

Mr. GOLDSBOROUGH. I think they will be used to extend credit to the Government.

Mr. O'MALLEY. Will the gentleman yield?

[Here the gavel fell.]

Mr. O'MALLEY. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland may have 5 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. O'MALLEY. When we gave the authority to the Federal Reserve Board to put up this collateral and get this money last year, we were told at that time by the distinguished chairman of the committee, when this particular legislation was brought up, that its effect would be to ease credit and the banks would make more commercial loans and money would be easier to obtain for business and borrowers. This authority has been exercised for a year, and the actual facts shown by economic surveys are that the total of commercial loans and discounts in this country in 1933 was very much lower than in 1932. So the only thing the Federal Reserve banks can be doing with the money they are getting under this authority of law is to take the money and buy more Government bonds, because they are certainly not putting it out in commercial credit as every merchant knows.

Mr. GOLDSBOROUGH. The money is being loaned to the Federal Government at the present time.

Mr. Speaker, there is one thing I want to call to your attention. There has been a great deal of criticism, and in my judgment very uncalled-for criticism, of the Chairman of the Committee on Banking and Currency. I happen to know, personally, of the tremendous pressure that is continually brought upon the Chairman of the Banking and Currency Committee by the great banking interests. I happen to have personal knowledge of the fact that insofar as his power lies he has stood between the people and the great banking interests, without a single exception. [Applause.]

I want to say that his achievement in getting a deposit insurance bill passed was one of the greatest consummated efforts ever made in the history of mankind against great power. [Applause.]

I want to voice, in concrete form, at this time my tribute to him, just as I did in several speeches I made last summer, when I said this:

The pioneer turns his back upon the feast and renounces the place of power; he leaves it to others to accumulate wealth, to gratify pleasant tastes, to bask themselves in the warm sunshine of the brief day. He works for those he never saw and never can see; for a fame, or maybe for a scant justice, that can only come long after the clods have rattled upon his coffin lid. He toils in the advance, where it is cold, and there is little cheer from men, and the stones are sharp and the brambles thick. Amid the scoffs of the present and the sneers that stab like knives he builds for the future; he cuts the trail that a progressive humanity may hereafter broaden into a high road. Into higher, grander spheres desire mounts and beckons, and a star that rises in the east leads him on. [Applause.]

The pro forma amendment was withdrawn.

Mr. SUMNERS of Texas. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, I do not often ask for the time of the House and I would not do it today if I did not feel we face a great crisis. It is a pity when we come to discuss legislative matters that we cannot sit around a table and concede that the other fellow is just as honest as we are and just as patriotic as we are in trying to do his duty. These Members who are opposing this bill are as conscientious as we are. When a fellow gets it into his head that he is about the only honest man and the only smart man and the only patriotic man, he is the biggest fool in the country. [Laughter and applause.] We may have differences of opinion about how to do it. It would be impossible if you had a business matter to consider to get this number of persons together without having differences of opinion. If it were a business problem we were trying to deal with and the other fellow sitting across the table did not agree with you, you would not want to throw a book at him or an inkwell. You would listen to what he had to say, and if you had taken a position which, under the circumstances and after discussing the thing among yourselves, you saw was not a sound position, you would not hesitate a minute to go the other way. This is the reason for a conference. This is the reason for a meeting of this sort, and it is what we are doing today.

I agree with what lies very deeply in this situation. I do not think these leaders have taken us ordinary fellows into their confidence as much as they should. We could have added a whole lot to the wisdom of the guidance of the Democratic Party, and I guess the same thing is true with those on the other side. But these leaders have been pretty busy, and they are not as smart as we are anyway, and are bound to make mistakes that we would not make. [Laughter.]

After all, it is not what the Secretary of the Treasury did or did not do, or what the leaders did or did not do, but it is what you and I are going to do in a very few minutes.

This is the big job ahead of us. Now, what are we going to do about it?

Those of you who have paid any attention to my attitude toward these economic questions know that I have insisted all the time that if we could revive the buying power of the farmers, and possibly, under necessity, reduce the dollar, we would not have to have all these alphabets under which we are working. But I may have been wrong about it. You know, when I disagree with somebody I know one of two things—somebody is wrong, and I may be that person. But here is what we have done—and by the way, I hope I can get by with this, Judge BECK, this time. I have tried a lot of times to do it, and I never have been able to do it.

We are operating under a thing that is pretty close akin to war psychology. We have not changed our Government, but for the moment, sensing the existence of a great crisis, we have concentrated power in the Executive. This urge came from the country, and we have done it. We have gone a long way down that road. We have gone about five or six billion dollars down that road, and now the question is, Are we going along that road or are we going to turn around? Why, half of these things, or two thirds of these things I have been voting for I do not believe in, but I recognize that in this crisis no human being knows whether we are going to reach the shore or not. We know we are far from shore, and we know we are all in the same boat, and we know it is going to take the united resources and the pulling together of the American people to give us a chance.

[Here the gavel fell.]

(The time having expired, Mr. SUMNERS of Texas was given 5 minutes more.)

Mr. SUMNERS of Texas. This is what confronts you, this is a great crisis.

Mr. HOEPPEL. Will the gentleman yield?

Mr. SUMNERS of Texas. Please let me complete this thought and then I will yield. What are we going to do? In this situation I am very fond of Mr. BUSBY; I have a deep affection for the gentleman from Texas, Mr. PATMAN, and this young fellow BROWN—if he stays here a few years, and his people ought to keep him—he will have a lot of sense. He has a good deal now. [Laughter.] He has got the making of a real legislator, and these other boys are all right. [Laughter.]

Now, what is the situation? This recovery thing depends on having the country continue to believe that the legislative branch of the Government and the President are standing close together, and the minute you destroy that you destroy the confidence and the hope of the American people.

Now, do not underestimate that. You cannot put these things on the table and consider them as in normal times. If you defeat this measure our country would say that the Chief Executive and Congress are not standing together. Under the existing situation the President is not only Commander in Chief of the military forces, but he is a Commander in Chief of the economic resources of this great Republic. [Applause.]

I mean that that is the situation. We have to deal with the facts. We are not dealing with theories. I tell you, boys, you should hesitate a long time before you send out word that the President of the United States has lost the confidence of Congress.

Mr. HOEPPEL. Will the gentleman yield?

Mr. SUMNERS of Texas. Yes; I will yield.

Mr. HOEPPEL. The gentleman says that we are all in the same boat.

Mr. SUMNERS of Texas. All but the gentleman from California—everybody else is. [Laughter and applause.]

Mr. HOEPPEL. Will the gentleman yield further?

Mr. SUMNERS of Texas. No; I cannot yield further. Let us see what the situation is. The gentleman stated that notes are not being tendered for rediscount in large volume. It is a fact that they are not in volume. Why? Everybody knows why. Because the economic conditions of the country are such you cannot tender notes in volume that will make good collateral. We have to have Government bonds eligible in order to get a broad enough basis, so we are told.

Now, do not fail to listen to this: The administration has to float about $10,000,000,000 of bonds; and if it should fall down on the floating of one of those issues, what is going to happen? Can you contemplate the economic consequences that would follow?

Mr. HOEPPEL. Will the gentleman yield? I can tell the gentleman what would happen.

Mr. SUMNERS of Texas. No; I cannot yield further. The human mind shrinks from contemplating what would be the result if we failed to float these bonds. We might be in the situation of France, where they are paying 5 percent to induce the French people to take their bonds. We have already reached a situation where it takes about a billion dollars to take care of the interest on the national debt.

Mr. BUSBY. Mr. Speaker, will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. BUSBY. Has the gentleman made any calculation as to what point we will have to stop issuing bonds at the rate of a billion dollars a month?

Mr. SUMNERS of Texas. I do not like to think about it, but this is true, we cannot back up now. There is a limit to our bond-issuing and bond-selling ability, and the chance of our bond-selling resources holding out until we reach shore is better with the Congress and the President standing together and a country enheartened and solidified by that teamwork.

The SPEAKER. The time of the gentleman from Texas has again expired.

Mr. LUCE. Mr. Speaker, I move to strike out the last two words. A stranger might look upon this as a lively rendition of Much Ado About Nothing, but those of us acquainted with the conditions at the moment realize that there are two grave questions here concerned. Neither of them relates to the merits of the main proposition, which will undoubtedly prevail. They affect, respectively, the Republican and Democratic sides of the House. First, a word to my Republican friends. This is a measure to continue the life of a bill recommended by President Hoover, renewed while he was still President, and now, by force of circumstances, turned from its original purpose to meet the emergency presented by the necessity of servicing the public debt.

Mr. HOEPPEL. Mr. Speaker, will the gentleman yield?

Mr. LUCE. When I have finished my statement.

Mr. HOEPPEL. But I should like to ask the gentleman a question right now.

The SPEAKER. The gentleman declines to yield.

Mr. LUCE. Lest the diversion introduced by the gentleman who accosted me may have broken the thread of my remarks, I may repeat that this is now a measure for servicing the public debt, an exigency which many of us fear will not to be concluded through our lifetimes, an exigency that is certain to last for years, so that whether you restrict the life of this act to 1 year or 3 years is absolutely immaterial. It will be reenacted next year if we confine it to 1 year, and my associates on the Republican side of the House will accomplish only one thing by voting to restrict it to 1 year, and that will be to preclude themselves from saying next October that they have supported the President in every matter of mechanics. There is no principle involved in this issue. It is simply one of detail, one of mechanics, and if gentlemen think it is wise to preclude themselves from the chance of saying that they have supported the administration in all matters of mechanics, that is their own responsibility. For my part I would rather point to the fact that this is a program recommended by the Federal Reserve Board, recommended by the Governor of that Board, who came before us and asked for it, and unanimously supported by the committee.

Mr. HOEPPEL. Mr. Speaker, will the gentleman yield?

Mr. LUCE. I will not.

Mr. HOEPPEL. I should like to ask the gentleman a question.

Mr. LUCE. And now a word to my Democratic friends. In England this question would be called one of a vote of lack of confidence. In England and all the other countries of the world where the system of ministerial responsibility prevails there come from time to time votes on unimportant matters, on proposals where gentlemen of the majority who have come to differ from the ministry seek a vote of lack of confidence. Here is an absolutely immaterial thing, because we all know that if the amendment restricting the grant of power to one year prevails the President will come back a year from now, and then a year after that, and then a third year, through some indefinite time, and the power will be extended. So we shall have the problem repeatedly before us, because it is the problem of financing the greatest debt that this country ever saw, and pray God it may be the greatest debt it ever will see. If gentlemen desire to show their insurgency, if they want to revolt, if they want to rebuke the administration, then they will vote for these amendments.

The SPEAKER. The time of the gentleman from Massachusetts has expired.

Mr. STEAGALL. Mr. Speaker, I move the previous question on the bill and the amendments to final passage.

Mr. HILL of Alabama. Mr. Speaker, will the gentleman withhold that for a moment until the gentleman from West Virginia can be heard?

Mr. STEAGALL. I withdraw the motion. I do not want to shut off debate.

Mr. EDMISTON. Mr. Speaker, I move to strike out the last two words. I do not like to impose upon the House in this matter, but to my mind this is the most serious piece of legislation that I have been called to vote on since I became a Member of Congress. I do not pretend to be a banker. I never was until necessity closed every bank in my own home county and we had to have a new bank. I know the condition in my own county, and that is the only banking business that I know—the old system did not work—and I know that the new bank which we have organized is not anything more than a medium of changing and storing money for that community. It is not worth a nickel for the home, the industries, or the farmers of that community. I have the statement of that bank which I received in the morning's mail as of the 28th day of February. That small bank has total resources of $1,735,000. Of that amount they have $1,025,000 in Government bonds and on deposit Federal Reserve. They have loans of 24 percent of their resources are in Government bonds or on deposit in the Federal Reserve. They have loans of 25 percent of their total resources, and the bank examiner who comes periodically tells us to collect those loans and put them into Government bonds. How are you going to help a community get back on its feet if you follow that system? As I understand this bill, that is what it does. I am not for blocking the President. I will put this aside if the President tells me it is better to have that money and let my community do without it, but it seems to me that the Brown amendment would put the proposition up to President Roosevelt and give him time to put his "brain trust" and his own brain to work and try to work out something that would modify this and help both the Government and our own home communities and struggling banks.

Mr. STEAGALL. Mr. Speaker, I move the previous question on the bill and pending amendments.

The previous question was ordered.

The SPEAKER. The question is on the substitute amendment offered by the gentleman from Kentucky [Mr. BROWN] to the amendment offered by the gentleman from Texas [Mr. PATMAN].

The question was taken; and on a division (demanded by Mr. O'MALLEY) there were ayes 80 and noes 123.

So the substitute amendment was rejected.

The SPEAKER. The question is on the amendment offered by the gentleman from Texas [Mr. PATMAN].

The question was taken, and the amendment was rejected.

The SPEAKER. The question is on the third reading of the Senate bill.

The bill was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. PARKER and Mr. O'MALLEY demanded the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 312, nays 38, not voting 82, as follows:

[Roll No. 98]

The SPEAKER. The Clerk will call my name.

The Clerk called the name of Mr. RAINEY, and he answered "aye."

So the bill was passed.

The Clerk announced the following pairs:

General pairs until further notice:

Mr. Pou with Mr. Treadway.
Mr. Taylor of Colorado with Mr. Millard.
Mr. Montague with Mr. Edmonds.
Mr. Granfield with Mr. Ransley.
Mr. Underwood with Mr. Crowther.
Mr. Haines with Mr. Bacharach.
Mr. Hancock of North Carolina with Mr. Kinzer.
Mr. Flannagan with Mr. Simpson.
Mr. Boland with Mr. McLeod.
Mr. Cannon of Wisconsin with Mr. Britten.
Mr. Truax with Mr. Cavicchia.
Mr. Williams with Mr. Reid of Illinois.
Mr. Sweeney with Mr. Stokes.
Mr. Rogers of New Hampshire with Mr. Waldron.
Mr. Lea of California with Mr. McLean.
Mr. Wilson with Mr. Doutrich.
Mr. Shannon with Mr. Eaton.
Mr. Frey with Mr. Connolly.
Mr. Drewry with Mr. Stalker.
Mr. Farley with Mr. Strong of Pennsylvania.
Mr. Clark of North Carolina with Mr. Darden.

Mr. DOUGLASS. Mr. Speaker, my colleague, Mr. GRANFIELD, is unavoidably absent. If present, he would vote "aye."

Mr. SECREST. Mr. Speaker, my colleague, Mr. YOUNG, is absent. If present, he would vote "aye."

Mr. BYRNS. Mr. Speaker, the following Members are unavoidably absent. If present, they would vote "aye": Messrs. BOYLAN, O'CONNOR, CULLEN, CORNING, RUDD, LINDSAY, PRALL, SULLIVAN, DICKSTEIN, BEITER, GAVAGAN, YOUNG, BEAM, CHAVEZ, BRUNNER, CELLER, DELANEY, GRIFFIN, KENNEDY of New York, LANZETTA, OLIVER of New York, PEYSER, SOMERS of New York, STUDLEY, CARLEY, and CHAPMAN.

Mr. KENNEY. Mr. Speaker, my colleagues, Mrs. NORTON and Messrs. AUF DER HEIDE and SUTPHIN, are detained at home because of illness in their respective families. Were they here, they would vote "aye."

Mr. CLAIBORNE. Mr. Speaker, my colleague, Mr. MILLIGAN, is unavoidably detained. Were he able to be present, he would vote "aye."

Mr. DARROW. Mr. Speaker, my colleagues, Messrs. CONNOLLY, STRONG, and WALDRON, are unavoidably absent. If present, they would vote "aye."

The result of the vote was announced as above recorded.

On motion by Mr. STEAGALL, a motion to reconsider the vote by which the bill was passed was laid on the table. A similar House bill was laid on the table.

S. 2766—EXTENSION OF REMARKS

Mr. STEAGALL. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days within which to extend their remarks on this bill.

The SPEAKER. Is there objection to the request of the gentleman from Alabama [Mr. STEAGALL]?

There was no objection.

Mr. PATMAN. Mr. Speaker, I have offered an amendment to Senate bill 2766, relating to collateral security for Federal Reserve banks which would permit the privilege to continue for 3 months only. The gentleman from Kentucky [Mr. BROWN] offered a substitute to my amendment providing that the privilege may be extended for 1 year, within the discretion of the President.

In one of my speeches on yesterday in discussing this proposal I stated:

> If the President or the Secretary of the Treasury should suggest to me how this bill would aid the President's program, I would withdraw my objection to it. (CONGRESSIONAL RECORD, Mar. 2, 1934, p. 3680.)

The information as to how this bill will aid in the recovery program has been communicated to me; and in compliance with my suggestion I am glad to submerge my personal views, which involve the enactment of a temporary measure, and vote for the bill without insisting upon the amendment.

OPPOSED TO THE PRINCIPLE INVOLVED IN BILL

I am opposed to the principle of the Federal Reserve bank depositing Government bonds, receiving new money in return for them to the amount of the bonds, and at the same time the member banks use the money as a reserve for the issuing of 10 times the amount in credit; they also get interest from the Government on the deposited bonds. There is another way I can oppose this practice without attempting to block the passage of this bill. I expect to continue to oppose this practice. It amounts to a bonus to banks.

PRESIDENT'S PROGRAM

It is realized that our President cannot do everything in 1 year. He has made long steps in the direction of taking the power away from the Money Trust, and I am confident that he will do even more in this respect in a reasonable time. I do not overlook the fact that he is waging a war against high interest rates, which will help the home and farm owners as well as everyone who is in debt. He is using the credit of the Nation to help home and farm owners. Thousands of homes have been saved in this manner.

This has never been done before. Heretofore only the bankers were permitted to use the Government credit. They are the only group now that can use it without charge, and I predict they will not always have this great privilege. People are not starving this winter as they were the two preceding winters. Employment and purchasing power are on the increase. The poor folks, including farmers, laborers, wage earners, and low-salaried people have a friend in the President, who is determined to give them substantial aid, assistance, and improve their opportunities for the future.

The big bankers, and especially the international bankers, were bitterly opposed to the abandonment of the gold standard. He hit them squarely between the eyes by going off gold. They contended that the profits on the gold by reason of devaluation, amounting to about $3,000,000,000, should go to the Federal Reserve banks, and, of course, eventually for the benefit of the member banks, but the President captured these profits for the benefit of the people. This is a sufficient amount of gold to authorize the issuance of more than 7½ billion dollars upon a 40-percent gold base, and the people, not a few bankers, will get the benefit of this money.

May 7, 1933, President Roosevelt made a radio speech in which he stated:

> Let me make the facts very simple and my policy very clear. In the first place, Government credit and Government currency are really one and the same thing.

It is my belief that Government bonds and Government currency are secured in the same manner and by the same security—the credit of the Nation. Gold is not being used at this time as a reserve for money. Thomas A. Edison said:

> If our Nation can issue a dollar bond, it can issue a dollar bill. The element that makes the bond good makes the bill good also.

Judging by what our President has said and done, we know that the day of an unholy alliance between the greedy money trust and the administration in power is over. It is the first time in many years that Wall Street agents do not have entry to the White House for the purpose of getting

advance information that would enable them to invest wisely. They are now as much in the dark at all times as the people generally. They are not accustomed to this and do not like it.

FEDERAL RESERVE BANKS

The Federal Reserve Act became law December 23, 1913. It was intended to decentralize money and credit, furnish an elastic currency, and extend sufficient credit at all times to commerce, industry, and agriculture. These banks are authorized to issue money—Federal Reserve notes—which is a blanket mortgage on all the homes, other property, and all income of all the people. This is a great privilege; one that is not enjoyed by any other group. The Government does not own one penny of stock in these banks. It is all owned by private banks. The paid-in stock only amounts to $160,000,000, an insignificant sum, considering that these institutions often do an annual business amounting to more than a hundred billion dollars. They really operate on Government credit. Section 16 of the act provides that they shall pay an interest charge for this credit. A regulation by the Federal Reserve Board relieved them of that duty. Therefore they use the credit of the Nation free. The law contemplated that all excess profits of these banks should go into the Treasury. Large salaries, big buildings, heavy expenses, and a few perfecting amendments, so called, relieved them of that duty.

PERFECTING AMENDMENTS

It was never contemplated that a Federal Reserve bank should be permitted to issue the Government's money except in aid of commerce, industry, and agriculture. A so-called "perfecting amendment" to the act approved June 21, 1917, on the theory that the World War justified the departure allows gold and gold certificates to be used as a basis for the issuance of new money. This amendment remains the law. Another so-called "perfecting amendment" permitted the substitution of collateral February 27, 1932, by reason of the great emergency. Another so-called "perfecting amendment" was adopted which allowed these banks to issue money on Government bonds. The bonds are purchased on Government credit by the Federal Reserve bank and then deposited with the Federal Reserve agent as collateral security for the issuance of new money. They use the money free of charge and also get interest on the bonds from the Government. In 1933 this great privilege was renewed for another year. Now S. 2766 proposes another extension of 1 year with the privilege of the President to extend it another 2 years. Having faith and confidence in the present administration and being assured that the present emergency makes it necessary for this extension to be granted, I am yielding with the hope that during the next year we can obtain the passage of legislation that will render the continuation of this great privilege unnecessary, as well as securing the passage of a law that will restore to Congress the power to issue money. Such privilege should not be farmed out to a few bankers. We know that whoever controls money and credit is absolute master of all commerce and industry.

MONEY FOR 1945 BONDS

This bill further extends and enlarges upon the privilege now held by certain bankers to obtain new money in return for a collateral security deposit of United States Government bonds. They use the money and also get interest on the bonds. Under present law, a bank can take a $1,000 bond, payable January 1, 1945, deposit it as collateral security, and receive $1,000 in new money. The bank will get the use of the money, which can be used as a reserve for the issuance of 10 times that amount in credit, which will become a deposit in the bank. Each year the bank will collect interest on the bond deposited, in addition to using the money and collecting interest from those who use the credit that is extended by using the money as a reserve.

GOVERNMENT TAKE OVER FEDERAL RESERVE

The Government should take over these banks, coordinate their activities with the Reconstruction Finance Corporation, and extend plenty of credit to commerce, industry, and agriculture.

The Federal Reserve System has proved itself to be a fair-weather friend of the people. When times are good, a rising market, steady employment, ample credit facilities are at the command of the people through this System. But when there is a declining market, unemployment, reduced valuations, and reduced earnings, the Federal Reserve System will not furnish the credit necessary to restore the country.

Mr. SMITH of Washington. Mr. Speaker, I will briefly state my reasons for casting my vote against the passage of this measure, which has been submitted precipitously, under very limited debate, and with very little time allowed for its discussion and consideration. I feel compelled to join with the small group of Members who are voting "nay" on this roll call as a protest against the continuation of a monetary policy which we are convinced is vicious and wrong, in the confident belief that the time is coming, sooner probably than most of us expect, when our vote here today will be approved and vindicated by the majority of our countrymen and a future Congress will legislate accordingly.

Mr. Speaker, this bill is intended to continue in effect the provisions of the Borah-Steagall and Glass-Steagall amendments to the original Federal Reserve Bank Act, which was thereby changed and modified to permit the Federal Reserve banks to substitute bonds for eligible commercial paper, and subsequently gold, which was recently impounded in the Treasury. In other words, the Federal Reserve Banking System, which was originally designed to provide sufficient credit to finance the legitimate transactions and demands of industry, business, and agriculture, has been emasculated, its primary purpose lost sight of, and it has become an instrumentality for the manipulation of the credit and money of the Nation for the benefit of the few of the big bankers in New York who control by ownership the stock in the Federal Reserve banks.

Consequently the primary and paramount purpose of the Federal Reserve Act to issue notes against the collateral of business and property loans to business firms, industries, and farmers was changed to encourage the issuance of Federal Reserve notes against United States bonds and gold. As a result, the Federal Reserve banks have almost entirely ceased making loans to private business, industry, and the farmers, and are making loans exclusively to a favored few who hoard and invest these funds in tax-exempt securities.

The situation which I have described is detrimental to a complete recovery of business, industry, and agriculture, and is caused principally by the monetary policy of our Government, which is vicious and wrong, of issuing tax-exempt Government bonds, drawing interest, for the benefit of the banks so that the banks can pledge these bonds with the Government in order that the Government can issue money to the banks. This policy has been carried on to such an extent that our annual interest charge on the outstanding bonds will soon approximate $1,000,000,000, and it is estimated that the interest on all the indebtedness, public and private, in the United States, amounts to $9,000,000,000 per year, and which cannot be paid. The Constitution of the United States provides that "Congress shall issue money and regulate the value thereof", but this function has surreptitiously been delegated to private interests, and brought about the distressing state of affairs from which all of us are suffering today. I therefore desire to be recorded in opposition to a continuation of this policy which should not be any part of the "new deal."

Mr. THOMPSON of Texas. Mr. Speaker, I have listened to the debate on this measure and I feel a particular sympathy for those who would amend it for various reasons. I have a suspicion that if the bill had been brought out in ample time to discuss it, rather than in the hurried last-minute rush that characterized its consideration on the floor, the differences between the various factions involved would have been easily adjusted.

I am moved to vote favorably, because I believe that the continuation of the act involved is an important factor in the President's recovery program. I understand that he

wishes it to pass and I am glad to cast my vote to assist him in carrying out any program which he may undertake.

I feel that support is more important to the administration today than it has been at any time during the past year. Our national hysteria is passing, the desperate plight of the Nation has been considerably improved, and on all sides we hear murmurings of the selfish individuals—many of them politically opposed to the administration—who would seek to make capital of any weak spots that may develop. For the Democratic Party to split over an issue of this kind and thereby to drive what might be the first entering wedge in the administration would, I believe, be a serious mistake. I shall therefore support the bill.

Mr. DINGELL. Mr. Speaker, I rise at this time in opposition to H.R. 7963, a bill to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes.

I cannot arrive at a compromise with my conscience on this all-important question, because I have always been of the impression that the monetary system and the regulation thereof should be vested in the hands of Congress solely, as the Constitution provides. I am opposed to the further extension of this usurpation of power and of privilege to the Federal Reserve System, composed of private corporations. The committee report makes clear my contention that this bill is primarily a bill of monetary inflation, and Mr. GOLDSBOROUGH, ranking member of the Banking and Currency Committee, admitted that that is its prime purpose. The report on the bill states that—

> In February 1932 Congress passed an act amending section 16 of the Federal Reserve Act providing that until March 3, 1933, the Federal Reserve Board might, upon an affirmative vote of not less than a majority of its members, authorize the Federal Reserve banks to offer and the Federal Reserve agents to accept Government bonds as security for Federal Reserve notes in the same manner as collateral theretofore eligible as such security.

Now I should like to ask why it is that the Government of the United States must fall back upon the Federal Reserve Bank System for an inflationary measure and why it is that the Government of the United States will permit the bankers to inflate the currency, when the Government itself has been reluctant up to the present time in increasing the monetary base. I call your attention, Mr. Speaker, to the fact that the bankers were permitted to inflate the currency during the extraordinary session to the full extent of the amount of certain Government bonds in their possession. At that time the distinguished Chairman of the Banking and Currency Committee told the Members of the House of Representatives that it was an essential part of the administration program and that it was necessary to relieve the credit situation of this Nation. We find at a closer examination that the bankers were permitted to print a tremendous amount of new currency, which was loaned out to industry in but small dribbles, sums of no consequence whatsoever, while the bulk of this money was again reinvested in Government securities. The example cited by the distinguished Member from West Virginia [Mr. EDMISTON] shows conclusively that even the reorganized banks over the country, after being reestablished on a new and substantial basis, are using the money for the purpose of acquiring additional Government securities and not for the purpose of relieving the credit situation. Distressed industry and our merchants have derived no benefit from the previous action, and now we are faced again with the same request which is brought before the House at the eleventh hour, and we are expected to swallow it irrespective of whether or not the measure is digested.

The members of the Federal Reserve System come before the Congress of the United States and ask that they be permitted to print additional currency secured by the bonds which they have purchased with money which was printed after being secured by bonds which they had previously purchased. This practice will continue so long as the Congress of the United States is willing to submit abjectly to the will of the bankers, and in this respect I am not willing to bow my neck and accept the yoke of Wall Street. I am for an orderly expansion of the currency and for as nearly as possible a direct benefit to the people, for direct assistance to distressed industry, to the merchant, and to the home owner. In this respect the banker has failed miserably. He has made every effort to make his own position secure by a marginal safety in what is called "liquidity." I cannot conceive why it is that this same element, and I refer to the bankers—and let me distinguish at this point between the honest, conscientious banker who attempts to serve his community and the international, or Wall Street, banker—can come before this Congress and ask for an inflation backed by Government bonds when it will stand opposed to any inflationary movement in which the people will have a direct equity.

Let me call your attention specifically to the bonds which are in the hands of the ex-service men, secured by the sacred promise of the United States Government to pay in adjusted compensation in the year 1945 to each and every holder thereof the full face amount due the holder. It is manifestly clear, and my statement is unimpeachable, that the adjusted-compensation certificates are just as much a bond and an obligation of the Federal Government as are the Liberty bonds and/or any of the emergency bonds which are being issued at the present time, and as a result that these bonds should be eligible, being deposited with the Treasurer of the United States, to form the basis for an orderly expansion of the currency in the selfsame way and through the selfsame process as that which is proposed by and for the benefit of the bankers connected with the Federal Reserve System. It is my contention that if the United States Government will permit the printing of currency secured by the adjusted-compensation certificates, this money will be placed in the hands of the common man, who is entitled to first consideration under the "new deal." The redemption of the adjusted-compensation certificates will distribute money into every State, every county, every city, and every village of the United States. In every Territory and detached possession—in fact, directly and indirectly—new money will be placed within the reach of every family in America. No stretch of imagination is necessary to portray the results of such action on the part of Congress. It will do more to relieve the present depressed state of the Nation than any other single thing thus far enacted or contemplated. The ex-service men will buy new cars, radios, will install telephones. They will proceed to pay off the grocer and the butcher and other merchants in their community who have extended credit in the past. It will bring money into circulation, and this money will eventually come into the hands of the bankers as deposits in one form or another, and in this respect the inflationary measure, under which the ex-service men will be the medium of distribution, will be of more benefit than any movement or measure under which and through which the banker and the banker only will be the beneficiary.

I cannot support this bill inasmuch as liberal amendments, such as the Brown amendment, have been crushed by an unjustified opposition. Evidently, it is intended that the stranglehold upon the people of this Nation should be made permanent and that the money changers shall reside within the temple in the future as he has in the past.

I am willing that the people of my district sit in judgment on my action in this instance and I make no apologies for the fact that I cannot compromise with Wall Street bankers when the best interests of the people are at stake. What I cannot get through my head, and not a single Member of this House has ever been able to explain to me, is why it is wrong to inflate the currency of the United States Government and expand the currency system in accordance with the needs of the people, when it is all right to do so for the specific benefit of the bankers. Moreover, I should like to know and I have never received an explanation of why it is that bankers will condemn the payment of the adjusted-compensation certificates with currency secured by depositing these certificates, when this same principle has been, in effect, applied for the benefit of the bankers heretofore and when this same method is again authorized by the provisions of this bill.

I am obliged to record my vote in opposition and in doing so I am consistent with my previous actions in voting for

and supporting the guarantee deposit law and in demanding investigation of the bank situation in my State in similar progressive measures.

Mr. WEIDEMAN. Mr. Speaker, on March 3 this branch of Congress was asked to vote on H.R. 7963, a bill to extend the period during which direct obligations of the United States interest-bearing bonds may be used as collateral security for Federal Reserve notes.

This bill was submitted under a rule giving very limited debate and with very little time allowed for its intelligent and free discussion and consideration. On the surface this bill asked for an extension of time of a similar bill passed in February 1932. At that time this same bill was brought up under a rule of the most drastic sort, as the gentleman from Texas [Mr. BLANTON] said on February 15, 1932:

This most important measure is not before the House under the ordinary rules, which would permit it to be safeguarded by proper amendments. It is called up under a suspension of the rules and has to be passed just as it has been proposed by the committee, and not 1 of the 435 Members of this House can propose a single amendment to it. It cannot be amended in any particular. We have to vote for it just as it is, without the changing of a dotting of an "i" or the crossing of a "t."

He further said:

These Federal Reserve banks have squeezed, robbed, wrecked, and ruined many banks, merchants, and citizens all over the United States, and I condemn them for it.

Quoting further, he says:

The huge, unearned salaries they are paying their officials and employees are a stench in the nostrils of all Americans at this time, when millions of men are without jobs and women and little children are starving all over the United States. Just think that they are paying some of their officials annual salaries of $25,000, $30,000, $35,000, $40,000, and $50,000 a year, when people are starving, and the time has come when we ought to stop this abuse and require them to respond to us with proper information.

I want to bring to the attention of the Members of Congress and the taxpayers of America that the Federal Reserve banks have not mended their ways, and every penny that is collected as an interest payment by the Federal Reserve banks is exacted as a tribute, without any moral right so to do, from the workers, farmers, and laborers of this country, either directly or indirectly.

I want to bring to the attention of the House that on the consideration of this bill in the committee in 1932, General Dawes—whose last claim to fame was that he borrowed $90,000,000 for his own personal bank in Chicago—appeared in favor of the bill, as did Ogden Mills, the protector of the vested interests under Hoover; but all the testimony we get in the committee report as to what he—Dawes—said is the following—and I am quoting from the statement of our former Member of Congress, LaGuardia:

General Dawes thereupon addressed the committee, his remarks not being stenographically reported, at his own request.

LaGuardia further said:

It is indeed a sad commentary on the banking system of our country when it is admitted that $2,000,000,000 have been withdrawn from the banks and are being hoarded. This is a reflection and to the everlasting shame of the bankers and the system which they have created; and no criticism of the thousands and thousands of persons who have lost millions in bad banks and unsafe securities. I fail to see that even in this bill, with its unlimited latitude and tremendous powers, anything that will guarantee to us that the small business man, the manufacturer, or the merchant will get credit any easier than during the last 2 years. All that we hear is "help the banks; help the railroads"—loans of all sorts to both—and leaving to their tender mercies relief of any kind to the merchants, business men, and manufacturers. After all, the return of normal conditions depends on increased business with increased employment.

And from the working of the original act, passed in 1932, the result predicted by Mayor LaGuardia was a true forecast. On February 15, 1932, the Chairman of the Banking and Currency Committee said, on page 3964 of the RECORD, the following:

There is a certain delicacy involved in the discussion of credit and banking that forbids that reference to matters of that kind be published to the world, if we are to deal constructively with great and important affairs such as were before the Committee on Banking and Currency when the distinguished gentleman appeared before us.

And it is my personal opinion that if the citizens of this country were informed of all the conditions surrounding the issuance of currency, the floating of bonds, and the paying of interest and the total cost to the country each year, they would have long ago declared that the paying of interest as tribute should now be at an end. The gentleman from Alabama further said, specifically referring to section 3 of the act then before the House:

It makes possible expansion, not a wild inflation, but sufficient expansion to counteract the horrible deflationary policies and practices in which we find ourselves engulfed at this time in the United States. That is what we are trying to do. That is all there is in this provision respecting note issues by the Federal Reserve banks. It is not a wild scheme. It is to be kept under the control of the Federal Reserve Board. The provision is limited in operation to a period of 1 year. We could not inflate to any dangerous extent so long as the gold requirement is retained. I will say also, in this connection, that if the Federal Reserve Board is to be judged by its conduct in the past, nobody need fear that we are in for a wild period of inflation through the operation of this law, so long as it is under the control of the Federal Reserve Board of the United States.

But remember the Federal Reserve bank is a private bank. I am inclined to believe that when he said we would not have any wild inflation he was correct. And the facts follow that instead of inflating, the total amount of commercial loans and discounts in this country in 1933 was much lower than in 1932, so if the Federal Reserve banks received an issuance of Federal Reserve notes under this act, and industrial and commercial loans were lessened instead of increased, the Federal Reserve banks must have been using their money in the purchase of interest-bearing Government bonds. In the CONGRESSIONAL RECORD of March 3, 1934, in a discussion on this bill, in reply to a question as to whether these notes would be used for a further extension of credit or for a further shrinkage, Mr. GOLDSBOROUGH, the gentleman from Maryland, replied:

I think that they will be used to extend credit to the Government.

And, further—

The money is being loaned to the Federal Government at the present time.

And it was not loaned back to business and industry as intended.

I believe that the gentleman from Maryland correctly stated where this money issued under this bill was going; it was being loaned back to the Government. This same money issued by the Federal Reserve agent to the Federal Reserve bank at one thirtieth of 1-percent interest was being used to purchase more Government bonds bearing from 3- to 4-percent interest. In other words, the Federal Reserve banks were getting money from the Government at one thirtieth of 1-percent interest and were reloaning the same identical money to the Government and receiving Government bonds bearing interest of from 3 to 4 percent. The United States is paying the private bankers for the use of the Government's own money from $30 to $40 per thousand per year, while it costs the banks only 30 copper cents.

Under the new bonds to be issued by the Government the bankers have promised to do the people of the United States a favor and charge only 2⅞-percent interest.

While many Members of the House believe in this form of financing they will not get behind a bill such as the Frazier bill to loan money to the farmers to save their farms, at 1½ percent interest, and they will ratify the loaning to the Federal Reserve banks, which are private banking institutions, Government money at one thirtieth of 1-percent interest. Under the Frazier-Lemke bill the farmer pays 50 times as much as the banker.

If this bill embodies a sound policy, which is a comparative term, then the House and Senate should pass without hesitation the Weideman bill (H.R. 8286) authorizing the Reconstruction Finance Corporation to make loans direct to municipalities and other governmental subdivisions at an interest rate not to exceed 1½ percent, said loans to be secured by tax-anticipation warrants, short-term notes, delinquent-tax certificates, or other collateral as the R.F.C. board may deem adequate.

The passage of this bill would save many municipalities and other governmental subdivisions from bankruptcy, and would enable cities, townships, and so forth, to pay up their indebtedness and not default on their obligations, and would guarantee the payments of municipal and county bonds heretofore issued.

Take, for example, the city of Detroit, whose bonded indebtedness amounts to approximately $400,000,000. The city of Detroit has now balanced its budget and is living within its income, but it has an inherited deficit of $13,000,000 which it is carrying on its budget from year to year. In order to carry on the city's business it is necessary for the city to issue scrip bearing interest at the rate of 5 percent per annum. Each time the city has scrip printed there is a printing cost of about $35,000. Therefore, the yearly cost to the taxpayer to carry this scrip, which is used because the bankers claim they cannot loan the city the necessary money needed through short-term obligations, is $650,000 for interest and $35,000 for printing, a total of $685,000. If H.R. 8286 were made a law, the R.F.C. could loan money to the city of Detroit and other governmental subdivisions and cities at the rate of 1½ percent per annum. Under this bill, the cost to the city of Detroit would be $195,000 per year, a saving of $490,000 per year. If municipalities were loaned money at the same rate as the Federal Reserve banks are loaned money, the cost would only be $68,500 per year.

The point I want to make is this: The additional payment of interest is nothing but a bonus for the bankers, paid for by the taxpayers, for which they are rendered no service, and for which they receive nothing in return.

The exorbitant interest demanded by bankers is the reason for the high taxes now levied; it is the reason why, in the name of economy, the salaries of teachers, policemen, firemen, and city employees have been generally reduced. So the divisions of Government could live within their income, so they could continue to pay their tributes to the bankers.

It is about time for the citizens of the United States to again say: "Millions for defense, but not one cent for tribute."

If the illustration were carried further, again using the financial condition of the city of Detroit as an example. The interest charges on the bonded debt of the city of Detroit amounts to $19,000,000 a year on a bonded debt of approximately $400,000,000, a rate of about 4½ percent per annum. If the city's debt could be refinanced by the Government at 1½-percent interest per annum, the city of Detroit would save two thirds of the money it is paying out for interest, or $12,666,666.

It could wipe out its deficit in 1 year, and our municipal employees could be paid a decent salary again, increase their purchasing power, and help this country on the road to prosperity. If the Government can loan money to the private bankers, the Federal Reserve System, at one thirtieth of 1-percent interest, it could make money by loaning the cities money at 1½-percent interest.

There is one serious objection to my plan, and that is that it will not allow the private bankers and buyers of tax-exempt securities to further enslave our citizens. This plan will not meet with the approval of the international bankers, whose only aim in life is to keep us in bondage and to exact their tribute from each and every one.

To get back to the year 1932, on February 15, the gentleman from Massachusetts [Mr. LUCE] said:

> We are here to save the country from impending danger. I shall not particularize but will point out to you that such action as we are now taking by methods justified only under the most imperative circumstances may of itself testify to the extreme need of action—not of finding fault, not of reviewing ancient history, not of discussing wages, but of saving the financial structure of the United States; and before any man casts his vote against a proposal to that end, recommended by 20 out of 21 members of your Committee on Banking and Currency, recommended by your trusted leaders of both parties, recommended by those who are in charge for the moment of the financial destinies of the land—before he for some unrelated reason casts his vote, let him ask of himself what will the people of the United States think of his attitude in this grave hour of peril.

In two market days the very proposal of this measure added $5,000,000,000 to the value of what we commonly speak of as securities—$5,000,000,000 brought by a ray of hope, brought by the certainty in the mind of the business world that this proposal would open the doors of the banks; that this would send the money out into circulation; that this would turn the wheels of industry; that this would set the tractors going over the plains; that this would renew the activities of the land.

I know well that some short-sighted critics will say that we are doing this for the benefit of the speculators, will say that we are only helping those who gamble in the market. Nothing could be further from the fact. We are doing this to help the banks in order that the banks can help us, in order that the banks now keeping untold millions hoarded through fear of withdrawals of deposits may gain courage in order that they may with safety proceed again to make loans and thus spread the feeling of confidence that alone can bring us out of this crisis.

Well, we followed the course prescribed by the committee, and what happened? Five thousand million dollars were added to the value of securities which were nearly all held directly or indirectly for the benefit of the bankers. And did this action in the year 1932 open the doors of the bank? No! Within 1 year the doors of every bank in the Nation were closed. Did the banks send the money out into circulation that would turn the wheels of industry? No! The actual facts shown by economic surveys are that the total of commercial loans and discounts in this country were lower in 1933 than in 1932. And I leave it to you as to whether or not the banks released their hoarded millions and spread the feeling of confidence throughout the country.

It is further said:

> In all times of great national distress men have turned to individuals and have trusted them with temporary power, power that under other circumstances might seem extreme, might seem full of danger, but which in times of crises is necessary for national preservation. Because such a time is upon us, because the need exists, an imperative, commanding need, I pray that no man may hesitate to entrust this power to men whom we know in our hearts will be patriotic men, will be unselfish men, will have only the welfare of the country at heart, and will use their power for the common welfare.

And within 1 year after the gentleman from Massachusetts engaged in this great display of patriotic oratory, every bank in the country was closed and people driven to the depths of despair like this country had never known before.

The gentleman from Maryland said in 1932:

> The laboring man, the man who lives from day to day, is always the first consideration.
>
> Now, the Federal Reserve System is thoroughly aware of the purposes of this bill. It is thoroughly aware that the purpose of it is to give the Federal Reserve System an opportunity to go into the market and start raising the price level and reestablish the confidence of the people. They are honorable men. They are men of ability. They are men of experience. They have not always in the past used their powers in the way I would like them to, but they have a magnificent opportunity for the demonstration of a high-class and unselfish Americanism, and I believe they will make fine use of this opportunity.

And he guessed wrong then, and in 1934 he says, on page 3644 of the CONGRESSIONAL RECORD:

> Sometimes it is unwise to explain the purpose of a measure, but in my opinion it is necessary to go into detail about the necessity for this legislation at this time. The administration has gone a long way in its effort to drive the money changers from the temple. The people of the United States are not yet ready, in the judgment of the administration, for a managed currency; they are not yet ready for the issuance of money without some sort of reserve. The public is in the habit of having the Government issue its bonds when it needs money for public purposes. Unless this bill is passed, the market for Government bonds will drop immediately.

And further—

> I want to make a statement that I did not make yesterday, and that is, you cannot sustain the bond market unless this extension of time is given. Unless the Government can market its bonds, under our present set-up we cannot carry on the extensive public works now in the process of being worked out.

I challenge the statement that the Government is dependent upon the payment of a tribute, in the form of interest collected on Government bonds, in order to carry out its program. Just a short time ago our President of the United States stated that there must be a general scaling down of interest charges.

We are at the crossroads today, to decide whether or not we as Members of Congress are willing to help cut the shackles that are bearing down upon the American public by declaring our financial independence and by saying no tribute shall be paid to private bankers henceforth in the form of interest. When we take that step our work will have been complete.

Compared to the dangers in this bill, and the dangers of our past financial policies, a highwayman and a safe blower is a gentleman and the racketeer is an angel. The citizens of the United States are paying a yearly toll of $15,000,000,000 to bankers for interest covering all sorts of loans. Do you want this to continue?

The Federal Reserve bank, according to this bill, can take a billion dollars in United States bonds and hypothicate them, but still have them draw interest to the bank at 3 to 4 percent and pay the United States Treasury approximately $300,000 and receive $1,000,000,000 in new money. They can take the billion in cash and buy a billion in bonds, then take the second billion of bonds and three hundred thousand in cash and receive another billion of new money, and with that cash buy another billion of bonds. They can again take the billion of bonds and three hundred thousand of cash and receive another billion in cash, and so on, just like a dog chasing his tail, until the bond issues are completely taken up.

One billion in bonds and $2,700,000 in cash will float the entire bond issue of $9,000,000,000. That is, on an investment of $2,700,000 the Federal Reserve bank can have $9,000,000,000 drawing an interest of $258,750,000 annually, almost a million dollars for each working day of interest. That is 95.219 percent per year on the investment, or 26.06 percent daily interest. That is exactly what the terms of this bill gives to the Federal Reserve bank, a private corporation, and some of the gentlemen on the floor say it is necessary that we give these interests this bonus.

All other robberies in history are pikers as compared with this hold-up.

Suppose you gave the farmers of the Nation that kind of a chance to hold up the Government, it would read like this: Government sells farmers wheat at 30 cents a bushel and then buys back the same wheat and pays the farmer $28.75 for the bushel, then sells it to the farmer again at 30 cents and again buys it back at $28.75, and so on; more than that, the farmer would have all the natural results of the bushel of wheat. It would be his wheat and dole, too.

It would be like the grocer selling the same can of sardines nine times and still have the same can on his shelf. Extract nine profits and have it ready for the next customer. Why, a one-horse independent grocer could make money at that. We are actually giving that privilege to the chain grocers, the owners of the banks and chain stores, through this bill, and we wonder why the chains are outstripping the independents.

This bill is the sum total of all robberies ever pulled off in all history. Beside it all other robberies are but molehills as compared with this mountain of privilege.

The same method that the private bankers use in this bill is the method that could be used to pay off the soldiers' adjusted-service certificates, the only difference being that no one would be paying interest on the currency issued to pay the bonus to the soldier. There is no new principle of issuing money under the terms of the Patman bill, H.R. No. 1. The amount paid to the veterans will be permanent circulating medium and of the same wording, form, size, and denominations as United States notes issued under existing law and now in circulation.

So all may understand the purpose for which the adjusted-service certificates were issued, I quote the gentleman from Texas [Mr. PATMAN], who on February 20, 1934, clearly explained this. And there is no one in the House who can refute the facts, which are as follows:

There are 3,545,284 certificates as of January 1, 1934, of the aggregate face value of $3,543,981,515. Three million nineteen thousand five hundred and eighty-two of these veterans out of a total number of 3,545,000 have borrowed money on their certificates. They have borrowed $1,340,659,199.38, leaving a remainder due of approximately $2,200,000,000, and if that money is paid, it will go into every nook and corner of the Nation. It will not only benefit these veterans but it will benefit everybody. It will find its way into the local banks, and there be used as a reserve for the issuance of ten additional dollars for every dollar of reserve. That will help the country generally, as the people are very much in need of additional purchasing power. This will not be giving away $2,200,000,000, but it will be paying $2,200,000,000 on a debt that Congress has heretofore confessed was due to the 3,545,284 veterans in the United States.

HOW AMOUNT OF ADJUSTED-SERVICE CERTIFICATES ARRIVED AT

The committee that passed on this matter ascertained that there was a difference of between $1 and $1.25 a day between the pay received by the lowest-paid laborer in the United States during the war and what a private in the United States Army received. Many laborers in civilian life received several times as much as the lowest-paid laborers and the skilled workers received very high wages. Therefore the committee said we should at least compensate the soldiers to the extent of that difference between what the lowest-paid laborer received and what the average private received, the difference being between $1 and $1.25. Congress allowed them the $1 a day for home service extra, and $1.25 a day extra for service overseas. If this money is paid as of the time they rendered service, the full amount was due October 1, 1931. The reason it is not due now on its face is because there were 7 years from the time the services were rendered to January 1, 1925, the date of the certificates. The veterans were not allowed interest. So if you will go back and date the certificates as of the time they rendered the service and give the veterans the customary rate of interest paid to everyone else connected with the war, the full face value of each certificate was due on October 1, 1931, and this bill provides that no interest shall be charged the veterans subsequent to that time. I believe it is the best means, it is the best vehicle, that has ever been proposed to put purchasing power into the hands of the masses of the people in every nook and corner of the Nation.

CONTROLLED EXPANSION OF CURRENCY

House bill 1 provides for controlling expansion of the currency and the immediate payment to veterans of the face value of their adjusted-service certificates in new currency—United States notes. These notes will not bear interest and will be lawful money of the United States and shall be maintained at a parity value with the standard unit of value fixed by law. No new principle of issuing money is involved. Such notes shall be legal tender in payment of all debts and dues, public and private, and shall be receivable for customs, taxes, and all public dues, and when so received shall be reissued. Such notes, when held by any national banking association or Federal Reserve bank, may be counted as a part of its lawful reserve.

The State of Michigan would receive $85,418,613 if the adjusted-service certificates were paid. The various counties in Michigan would receive the following amounts:

Alcona	$88,005.96
Alger	164,528.28
Allegan	687,501.36
Alpena	327,645.36
Antrim	176,029.56
Arenac	141,243.48
Baraga	161,723.52
Barry	369,169.92
Bay	1,225,521.36
Benzie	116,194.68
Berrien	1,430,004.24
Branch	422,478.00
Calhoun	1,535,438.52
Cass	368,464.32
Charlevoix	211,344.84
Cheboygan	202,895.28
Chippewa	441,829.08
Clare	124,044.48
Clinton	426,429.36
Crawford	54,631.08
Delta	569,419.20
Dickinson	528,159.24
Eaton	559,681.92
Emmet	266,522.76
Genesee	3,733,347.24
Gladwin	130,959.36
Gogebic	557,018.28
Grand Traverse	352,994.04
Gratiot	533,645.28
Hillsdale	483,635.88
Houghton	932,291.64
Huron	549,168.48
Ingham	2,056,594.68
Ionia	619,040.52
Iosco	132,599.88
Iron	367,000.20
Isabella	372,662.64
Jackson	1,628,242.56
Kalamazoo	1,611,731.52
Kalkaska	67,014.36
Kent	4,242,614.04
Keweenaw	89,540.64
Lake	71,724.24
Lapeer	500,058.72

Leelanau	144,753.84
Lenawee	879,336.36
Livingston	339,993.36
Luce	115,153.92
Mackinac	154,932.12
Macomb	1,360,855.44
Manistee	307,094.76
Marquette	777,500.64
Mason	330,855.84
Mecosta	277,618.32
Menominee	417,221.28
Midland	337,806.00
Missaukee	123,338.88
Monroe	925,835.40
Montcalm	484,588.44
Montmorency	49,638.96
Muskegon	1,492,873.20
Newaygo	300,391.56
Oakland	3,726,467.64
Oceana	243,520.20
Ogemaw	116,335.80
Ontonagon	196,050.96
Osceola	225,897.84
Oscoda	30,481.92
Otsego	97,972.56
Ottawa	967,695.12
Presque Isle	199,861.20
Roscommon	36,250.20
Saginaw	2,129,447.88
St. Clair	1,191,811.32
St. Joseph	540,101.52
Sanilac	489,527.64
Schoolcraft	149,075.64
Shiawassee	697,079.88
Tuscola	580,955.76
Van Buren	575,716.68
Washtenaw	1,155,949.20
Wayne	33,321,007.44
Wexford	296,828.28
Total	$85,418,613.00

The Fourteenth Congressional District of Michigan would receive over $6,000,000.

Do you not think that we all would benefit if this amount of money was used to increase supply of money and the purchasing power of the people? And do not forget that the money which we would use to pay off the debt to the soldier would be the same kind of money we are using to pay the bonus to the bankers for which the bankers contribute nothing, but use to exact a tribute from the people in the form of money loaned to them or their divisions of government for a price, the payment of interest. The payment of the adjusted-service certificates will put money into the hands of nearly 4,000,000 veterans who will use it to purchase goods they have so long needed, pay taxes, and put it in the channels of business. This money will not be hoarded, but spent. The circulation of this money will help the President's program and may be the one thing necessary to guarantee it success.

So the paramount issue of today is this: Shall the Government of the United States be run for the benefit of the international bankers or shall the citizens of the United States be given the right to "life, liberty, and the pursuit of happiness"? Shall we replace the Statue of Liberty with the golden statue erected to the god of greed? Shall we forget that the only time our Saviour used force was when he drove the money changers from the temple? Let us reestablish the principle that we all believe in: That all men are entitled to a right to work, to own their own homes, to reap a just reward for their labors, and to enjoy nature's sunshine as God intended. We owe it to our children that we shall not depart and leave them in a condition of bondage and slavery to organized greed and gold.

Inheritances and incomes must be limited so the powerful few cannot have it in their power to control the life and destiny of the many. The lifeblood of labor shall not be further transfused by the payment of interest.

Mr. LEMKE. Mr. Speaker, there is danger ahead—the Government is still trying to get prosperity by borrowing—by issuing billions more of tax-exempt interest-bearing bonds. By the end of this year, it is said, this Nation's debt will be some $32,000,000,000. The average interest on this huge sum will be about 3½ percent, which amounts to $1,120,000,000 per annum. This is the national debt. It does not include that of States, counties, cities, and other political subdivisions. These States, counties, cities, and other political subdivisions, as well as individuals, have all stretched their credit to the limit.

This Nation is bankrupt; every State in this Union is bankrupt; the people of the United States, as a whole, are bankrupt. The public and private debts of this Nation, which are evidenced by bonds, mortgages, notes, or other written instruments amount to about $250,000,000,000, and it is estimated that there is about $50,000,000,000 of which there is no record, making in all about $300,000,000,000 of public and private debts. The total physical cash value of all the property in the United States is now estimated at about $70,000,000,000. That is more than it would bring if sold at public auction. In this we do not include debts or the evidence of debts, such as bonds, mortgages, and so forth. These are not physical property. They will have to be paid out of the physical property. How are we going to pay $300,000,000,000 with only $70,000,000,000? It cannot be done unless we first put more money into actual circulation—not by doubling it in the hands of a few but by putting it into circulation among the people. Let Wall Street call that debasing of the currency and make the most of it. We are more concerned with not debasing American manhood and womanhood.

At 5 percent the interest on this vast indebtedness amounts to $15,000,000,000 annually, or $120 a year for every man, woman, and child. The amount of money in actual circulation in this country is about $2,000,000,000—by that I do not mean money lost or destroyed, hoarded, or in foreign countries. Therefore, in order to pay the interest on our public and private debts, each dollar in actual circulation—in actual use—will have to be used as a revolving fund and be paid over seven and one-half times a year.

Yet in spite of this vast indebtedness, in spite of these dizzy, incomprehensible figures, millions of our people are forced to seek a position on the Federal pay roll or on a disguised dole system. There is not enough money among the people to enable them to employ and utilize the energy of these men and women in necessary and useful work—there is a money famine. We have made beggars out of a once proud people. States, counties, cities, school districts, and other quasi-public institutions are all asking for help from the Federal Government. Some of these are offering so-called "frozen assets" as security for loans, forgetting that these assets are no longer frozen but have long since evaporated. There is danger ahead, a collapse, and a collapse means devastation and destruction.

What, then, caused this condition? It was caused by the monopolization—not of the wealth of this country but of the medium of exchange—the monopolization in the hands of a few financial monarchs of the money of the country—the unit of exchange. This was brought about by skillful manipulation of the currency, by a monopolizing tariff, by gambling in stocks and bonds and the necessities of life. It was brought about first by virtually doubling the money in circulation through the Federal Reserve banks during the war and then by cruel, brutal, and inhuman deflation, by virtually cutting in two the money in circulation.

May we ask what is money? What is its purpose and its function? Money is not gold; it is not silver. Money as such has no intrinsic value; it is a unit of exchange, a measure of values, a common denominator with which we measure the comparative values of commodities; it is a yardstick with which we measure the comparative values of the things produced by the energy of a people. Money is made by law; demonetize gold today and remonetize silver, and gold would be worth less than silver.

We have heard a great deal about real money and bank money—credit money. It may be well for us to find out just what credit money—bank money—is as compared with real money. In plain words, credit money or bank money is just hot air; it is make-believe money that does not exist. Bank or credit money is a condition where all the banks of this Nation have on deposit, as they had on January 9 last year, $42,000,000,000 and only $684,000,000 of actual money with which to pay the $42,000,000,000. How could

they pay $62 with only $1? That is why we had the bank holiday. The difference between $42,000,000,000 on deposit and $684,000,000 of actual money in the banks is credit money or bank money. In other words, bank money or credit money is imaginary money on which the banks draw interest. The trouble with us is that we have too much bank or credit money and not enough real money. What we need is enough actual money in actual circulation to do the Nation's business and less imaginary bank money or credit money.

To loosen this strangle hold upon our people we propose as a remedy the Frazier-Lemke bill. This bill provides that the United States Government shall refinance existing farm indebtedness at 1½-percent interest and 1½-percent principal on the amortization plan, not by issuing bonds but by issuing Federal Reserve notes secured by the best securities on earth, first mortgages on farm lands; better security than gold or silver, because you cannot eat gold or silver but you can eat the products that grow on the farms, therefore your life depends upon the farms. They are the best security on the face of the earth. If our Government has enough intelligence to do this, it will make a profit of $6,345,000,000 at 1½ percent interest in 47 years, the time required for amortization of the farm indebtedness.

Let us compare the Frazier-Lemke bill with the one passed by the special session of Congress, written in New York in the atmosphere of the money changers. Under that bill, if all the farm indebtedness were refinanced, the farmers of this Nation would pay $12,492,500,000 in 39 years to the coupon clippers. Under the Frazier-Lemke bill, the farmers would have to pay just $6,149,500,000 less interest in 47 years, and, at the same time, the Government would make a net profit of $6,345,000,000, and to that extent lessen our Federal tax burden.

Under the present Farm Mortgage Act the farmer is asked to pay 4½-percent interest if he lives in a Federal Farm Loan Association district and 5 percent if he does not, and in addition pay 1 percent for administration and buy stock in an amount equal to 5 percent of the loan, making 10½ or 11 percent for the first year and thereafter 4½- or 5-percent interest, together with 1 percent for amortization, making 5½ or 6 percent annually until paid. While under the Frazier-Lemke bill he will pay 1½-percent interest and 1½-percent principal, or $30 for each thousand dollars borrowed for approximately 47 years. Under the Frazier-Lemke bill a farmer could carry a $17,000 mortgage loan, as far as his ability to pay goes, as easily as a $5,000 loan under the present law. The Frazier-Lemke bill takes into consideration the farmers' ability to pay.

Our Government now prints Federal Reserve notes and gives them to the Federal Reserve banks at 0.7 of 1 cent per bill—the cost of printing. It makes no difference whether that bill is a one-dollar bill or a thousand-dollar bill—or whether they keep it for 1 year or for 20 years—all they ever pay your Uncle Sam for it is 0.7 of 1 percent per bill. The amount of all the paper money given by the Government to the banks amounted on January 1 last to over $4,878,500,000, of which amount over $3,332,000,000 were Federal Reserve notes.

After your Government had given all this money to these bankers, it found it necessary to borrow back some of the money that it gave away. It had to sell bonds. The amount of these bonds together with certificates of indebtedness on January 31 last amounted to over $25,000,000,000 and will be, it is claimed, some $32,000,000,000 by the end of the year. These bonds bear interest on an average of about 3½ percent and are tax exempt. In other words, these bankers used the $4,878,500,000 paper money which your Government gave them as a revolving fund with which they bought the $25,000,000,000 tax-exempt, 3½-percent, interest-bearing bonds and certificates.

These bankers not only now have the $25,000,000,000 tax-exempt, interest-bearing bonds and certificates but they also have the $4,878,500,000 of paper money which your Government gave them and which they used as a revolving fund to buy these bonds. At this time the Government is borrowing about a billion dollars a month. It prints tax-exempt, interest-bearing bonds to that amount and hands these over to these bankers, and in return the bankers hand to the Government deposit slips. No money is exchanged—the whole thing is merely a bookkeeping transaction. The banks draw interest on the bonds, but the Government draws no interest on the deposit slips. The Government checks on these deposit slips and the persons who receive the checks redeposit them in the banks. The Government, of course, is short changed. If the banks need more money as a revolving fund, they take these bonds and put them up as security for more Federal Reserve notes.

Congress, in passing Senate bill 2766 last Saturday, extended the privilege for 3 years more to the Federal Reserve banks, of buying tax-exempt, interest-bearing bonds and then putting them up with the Federal Reserve Board and receiving Federal Reserve notes—money—for seven tenths of 1 cent per bill—the cost of printing. There is no limitation—the sky is the limit. In other words, the Government farms out the right to have money issued to the banks and they agree to buy tax-exempt, interest-bearing bonds with money that the Government gives them for nothing. In that way the Government can continue to borrow on the one hand by issuing tax-exempt, interest-bearing bonds for the bankers at the expense of the taxpayer, and on the other hand, print the money for these banks until the whole credit structure of this Nation will fall.

There was great confusion and resentment on the floor of the House of Representatives when the party leaders of both parties brought this bill up for consideration on Friday. The majority of the Members then seemed determined to stop this vicious practice of issuing money and giving it to the banks for nothing and then borrowing it back again by issuing interest-bearing tax-exempt bonds. To save the day for this bill, the House was adjourned. The next day, strange as it may seem, the bill that could not have been passed the night before, was passed with only 38 dissenting votes.

To one unfamiliar with how laws are made, it would seem as it did to Alice in Wonderland, where things seem real but are not. No voice was heard about fiat money, soft money, nor yet about debasing the currency. The dying shadows of a past civilization, slaves of a dying monetary system won a temporary victory. The bill which pays tribute to the bankers for doing that which it is clearly the duty of the Government to do was passed. We have this consolation, however, that there will be an end to dreamland. It may take another election or two, but ultimately the public wrongs will be righted and the people will triumph.

If our Government can print paper money for the bankers, why can it not do it for the farmers? Why not do it for agriculture? Why not issue Federal Reserve notes secured by better security than the bankers put up—secured by the farms of this Nation? Why not do the reasonable thing—the intelligent thing—the only thing—and pass the Frazier-Lemke bill? When this bill becomes a law, it will reduce a farmer's indebtedness by three fifths in 47 years because of the lower rate of interest, and in addition the Government will make a net profit of $6,345,000,000. On a $10,000 loan the farmer will save $24,000 in interest in 47 years and the Government will make $1,100 net profit. What does that mean to you business and professional men and women? It means that this farmer will spend that $24,000 at home; that he will buy the things that he is so much in need of; and that the wheels of progress will start moving. We will have stopped making beggars of a once proud people. There will be no further need of a disguised dole system—of tax-exempt interest-bearing bonds.

This bill is right in line with the President's monetary policy. The mere seizing of the monetary gold of this Nation by the Government and increasing its value by lowering the gold content in the dollar, while it will make several billion profit for the Government, will not in itself help agriculture or industry unless the medium of exchange—the money in circulation—is also increased. Making gold dearer and thereby making money that is in our possession—silver and paper—cheaper will not expand the currency but, on the contrary, contract it.

Congress must supply the next step—the Frazier-Lemke bill—when Congress passes that, then there will be issued and put into circulation among the people several billion dollars of new money, Federal Reserve notes. It will again give purchasing power to the people. The farmer will pay his banker, his merchant, his lawyer, and his doctor, and they in turn will pay their bills, and all will start in again repairing and improving their homes. Unemployment and starvation will cease. The enforced idleness of millions of men and women will disappear, and we will hear no more of overproduction. Consumption will again be normal; real prosperity will return.

This bill has the official endorsement of the National Farmers' Union; it has the official endorsement of some State farm bureau organizations and of many bureau and grange locals throughout the Nation. It has the approval of 95 percent of the farmers of this Nation; it has the approval of every intelligent banker, business and professional man and woman. Twenty-one State legislatures have asked Congress to pass this bill. They are: Arizona, California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Montana, Nebraska, Nevada, North Dakota, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, and Wisconsin. It has the approval of the lower house of the State Legislature of New York, the President's own State, as well as that of Ohio and of Delaware. Surely no Member of Congress from these States is justified in ignoring this mandate from his State.

Why, then, does Congress not pass this bill? Is it because Wall Street is still closer to Congress than are the people of the United States? The people have been sleeping at the switch. They expect Congress to do something for them and generally wake up to find that it did something to them—gave them the so-called "Economy Act" and make-believe farm relief. This is the people's fault. They neglect Congress, while the international bankers are on the job with their lobbyists and false propaganda. This Government is the people's. The responsibility rests upon their shoulders. They elect all the Representatives and one third of the Senators in Congress every 2 years. They can and ought to make their representatives responsive to their will.

They have a right to demand that Congress pass the Frazier-Lemke bill—they have a right to ask their Congressmen to sign the petition at the Speaker's desk to bring this bill out on the floor for discussion and passage. Congress must give this Nation the Frazier-Lemke bill and the Patman bonus bill—it must refinance the farmers and pay the soldiers in cash. It must give us an intelligent expansion of the currency, not in the hands of a few, but in the hands of the people. We cannot borrow ourselves out of indebtedness. An aroused and enlightened public opinion will compel Congress to pass this bill eventually, why not now?

THE SENATE VETERAN AMENDMENTS TO THE INDEPENDENT OFFICES APPROPRIATION BILL

Mr. MOTT. Mr. Speaker, I ask unanimous consent to extend the remarks I made on yesterday on veterans' legislation.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. MOTT. Mr. Speaker, I stated yesterday in reply to the question of the gentleman from North Carolina [Mr. BULWINKLE] what the provisions of the Senate amendments to the independent offices appropriation bill were in regard to disabled veterans of the World War and the Spanish War veterans. Expiration of the time allotted me for this purpose prevented me from summarizing the remaining veteran provisions of the amendments. I desire to do this now.

In addition to the World War and Spanish War veterans' provisions, the Senate amendments include remedial legislation in regard to hospitalization, to death compensation of World War veteran widows and children, and to disability retirement pay of emergency officers actually disabled in line of duty.

The widow's pension amendment provides that in no event shall death compensation being paid to widows, children, or dependent parents of deceased veterans be reduced or discontinued, whether the death of the veteran on whose account compensation is being paid was directly or presumptively connected with service. The amendment excludes from its provisions any case where death compensation was or is being paid through fraud, misrepresentation of a material fact, or unmistakable error; and this, in my opinion, is an all-sufficient safeguard and disposes of every reason for continuing the inhuman provisions of the Economy Act in regard to death compensation to dependents, under which thousands of helpless widows and orphans of disabled veterans were left destitute.

The Senate amendments also reinstate about 1,900 emergency officers actually disabled in line of duty during the war, and whose disability allowance was cut off by the Economy Act. This restoration includes only those officers whose injury or disease was made a matter of official record by competent military authority during the period of actual service in war time, and to whom a disability allowance was being paid at the time of the passage of the Economy Act.

HOUSE UNDERSTANDS THE ISSUE

Finally, the Senate amendments provide that any honorably discharged veteran of any war who is suffering from disability or disease requiring hospitalization or domiciliary care and who is unable to defray the necessary expenses thereof, shall be entitled to hospitalization or domiciliary care in any veterans' hospital within the limitations existing in such hospital.

Now, Mr. Speaker, I repeat, there is nothing vague and nothing ambiguous in any of these amendments, nothing which the Members of the House do not understand and which they have not been perfectly familiar with ever since the Legion four-point bill and the Spanish War veterans' bill were introduced in January. I say the House is entitled to vote on these amendments now, and that it is competent to vote on them, without the intervention or advice of the Appropriations Committee.

There are gentlemen here who honestly believe that these amendments are not proper. They voted for the Economy Act in the first place, knowing what it would do and what it has done for the sick and disabled veterans, both in the hospitals and out of them. I have no quarrel with them. If they are against the amendments, either in whole or in part, let them vote according to their convictions and their conscience. I do not deny them the right to vote against the amendments, but, Mr. Speaker, neither shall they deny me the right to vote for them, if I can help it. And that is why I have filed these motions to discharge the committees.

In closing, let me say this. If, as the distinguished majority leader assured me on the floor yesterday, it is the intention of the Appropriations Committee to report out these Senate amendments within a reasonable time, and in the exact form in which they received them, I have no great objection to that committee doing so. In that case, however, I am wholly unable to see any reason for the reference of the amendments to the Appropriations Committee. If that committee is simply going to hold the amendments for 3 or 4 days and then send them into the House without any change, for what purpose was the reference to that committee?

The astute, capable, and intelligent leaders of the majority, who, by the way, are opposed to these amendments, do not do meaningless or futile things. If the Appropriations Committee report the amendments out unchanged, within a reasonable time, and allow the House a direct vote upon each one of them separately, my opinion is that it will not be because the majority leaders want them to—otherwise, they never would have had them referred to that committee—but it will be because the pressure of sentiment both within this body and without it, forces them to do so.

That such sentiment exists and exists strongly, I think there can be no possible doubt. Therefore, whatever the reason may have been for referring the amendments to the committee, we are willing to wait a reasonable time, and no more, for those amendments to come out. If they do not, then by the motions for discharge which I have filed, we intend to force consideration of both the American Legion

four-point bill and the Spanish War veterans' bill, notwithstanding the wishes either of the majority leaders or the committee.

EXTENSION OF REMARKS

Mr. DOBBINS. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and to append thereto a transcript of a radio address on the occasion of the President's birthday, by Mr. Edwin C. Hill.

Mr. RICH. Reserving the right to object.

Mr. TABER. Reserving the right to object.

Mr. RICH. I should like to know what the radio address is.

Mr. DOBBINS. It was a nonpolitical address by Edwin C. Hill, on the night of the President's birthday, on a commercial program, and it has a historical value, as it contained a very vivid newspaper account of the inaugural exercises a year ago tomorrow.

Mr. RICH. Mr. Speaker, I object.

CIVIL WORKS ADMINISTRATION

Mr. SWICK. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. SWICK. Mr. Speaker, since the order to curtail the rolls of the Civil Works Administration was ordered by the administration 2 weeks ago, my office has been deluged with letters coming from men in my district who find themselves overcome with fear of want and hunger for their families.

For the first time in these years of trial I am receiving letters containing words of doubt—fear for the future of America. Men look with awe on the trend of government. I quote a paragraph from a letter written by a foreman on a C.W.A. project in my home county of Beaver, Pa.:

> For God's sake don't let us have a Germany, a France, or an Austria here. Put these men to work again, give them 30 hours a week and the same wages they were getting, or God help our country!

Western Pennsylvania is experiencing the most severe winter it has known in the memory of most of its citizens; inclement weather has caused the cessation of C.W.A. projects for days at a time, for instance, men employed on a sewer project in Pulaski Township, Beaver County, received in wages for the week ending February 24, 1934, the sum of $2.50, according to the foreman whose letter I have quoted in part.

At the time the C.W.A. was inaugurated, it was the announced purpose of the administration to carry it on until the P.W.A. and industry could assimilate the workers into their operations, certainly no person is optimistic enough to believe that can or will be done at this time.

The only conclusion that can be reached is the administration does not believe that which it has attempted to make the people believe that the recovery program of the President is successful or that it is producing the results intended.

We have almost completed 12 months under the new deal; the much-heralded annual review to be issued by the Democratic Party has been postponed.

President Roosevelt, in his inaugural address, used the following words, which, in my opinion, may well be repeated at this time:

> This is preeminently the time to speak the truth, the whole truth, frankly and boldly. Nor need we shrink from honestly facing conditions in our country today. This great Nation will endure as it has endured, will revive and will prosper. So first of all let me assert my firm belief that the only thing we have to fear is fear itself—nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance.

My friends, barrages of propaganda, composed of exaggerated reports of employment, charges of corruption against men in high places, and a general smearing of America before the new deal, succeeded for many months to draw the attention of our people from that which menaced them near at hand and focus their eyes on the mirage of the "brain trust."

A few days ago the people of Germany took an oath of fealty and allegiance to Hitler. They have been carried away on a storm of fanatical propaganda until they have submerged every right and become mere pawns for an ambitious politician.

During the past 12 months charges of treason have been hurled at men and women who dared to lift their voices in protest against the practices of the new deal. The legislative branch of the Government ceases to function through the deliberations of duly elected representatives of the people. Legislation is drafted and originated at the other end of Pennsylvania Avenue by men who are long on theory and short on experience. The will of the people as expressed to their Members of Congress is subject to the decree of the executive council, issued through the majority leaders at the Capitol.

Let me quote further from that inaugural address of a year ago:

> And it is to be hoped that the normal balance of executive and legislative authority may be wholly equal, wholly adequate to meet the unprecedented task before us. But it may be that an unprecedented demand and need for undelayed action may call for a temporary departure from that normal balance of public procedure.
>
> I am prepared, under my constitutional duty, to recommend the measures that a stricken nation in the midst of a stricken world may require. These measures or such other measures as the Congress may build out of its experience and wisdom I shall seek, within my constitutional authority, to bring to speedy adoption.
>
> But in the event that Congress shall fail to take one of these two courses, in the event that the national emergency is still critical, I shall not evade the clear course of duty that will then confront me. I shall ask the Congress for the one remaining instrument to meet the crisis—broad executive power to wage a war against the emergency, as great as the power that would be given to me if we were, in fact, invaded by a foreign foe.

Congress has complied with every request made by the Chief Executive; many Members, Republicans and Democrats alike, who have spent years in legislative service, have submerged their own views in the hope that the new deal would succeed. It is admitted now that many of the policies have not worked out and new ones are to be substituted for them; we shall continue to experiment with human lives. In view of this, if the President carries out his plan as stated in his address which I have just quoted, the next step will be to adjourn Congress by placing all authority—legislative and executive, in the hands of the President.

The Government has by its own spokesmen given the millions of unemployed men and women reason to believe they may rightfully expect employment, if from no other source, from the Government itself. Yet the administration admits this is not possible by its avowed intention of stopping the C.W.A., which has furnished temporary employment for about 4,000,000 people, or about one third of those out of employment.

What substitute is proposed for the C.W.A.? The most recent plan is known as the "three-point plan", involving Federal aid through local relief agencies and the transplanting of from 300,000 to 500,000 families from their present localities to other areas, where they will be placed on subsistence farms, and where it is hoped they can eke out an existence by part-time employment in industry. It reminds me a great deal of the fate of the Arcadians. But that would be looking backward.

Mr. Speaker, I call upon the Members of this House to assume the responsibilities of their office; we have listened to a one-man band long enough, so long, in fact, that we are in danger of being lulled to sleep by the monotonous rhythm, and awaken to find the Government which we have sworn to defend, and the Constitution we have sworn to uphold, a matter of history, while our country joins with the many others who have reverted to the ancient form of government now known as "dictatorship."

I do not believe any human being is equal to the task of restoring prosperity in this country by the application of theories which are admitted to be experiments.

I do believe, however, that the American people have the courage to face the facts if they are placed before them in an honest, straightforward manner. They will call upon

their own mental and physical resources, just as their forefathers did in former years, and with the help of Almighty God, go forward, proud Americans, conscious of their duties as citizens, determined to be master of their own lives.

I am willing to vote any amount of money the Nation's credit will stand for relief purposes, but I object to the creation of a great paternalistic government, which will stamp out of our lives those forces which have made America great—initiative, self-reliance, and independence.

I respect the President of the United States; I am confident he is doing his best to make conditions better; I also respect the wisdom of the American people; the brains of this Nation are not concentrated within the craniums of a few men. The voice of experience should be heeded. Let us preserve America for those who subscribe to American principles at all cost.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. REID of Illinois, indefinitely, on account of important business.

ADJOURNMENT

Mr. BYRNS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 9 minutes p.m.) the House adjourned until Monday, March 5, 1934, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. BLAND: Committee on Merchant Marine, Radio, and Fisheries. H.R. 6175. A bill to amend an act entitled "An act to amend sections 3 and 4 of an act of Congress entitled 'An act for the protection and regulation of the fisheries of Alaska', approved June 26, 1906, as amended by the act of Congress approved June 6, 1924, and for other purposes"; with amendment (Rept. No. 866). Referred to the House Calendar.

Mr. JONES: Committee on Agriculture. H.R. 8402. A bill to place the cotton industry on a sound commercial basis, to prevent unfair competition and practices in putting cotton into the channels of interstate and foreign commerce, to provide funds for paying additional benefits under the Agricultural Adjustment Act, and for other purposes; with amendment (Rept. No. 867). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE

Under clause 2 of rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H.R. 8378) granting a pension to Clara J. Masterson, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. HOEPPEL: A bill (H.P. 8458) to amend section 6 of Public, No. 2, Seventy-third Congress, to provide hospital treatment and domiciliary care to retired personnel of the armed services without additional expense to the Government; to the Committee on Expenditures in the Executive Departments.

By Mr. SWICK: A bill (H.R. 8459) for the improvement of the Beaver and Mahoning Rivers located in Pennsylvania and Ohio; to the Committee on Rivers and Harbors.

By Mr. WOOD of Georgia: A bill (H.R. 8460) to amend section 392 of title 5 of the United States Code; to the Committee on the Post Office and Post Roads.

By Mr. BUCK: A bill (H.R. 8461) authorizing the adjustment of existing contracts for the sale of timber on the national forests, and for other purposes; to the Committee on Agriculture.

By Mr. RUFFIN: A bill (H.R. 8462) granting an easement over certain lands to the Springfield Special Road District in the county of Greene, State of Missouri, for road purposes; to the Committee on the Judiciary.

By Mr. COLDEN: Resolution (H.Res. 290) requesting the Secretary of the Interior to furnish to the House of Representatives a comprehensive plan for the improvement and development of the rivers and water resources of the States of California, Arizona, and Nevada, and, furthermore, to include authority for the establishment of subsistence homesteads and the encouragement of home owning; to the Committee on Flood Control.

By Mr. WELCH: Joint resolution (H.J.Res. 289) authorizing establishment of bulk and pierhead lines in San Francisco Bay from a point near Point Avisadero (Hunters Point), San Francisco County, to Ravenswood Point, San Mateo County; to the Committee on Rivers and Harbors.

By Mr. BUCHANAN: Joint resolution (H.J.Res. 290) to provide an appropriation to carry into effect the act entitled "An act to provide for loans to farmers for crop production and harvesting during the year 1934, and for other purposes", approved February 23, 1934; to the Committee on Appropriations.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the State of Massachusetts, memorializing Congress to increase immigration quotas so as to enable persecuted Jewish people in Germany to enter the United States; to the Committee on Immigration and Naturalization.

Also, memorial of the State of Michigan, regarding discrimination against sales at retail; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CARDEN of Kentucky: A bill (H.R. 8463) granting a pension to Isaphaine Hufft; to the Committee on Invalid Pensions.

By Mr. MARTIN of Massachusetts: A bill (H.R. 8464) authorizing the Secretary of the Navy to award a Distinguished Service Cross to John Moran; to the Committee on Naval Affairs.

By Mr. MEAD: A bill (H.R. 8465) conferring jurisdiction upon the Court of Claims of the United States to hear, consider, and render judgment on the claim of Squaw Island Freight Terminal Co., Inc., of Buffalo, N.Y., against the United States in respect of loss of property occasioned by the breaking of a Government dike on Squaw Island; to the Committee on Claims.

By Mr. REECE: A bill (H.R. 8466) for the relief of Lt. Col. Harry W. Stephenson, United States Army, retired; to the Committee on War Claims.

By Mr. RUFFIN: A bill (H.R. 8467) for the relief of A. P. Beazley; to the Committee on Claims.

By Mr. SCHAEFER: A bill (H.R. 8468) for the relief of Sarah Shelton; to the Committee on Claims.

By Mr. SINCLAIR: A bill (H.R. 8469) for the relief of H. M. Pippin; to the Committee on Claims.

By Mr. WOOD of Georgia: A bill (H.R. 8470) for the relief of Eddie B. Black; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

2716. By Mr. AYERS of Montana: Petition of L. R. Bateman, of Great Falls, and sundry other citizens of Great Falls, Brady, and Missoula, Mont., praying for repeal or modification of the fourth section of the Interstate Commerce Act; to the Committee on Interstate and Foreign Commerce.

2717. By Mr. CARTER of California: Petition of William H. Becker, Elmar R. Beverley, H. G. Preston, and 47 others, residents of Alameda County, Calif., urging restoration of

benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2718. Also, petition of Evelyn Silva, Mary E. Peters, Jewel R. Colbert, and 47 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2719. Also, petition of Harvey Forrester, Effie L. Wickham, Henry S. Thayer, and 19 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2720. Also, petition of L. M. Hudson, S. W. Alexander, George Jenkins, and 45 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2721. Also, petition of L. R. Sapp, Edward Love, R. C. Williams, and 45 others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2722. Also, petition of W. P. Hodgkins, J. H. Morgan, and seven others, residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2723. By Mr. FULLER: Petition of the veterans of the Seventeen Hundred and Eightieth Company of the Veterans' Civilian Conservation Camp at Mount Nebo, Ark., praying for the payment of the soldiers' bonus; to the Committee on Appropriations.

2724. By Mr. HILDEBRANDT: Resolution of the Fortnightly Club, of Mitchell, S.Dak., urging support of House bill 6097, for supervision of motion pictures, known as the "Patman bill"; to the Committee on Interstate and Foreign Commerce.

2725. By Mr. KENNEY: Memorial of the borough of Cresskill, Bergen County, N.J., endorsing House bill 7316, introduced in the House of Representatives by Mr. KENNEY for the authorization of a national lottery to be conducted under the auspices of the United States; to the Committee on Ways and Means.

2726. By Mr. LINDSAY: Petition of the Chamber of Commerce of the State of New York, New York City, opposing numerous provisions in the National Securities Exchange Act, S. 2693; to the Committee on Banking and Currency.

2727. Also, petition of American Ice Co., Jersey City, N.J., protesting against certain provisions of the National Securities Exchange Act of 1934; to the Committee on Banking and Currency.

2728. Also, petition of American Federation of Labor, Washington, D.C., favoring the passage of House bill 3842; to the Committee on Immigration and Naturalization.

2729. By Mr. LUDLOW: Petitions of citizens of Indianapolis, Ind., requesting early hearings and favorable action on the Patman motion picture bill, H.R. 6097; to the Committee on Interstate and Foreign Commerce.

2730. By Mr. MEAD: Petition of the American Legion, Buffalo, N.Y.; to the Committee on World War Veterans' Legislation.

2731. Also, petition of the Sons of the American Revolution, Buffalo, N.Y., urging favorable action on House bill 683; to the Committee on Ways and Means.

2732. Also, petition of the Erie County Board of Supervisors, New York State; to the Committee on Naval Affairs.

2733. Also, petition of O.P. and C.F.I.A., Local No. 9, Buffalo, N.Y., urging adoption of House bills 7202 and 7050; to the Committee on Labor.

2734. Also, petition of the Buffalo Aeronautical Workers Union, Buffalo, N.Y., urging favorable action on bill for insurance for unemployed, and passage of 30-hour week bill; to the Committee on Labor.

2735. By Mrs. ROGERS of Massachusetts: Petition of the General Court of Massachusetts, memorializing the President and the Congress of the United States relative to increasing immigration quotas so as to enable persecuted Jewish people in Germany to enter the United States; to the Committee on Immigration and Naturalization.

2736. By Mr. RUDD: Petition of Sidney Blumenthal & Co., Inc., New York City, concerning certain provisions of the National Securities Exchange Act of 1934; to the Committee on Banking and Currency.

2737. Also, petition of American Ice Co., Jersey City, N.J., protesting against certain provisions of the National Securities Exchange Act of 1934; to the Committee on Banking and Currency.

2738. Also, petition of Chamber of Commerce of the State of New York, New York City, opposing numerous provisions in the National Securities Exchange Act, S. 2693; to the Committee on Banking and Currency.

2739. Also, petition of the Old Glory Council of the American Association for the Recognition of the Irish Republic, Brooklyn, N.Y., protesting against the scuttling and destruction of the American Merchant Marine perpetrated by the British; to the Committee on Merchant Marine, Radio, and Fisheries.

2740. Also, petition of Camp Dewey, No. 41, United Spanish War Veterans, Kenosha, Wis., favoring House bill 7135; to the Committee on Pensions.

2741. Also, petition of the American Federation of Labor, Washington, D.C., favoring the passage of House bill 3842 for the deportation of certain alien seamen; to the Committee on Immigration and Naturalization.

2742. By Mr. SWICK: Petition of the Ministerial Association of Lawrence County, Pa., urging the enactment of House bill 6097 providing higher moral standards for motion-picture films entering interstate and international commerce; to the Committee on Interstate and Foreign Commerce.

2743. By Mr. THOMASON: Petition of El Paso County, Tex., urging adoption of amendment to independent offices appropriation bill in behalf Spanish-American veterans and widows; to the Committee on Appropriations.

2744. By the SPEAKER: Petition of the borough of Cresskill, Bergen County, N.J., regarding the conduction of a national lottery; to the Committee on Ways and Means.

2745. Also, petition of Charles Forney; to the Committee on Interstate and Foreign Commerce.

2746. Also, petition of the Young Women's Christian Association of Indianapolis, Ind.; to the Committee on the Judiciary.

2747. Also, petition of Building Owners and Managers Association of Dayton, Ohio; to the Committee on Interstate and Foreign Commerce.

SENATE

MONDAY, MARCH 5, 1934

(Legislative day of Wednesday, Feb. 28, 1934)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 406. An act for the relief of Warren J. Clear;

S. 750. An act for the relief of the Lebanon Equity Exchange, of Lebanon, Nebr.;

S. 1069. An act authorizing adjustment of the claim of the Chicago, North Shore & Milwaukee Railroad Co.;

S. 1074. An act authorizing adjustment of the claims of John T. Lennon and George T. Flora;

S. 1087. An act authorizing adjustment of the claim of William T. Stiles;

S. 1115. An act to authorize the Department of Agriculture to issue a duplicate check in favor of Department of Forests and Waters, Commonwealth of Pennsylvania, the original check having been lost;

S. 1347. An act for the relief of Little Rock College, Little Rock, Ark.;

S. 1724. An act authorizing the reimbursement of Edward B. Wheeler and the State Investment Co. for the loss of certain lands in the Mora Grant, N.Mex.;

S. 2201. An act for the relief of the Neill Grocery Co.; and

S. 2766. An act to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes.

The message also announced that the House had passed the following bills of the Senate, severally with an amendment, in which it requested the concurrence of the Senate:

S. 2. An act for the relief of C. M. Williamson; Mrs. Tura Liljenquist, administratrix of C. E. Liljenquist, deceased; Lottie Redman; and H. N. Smith;

S. 551. An act for the relief of A. W. Holland;

S. 1496. An act for the relief of Nannie Swearingen; and

S. 1782. An act for the relief of the B. & O. Manufacturing Co.

The message further announced that the House had passed the following bills of the Senate, severally with amendments, in which it requested the concurrence of the Senate:

S. 407. An act for the relief of Willie B. Cleverly;

S. 751. An act authorizing the Secretary of the Treasury of the United States to refund to the Farmers' Grain Co., of Omaha, Nebr., income taxes illegally paid to the United States Treasurer;

S. 1083. An act authorizing adjustment of the claim of the Potomac Electric Power Co., of Washington, D.C.; and

S. 1426. An act for the relief of the estate of Benjamin Braznell.

The message also announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H.R. 191. An act for the relief of William K. Lovett;

H.R. 207. An act for the relief of Homer C. Chapin;

H.R. 211. An act for the relief of John A. Rapelye;

H.R. 469. An act for the relief of Lucy Murphy;

H.R. 472. An act for the relief of Phyllis Pratt and Harold Louis Pratt, a minor;

H.R. 473. An act for the relief of Irene Brand Alper;

H.R. 526. An act for the relief of Arthur K. Finney;

H.R. 881. An act for the relief of Primo Tiburzio;

H.R. 987. An act for the relief of Sard S. Reed;

H.R. 1127. An act for the relief of O. H. Chrisp;

H.R. 1133. An act for the relief of Silas B. Lawrence;

H.R. 1254. An act for the relief of H. Forsell;

H.R. 1301. An act for the relief of M. Aileen Offerman;

H.R. 1398. An act for the relief of Lewis E. Green;

H.R. 1405. An act for the relief of the Yosemite Lumber Co.;

H.R. 2342. An act for the relief of Mrs. Lota Tidwell;

H.R. 2419. An act for the relief of W. B. Ford;

H.R. 2512. An act for the relief of John Moore;

H.R. 2639. An act for the relief of Charles J. Eisenhauer;

H.R. 2672. An act for the relief of John B. Russell;

H.R. 2818. An act for the relief of Katherine G. Taylor;

H.R. 2990. An act for the relief of George G. Slonaker;

H.R. 3044. An act for the relief of Charles Beretta, Isidore J. Proulx, and John J. West;

H.R. 3296. An act for the relief of Carl F. Castleberry;

H.R. 3318. An act to reimburse Earl V. Larkin for injuries sustained by the accidental discharge of a pistol in the hands of a soldier in the United States Army;

H.R. 4013. An act to provide an additional appropriation as the result of a reinvestigation, pursuant to the act of February 2, 1929 (45 Stat., p. 2047, pt. 2), for the payment of claims of persons who suffered property damage, death, or personal injury due to the explosion at the naval ammunition depot, Lake Denmark, N.J., July 10, 1926;

H.R. 4056. An act for the relief of Emma F. Taber;

H.R. 7229. An act for the relief of the estate of Victor L. Berger, deceased;

H.R. 8134. An act making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1935, and for other purposes; and

H.J.Res. 61. Joint resolution granting compensation to George Charles Walther.

CALL OF THE ROLL

Mr. ROBINSON of Arkansas. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Couzens	Johnson	Reed
Ashurst	Cutting	Kean	Reynolds
Austin	Davis	Keyes	Robinson, Ark.
Bachman	Dickinson	King	Robinson, Ind.
Bailey	Dieterich	La Follette	Russell
Bankhead	Dill	Lewis	Schall
Barbour	Duffy	Logan	Sheppard
Barkley	Erickson	Lonergan	Shipstead
Black	Fess	Long	Steiwer
Bone	Fletcher	McAdoo	Stephens
Borah	Frazier	McCarran	Thomas, Okla.
Brown	George	McGill	Thomas, Utah
Bulkley	Gibson	McKellar	Thompson
Bulow	Glass	McNary	Townsend
Byrd	Goldsborough	Murphy	Trammell
Byrnes	Gore	Neely	Tydings
Capper	Hale	Norris	Vandenberg
Caraway	Harrison	Nye	Van Nuys
Carey	Hastings	O'Mahoney	Wagner
Clark	Hatch	Overton	Walcott
Connally	Hatfield	Patterson	Walsh
Coolidge	Hayden	Pittman	Wheeler
Costigan	Hebert	Pope	White

Mr. LEWIS. Mr. President, permit me to announce the absence of the Senator from New York [Mr. COPELAND], who is necessarily detained from the Senate.

Permit me also to announce that the senior Senator from South Carolina [Mr. SMITH] is detained by reason of a death in his family.

Mr. HEBERT. I wish to announce that my colleague the senior Senator from Rhode Island [Mr. METCALF] and the Senator from South Dakota [Mr. NORBECK] are necessarily absent from the Senate.

The VICE PRESIDENT. Ninety-two Senators have answered to their names. A quorum is present.

A. W. HOLLAND

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 551) for the relief of A. W. Holland.

Mr. THOMAS of Oklahoma. I move that the Senate disagree to the House amendment, request a conference with the House on the disagreeing votes of the two Houses thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Vice President appointed Mr. BAILEY, Mr. TRAMMELL, and Mr. CAPPER conferees on the part of the Senate.

UNCLAIMED DEPOSITS IN NATIONAL BANKS—RECONSIDERATION

Mr. REED. Mr. President, on Wednesday last, during my absence, the Senate passed, without discussion, on the call of the calendar Senate bill 2359, which, in effect, provides for the Federal escheat of unclaimed deposits in national banks. There was no word of discussion about it; there were apparently few Senators present. It is a bill of very far-reaching consequences that involves the right of the Federal Government to escheat to itself property of citizens of the several States, a right which seems to me to be very doubtful under the Constitution and one which belongs to the separate States themselves.

I now enter a motion to reconsider the votes whereby the bill was ordered to be engrossed for a third reading and passed, and move that the House be requested to return the bill to the Senate.

The motion was agreed to.

ESTATE OF BENJAMIN BRAZNELL

Mr. REED. Mr. President, I ask that the Chair lay before the Senate the amendments of the House of Representatives to Senate bill 1426.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 1426)

for the relief of the estate of Benjamin Braznell, which were as follows:

On page 1, line 7, after the sum "$2,323.47," to insert "in full settlement of all claims against the Government of the United States"; and, on page 1, line 8, after the word "decisions", to insert "*Provided*, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

Mr. REED. I move that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

B. & O. MANUFACTURING CO.

Mr. GOLDSBOROUGH. I ask the Chair to lay before the Senate the amendment of the House of Representatives to Senate bill 1782.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 1782) for the relief of the B. & O. Manufacturing Co., which was, on page 1, line 12, after the word "claim", to insert:

Provided, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. GOLDSBOROUGH. I move that the Senate concur in the House amendment.

The motion was agreed to.

FARMERS' GRAIN CO. OF OMAHA, NEBR.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 751) authorizing the Secretary of the Treasury of the United States to refund to the Farmers' Grain Co., of Omaha, Nebr., income taxes illegally paid to the United States Treasurer, which were, on page 1, line 6, after the name "Nebraska", to insert "in full settlement of all claims against the Government of the United States"; and on page 1, line 9, after the word "Treasury", to insert:

Provided, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. NORRIS. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

NANNIE SWEARINGEN

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 1496) for the relief of Nannie Swearingen, which was, on page 1, line 10, after the date "1926", to insert:

Provided, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. LEWIS. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

C. M. WILLIAMSON AND OTHERS

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 2) for the relief of C. M. Williamson; Mrs. Tura Liljenquist, administratrix of C. E. Liljenquist, deceased; Lottie Redman; and H. N. Smith, which was, on page 1, line 14, after the word "plant", to insert:

Provided, That no part of the amount appropriated in this act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 percent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. POPE. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate resolutions adopted by the General Court of Massachusetts, favoring the passage of legislation increasing the existing immigration quotas for the purpose of enabling persecuted Jewish people in Germany to enter the United States, which were referred to the Committee on Immigration.

(See resolutions printed in full when presented today by Mr. WALSH.)

The VICE PRESIDENT also laid before the Senate a paper in the nature of a petition from Charles Forney, of Norfolk, Va., relative to amendment of the Securities Act, which was referred to the Committee on Banking and Currency.

He also laid before the Senate papers in the nature of a petition of several citizens of Iowa and Pennsylvania, praying for the restoration of silver to be used as money along with gold, and the adequate issuance of new currency, which were referred to the Committee on Banking and Currency.

He also laid before the Senate resolutions adopted at a public meeting of citizens of Lafayette Parish, La., favoring the prompt passage of legislation to provide work for all the unemployed until private industry can relieve the situation, and protesting against any diminution of relief activities of the Government, which was referred to the Committee on Education and Labor.

He also laid before the Senate a resolution adopted by the council of the city of Dearborn, Mich., favoring immediate payment of the so-called "soldiers' bonus", which was referred to the Committee on Finance.

He also laid before the Senate papers in the nature of petitions from several citizens of the States of Louisiana and North Carolina, praying for the immediate cash payment of the so-called "soldiers' bonus", which were referred to the Committee on Finance.

He also laid before the Senate resolutions adopted by the mayor and council of the borough of Cresskill, N.J., favoring the passage of the so-called "Kenney bill", being House bill 7316, providing for a national lottery, so as to ease tax burdens, which were referred to the Committee on Finance.

He also laid before the Senate a telegram from the secretaries of the Export Managers' Club and the Foreign Credits Division of the Chicago Association of Credit Men, of Chicago, Ill., favoring, on behalf of the executive committees of those organizations, the passage of legislation granting the President power to negotiate reciprocal trade agreements

with foreign nations, which was referred to the Committee on Finance.

He also laid before the Senate a resolution adopted by La Fayette Lodge, No. 143, B.P.O.E., of La Fayette, Ind., favoring the passage of Senate Resolution 154 (submitted by Mr. TYDINGS), opposing alleged discriminations against Jews in Germany, which was referred to the Committee on Foreign Relations.

He also laid before the Senate a petition signed by approximately 4,000 citizens of the State of Illinois, praying for the passage of House bill 7483, to provide a minimum wage for substitutes in the Postal Service, which was referred to the Committee on Post Offices and Post Roads.

He also laid before the Senate a letter from Henry Saum, of Canajoharie, N.Y., relative to the operations of the N.R.A., which, with the accompanying newspaper clipping, was ordered to lie on the table.

He also laid before the Senate a telegram from Mrs. Arthur Brin, president of the National Council of Jewish Women, New York, N.Y., favoring, on behalf of her organization, the adoption of amendments to the pending naval construction bill controlling profits and calling for 50-percent construction in the Government yards, which was ordered to lie on the table.

Mr. GEORGE presented a resolution adopted by the Woman's Missionary Society of the First Methodist Church of Rome, Ga., favoring the maintenance of peace, which was referred to the Committee on Military Affairs.

Mr. STEPHENS presented a concurrent resolution of the Legislature of the State of Mississippi, which was ordered to lie on the table, as follows:

Concurrent resolution memorializing the Congress of the United States to enact suitable legislation so as to provide for the continuation of crop-production loans to farmers unable to secure production-credit facilities elsewhere

Whereas the break-down of credit facilities incident to the depression resulted in the paralysis of customary avenues of agricultural production credit, to the very grave detriment of all engaged in agriculture; and

Whereas in this emergency the Federal Government of the United States came to the rescue of farmers by making available, through the United States Department of Agriculture, sufficient production finances to enable farmers not in position to obtain credit elsewhere to carry on the business of agriculture; and

Whereas during the year 1932, out of a total sum of $75,000,000 made available to the Secretary of Agriculture for crop-production loans, the sum of $64,203,773 was loaned to 507,643 borrowers in the United States; and

Whereas the total sum of $3,890,262 was loaned from the crop-production fund to 40,066 farmers in Mississippi; and

Whereas, notwithstanding the emergency nature of the crop-production loan, and notwithstanding, further, the fact that such loans were made available only to farmers not able to secure finances elsewhere, approximately 94 percent of the money made available to the farmers in Mississippi in 1932 has been repaid, and indications point a record of repayment as high for 1932; and

Whereas, because of continued financial distress and the prevalence of overburdening farm indebtedness, many farmers in Mississippi will be unable to offer suitable security for the borrowing of crop-production finances upon ordinary business terms, whether through production credit associations now being organized under the Farm Credit Administration or through private banks, to such a prevailing extent that the withdrawal of facilities made available through the operation of the crop-production loan would be extremely detrimental to Mississippi agriculture: Now, therefore, be it

Resolved by the house of representatives (the senate concurring therein), That the Congress of the United States be memorialized to enact suitable legislation so as to provide for the continuation of agricultural production credit facilities such as were available during 1932 and 1933 through the production credit loans.

Resolved further, That copies of this resolution be delivered to Hon. Franklin D. Roosevelt, President of the United States; Hon. Henry A. Wallace, Secretary of Agriculture; and the United States Senators and Congressmen representing the State of Mississippi in Congress.

Adopted by the house of representatives February 5, 1934.

THOS. L. BAILEY,
Speaker of the House of Representatives.

Adopted by the senate February 19, 1934.

DENNIS MURPHREE,
President of the Senate.

Mr. STEPHENS also presented a resolution of the House of Representatives of the State of Mississippi, which was referred to the Committee on Foreign Relations, as follows:

Resolution of the House of Representatives of the State of Mississippi addressed to Hon. Franklin D. Roosevelt, President of the United States, declaratory of a sound foreign policy for the American Government to follow in all its dealings with other nations

Whereas the wisdom of our forefathers who founded this Government, and their virtues which enabled them to abide by their teachings is the most precious heritage of the American people; and

Whereas as long as we were obedient to their philosophy of government, our prestige and influence increased among the nations of the world until they vied one with another for our friendship and good understanding; and

Whereas their doctrine of friendship for all nations but entangling alliances with none was no other than the Golden Rule of "doing unto others as you would that others should do unto you"; and

Whereas our Herculean efforts in the World War and the generous and lofty policies pursued by us in adjusting all matters growing out of said war have only resulted in misunderstanding and bitterness, going to the extent that we are no longer known as the United States, but we are stigmatized throughout the world by the nations that owe us as "Uncle Shylock"; and

Whereas recent investigations have shown us beyond the peradventure of a doubt that the international banker is the real Shylock in the case, and the siren whose dulcet song has lured us from the faith of our fathers and embroiled us in all of our international controversies; and

Whereas the President of the United States has, with commendable courage, with true vision and loyalty to the principles of our forefathers, declined to permit the late unlamented World Economic Conference to fix the value of the American dollar and to dictate America's foreign policy; and

Whereas we commend in unmeasured terms the true Americanism of our President in regard to the acts and powers of said conference; and

Whereas the President has shown a determination to repudiate the international banker and return our country to its true policy of friendship for all nations but entangling alliances with none; and

Whereas we deem it the duty of those who believe in this ancient American doctrine to commend and uphold the hands of the President in his struggle with the international banker and his foreign allies in a determination of America's foreign policy:

Now, therefore, in order that the President might know that his policies are echoed in the hearts of the people, and that they are deeply anxious that a sound foreign policy be formulated, it is hereby resolved by the House of Representatives of the State of Mississippi that the following resolution is declaratory of what we believe to be a sound foreign policy for the American Government to pursue, to wit:

First. That the policy of friendship for all nations but entangling alliances with none is the true, traditional, and sound policy for America to follow in all its dealings with other nations.

Second. That the form of government or its territorial extent, the methods by which it was set up, or its territory acquired, are questions to be settled by the nations involved and not by us.

Third. That it is not the province or purpose of this Government to regenerate the world. We believe that each nation should be free to work out its own destiny. Official intermeddling in the affairs of other nations, or a "holier-than-thou" attitude toward them, is not only impolitic but is wrong in principle, and in the present state of world tension is absolutely perilous. No word or act or deed of ours should be permitted to impugn our sincerity in this respect.

Fourth. That commercial treaties should be negotiated only through the usual diplomatic channels and never in conference such as the late lamented World Economic Conference.

Fifth. That the President should, subject to the approval of Congress, negotiate a final settlement of the war debts owing us by foreign nations. These debts are a cancerous legacy of our efforts to compose a war-torn world. It is manifest now and has been for many years that Europe never intended to pay these debts. The ink on the peace treaty was scarcely dry before the international banker began to put out his propaganda to cancel the war debts in order that he might collect his own. They are a grievous, unjust, and almost overwhelming burden on the American taxpayer. If it teaches us to keep our money at home and steer clear of the international banker in foreign affairs, it may prove like many another sore burden—a blessing in disguise. In any event, this festering sore should be removed from our international relations, yet ever remembered for the lesson it teaches. We should get out of Europe before the next war starts. Provided, however, that nothing herein contained shall be construed as favoring the cancellation of such debts.

Sixth. The President should accept money, favorable trade treaties, and other things of value except land in settlement of our war debts.

Seventh. We should at once redeem the Democratic pledge by freeing the Philippine Islands without restraint, reserving only suitable coaling stations to service our foreign commerce in times of peace and war.

Such an act would disarm suspicion and enable us to make favorable trade treaties with all the nations of the Pacific and Asiatic waters.

Adopted by the house of representatives February 26, 1934.

THOS. L. BAILEY,
Speaker of the House of Representatives.

Mr. WALSH presented a resolution adopted by the Boston (Mass.) Chapter of the Reserve Officers' Association, favoring the making of appropriations providing an Officers' Reserve Corps of 120,000 officers, with annual 14-day active duty with not less than 30,000 Reserve officers; a Regular Army of not less than 14,000 officers and 165,000 enlisted men; a National Guard of 210,000 officers and enlisted men, with 2 weeks' annual field training and 48 armory drills; for the training of 50,000 boys annually in the citizens' military training camps, and the maintenance of the Reserve Officers' Training Corps with 42-day camps, which was referred to the Committee on Military Affairs.

PERSECUTION OF THE JEWS IN GERMANY—IMMIGRATION QUOTAS

Mr. WALSH. Mr. President, I present and ask that there be printed in full in the RECORD resolutions from the Massachusetts General Court memorializing the President and the Congress relative to increasing immigration quotas, so as to enable persecuted Jewish people in Germany to enter the United States.

The resolutions were referred to the Committee on Immigration and ordered to be printed in the RECORD, as follows:

Resolutions memorializing the President and the Congress of the United States relative to increasing immigration quotas so as to enable persecuted Jewish people in Germany to enter the United States

Resolved, That the General Court of Massachusetts respectfully represents to the President and the Congress of the United States of America the necessity of increasing the existing immigration quotas for the purpose of enabling persecuted Jewish people in Germany to enter the United States; and be it further

Resolved, That copies of these resolutions be forwarded forthwith by the secretary of the Commonwealth to the President of the United States, the presiding officers of both branches of Congress, and to the Members of Congress from Massachusetts.

In house of representatives, adopted February 20, 1934.

In senate, adopted, in concurrence, February 26, 1934.

A true copy.

Attest:

[SEAL] F. W. COOK,
Secretary of the Commonwealth.

Mr. WALSH. Mr. President, I have also received a large number of petitions and resolutions that I wish to have referred to the Committee on Foreign Relations, which is now considering Senate Resolution 154, submitted by the junior Senator from Maryland [Mr. TYDINGS], entitled "opposing alleged discriminations against Jews in Germany." The list of organizations includes the American Jewish Congress, the Boston city council, and the National Council of Jewish Women, all of Boston; the Brotherhood Temple Ohabei Shalom, of Brookline; the Tifereth Jacob Association, of Dorchester; the Hebrew Beneficial Association, the Jewish National Workers Alliance, and the Sons of Israel Sick Benefit, all of Fall River; Y. M. & Y. W. H. A., of Fitchburg; the Haverhill Lodge B'nai B'rith, of Haverhill; the Lowell Hebrew Community Center and Temple Beth El, and B'nai B'rith Lodge, both of Lowell; Branch 904, Workmen's Circle, of Malden; the National Council of Jewish Women, of New Bedford; Congregation Mishkan Tefila, of Roxbury; the Brotherhood of Temple B'nai B'rith, of Somerville; Touro Lodge No. 814, B'nai B'rith, of Taunton; and Worcester Lodge B'nai B'rith, of Worcester, all in the State of Massachusetts.

I hope that the committee may be able to report this resolution favorably to the Senate in the very near future.

The VICE PRESIDENT. The petitions and resolutions presented by the Senator from Massachusetts will be received and referred to the Committee on Foreign Relations.

THE VIRGIN ISLANDS

Mr. KING presented a letter from Casper Holstein, president of the Virgin Islands Congressional Council, which was referred to the Committee on Territories and Insular Affairs and ordered to be printed in the RECORD, as follows:

NEW YORK, N.Y., *February 7, 1934.*

Senator WILLIAM H. KING.

SIR: The purpose of this communication is to bring to your attention certain salient facts concerning the Virgin Islands of the United States which are of special import at this time.

As president of the Virgin Islands Congressional Council of New York, an organization of Virgin Islanders resident on the mainland, I have followed the conditions in the islands closely for the entire period of American sovereignty, now a matter of nearly 17 years. During that period this organization has worked for two major objectives—citizenship and a civil form of government for the islands—both of which have been achieved.

An altruistic Congress has appropriated money unstintingly for the rehabilitation of the Virgin Islands, but due to the peculiar set-up of the local machinery the results have been in no way commensurate with the sums expended. The following steps, if taken by Congress, would go far, we feel, in correcting the anomalous situation which prevails:

(1) We recommend the creation of an overseas bureau, under which all the insular possessions could be placed. This would have the advantage of centralizing control over them and improving administrative efficiency.

(2) We recommend the creation of the office of resident commissioner for the Virgin Islands to protect their needs and defend their interests in Washington. Unlike Puerto Rico or the Philippines, both of which are adequately represented in Washington, the Virgin Islands are without a spokesman elected by the people to represent them in Washington.

In view of the large allotments now made for the government of the Virgin Islands the salary of the commissioner may be paid out of the customary appropriations, thereby constituting no additional burden on the Federal Treasury.

Under the present arrangements only government officials furnish information to Washington on island conditions. These officials necessarily color their reports, since their personal welfare is often at stake. They must, perforce, give a good account of their stewardship. Only on such occasions as there are hearings before the committees of Congress or the Senate does disinterested testimony by Virgin Islanders and others not officially a part of the island administration get before official Washington.

Recently there was conducted in the Virgin Islands an unofficial plebiscite which revealed the peoples' disfavor of the present island administration under the leadership of Gov. Paul M. Pearson. The vote was 8,000 for his removal and 165 for his retention. A large percentage of this number was actual registered voters, but 10 times their number were from among the people directly affected by the local administration.

By virtue of this popular demonstration in the Virgin Islands against the retention of Gov. Paul M. Pearson, this letter is addressed to you as a member of the Committee on Insular Affairs to inform you that it is the desire of Virgin Islanders in New York also, 8,000 voters, that Gov. Paul M. Pearson be removed from the Virgin Islands.

If necessary, this organization is prepared to obtain the signatures of thousands of Virgin Islanders here, in addition to the voters above mentioned, to a petition urging that action be taken in this connection.

It is hoped that you will give this matter your immediate attention and support in your committee.

Very truly yours,

CASPER HOLSTEIN,
President Virgin Islands Congressional Council.

REPORTS OF COMMITTEES

Mr. LOGAN, from the Committee on Claims, to which was referred the bill (S. 1461) for the relief of the Fidelity Trust Co., of Baltimore, Md., reported it with amendments and submitted a report (No. 397) thereon.

Mr. GIBSON, from the Committee on Claims, to which was referred the bill (S. 2153) for the relief of Pinkie Osborne, reported it with an amendment and submitted a report (No. 398) thereon.

Mr. SHEPPARD, from the Committee on Military Affairs, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H.R. 1413. An act for the relief of Leonard L. Dilger (Rept. No. 399);

H.R. 2670. An act for the relief of James Wallace (Rept. No. 400); and

H.R. 3997. An act for the relief of Erney S. Blazer (Rept. No. 401).

Mr. SHEPPARD, also from the Committee on Military Affairs, to which was referred the bill (H.R. 3985) for the relief of Charles T. Moll, reported it with amendments and submitted a report (No. 402) thereon.

Mr. SMITH, from the Committee on Agriculture and Forestry, to which was referred the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes, reported it with an amendment and submitted a report (No. 403) thereon.

Mr. ASHURST, from the Committee on Public Lands and Surveys, to which was referred the bill (S. 2379) to provide for the selection of certain lands in the State of Arizona for the use of the University of Arizona, reported it without amendment and submitted a report (No. 404) thereon.

Mr. KING, from the Committee on the Judiciary, to which was referred the bill (S. 2460) to limit the operation of statutes of limitations in certain cases, reported it with an amendment and submitted a report (No. 405) thereon.

Mr. STEPHENS, from the Committee on the Judiciary, to which was referred the bill (S. 822) to amend the act entitled "An act to amend section 217, as amended, of the act entitled 'An act to codify, revise, and amend the penal laws of the United States', approved March 4, 1909", approved January 11, 1929, with respect to the use of the mails for the shipment of certain drugs and medicines to cosmetologists and barbers, reported it with an amendment and submitted a report (No. 406) thereon.

Mr. NEELY, from the Committee on the Judiciary, to which was referred the bill (H.R. 5950) to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States", approved July 1, 1898, and acts amendatory thereof and supplementary thereto, reported it without amendment and submitted a report (No. 407) thereon.

Mr. VAN NUYS, from the Committee on the Judiciary (on behalf of himself, Mr. HASTINGS, Mr. HEBERT, and Mr. MCCARRAN), submitted minority views to accompany House bill 5950, which were ordered to be printed as part of Report No. 407.

Mr. THOMPSON, from the Committee on Indian Affairs, to which was referred the bill (S. 1891) to authorize the Secretary of the Interior to cancel restricted fee patents and issue trust patents in lieu thereof, reported it without amendment and submitted a report (No. 408) thereon.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

Mr. SHEPPARD, from the Committee on Military Affairs, reported favorably the nominations of sundry officers in the Regular Army.

Mr. NEELY, from the Committee on the Judiciary, reported favorably the nomination of John B. Colpoys, of the District of Columbia, to be United States marshal, District of Columbia, to succeed Edgar C. Snyder, whose term will expire April 22, 1934.

Mr. VAN NUYS, from the Committee on the Judiciary, reported favorably the nomination of John B. Keefe, of Iowa, to be United States marshal, northern district of Iowa, to succeed Don A. Preussner, term expired.

The VICE PRESIDENT. The reports will be placed on the calendar.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BARBOUR:

A bill (S. 2933) granting a pension to Ada B. Nafew; to the Committee on Pensions.

By Mr. SMITH (by request):

A bill (S. 2934) to facilitate the acquisition of migratory-bird refuges, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. TYDINGS:

A bill (S. 2935) to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands, to provide for the independence of the same, and for other purposes; to the Committee on Territories and Insular Affairs.

By Mr. MURPHY:

A bill (S. 2936) for the relief of William Cornwell and others; to the Committee on Claims.

By Mr. LONERGAN:

A bill (S. 2937) to provide for the construction of two vessels for the Coast Guard designed for ice breaking and assistance work; to the Committee on Commerce.

By Mr. NEELY:

A bill (S. 2938) for the relief of Harry L. Reaves; to the Committee on Military Affairs.

By Mr. McGILL:

A bill (S. 2939) for the relief of Arthur Edwin Sanders; to the Committee on Naval Affairs.

By Mr. NYE (for Mr. NORBECK):

A bill (S. 2940) to provide funds for cooperation with the school board of Shannon County, S.Dak., in the construction of a consolidated high-school building to be available to both white and Indian children; to the Committee on Indian Affairs.

By Mr. DAVIS:

A bill (S. 2941) authorizing the Secretary of the Treasury to make payments to the widows or next of kin of certain Army Air Corps pilots; to the Committee on Military Affairs.

By Mr. FESS:

A bill (S. 2942) to create an establishment to be known as the "National Archives", and for other purposes; to the Committee on Public Buildings and Grounds.

By Mr. BULKLEY:

A bill (S. 2943) for the relief of William Kemper; to the Committee on Claims.

A bill (S. 2944) for the relief of Albert G. Dawson; to the Committee on Military Affairs.

A bill (S. 2945) granting a pension to Helen M. Harvey (with accompanying papers); to the Committee on Pensions.

By Mr. PITTMAN:

A bill (S. 2946) to provide for the establishment of regional industrial credit corporations by the Reconstruction Finance Corporation, and for other purposes; to the Committee on Banking and Currency.

By Mr. WHEELER:

A bill (S. 2947) granting a pension to Henry Archdale, Sr.; to the Committee on Pensions.

By Mr. SHEPPARD:

A bill (S. 2948) authorizing the appointment of Roy M. Kisner as a captain, Dental Corps, Regular Army; to the Committee on Military Affairs.

By Mr. THOMAS of Oklahoma:

A bill (S. 2949) to promote resumption of industrial activity, increase employment, and restore confidence by fulfillment of the implied guaranty by the United States Government of deposit safety in national banks; to the Committee on Banking and Currency.

By Mr. KING:

A bill (S. 2950) to authorize steam railroads to electrify their lines within the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. STEIWER:

A bill (S. 2951) granting a pension to Lillian S. Blackwell (with accompanying papers); to the Committee on Pensions.

CHANGE OF REFERENCE

On motion of Mr. FLETCHER, the Committee on Claims was discharged from the further consideration of the bill (S. 2895) granting a pension to Laura F. Carmichael, and it was referred to the Committee on Pensions.

HOUSE BILLS AND JOINT RESOLUTION REFERRED

The following bills and joint resolution were severally read twice by their titles and referred as indicated below:

H.R. 191. An act for the relief of William K. Lovett;

H.R. 207. An act for the relief of Homer C. Chapin;

H.R. 211. An act for the relief of John A. Rapelye;

H.R. 469. An act for the relief of Lucy Murphy;

H.R. 472. An act for the relief of Phyllis Pratt and Harold Louis Pratt, a minor;

H.R. 473. An act for the relief of Irene Brand Alper;

H.R. 526. An act for the relief of Arthur K. Finney;

H.R. 881. An act for the relief of Primo Tiburzio;

H.R. 987. An act for the relief of Sard S. Reed;

H.R. 1127. An act for the relief of O. H. Chrisp;

H.R. 1133. An act for the relief of Silas B. Lawrence;

H.R. 1254. An act for the relief of H. Forsell;

H.R. 1301. An act for the relief of M. Aileen Offerman;

H.R. 1398. An act for the relief of Lewis E. Green;

H.R. 1405. An act for the relief of the Yosemite Lumber Co.;

H.R. 2342. An act for the relief of Mrs. Lota Tidwell;

H.R. 2419. An act for the relief of W. B. Ford;

H.R. 2512. An act for the relief of John Moore;

H.R. 2639. An act for the relief of Charles J. Eisenhauer;

H.R. 2672. An act for the relief of John B. Russell;

H.R. 2818. An act for the relief of Katherine G. Taylor;

H.R. 2990. An act for the relief of George G. Slonaker;

H.R. 3044. An act for the relief of Charles Beretta, Isidore J. Proulx, and John J. West;

H.R. 3296. An act for the relief of Carl F. Castleberry;

H.R. 3318. An act to reimburse Earl V. Larkin for injuries sustained by the accidental discharge of a pistol in the hands of a soldier in the United States Army;

H.R. 4013. An act to provide an additional appropriation as the result of a reinvestigation, pursuant to the act of February 2, 1929 (45 Stat. 2047, pt. 2), for the payment of claims of persons who suffered property damage, death, or personal injury due to the explosion at the naval ammunition depot, Lake Denmark, N.J., July 10, 1926;

H.R. 4056. An act for the relief of Emma F. Taber;

H.R. 7229. An act for the relief of the estate of Victor L. Berger, deceased; and

H.J.Res. 61. Joint resolution granting compensation to George Charles Walther; to the Committee on Claims.

H.R. 8134. An act making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1935, and for other purposes; to the Committee on Appropriations.

AMENDMENT OF AGRICULTURAL ADJUSTMENT ACT

Mr. FRAZIER submitted an amendment intended to be proposed by him to the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes, which was ordered to lie on the table and to be printed.

AMENDMENT TO AGRICULTURAL DEPARTMENT APPROPRIATION BILL

Mr. TRAMMELL submitted an amendment intended to be proposed by him to House bill 8134, the Agricultural Department appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed, as follows:

At the proper place in the bill to insert the following new paragraph:

"Citrus fruits, processing and marketing: For investigating and developing at the United States Horticultural Field Laboratory, Bureau of Plant Industry, at Orlando, Fla., processes of coloring and antiseptic treatment of citrus fruits, and the methods of packing, storage, and transportation thereof, and for the conduct of experimental and laboratory work at such laboratory, $40,130, of which not to exceed $15,130 shall be immediately available for expenditure by the Secretary of Agriculture for the purchase of additional laboratory equipment for such laboratory for the conduct of such investigation and experimental work."

REPEAL OF GASOLINE TAX

Mr. CAPPER. Mr. President, I send to the desk an amendment to H.R. 7835, the revenue bill, which I ask to have referred to the Committee on Finance.

The amendment simply proposes to repeal the Federal tax of 1 cent a gallon on gasoline. This tax adds another $180,000,000 a year of taxes to an already overtaxed industry. Special taxes levied upon the motorists of the country now amount to more than a billion dollars.

It is my contention that gasoline taxes should be left to the States, and that the States should use proceeds from gasoline taxes for the construction and maintenance of highways. That policy justifies gasoline taxes so high that they would be entirely unjustifiable for other purposes.

Very frankly, I regard the Federal gasoline tax for general revenue as an unjust tax, all things considered. I felt that way about it when the tax was imposed in the first place, and opposed its enactment. I still feel that way about it, and hope that the Senate will take that view of it.

There is a limit to what the traffic will bear, and I believe that limit has been reached in most States already, so far as gasoline taxes are concerned. The average gasoline tax now represents a sales tax of 30 per cent. As a mileage toll tax, when the funds are used for highways, that heavy a tax might be justified. As a sales tax for general revenue purposes, it is outrageous.

The VICE PRESIDENT. The amendment will be received, printed, and referred to the Committee on Finance.

Mr. CAPPER. I ask unanimous consent to have printed in the RECORD an editorial from the Mobile (Ala.) Register, and another from the Topeka (Kans.) Capital, in favor of the repeal of this tax.

There being no objection, the editorials referred to were ordered to be printed in the RECORD, as follows:

[From the Topeka (Kans.) Capital]

GROSSLY OVERTAXED INDUSTRIES

Owners of automobiles as well as the automobile and oil industries will be in sympathy with Senator CAPPER's proposal to wipe out some of the numerous taxes on automobiles and their use. There are said to be 19 different classes of taxes affecting the automobile, including Federal and State gasoline taxes, Federal manufacturing taxes, personal property taxes, license taxes, and others.

In 1933 taxation of the automobile and its use reached an all-time peak, the American Automobile Association estimating that it returned to the Federal Government, States, and localities $1,180,000,000. Automobile ownership became more and more costly, and the automobile bid fair to be taxed out of existence. Taking all the various taxes together, the average motor vehicle contributed $50.47 annually to the support of government. The full value of the property was turned in in taxes in less than 4 years.

As motorists paid last year about $715,000,000 in gasoline taxes alone, the oil industry was heavily burdened. It could not sell gasoline in normal quantity against such exactions from Congress and the States. The motor industry was similarly discriminated against in taxation.

A halt has been called in the steady rise of the State gasoline tax, which affords no relief, but at least holds out the hope that the maximum has been reached. Last year Florida and Tennessee taxed gasoline at 7 cents, the total tax in those States on the motorist being 8½ cents. It is the only product taxed at more than total cost of production and price at the refinery. Alabama, Arkansas, Georgia, Mississippi, North Carolina, and South Carolina levied a tax of 6 cents. The tax in Arizona, Idaho, Kentucky, Louisiana, Montana, New Mexico, Virginia, and Washington was 5 cents. Seventeen other States fixed the tax at 4 cents and 10 other States at 3 cents, Connecticut, Rhode Island, and Missouri being the only States with a tax under 3 cents. The highest gasoline tax in any Eastern State is 4 cents except in the South.

Fair treatment of motorists would be a paying move, giving badly needed encouragement to the oil and automobile industries, which are important buyers of heavy materials and supporters of the backward capital goods industries. It would give a much-needed stimulation to all private industry and reemployment, and the Government would get out of business expansion more taxes than it relinquished.

[From the Mobile (Ala.) Register]

RELIEF FOR GASOLINE USERS

Senator CAPPER, of Kansas, has introduced in the Senate of the United States a measure that will do away with the 1½-cent-per-gallon Federal tax on gasoline. The passage of this measure will mean a large saving to the consumers of gasoline. It ought to be passed by Congress, for consumers of gasoline are now bearing an unjust part of the burden of taxation in this country. Representatives in Congress from Alabama should be urged to support the Capper measure, and it is reasonably certain that consumers of gasoline in this State will promptly urge them to support it.

Crude oil from wells has been selling for 60 cents a barrel. One barrel of crude oil will yield about 24 gallons of gasoline. Federal, State, and local taxes in Alabama combined result in a levy of 8½ cents per gallon on gasoline used by consumers in this State. Combined, these taxes result in the imposition upon consumers of gasoline a total levy of $2.04 on the gasoline content of every barrel of crude oil consumed in this State. The State tax of 6 cents per gallon amounts to $1.44 per barrel; the Federal tax of 1½ cents per gallon amounts to 36 cents per barrel; and the local tax amounts to 24 cents, making the total indicated.

It is stated that a 42-gallon barrel of gasoline, selling at an average of from $1.26 to $2.10 per barrel, wholesale, pays in local, State, and Federal taxes a burden of $3.57, divided thus: State of Alabama, $2.52; Federal Government, 63 cents; local government, 42 cents.

The Capper bill, if passed, will save motorists of this country about $180,000,000 a year. That is a large and meaningful saving. It ought to be passed, and consumers of gasoline ought to urge Congress to pass it. Its passage will lift at least some of this unjust and hurtful tax burden from the shoulders of consumers of gasoline.

EDWARD K. BACHSCHMID

Mr. REED submitted the following resolution (S.Res. 200), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay from the contingent fund of the Senate to Edward K. Bachschmid, son of Paul Bachschmid, late a carpenter employed by the Senate under supervision of the Sergeant at Arms, a sum equal to 1 year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

EXPENDITURES BY SPECIAL COMMITTEE ON WILD-LIFE RESOURCES

Mr. PITTMAN (for himself and Mr. NORBECK), Mr. WALCOTT, Mr. MCNARY, Mr. CLARK, Mr. BAILEY, and Mr. BYRD submitted the following resolution (S.Res. 201), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the special committee authorized and directed by Senate Resolution No. 246 on April 17, 1930, to investigate the conservation of wild-animal life, hereby is authorized to expend in furtherance of such purposes $15,000 in addition to the amounts heretofore authorized.

THE STATE OF THE UNION IN RELATION TO FOREIGN NATIONS

Mr. SCHALL submitted a resolution (S.Res. 202), which was read and referred to the Committee on Finance, as follows:

Whereas the Congress has received from the President a message asking for new powers of treaty making and tariff making, and a further message pertaining to the Philippines; and

Whereas the administration is expending large sums of money for military purposes in the form of larger Army, Navy, air forces, and subsidiary forces readily available for war purposes such as the Civilian Conservation Corps and like organizations; and

Whereas the Government has now embarked upon a gold-purchasing plan by paying $35 per ounce for foreign gold, causing large gold movements toward this country which makes possible large sums of credit in the event of war, internal or external; and

Whereas the normal effect of 300 price-boosting codes under the so-called "Recovery Administration" is to invite imports from all nations, thereby forecasting as a defensive measure a world cartel in cooperation with the League of Nations, as advocated by the President when a candidate for Vice President in 1920; and

Whereas the administration recently established a $2,000,000,000 stabilization fund for the purpose of dealing in gold, silver, foreign exchange, and Government bonds with the expressed reservation that there shall be no report about operations of said fund and that no report shall be given Congress of such operations and that they shall specifically be shrouded in secrecy: Therefore be it

Resolved, That the Senate, before taking further action pursuant to the extension of the powers of the President in economic dealing with foreign powers, proceed to investigate the conditions involving the state of the Union with relation to countries abroad, and appoint a committee of five Senators, who shall hold public hearings, call upon Government departments for information, and, when necessary, subpena witnesses to the following end:

1. To investigate the effect upon American labor, agriculture, and industries of the policy involved in the President's proposal that Congress shall grant him power to raise or lower American tariff duties at will;

2. To investigate to what extent the Government is committed to the policy of a world cartel pursuant to the aims of the League of Nations;

3. To lay before the American people full information of our relations with the League of Nations through "unofficial Government observers", international conventions and conferences held pursuant to the policy and advice of said League, and the diplomatic activities of the American ambassador at large in Europe in cooperation with League policies;

4. To obtain information of the vast sums reported to be contributed by American holding companies, or the officers thereof, for League support or for the erection of the new million-dollar office of the League at Geneva, and the activities of international bankers and industrial trusts in making the United States a de facto agent and commercial member of the League, if not eventually a de jure member thereof;

5. To remove the ban of secrecy on our international relations, financial, commercial, and industrial, likewise the political contacts and commitments, to the end that American investors holding $15,000,000,000 of foreign bonds largely defaulted may know what steps have been taken to set up an organization in accordance with title II of the Securities Act of May 1933 and that American taxpayers saddled with $12,000,000,000 of unpaid foreign debts due the United States Treasury may know what is being done to enforce collections thereof, and that the American people engaged in industry may know whither, when, and how the American ship of state is drifting under the so-called "emergency" powers which the President has asked Congress to make permanent.

For the purposes of this resolution, the committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such times and places during the sessions and recesses of the Senate in the Seventy-third Congress and subsequent Congresses until a final report shall be made, to employ such legal and clerical and other assistants, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures as it deems advisable. The cost of stenographic services to report such hearings shall not be in excess of 25 cents per hundred words. The expenses of the committee, which shall not exceed $20,000, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

FEDERAL EMERGENCY RELIEF FUNDS—TRANSIENT CARE

Mr. ASHURST. Mr. President, I have received a letter from a gentleman in Arizona, a constant critic, who complains that I have not been sufficiently energetic in securing funds for transient care.

I ask to have read from the desk a letter from the Assistant Administrator of the Federal Emergency Relief Administration.

The VICE PRESIDENT. Without objection, the letter will be read.

The Chief Clerk read as follows:

FEDERAL EMERGENCY RELIEF ADMINISTRATION,
Washington, February 28, 1934.

Hon. HENRY F. ASHURST,
United States Senate, Washington, D.C.

MY DEAR SENATOR ASHURST: I am in receipt of your letter of February 24. We are putting into Arizona for transient care something like $250,000 per month, more than in any other State in the Union, more than we are putting into Mississippi, Arkansas, Louisiana, Tennessee, and Missouri combined.

Very truly yours,

AUBREY WILLIAMS,
Assistant Administrator.

Mr. ASHURST. Mr. President, I hope that the friendly critic will be gratified to learn that the authorities are putting into Arizona, for transient care, more money per month than they are putting into any other State.

PARTISANSHIP IN THE RECOVERY PROGRAM—STATEMENT BY SENATOR JOHNSON

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the RECORD a statement issued by the Senator from California [Mr. JOHNSON] which was published in the press of Sunday morning.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

To those of us who without thought of partisanship have participated in the events of the last year and have endeavored to do our small share in the heroic efforts that have been made by the President to bring us out of the awful depression and give relief to our people, it was a matter of rejoicing to observe that some authority recently curbed the issuance of a book by the Democratic National Committee which, it is alleged, was a mere partisan statement of what had been done.

DOCTRINE OF DEFEAT AND DESPAIR

I observe today a like partisan statement issued by the chairman of the Republican National Committee preaching a doctrine of defeat and despair. What a pity that some authority in the Republican Party did not do with this statement exactly what was done with the partisan statement of the Democratic Committee! Party lines have never been so loose as at present. Partisan activity has never been so little in evidence as during the last year. A common purpose has actuated every man of patriotic instincts in every party—the purpose of acting in cooperation with the President in doing what was essential for the public weal. It is not necessary to agree with all that has been done in every conceivable particular, but unfair and unjust would be the individual who would not emphatically concede that with an enlightened audacity the President has acted and has accomplished amazing results.

It is a sorry policy that now says to 120,000,000 people that nothing has been done that is right and that the President has brought them no relief and the future holds for them no hope. We are better, and our country is better, and our times are better for what the President has done during the past year. Those legislators who in this crisis in the affairs of the Nation have placed country above party and have cooperated to bring about recovery are proud of the part, whether great or small, that they have played in the astonishing work that has been done.

Any statement at this time which would destroy the confidence of our people, which would transmute their present optimism into a disgruntled pessimism, which instead of citing the gains which have been made, which none can deny, would decry them for partisan purposes, does not serve either party or country.

ECONOMIC POLICIES OF THE ADMINISTRATION—STATEMENT BY JOHN W. DAVIS

Mr. REED. Mr. President, I send to the desk and ask to have incorporated in the CONGRESSIONAL RECORD an article by Mr. John W. Davis which appeared in the New York Times of February 28 last.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the New York Times, Wednesday, Feb. 28, 1934]

TEXT OF J. W. DAVIS' ATTACK ON THE NEW DEAL

The full text of the statement by John W. Davis, attacking the economic policy of President Roosevelt, follows:

"Under the title 'America Must Choose', Secretary of Agriculture Wallace has outlined the courses of action that are open to the American people in relation to their farming problem and their foreign trade. I have read his discussion with interest and with great admiration for its excellent temper, its clarity, the restraint with which facts are stated, and the fearlessness with which the necessary conclusions are drawn. In putting it forth the Secretary has rendered a real public service, and I wish that every voter in the land might read and ponder what he has to say.

"The choices which he offers are, in a nutshell: (1) National isolation—raising under strict regimentation only so much as we can consume at home and withdrawing from production anywhere from 40,000,000 to 100,000,000 acres; (2) a revival of international trade, accepting in payment for our goods the goods of foreign buyers and lowering our tariff wall to make this possible; (3) a middle ground, chosen as a matter of expediency, whereby only 25,000,000 acres of good land would be taken out of production and only one half of a billion dollars' worth of foreign goods would be admitted. He leans, he says, to the international rather than the nationalistic policy.

"But he rightly urges that the whole problem, each course and its consequences, should be debated so fully and so generally that every citizen of the United States would be brought to understand just what is at stake. Surely this should be done, for a people that accepts without discussion whatever is proposed has no right to complain when the outcome is unfortunate.

CITES PRICE OF ISOLATION

"What does the choice of national isolation mean, as the Secretary outlines it? His logic is merciless. It would be necessary first to compulsorily retire from forty to one hundred million acres of crop land. In these days of juggling with billions these figures may seem unimpressive; but 100,000,000 acres laid down in a single sheet would cover the combined States of West Virginia, Ohio, Indiana, and Illinois, with barely enough fringe for standing room. Quite a patch of land that, even in this big country. Of course, in actual operation, the doubtful blessing of idle land would be more widely distributed. But wherever the destroying rain might fall it would produce a destruction of land values and would compel a radical shifting of population. There would be needed, too, as the Secretary concedes, forcible control of both marketing and production even to the point where 'every plowed field would have its permit sticking up on its post.'

"Assuming that the Government may do anything it chooses—a concession I for one am quite unwilling to make—I wonder why some advocate of decreased production has not proposed an alternative but even more certain method of abolishing farm surpluses. Why not enact that no machinery whatever should be employed in agriculture except hand implements, a horse-drawn plow and drag harrow? True, that would put more corns, if possible, on the farmer's hands and would probably starve a large part of the urban population. But it would do away with surpluses all right and new occupation as farm laborers would be opened up to those of the unemployed who were not too much weakened by hunger to reach it.

"Is it conceivable that American farmers or American citizens will submit to that sort of thing? Are they ready to support the army of Government agents, employees, inspectors, reporters, and spies that would be used to carry it on? Have they not enough of these already? Are they willing to bow their necks to the flood of rules, regulations, proclamations, and edicts that would be issued in order to fit their daily lives and conduct to the prescribed system?

"If there are to be orders, somebody must give them. Without impugning the high purpose and integrity of the great majority of our public servants, are we so sure of their constant wisdom, their disinterestedness, their ability to resist temptation, their freedom from political influence, that we are willing to trust them with unlimited power?

DEMANDS RULERS BE NAMED

"Every Socialist, every advocate of social discipline, of a planned economy, of a nationalist regimentation—call it what you will—must answer in the end this question: Who is to sit in the driver's seat and hold the reins and whip? And the answer cannot be made in such vague collective terms as 'the state', 'the government', or 'society', for these only move by human hands. Who are the men, gentlemen, that you would set to rule over us?

"I pass the question of constitutional authority, since constitutional questions seem not to lie within the scope of the proposed debate. I say only that I am not aware of any provision in our fundamental laws that gives any power whatever to limit the right of any man to carry on the business of farming to any extent he chooses, unless, indeed, in time of actual war. But the thrust of this proposed regimentation goes even deeper than that. It threatens, if it does not seek, to destroy that personal liberty which Americans of past and present days have been taught hitherto to hold as the most precious of earthly possessions.

"The Secretary stresses the fact that the administration is 'conducting an orderly retreat from surplus acreage' by payments to cooperating farmers for the adjustment of their acreage farm by farm. The money, of course, comes from the taxpayer as the Government's only source of supply. One may approve or disapprove this program, but no one should have any doubt what it means.

"The farmer who raises more than he can sell suffers in not being fully paid for his efforts. That is unfortunate for him and bad for those whose prosperity is linked with his. To avoid this, the Government steps in and pays him in advance to reduce his acreage and lessen his labor so that he may escape the danger of unrequited toil. But what it takes from the taxpayer to make payment to the farmer lessens so much of the taxpayer's return for his own effort.

"So that all that has happened in the end is that one man's burden has been shifted to another man's back. That may do for the moment, but as a permanent policy it is obviously unthinkable. For it is as true today as when Justice Miller wrote it, that for the Government to put its hand in one man's pocket and take money to be given to another is 'none the less robbery because done under the forms of law and called taxation.'

PLEADS FOR INTERNATIONALISM

"The second alternative presented by the Secretary offers a much fairer prospect. There is world trade to be had, he says, and, by paying the price, the United States may have its share. That price is simply that we must buy as well as sell, import as well as export. It subtracts nothing from the weight of the Secretary's words to call attention to the fact that the statement is not new. Every gathering of experts, at home or abroad, since the war ended has proclaimed the same thing. Their advice has been coupled with warnings and the warnings have been in large measure fulfilled.

"Who can doubt that there are natural laws in the social and economic as well as in the physical worlds, and that these cannot be overridden without courting disaster. The law of supply and demand, for example, cannot be thwarted by governmental price-fixing or even by experiments with the currency. Those who bite on that rock are sure to break their teeth. Just as incontrovertible is the axiomatic truth that men live in this world only by exchanging their labor, or the fruits of it, for the labor and the products of other men.

"The larger the circle of those with whom such an exchange is possible, the more surely it will occur and the greater will be the security of those dependent upon it. But for the pressure of special interests, no man could be found to deny this axiom or the conclusions to which it inevitably points. No one could be found to argue for more rather than less restrictions upon industry, commerce, and trade.

"Wisdom in government, I submit, consists in discovering these natural laws and following them—not in devising hasty expedients whereby they may be circumvented. The coming of the depression itself should have taught us that lesson. It was not brought on by the observance of ancient rules and principles but, the effects of the World War aside, by their deliberate disobedience. We ate, we drank, and were merry until inexorable laws claimed their penalty.

"Ever since the blow fell we have been looking for scapegoats and hoping for short-cuts to recovery. I much doubt that we shall find either the one or the other. I do not look for miracles to save us or hope for gold at the foot of the rainbow. I have more faith in the prosaic process of following paths marked out by reason, common sense, and the past experience of mankind.

"This translates, in my opinion, into terms, among others, of less restraint on human activity, not more; a freer exchange of goods and service with other nations, not increased prohibitions; more economy in government and lower taxes, not higher taxes and increased spending—and so on down the line.

"When the wind has blown over the ant heap, the ants will build it again, never fear, if they are given time. But they will not work if they are urged into blind paths or pushed in several divergent directions at one and the same time. By all means let us have the debate the Secretary suggests so that we may chart our true course."

THE MISSISSIPPI VALLEY COMMITTEE AND ITS PLAN—ARTICLE BY THE SECRETARY OF THE INTERIOR

Mr. NYE. Mr. President, the February issue of the Survey Graphic contains an article by the Secretary of the Interior on the subject of the Mississippi Valley Committee and its Plan. The article deals with a matter of such interest to so large an area in the Northwest that I feel free to ask that it may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Survey Graphic, February 1934]

SAVING THE GOOD EARTH—THE MISSISSIPPI VALLEY COMMITTEE AND ITS PLAN

(By Hon. Harold L. Ickes, Secretary of the Interior and Public Works Administrator)

The "inland empire" is one name for the 27 States drained by the river system that stands like a great tree in the center of a map of this country, its roots in the Gulf of Mexico, its topmost twigs across the Canadian border. This region, one of the chief agricultural areas of the earth, shared less than other sections in the late prosperity and feels with peculiar force the burden of the depression. Its problems lie deeper than financial structure or overdeveloped factories. They spring from the soil itself and involve the irreplacable treasure of natural resources. Though these States differ so widely in landscape, in population, in the variety of their crops, their common problems bind them together into a natural regional unit.

To give impetus and direction to the effort to deal with these problems, President Roosevelt recently authorized the setting up, under the Public Works Administration, of a Mississippi Valley Committee. Its chairman is Morris Llewellyn Cooke, a consulting engineer and an authority on power and public works. Its membership includes Harlan H. Barrows, a geographer, head of the geography department at the University of Chicago; Herbert S. Crocker, a civil engineer of Denver, Colo.; Henry S. Graves, dean of the Forestry School at Yale; Charles H. Paul, a civil engineer of Dayton, Ohio; Sherman M. Woodward, civil engineer and a professor at the University of Iowa; and Maj. Gen. Edward M. Markham, Chief of Engineers, United States Army, ex officio.

This committee has a dual mandate: First, to review all projects for immediate execution in the Mississippi Valley under the P.W.A.; second, and this is its great task, to draft a plan for the Mississippi Valley.

This article is not a report of accomplishment, nor an outline of procedure but a glimpse of what such a committee might and, it is hoped, will accomplish. Sometimes when a bridge is to be built the engineer begins by using, instead of drafting board and precision instruments, colored chalks to make a free sketch—lines which can be shifted and modified so long as the scheme preserves a logical relationship to its location. By this means the main outlines of the structure are determined though the detail is changed a hundred times before the final drawings are made. It is not a blueprint but a chalk sketch that is submitted here.

To try to picture 27 States at once is a confusing operation. Let us begin by considering one Mississippi Valley farm and, viewing what has happened there, attempt to define the most urgent problems of the area.

A farm that used to be known as "Point Pleasant" lies in the bend of a stream in a Dakota valley. The square mile of land with the little river on its west and north sides was made up, 30 years ago, of 520 gently rolling cultivated acres and 120 acres of woodland. Its artesian well gave a constant flow for domestic purposes. The fertile soil yielded 25 to 35 bushels of wheat to the acre and other crops in proportion. The woodland supplied fuel, pasturage for a herd of dairy cattle, and sheltered the farm from the worst effects of blizzards, hail, and dust storms. A water wheel in the river filled the barnyard drinking trough. The river also was used for fishing, swimming, and canoeing in the summer, and ice was put up each winter.

Point Pleasant and what has happened there since the turn of the century is typical of the depression that began, long before the "boom" broke, to creep over the Mississippi Valley drainage area. The well has run dry. The river, once a swift stream 4 to 12 feet deep, 30 feet broad, may be crossed on stepping stones, except for a few weeks in early spring. The woods are dead timber, rapidly being cut off for fuel, leaving the farm exposed to the full force of the prairie winds. The fields, instead of their once abundant harvest, yield 10 to 15 bushels of wheat to the acre. The farm's most important crop—the young generation—is gone, unwilling to face the life of hard, ill-paid toil and the lack of all modern conveniences.

On this farm, once beautiful and prosperous (and it is a story that could be repeated all up and down the valley), "hard times" have deepened in the general depression, but their primary causes were a failing water supply, decreased soil fertility, and lack of electric power which would enable the farmer to share in a rising standard of living.

Clearly the essentials in any plan for the region are the conservation, use, and control of water, and, inevitably linked with this, the conservation and wise use of the soil. And while it is desirable to have all P.W.A. projects for the area passed on by one agency, the primary responsibility of the M.V.C. is not projects but such a plan. The committee has, first of all, a coordinating function. It will not engage in research. Rather, it will gather together, correlate, and interpret existing data, and having thus obtained a picture of the valley, its assets and liabilities, it will be ready to prepare the blueprint of a long-term scheme, drawn in units of 5-year or 10-year efforts.

Paralleling the growth of the plan must go schemes for its interpretation. The M.V.C. has accepted as a major responsibility the development of a graphic method of statement and interpretation. This committee does not propose to submit a learned report which will quietly gather dust in the departmental archives. "The engineering of human consent", to borrow George Soule's excellent phrase, is essential to planning in a democracy. The M.V.C. seeks ways of sharing its vision with the Kansas wheat grower, the Louisiana planter, and making its figures "come alive" to them through their "sweet reasonableness."

In drawing its plan, the M.V.C. must, of course, determine how radical are the steps required if the goal is to be attained, and the cost of these steps in dollars and cents, as well as their rewards in social terms; but it has also to show that the steps are suited to the technique of a democracy. For throughout the recovery effort it must be borne in mind that it is one thing to plan and proceed under a dictatorship but quite another where the rights of free people are respected. If the progress I hope for is made, it may be possible to have ready for the reopening of the Chicago Fair a bird's-eye view of plan and procedure.

As a first step the M.V.C. has broken down its task, broadly speaking, into six parts—erosion, forestation, flood control, agriculture, navigation, and power. Let us follow the committee's lead in keeping in mind these factors and try to see their relationship to one another and to the central idea; a plan that will conserve and wisely use the water and the soil of the inland empire.

Great maps have been spread before the committee by the Department of Agriculture showing land little suited or completely unsuited to modern farming. There are 20 types of these marginal and submarginal lands—exhausted acres, dry-farming areas, rocky slopes, swamps, and so on. Using a planimeter, an instrument which measures an area, however irregular its shape, experts are working out the total area of the watershed regardless of State boundaries and the amount of unfertile land and at the same time compiling figures from the census reports to show the population of the good and bad sections. The M.V.C. has found that the population of the million and a quarter square miles making up its field of operations totals about 49,000,000. The percentage living in the less desirable areas is believed to be relatively small. If three out of forty-nine million people are trying to support themselves on exhausted, rocky, or semiarid lands, that is one problem; if there are 15,000,000 the problem would, of course, be different. The committee cannot begin to plan without such basic figures as these. For the same reason, an allotment of $285,000 has been made "for construction, repair, and replacement of river-measurement stations", to maintain reliable records of the flow of the Mississippi and its main tributaries. A recommendation has been made for an appropriation for studies of existing data on rainfall and run-off, with particular attention to the relationship between the two and to the factors that determine the percentage of rainfall absorbed by the soil, as well as the percentage that goes to swell the Mississippi floods.

In the Dakota drought area, which takes in all or parts of several States, studies based on Weather Bureau records reveal fluctuations in rainfall from year to year, but no change in the average amount over the period since 1890. And yet the area shows progressive symptoms of drought; decreasing crop yields per acre, falling water levels in rivers and lakes, scarcity of bird life. The change, it is pointed out, is in the use of the water, not in its amount.

There are three unrelated water levels in this region, which geologists term the ground level, the gravel level (100 to 200 feet down), and the artesian level. The artesian level is a great sandstone bowl, approximately 1,000 feet below the surface, which holds the water that pours down from the Montana heights. Many communities have tapped this water with driven wells. The story of such wells is in most instances typical of our national wastefulness. Pipes have been left uncapped, allowing water to pour forth continuously, with ditches to carry off the surplus not immediately required. The supply of artesian water is definitely limited, and an increasing number of wells are tapping it as other sources fail. North Dakota has passed legislation regulating artesian wells and prohibiting the waste of its waters. It would seem reasonable that no State which is not similarly safeguarding existing water supplies should be given Federal aid in developing new sources.

Though some relief for water famine can be obtained by these deep-driven wells, agriculture's main dependence is on ground water. Devils Lake, N.Dak., is one of the most dramatic examples of the recent disappearance of ground water. The level of the lake has been steadily falling since the region was opened up to settlement and cultivation. A hotel that some years ago was on the margin of Devils Lake is now 4 miles from the water.

There are three ways by which surface water is distributed. H. E. Kiefer, an agricultural authority of Burlington, N.J., has conveniently termed these "fly-off", "run-off", and "sink-off." The sink-off is, of course, the absorption of the water by the soil, the process that the M.V.C. seeks to facilitate. Fly-off, the loss of surface water through evaporation, is many time more rapid with cultivated crops than with native (prairie) grasses. Once the sod covering is broken with the plow, capillary attraction draws the water to the surface where it evaporates. Various mechanical means have been suggested to reduce the fly-off that results from cultivation. Many of them are still experimental. All efforts to conserve ground water have an important bearing on soil conservation.

The problem of run-off is also the problem of erosion, the washing away of the fertile topsoil by wasted rainfall. It is well known that sod and woodland are nature's conservators of soil and water. The amount of water lost in run-off, the acreage despoiled by erosion, increase as we shift from prairie and forest to cultivated fields. South Dakota had over 3,000,000 acres more in five crops (wheat, rye, oats, barley, and corn) in the 1932 drought than in that of 1923. With none too plentiful rainfall in any year, con-

sider the effect of accelerated evaporation and run-off on the added 5,000 square miles planned to these crops.

As a nation, we are not yet "erosion conscious". Twenty-five years ago the late Prof. N. S. Shaler, one of the great geographers of all time, warned us:

"If mankind cannot devise and enforce ways of dealing with the earth which will preserve this source of life (the soil), we must look forward to the time—remote it may be, yet clearly discernible—when our kind, having wasted its greatest inheritance, will fade from the earth because of the ruin it has accomplished."

The typical attitude toward the whole matter was expressed by a well-informed acquaintance who laughingly said, when I commented on our reckless misuse of the land, "If the Chinese have farmed their land for 2,000 years, I guess we can go on for a few centuries." He overlooked the fact that the soil to which he referred is an aerial deposit, accumulated through countless ages from sixty to several hundred feet thick and does not have hardpan or rock within several feet as in our case. Our soils can rarely be measured in feet, being usually from 6 to 16 inches in depth. True, in China the soil has no organic matter in the deeper reaches. Further, the Chinese not only use commercial fertilizer but they do not waste a handful of anything in the cities that might be used for that purpose. With us soil once lost can be restored only through nature's slow processes to be measured by centuries, not seasons.

The extent of our reckless destruction of the soil is revealed by erosion-service estimates, which reveal that 3,000,000,000 tons of good earth are washed out of fields, pastures, and temporarily idle land every year. To haul these 3,000,000,000 tons off the land and dump them into the oceans and valleys would require the continuous loading of a fleet of trucks, 6,000 abreast, simultaneously every minute of every day and night the year around.

But this loss of soil is not the end of the story. Erosion and run-off work together in a vicious circle. Once the sod or woodland cover is gone, erosion planes off the rich, humus-charged topsoil leaving unproductive sand, stiff clay, or rock. The hidden conduits of the soil, the veins made by earthworms and insects and plant roots, are destroyed. In fact, since insects and worms exist on organic matter in the soil they do not penetrate to great depths in the subsoil. The subsoil is hard and smooth. Not being able to penetrate this surface, the rain water runs off, gullying the slopes, and, in some regions, burying fertile lowland fields under sterile sand and clay.

In human terms, the tragedy of erosion is the tens of thousands of hard-working families trying to till land that cracks and bakes and gives meager yields of poor crops in return for weary toil. The homes of these farmers and the yards around them bear the unlovely stamp of poverty. Men and women and children live narrow, dreary lives on these farms that have been despoiled of both soil and water by our prodigal misuse of the land. No one, unless he personally has gone off the beaten path, can have any conception of the existing deplorable conditions. In the last 10 years, more than 30,000,000 acres of American farm land have been abandoned because of erosion. If an enemy army with big guns and trenches laid waste these once fertile farms we would be filled with horror and dismay. But since it was done by our carelessness in letting rain water run wild, for some strange reason it strikes us as nothing to worry about.

With an allotment of $10,000,000 from the P.W.A., the Erosion Service, recently established in the Department of the Interior, is laying out several impressive projects, working whole watersheds of 100,000 acres or more, employing every practical erosion-control measure that conforms to the needs and nature of the land. Farmers who will cooperate with the Erosion Service are to be given C.C.C. aid. The service will not only apply the best methods known but will devise and experiment with new methods.

In almost every instance an attack on erosion is also an attack on drought. "Contour plowing" follows the levels of the land, making ridges that hold the water instead of channels to carry it away. "Strip farming" puts narrow fields of sod crops—alfalfa, clover, and the like—between such crops as corn, tobacco, and cotton, conserving both moisture and topsoil. Fertile slopes can often be terraced to good effect. A field in Texas with a 2-percent grade (almost level) lost 42 tons of topsoil in a single year. Terracing reduced the next year's loss to 19 tons, while a sod field (buffalo grass) alongside lost only 7 tons. The erosion service demonstrations will, it is believed, serve not only as laboratories for testing and devising methods of erosion control, but as convincing educational centers, teaching the importance of conserving our soil and water and the ways and means of fulfilling that great responsibility.

Forestry, which includes the management of existing wooded areas as well as forestation, must hold a big place in any plan for the Mississippi Valley. Forests not only prevent erosion, but by checking run-off in flood periods and increasing the underground water supply, they save the surface water for thirsty farm lands. A first report on forests in relation to water conservation and control has been prepared by Henry C. Graves, of the M.V.C. This report shows that there are left about 250,000 square miles of forest land in the valley, more than 10 percent of it already stripped or devastated. A little less than half the total is in farm ownership, only 27,000 square miles are public property, and the balance is commercially owned. The report points out that "the forests have been greatly impaired by cutting, fire, insects, grazing, and other destructive agencies." It makes clear the need for an enlarged program of forest-fire protection and also for the regulation of grazing, "since heavy grazing of forests reduces their value in watershed protection." Though grazing is well managed in public forest reservations, much damage is done by overgrazing in private forests and on the public domain. There are still some 20,000,000 acres of public domain within the valley. Most of the conservation groups in the country opposed the recommendation of the committee appointed by President Hoover in 1930 which, if adopted, would have transferred this entire acreage to the States. A proposal to place the public grazing land under Federal control, prepared and endorsed by the Departments of the Interior and of Agriculture, is contained in H.R. 6462, now before Congress.

Little progress has been made in the handling of private forests. Commercial timberlands are nearly all cut under the old system of unregulated exploitation. The result is not only destruction of the forests, but soil erosion and drought. The code of the Lumber and Associated Forest Industries contains an article, the details of which are being worked out, committing the industry to proper and intelligent forest practices. This holds a real measure of promise.

Accompanying the committee's first forestry report are maps which show where forests used to be and their extent today. Clearly it would not be advisable to put back to forest all the land that was once grown over with trees. A conservative estimate indicates that for every 100 trees in the valley today we must add 20. In making a forestry plan, we have got to think at least in terms of a 20-year program. Among the questions Mr. Cooke and his associates have posed are: How many seedlings do we need year by year? What varieties should they be? Where are we going to get them? Where can they best be grown? For, as Mr. Cooke points out—

"Any progress in forestation in such an area runs into big figures. You can plan all you want to, but your planning for new forests is no good unless you have the trees to plant, the men to set them out, to supervise their growth, to protect them from fire, to cut and replant as forestry experts, conscious of public responsibility, rather than as lumber dealers, out for big profits."

Closely related to erosion, to surface run-off, to forestry is flood control, the most dramatic problem of the Mississippi Valley. The flood menace is dramatized in the broken levees of the lower Mississippi, but the real flood is a thousand miles north, where the water runs off the fields of Illinois and Iowa. We have tried to control the flood waters of the Mississippi by having our Army engineers build the levees higher and still higher in the effort to restrain our wasted water. But the levees have reached their limit as an engineering possibility. Now we must attack the real problem of flood control. We must reverse our practice and prevent floods. This attack is necessary not only to safeguard the plantations and towns of the lower Mississippi, but to save wide areas from the blight of erosion and drought. There are water supplies on every farm, from the Canadian border to the Gulf, that have simply been poured into the Mississippi and its tributaries. These must be dammed and held where they are needed—the streams that flow through ravines and coulees when the snow melts or when there is an unusually heavy rain, the ponds that collect in low places which we have emptied with drainage ditches. We must go back and fill up a lot of these ditches that carry off both water and topsoil, and we have got to preach the gospel of using the water we have, particularly in low-rainfall areas, not making of it a flood menace for the Delta.

Like our handling of water and our treatment of topsoil, the distribution of farm land in this country and the uses to which it is put show little evidence of the American genius for organization. The homesteads and land drawings in the North Central States, the glamor and excitement of the rush for locations when the Cherokee Strip was thrown open, have been typical of our hit-or-miss agricultural development. It is the policy of this administration not to allow a new piece of land to be brought under cultivation through reclamation without withdrawing an area of less desirable acres of equivalent productive capacity. It is with this policy in mind that irrigation and other reclamation projects are studied today. The shift is to be not a restless moving from old land to new but a change from less desirable to more desirable farming land. Thousands of acres in the South and Midwest should clearly be put back to forests or otherwise taken out of farming use. Turning under every third crop row is a temporary expedient. Turning land equivalent to every other half section back into woods would encourage better methods of agriculture, contribute to the upbuilding of the valley, and provide new employment opportunities in scientific forestry.

The time has come when we must take to heart the lessons of the wise and economical agriculturists of Europe and of the older American civilizations. The careful Danes and Belgians, the French farmers who for 700 years, father to son, have tilled and genuinely improved their small farms, the Incas who so wisely treasure their meager water supply and spade back the topsoil that rain washes into the hedges—these husbandmen are all more skilled than we in the great arts of agriculture. We must recognize erosion and drought as national perils, and the need to plan in terms of decades rather than months.

I remember talking with an expert who had been studying the gypsy moth. He showed me his charts and tables and described how, through the methods he and his associates had developed, the pest had been brought under control. True, there was a long, uphill fight ahead. The number of moths would continue to increase year by year for 15 years, but the final extinction of the gypsy moth was assured. "We have the thing licked", he said triumphantly.

Similarly, facing the realities of the situation and accepting the long-term struggle, we have got to lick erosion. It is fortunate

that we have as our national leader today a man who is fully alive to the problems of agriculture and forestry. I am firmly convinced that the backbone of the Republic will be broken before the century is out unless we formulate and put in motion such plans as he envisages for the wise upbuilding of the farm areas. President Roosevelt has given force and direction to all these efforts. He may well be honored by succeeding generations as the man who saved the land.

The use of the water of the Mississippi Valley for navigation, as well as for agricultural and domestic purposes, is a part of the plan being shaped by the Mississippi Valley committee. In a preliminary way, the committee is using data supplied by the Army engineers to make a map showing the flow of the navigable streams of the area and the movement of local and long-distance river traffic. Inland navigation projects to date have been isolated, related neither to one another nor to any coordinating scheme. The Smith report on the railroads suggested the need for comparative data on dollars-and-cents cost of different means of transportation, and Joseph B. Eastman, Federal Railroad Coordinator, is directing studies along this line. It must be remembered, however, that social as well as financial values are involved, and that the type of transportation facilities to be developed in a given locality cannot be determined by money outlay alone. Even so, some fair basis for computing costs is needed.

Another aspect of inland navigation that must be squarely faced is the day-dreaming of many communities situated on rivers we have termed navigable. On many small streams which thread the Mississippi watershed there are towns and cities that look forward to having foreign vessels tie up at their docks. Luncheon-club speakers continue to paint glowing pictures of the activity (and the profits) that will be enjoyed by local enterprises when French and English freighters load and unload at Smithtown or Jonesville. The persistence of such fantasy accounts in some measure for the unsavory pork-barrel character of many of our rivers and harbors appropriations in past years.

In fitting a scheme for river navigation into a vast plan for the Mississippi Valley, the committee recognizes not only the need for railroad and river data, but for facts on highway traffic. All transportation is affected by the coming of pneumatic-tired trucks, making possible both local and long-distance hauling over highways that can be lightly and hence quickly and cheaply built and maintained.

In modern American life, streams probably play a more important part in developing electric power than they do in their ancient role as highways. Even a cursory study of the Mississippi Valley discloses the need to bring electricity to the largest possible percentage of its rural population. In comfort and convenience as well as efficiency, farm living is heavily penalized by lack of this modern Aladdin's lamp. A water pump—to make possible the kitchen sink and the bathroom that the city dweller takes for granted—electric lights, relief from household drudgery by electric washing machine, electric iron and mangle, mechanical refrigeration, electric churn, a continuous supply of hot water—these are only a few of the means to easier and more satisfactory living that electricity could bring to the farm home. And if Ireland, Bavaria, Alsace-Lorraine, Norway, and Ontario can take cheap electric current to the farms, then the farmers of the United States can have these modern conveniences, too. In the Middle West, where hard times have forced severe economies, the well-equipped farm has usually given up the telephone before turning off its home-made (and relatively expensive) electric lights. This fact often surprises city people, but it surprises no one who knows at first hand the danger and inconvenience of kerosene lamps in an isolated farm home, particularly a home where there are little children.

At present rural electric rates are almost prohibitive. President Roosevelt is leading the effort not only to make cheap current more widely available but to lower the cost of its distribution and of the electrical appliances needed for its functioning.

The dominant factor in rural rates has been the cost of the distribution lines. In a city there are thousands, sometimes tens of thousands, of domestic customers per mile of line; in a farming country there are almost never more than five. This fact has heretofore made distribution costs prohibitive. Today we can put in pole lines at unprecedentedly low costs for materials, with plenty of local labor available.

President Roosevelt recently set going another experiment in the farmers' behalf when, by Executive order, he directed the establishment of the Electric Home and Farm Authority, Inc. This Delaware corporation, with capital of a million dollars, will extend cheap credit to householders within the Tennessee Valley area who wish to purchase electric equipment. The plan is to encourage large orders for appliances, which, eliminating unnecessary gadgets, will be designed for maximum performance and wear. In a press statement, David Lilienthal, of the T.V.A., thus explained the program of the new corporation, a scheme that can easily be extended to other areas:

"The objective * * * is a wider and greatly increased use of electricity in the homes and on the farms. * * * In order to carry out the program there must be a broad-scale distribution of very low cost, standard-quality electricity-using appliances, and concurrently a revision downward of electric rates. The new agency is based on a cooperative program in which the Federal Government, the electric utilities, both publicly and privately owned, the electric manufacturing industry, and dealers will participate."

The Federal Government, he stated, will participate:

"By assisting in financing the consumer in purchasing standard electric equipment at very low prices; by securing reductions in electric rates * * * so as to make the use of this equipment feasible for the average householder and farmer; by engaging in educational work and research further to lower the cost of electric equipment, and to make it better adapted to the needs of the average home and farm."

The enormous demand for refrigerators, washing machines, plumbing fixtures, water pumps, electric irons, sewing machines, and so on, that will follow should such conveniences actually be put within reach of householders and farmers now lacking them will, many enthusiasts believe, give industry a boost similar to that supplied by the expansion of the automobile industry after 1920. But to many of us, and I think that group includes the President, to bring farm and village homes up to a higher standard of wholesome and comfortable living, looms even more important than an increase in business activity. If any such dream is to become a reality, it will be under Government leadership and supervision, insuring a development planned and carried out with advantage to the consumer rather than to the power companies as the first objective.

In this quick chalk sketch I have tried to show not the details but the broad outlines of what this vast regional plan will cover, how it will attempt to correlate the common problems of these 27 States, and the most promising lines of effort for solving them. Like the bridge builder's profiles of the setting for his bridge, the shape and direction of the committee's work is determined by those first essentials for the Mississippi Valley—the conservation, use, and control of its water; and linked with that, the conservation and use of its soil.

But I shall have failed in the task I set myself in attempting to show how vital is planning to navigation, flood control, erosion, agriculture, power, and forestation unless I have at the same time shown the larger considerations that called the committee into being and that inspired its own effort and the effort of all the governmental agencies cooperating with it or working along similar lines in other areas. Here we have the reverse of private industrial planning. Here, within the framework of a democracy, we have a tremendous common effort toward a better distribution of the products of our machine age—a striving for social as well as economic dividends for a better basis of life for the men and women of the Mississippi Valley and for their children.

ADDRESS BY SENATOR M'GILL AT ANNUAL BANQUET OF STATE DEMOCRATIC CLUB OF KANSAS

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Senator from Kansas [Mr. MCGILL] on February 22, at Topeka, Kans., on the occasion of the annual banquet of the State Democratic Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, I regard as one of the greatest privileges I have thus far been permitted to enjoy, this opportunity to appear before you and to speak to you and to the people of Kansas concerning the progress thus far made by the administration in power, as well as the program now being carried on by the administration of affairs in Washington.

During the 4 years prior to the induction of President Roosevelt into office we had witnessed nothing but inaction in the affairs of our Government looking toward any measure which would be beneficial to the masses of our people. During this entire period we had witnessed, by virtue of unsound economic policies, the building up of surpluses, the increasing deplorable conditions of unemployment, contraction of our circulating medium, the falling of commodity prices, the strangulation of industry, the paralyzing of agriculture, and the destruction of business and of our financial institutions. During a period of peace, no such calamitous conditions without cause or reason had ever before been foisted upon our people. The present administration came into power with a mandate from our people to rectify the wrongs then existing and to restore to our people at once the highest degree of prosperity possible, and as time would permit to bring to our people a return of normal conditions. Normal conditions could not by human endeavors be brought back immediately. Time was and is necessary. The extremities of the patient required strong restoratives. The administration, among other things, found an appalling state of unemployment existing in labor with millions upon millions of our best citizens forced to depend upon the charity of their more fortunate fellows; found the commodities of the farm selling far below the cost of production, and agriculture standing in a state of ruin. Although production had been bountiful, millions were in want. We also found no adequate medium of exchange with which the business of the country could be carried on, or with which the wealth of the country could be properly exchanged and distributed among our people, or with which to supply labor with employment or with which industry could be made to prosper.

The administration also found a staggering load of debt contracted by our people with a 100-cent dollar, while the same citizens were being called upon to pay those obligations with a dollar which had more than doubled in value, found our farmers losing their farms and our city and urban home dwellers losing their homes under and by reason of this staggering and

unjust weight of debt, and found virtually all banks in America under such dire straits as to require their closing in order to save them from complete ruin and bankruptcy and our people from a complete financial collapse. The administration also found that a policy had been carried on which operated continuously to increase the closing of foreign markets and world trade, the closing down of our factories and the building up of agricultural surpluses while at the same time we were being forced upon a domestic basis. No such calamitous condition had existed since the birth of the Republic when our people were at peace and when seasons and crop yields were normal. Let those who would criticize, especially those who were in responsible positions in our governmental affairs and who would now raise by voice or pen a cry of fear of a dictatorship, when every citizen knows our President would be the first to denounce any effort to establish a dictatorship, consider the picture of the ruin they had wrought by reason of their own financial and official governmental policies. The most charitable view we can entertain is that the last one who should express a sense of fear in behalf of our people is that man who held the important and responsible position of advisor to the Hoover administration with reference to its financial policies. Investigation has disclosed that in March 1933, when this administration came into power, we had over four and one half million families in the United States receiving public relief, which meant that something over 20 million people were on public relief or 1 person out of every 6.

The Emergency Relief Administrator states that he attempted to discover who these people were, where they lived, how old they were, and found that there was on an average of four people in each one of these families, and that among the 20 million people who were on public relief were included approximately 6 million children under 18 years of age.

It is not difficult for one readily to see that the situation in which the administration found the affairs of our people at the very inception of its taking charge of the affairs of Government was such as to require drastic action, and President Roosevelt at once began the task of a recovery program.

Without delay he called the Congress into extraordinary session, and this Congress did not fail to act. Emergency legislation was enacted, most of it due to the then existing conditions, in order to care for immediate needs and in order that a more permanent program could later be put into effect. Nothing transcends the general welfare, and let me warn the self-appointed critics of the administration that this emergency legislation will be held to be, and is, constitutional. We believe in constitutional representative government, and the great charter of American liberty is not being ignored or violated by the Congress; nor will your great President countenance the violation of any of its provisions, or hesitate to operate under its terms in the interest of the average citizen. The rights of the individual citizen to "life, liberty, and the pursuit of happiness", many of which had been denied him, are gradually but surely being restored to the average citizen and will be preserved to him and handed on to children yet unborn.

Let the critics of Roosevelt be candid, take the people into their confidence, state what their program would be and what they would do, or would have done at the time we acted. Would they again drive us down to the bedrock of despair? Industry and agriculture required aid at the earliest moment possible in order for our people to carry on. We therefore, at the special session of the Congress, enacted the National Industrial Recovery Act, the Agricultural Adjustment Act, an act to provide credit for emergency farm loans, the Home Owners' Loan Act, the National Securities Act, and an act to provide for a Public Works program to provide for needed and necessary public improvements and to relieve the serious conditions of unemployment, and an act to provide relief to the then existing national emergency among our banking institutions. Those who would find fault are seemingly unwilling to discuss these laws one by one, analyze them, or to suggest a substitute for a single one of them, although having had the months which have passed since their enactment for mature deliberation. Their speedy enactment simply and distinctly contrasts this administration which came into being with a willingness to act in behalf of the masses of our people with the administration which preceded it which had no program looking to the betterment of their conditions except the hope of the psychological effect upon the minds of our people by the repetition of the thread-worn phrase, repeated from month to month with great gusto, "Prosperity is just around the corner." Results speak for themselves, our people recognize them, and cannot be deceived. Results constitute a complete answer to denunciation.

It has been contended that the National Industrial Recovery Act, usually referred to as the "N.R.A.", does not apply to agriculture and is, therefore, not an aid to our farmers. It was not intended as a direct aid to agriculture but was intended as an aid to labor and to industry; but as time passes it, of necessity, will prove itself indirectly to be advantageous to agriculture and every form of industry. It was never intended to be applicable, and in the very nature of things, except in an indirect way, it could not be made applicable to our rural communities and our cities and towns located in our rural sections; but in our industrial centers it was and is necessary to relieve the obstructions to interstate and foreign commerce, to abolish those practices which were undermining the standards of living of the American people, to outlaw in this land forever child labor and to promote industry and labor under proper governmental sanctions and supervision. Let our farmers realize that during the recent years we had not been suffering so much from an overproduction of the products of the soil as we had been from an underconsumption of them. When we take into consideration the masses of our people it is evident to a thinking man or woman that we must prosper together; we must rise or fall together or return to the policy which leads only to prosperity for and in behalf of a privileged few—the masses receiving only the alms which fall from their tables. The National Industrial Recovery Act is a direct aid to the restoration of a purchasing power among those whom we commonly refer to as "the laboring class", and as they become normal consumers instead of being compelled by the circumstances in which they have inevitably been placed, using less in food and clothing—much less than nature requires—we shall find that agriculture will by reason of the operation of this law in the restoration of their purchasing power and in restoring normal consumption reap a benefit, one that is necessary to the survival of both agriculture and labor. Not only is this true with regard to agriculture but it is likewise true with reference to every form of human endeavor.

Not only had labor lost its purchasing power for the products of the farm but the products of the soil had so depreciated in value in comparison to their exchange value for other commodities as to cause a breaking down of the orderly exchange of commodities so as to render those engaged in agricultural pursuits to be without a purchasing power for the products of industry. A proper governmental program, monetary or otherwise, is one that brings to pass an equitable exchange of commodities. No other program can or will bring to pass prosperous conditions in a nation. This does not mean an exchange of commodities to the advantage of one class, one element, or some particular group, but a policy which makes possible an equitable exchange of commodities among all people. It was therefore necessary that the administration devise a plan whereby value would be established in a bushel of wheat or a bale of cotton to the producers of such commodities. I select those two commodities not to paramount them above others but by reason of the fact that they do constitute the two great crops of our basic industry and by reason of their outstanding position in our recovery program and that they have a direct bearing upon virtually all other products of the farm. By reason of the program previously carried on which gradually but surely resulted in underconsumption and in the destruction of foreign markets we had accumulated over a period of years and had been creating in this country vast surpluses of these two basic commodities until when the Roosevelt administration took over the reins of government we had a surplus in wheat of approximately 400 million bushels and a surplus in cotton of approximately 13 million bales. International trade and the building of foreign markets cannot be reestablished in a brief period, but within a reasonable period this can and will be accomplished. The enormous carry-over I have discussed in the two great crops of wheat and cotton had rendered each of those two basic commodities virtually valueless in this country to those who produced them or who were engaged in the business of producing them. Our carry-over of cotton amounted to more than a normal year's production in this country. The conditions surrounding the basic industry of agriculture made some form of relief necessary at the earliest possible moment, and by reason of this condition the Agricultural Adjustment Act was enacted. It is to be hoped that during the period of a few years foreign trade and markets may again be restored and that we may return to normal production.

The operations of this law and the machinery with which its provisions are carried into effect are so well known in Kansas and the Middle West as to render a discussion or description of them unwarranted. Suffice it to say, however, while futile efforts had in the past been made in the enactment of so-called "farm relief measures" that we can truthfully assert the Agricultural Adjustment Act is the first measure dealing exclusively with agriculture from which the farmers of our Nation have derived any benefits whatever either directly or indirectly. Benefit payments for the reduction of acreage have been and will continue to be made. Notwithstanding the enormous surpluses in these two basic commodities—and in saying this I am not discounting the value of the monetary policies of the administration—this act has had a marked influence in bringing to pass an increase in prices for these and other commodities, which increase has been steadily advancing since the passage of the act. We now have on the Chicago market approximately 90-cent to 92-cent wheat per bushel instead of 40-cent-per-bushel wheat and in the cotton markets 12-cent- to 13-cent-per-pound cotton, instead of 5-cent-per-pound cotton.

For the first time in many years we have as President of the United States a real friend of the farmers of our country and regardless of what may be the pursuit in life of any of our citizens a real friend to what we sometimes refer as "the little fellow." Their welfare is paramount in the Presidential mind. His thoughts are of them rather than of the forever discredited international banking group. Under his leadership your rights and liberties as individual American citizens will be preserved to you and your descendants notwithstanding the outpourings of one Ogden L. Mills to the contrary. I hesitate to contemplate what the state of the average American would have been by this time had we continued under a leadership largely controlled by the counsel and advice of Mr. Ogden L. Mills. He was high in the councils of the Nation while international bankers without molestation were smoothly carrying on their program, under the guise of being financial advisers, of mulcting the American people of their savings and draining the Nation of billions of dollars of its wealth by fraudulently selling among our people worthless foreign

bonds and securities by virtue of which transactions these high captains of finance amassed great fortunes while impoverishing those with whom they dealt. In order that such rank frauds could never again be perpetrated in this country the National Securities Act of the Roosevelt administration was enacted into law at the special session of Congress and is by the present session of Congress being amended and perfected. When I read the speech delivered by Mr. Mills here in Topeka, I could not keep from wondering if the loss of liberty he was then bemoaning were not such liberties as have been removed from the so-called "international-banking group" by such laws as the National Securities Act.

The saving of the homes of our people through the medium of the Home Owners' Loan Corporation Act and the emergency farm credit legislation are among the thus far outstanding accomplishments of the Roosevelt administration. The only fault that can possibly be found is with reference to the administration of these laws. These were enormous undertakings. The farm-mortgage indebtedness in the Nation amounts to approximately $12,500,000,000 and the mortgage indebtedness on urban, town, and city homes amounts to a sum in excess of $20,000,000,000. The machinery to administer the Home Owners' Loan Corporation Act had to be new. It is true the program was slow to begin with but is now speeding up. Almost as much has been accomplished during the last 2 months as had been previously accomplished since the creation of the Corporation and the future must be and will be of material aid to the distressed home owners whose homes are covered by mortgages which have run their course.

The Public Works program in its beneficient results not only in needed public improvements but to the army of the unemployed should meet with the approbation of every forward-looking citizen.

Thus far we have referred to not all of the laws, as time will not permit, but to laws passed during the special session of Congress under the leadership of President Franklin D. Roosevelt, each of which laws can be successfully defended on any forum or rostrum in this Nation.

Certain legislation relative to our monetary policies was enacted at the special session of Congress which was to my mind of great value as an aid to the recovery program but, which to my mind, was inadequate insofar as a monetary policy is concerned. The best way to judge the attitude of a public man toward the masses of our people is by considering his viewpoints with reference to the issues surrounding our circulating medium. Necessary remedial legislation involving this subject has been enacted during the present session of Congress. It is true, from my point of view, as my record in the Senate of the United States will disclose, the Congress did not enact all legislation it should have enacted relative to our monetary system. Nevertheless I congratulate the administration and the Congress under the circumstances for doing what has been done. Much more has been done by this enactment for the American people than had been done in any administration in many years gone by, or than any recent administration has shown a willingness to do.

I have said especially with reference to the $32,000,000,000 of mortgage indebtedness in this country that most of it was incurred by the borrowing of dollars of approximately normal value and that when this administration came into being debtors were being foreclosed against or required to discharge their mortgage obligations by paying with a dollar which had more than doubled in value and which was that much more difficult to acquire and that this increased value of the dollar had operated to drive the prices of commodities down. Notwithstanding these admitted facts, the Federal Reserve Bank of New York rather than allow the dollar to lose a portion of its abnormal purchasing power organized to peg it and hold it to its abnormal purchasing power and thereby prevent a rise in commodity prices. This undoubtedly contributed to cause President Roosevelt to free the dollar under laws enacted at the special session of Congress from its control by a group of organized bankers and thereby causing it to lose some of its abnormal purchasing power and thereby also checking the policy of deflation and bringing to pass a rise in commodity prices. This abnormal purchasing power of the dollar had gradually developed since 1926, and we should at least bring to pass a restoration of the purchasing power of the dollars to the 1926 level and work to the end of establishing our monetary policy so as to give the dollar a constant buying power for commodities as our whole structure rests upon adequate and fair commodity prices and on equitable debt-paying power. I, for one, although I am not authorized to speak for the President, and do not know his mind on the subject, do not believe the administration at Washington has gone as far in legislation governing our monetary policies as it should or will go, but I do believe the steps thus far taken are necessary and in the right direction. The welfare of more human beings is affected by and wrapped up in this all-important issue—more, in my opinion, than in all others—and our people can well applaud the Congress and the President for curtailing the contents of the gold dollar and in reducing its purchasing power and in anchoring the dollar to some fixed standard. Time will demonstrate the beneficence of this legislation and this act of the administration in behalf of our people.

Testimony before congressional committees demonstrated that the same quantities of basic commodities could be bought in the United States in 1933 with 63 ounces of gold as could be bought in 1926 with 146 ounces of gold. In other words, its purchasing power in that period of time had been more than doubled. In other words, it was disclosed that commodities in 1926, worth then to those who had produced them $3,018, in 1933 were only worth to those who had produced them $1,302. If the prices of commodities are raised to the level of 1926, and a reasonable time for recovery is allowed, agriculture and industry will receive their reward and be restored to normal conditions. The debtor will be enabled to discharge his obligations with a dollar no more valuable than the one he borrowed and the taxpayer will be enabled to discharge his tax burdens with commodities produced possessing a value commensurate with the labor employed to produce them. The mere statement of the facts I have outlined, to my mind, demonstrates the value to our people of the monetary program of this administration.

That unwarrantable conditions such as I have described should have been permitted to develop apparently unnoticed by those in charge of the affairs of the Nation is, to my mind, not only unthinkable but constitutes a condemnation of those who, while in authority, permitted and, in fact, encouraged their development—chief among whom was the distinguished former Cabinet member who not long since journeyed to Kansas to warn the people that they were about to be deprived of their individual rights as American citizens. Rugged individualism was indeed necessary to stand up and take it on the chin under the policies then in vogue.

For my part, as my record will disclose, I would have added, and still would add, silver as a basis for the issuance of our currency, and if for no other reason I would do so by reason of the enormous stimulus it would give to the building of our foreign trade. In my judgment, such a course would supply markets which would completely and entirely solve our surplus problem. It is a sad commentary to assume the position that we are producing too much in the way of food and clothing, while millions upon millions in silver-using nations with whom we have no commerce to speak of are suffering for all that goes to make life desirable. By adding silver to gold as a basis for the issuance of currency we would immediately enhance the value of silver, thereby making the money of those silver-using nations as valuable as our own, increase their cost of production to our standard cost of production, and place them on an equitable basis of trade with us. They could then buy from us on a basis of reasonable profit to our producers and would, in my judgment, absorb what we have heretofore regarded as a surplus of commodities.
